Investigation by the United States Tariff Commission

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the Tariff Act of 1922

Investigation No. 41 by the United States Tariff Commission for the purposes of section 315 of the Tariff Act of 1922.

Table, kitchen, and toilet china and earthenware

The United States Tariff Commission on this 10th day of March, 1925, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the Tariff Act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the Commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the following articles included within the class or kind of articles provided for in paragraphs 211 and 212 of Title I of said Tariff Act, namely: Table, kitchen, and toilet earthenwares and crockery wares, (including household or domestic, hotel, restaurant, and similar wares), composed of a nonvitrified absorbent body, including white granite and semiporcelain earthenware, and cream-colored ware, plain white, plain yellow, plain brown, plain red, or plain black, not painted, colored, tinted, stained, enameled, gilded, printed, ornamented, or decorated in any manner; or painted, colored, tinted, stained, enameled, gilded, printed, ornamented, or decorated in any manner.

Table, kitchen, and toilet china, porcelain and other vitrified wares, (including household or domestic, hotel, restaurant, and similar wares), composed of a vitrified nonabsorbent body which when broken shows a vitrified or vitreous, or semivitrified or semivitreous fracture, plain

white, or plain brown, not painted, colored, tinted, stained, enameled, gilded, printed, or ornamented or decorated in any manner; or painted, colored, tinted, stained, enameled, gilded, printed, or ornamented or decorated in any manner, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, That all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the Commission in Washington, D. C., or at such other place or places as the Commission may designate on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in COMMERCE REPORTS, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, That public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the Commission in the city of Washington, D. C., and at the office of the Commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said COMMERCE REPORTS.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 19th day of March, 1925.

JOHN F. BETHUNE, Secretary.

COMMERCE REPORTS

A Weekly Survey of Foreign Trade

JULIUS KLEIN, Director Bureau of Foreign and Domestic Commerce

Editorial Board: Griffith Evans, Grosvenor M. Jones, E. Dana Durand, Eugene S. Gregg, and Archibald J. Wolfe

Taxation of Securities in Europe

A comparison of the reports submitted by the European offices of the Bureau of Foreign and Domestic Commerce and other material assembled in Trade Information Bulletin No. 326, "Taxation of Securities in Europe," reveals a number of general characteristics in the systems of such taxation. In most of the countries treated in this bulletin there are stamp taxes on both the issue and sale of stocks and bonds. The tax on the issue is usually based on the par value, while the tax on the transfer or sale, which is commonly called a "sales tax" or "turnover tax," is calculated on the amount of the purchase price. Such is unqualifiedly the case in Belgium, Germany, Netherlands, and Spain. While frequently the tax is the same for stocks and bonds, in some instances distinctions are made between them, and between nominative, bearer, and other kinds of securities.

Certain countries have methods peculiar to themselves. For example, in the United Kingdom issues of stock are reached indirectly by means of a stamp duty levied on the statement of the amount which is to form the nominal share capital of registered limited companies, and on the statement of the amount of any increase of registered capital. A similar tax is levied in Austria. In the former country there is also a stamp duty on contract notes.

In most of the countries the sales tax is collected when the transfer is made. France collects a stamp tax on the face value of all securities, a transfer tax on bearer securities, which is based on the average quoted price for the preceding year, and a tax on coupon payments which is collected on an annual basis. A tax similar to the annual tax on the transfer of securities is found in Italy. Switzerland is unique in that its taxation of securities is effected through levying a stamp duty on the coupons of all kinds of securities.

Special provisions for foreign securities appear only in few instances. In France, while the tax rate for foreign securities is virtually the same as for French

securities, nevertheless before the securities of foreign companies can be issued in France or quoted on the bourse a responsible agent must be named. Belgium levies a special stamp tax on securities issued in that country by foreign companies. In Italy the capital of foreign companies which is employed in operations in Italian territory is subject to a special tax.

No-par-value stock is so rarely found in European bourses that mention of it is rarely made in tax legislation or literature. However, specific provisions are found in the laws of Belgium, Spain, and Switzerland. In the first-mentioned country, the Government may compel the company to make a declaration of the real value of such stock, which is then taxed according to the ordinary rate. A fixed rate is levied in Spain. In Switzerland the coupons of such securities are taxable at a fixed percentage. The issue of no-par-value stock is discouraged in France.

In the pages of the above-mentioned bulletin (just published by the Bureau) the general and special methods which have been merely indicated in this brief summary are treated in detail, together with much additional information.

[A. J. WOLFE.]

Pitfalls for the Unwary

American investors in securities of foreign companies and foreign governments should take care to purchase them only through reliable bankers or brokers.

There have recently been several flagrant cases of securities being advertised in American journals at prices from 10 to 100 times the price quoted on the same date in the markets of the countries where the concerns are located. Some of these cases have even attracted the attention of foreign newspapers.

This is not a safe kind of speculation for uninformed Americans, but the would-be investor can easily protect himself by asking the advice of his regular banker.

[R. S. TUCKER.]

World's Commercial News in Brief

The following are brief items compiled from data cabled by Government representatives stationed abroad, from official foreign publications, and from other sources. Countries included in the "Monthly Cable Reviews" are omitted from this section.

European Economic and Trade Developments

For reasons of Bureau administration, this heading includes also Canada

AUSTRIA

The Government, on March 26, removed all restrictions on transactions in foreign exchange and currency but retained the prohibition on export of securities. Vienna is the first city in Central Europe in which this freedom has been granted. It is reported that dealings on the first day after the decree went into effect were very large and resulted in a slight increase in quotations of the Austrian crown. The transition from the old paper-crown currency to the new schilling currency has been successful and has caused no rise in prices.

BELGIUM

Negotiation of the Belgian-German commercial treaty, begun last December, appears to be approaching conclusion. Retail prices declined 1 per cent during the past month. The security and metallurgical markets have both maintained the slight improvement shown during the past two weeks.

CANADA

The Dominion budget submitted to Parliament on March 24 shows an estimated revenue of \$344,000,000 and expenditure of \$342,177,000 for the fiscal year ending March 31, 1926, and Government loans to the Canadian National Railways aggregating \$64,027,000. Important tariff changes announced in the budget speech include the lowering of the import duty on American bituminous coal (other than slack) to 50 cents per ton and the raising of the duty on slack coal to the same rate; the imposition of an export duty on electrical power; the exemption of several articles from the sales tax; and an alteration of the basis for determining dutiable value. There appears to be no prospect of an early settlement of the Nova Scotia coal strike. Canadian pulp and paper exports during January and February were nearly \$1,000,000 larger than a year ago; pulp-wood exports increased almost \$700,000 during the same period. The production of steel ingots and castings in February showed a gain of 37 per cent over January. Wholesale and retail trade in a few lines are somewhat better. Individual manufacturers are well occupied, but industry in general is below normal activity.

FINLAND

Logging operations, hitherto delayed by lack of snow that is now adequate, are progressing on a very large scale. Lumber sales for forward delivery are increasing and amounted on March 15 to 400,000 standards, with an encouraging price outlook. Continued

activity in wood-pulp and paper mills is reported. An increase in note circulation from 1,205,000,000 marks in January to 1,288,000,000 marks in February is also reported. Foreign-exchange holdings of the Bank of Issue rose from 867,000 marks to 907,000,000 marks during the same period. Prices remain fairly constant.

GERMANY

The slight fall in imports, from 1.37 billion marks in January to 1.12 billion in February, is reported as an indication that the extremely heavy imports of raw materials and semifinished products recorded since September are now declining. The import surplus for the first two months of 1925 was 1.17 billion reichsmarks, nearly half the total 1924 import surplus of 2.7 million. Heavy imports of raw and semifinished materials, together with large foreign short-term credits, have increased German domestic consumption to a considerable degree. The wholesale-price index has registered a rise exceeding by 10 per cent the normal world price increase since July, 1924. The continuation of these high prices is in a measure dependent on a tariff policy yet to be effected, and also on the Reichsbank policy, which has been one of consistent credit restriction since April, 1924, and consequently unfavorable to high price levels.

GREAT BRITAIN

The budget will be introduced on April 28, and it still appears that there will be a moderate surplus. The Chancellor of the Exchequer has stated that while he is anxious to announce a decision on the restoration of the gold standard at the earliest possible moment, this can not be done before the parliamentary recess. Improvement in the coal industry is not yet representative, but it is expected that shipments may be better during the next fortnight in anticipation of the Easter holidays. The official cost-of-living index has shown no change in retail prices during March, remaining at 79 per cent above pre-war as compared with 78 at the end of February.

HUNGARY

Textile mills are working on full schedule, and large quantities of textiles are being imported in spite of high customs duties. The iron and metal industries, however, continue to be seriously depressed. The wholesale commodity index is now 160, and it is locally expected that prevailing high prices may encourage imports, particularly from Great Britain and the United States.

LATVIA

Logging operations have been curtailed to a minimum, entailing the closing down of a number of mills. Purchases of auction forest lands, put up by the Government, have been inconsiderable except by speculators in anticipation of a rise in lumber prices later in the year. Present currency circulation totals 100,000,000 lats (the lat=19.3 cents), of which 48,000,000 lats are Treasury notes secured by State property; 28,700,000 are bank notes fully covered by gold and foreign exchange; and 28,000,000 lats are in bronze, nickel, and silver specie. Commercial Attaché Mayer, at Riga, cables that Latvia is seeking a loan of 60,000,000 lats.

THE NETHERLANDS

Government revenues during the past month have been less than for the month preceding. The regulation Treasury paper issue was undersubscribed, and there was a relaxation of the discount policy of the Netherlands Bank during the week. Trade during February showed a decrease from that of January, but shipping conditions are better and there is no idle tonnage in either Amsterdam or Rotterdam.

POLAND

The Government has established, in connection with the State Textile School, an institute for the testing of raw materials, finished products, chemicals, water, etc. Polish banks are unable to supply the demand for money, and many loans are being procured by well-established firms at interest rates as high as 8 per cent a month. A recent tendency to purchase American machinery is being counteracted by increased credit competition from Germany and Czechoslovakia.

RUMANIA

Increasing concern is manifested over the probable necessity for importing wheat before the next harvest. The Minister of Agriculture has not yet admitted that importation will be necessary, but intimates that if it should be, the wheat will probably come from India or Argentina. It is reported that the General Staff has required that no army supplies be purchased abroad if they can be manufactured in the Kingdom, regardless of price or quality.

SPAIN

Business in general continues dull. The mining industries are more prosperous than others, with a slight revival in demand for iron ore, and an increased demand for native coal. Railway transportation needs continue to receive a great deal of attention, and recommendations for railway construction have been made to the superior railroad council. These include projects for construction of approximately 6,000 miles of railroad, involving the expenditure of 5 billion pesetas within a period of 20 years.

SWEDEN

The labor conflicts which have seriously disrupted Swedish industries appear to have been terminated by an agreement which affects all existing lockouts and strikes. Work is to be resumed immediately, although, but slight changes in wages have been effected. It is estimated that labor costs in the paper industry will be increased by about 4 per cent. The foot-and-mouth disease continues serious, particularly in the west and south, although some 10,000,000 crowns have been expended toward its eradication.

Latin America at a Glance

PARAGUAY

The economic situation of Paraguay has been somewhat depressed, the cotton harvest having been damaged by the army worm, but improvement in the general situation is expected in April. Official figures show Paraguayan exports for 1924 as having reached 8,100,000 Argentine gold pesos and imports 9,500,000 gold pesos. The money market is quiet, and little activity is expected until results of the cotton and tobacco harvests are definitely known. (Consul Digby A. Willson, Asuncion, March 28.)

ECUADOR

Washouts are reported on the Guayaquil-Quito railroad in Ecuador. Several months may pass before this line is in complete operation again, and it is feared that the highland regions will suffer considerably from lack of transportation, as this road is the only connection they have with the coast and the outside world. (Consul R. P. Butrick, Guayaquil.)

COLOMBIA

General business conditions in Colombia are good, with exchange steady. The import trade is more

active in the Cauca Valley section than along the Caribbean coast and at Bogota. The merchants of the interior are importing direct, which has curtailed the business of the merchants in the coast towns. (Curtis R. Hill, secretary to commercial attaché, Bogota.)

PANAMA

A sharp decline was noted in Panama trade during March in both imports and exports as compared with February, and further declines are expected during April and May. The Panama Congress, which is expected to adjourn shortly, has authorized a loan of \$1,000,000 for school construction and other loans totaling \$650,000 for road construction. The Panama Railroad Co. will warehouse goods "for orders" beginning April 1 at Canal Zone ports. (Consul George Orr, Panama City, March 26.)

COSTA RICA

Despite the fact that prices for coffee have weakened somewhat, wholesale trade continues firm in Costa Rica, with slightly weaker retail movement. Indications are for a maximum coffee crop for 1925-26. Sugar prices are somewhat lower; domestic foodstuffs are still high. Bank collections are good. (Vice Consul Roderick W. Unckles, San Jose, March 26.)

NICARAGUA

Business as a whole is still good in Nicaragua, but caution is urged in granting credits. The crop estimates as reported last month are unchanged. Exchange is firm, and circulation has reached 4,000,000 cordovas. The \$500,000 loan offered by New York bankers was rejected on March 25 by the Nicaraguan Congress. (Consul Harold Playter, Corinto, March 27.)

SALVADOR

Business, as a whole, continued good in Salvador during March, although it was less active than in February. The market for piece goods has been especially dull—partly the result of a practically stagnant coffee market—although tempting offers have been made on the part of Salvador exporters to both European and American coffee buyers. The expected increase in coffee shipments during March did not materialize. (Consul M. J. McCafferty, San Salvador, March 26.)

HONDURAS

Although the serious strikes which stopped work at both sugar mills and at the shoe factory of Ceiba, Honduras, were settled on March 12 and work resumed, general confidence was noticeably shaken. Business in the southern part of Honduras continues stagnant. General hope is centered upon the ability of the Government to negotiate a loan in the United States. (Consul George P. Shaw, Tegucigalpa.)

GUATEMALA

Coffee buyers in Guatemala are reported to have lost heavily as a result of declining prices from \$28 per hundredweight in January to \$25 during February and to \$23.50 in March. With 65 per cent of the crop shipped, poor quality has caused heavy rejections on the remainder. Imported stocks are moving very slowly, importations are light, and representatives of foreign houses are cautious in accepting orders. (Consul General Phillip Holland, Guatemala City, March 26.)

MEXICO

Although the business turnover of Mexico has not materially declined, purchasing is once more limited to staple commodities and general confidence has been materially weakened during the last two weeks of March. This has had the effect of restricting fresh capital investments. Conditions outside of Mexico City are reported somewhat better. The large accumulation of gold has caused a rise of the Mexican peso above par compared with the United States dollar. Money as a whole is scarce, however, and collections are very slow. Trade is limited in Mexico City to hand-to-mouth buying. (Commercial Attaché A. V. Dye, Mexico City, March 28.)

GUADELOUPE

The banks of Guadeloupe report financial conditions good. The sugar crop is now being ground and is expected to yield a greater outrun than for several years past. The vanilla and vanillin output will probably exceed 40,000 pounds, with high prices. Exports continue to exceed imports. (Vice Consul E. St. G. Lough, Guadeloupe.)

HAITI

The coffee crop of Haiti is practically finished and it is estimated that the total amount was about 65,000,000 pounds—somewhat less than expected. Foreign trade continues to reflect general prosperity. Unprecedented activity in the importation of construction materials is noted and foodstuff items register a considerable movement. Coffee prices continue high and the cotton crop is now moving at good prices. (Consul M. P. Dunlap, Port au Prince, March 27.)

CUBA

The labor situation continues to be a disturbing factor in Cuba, although there were no unlooked for developments during the week ended March 28. An early strike on the Cuba Railroad is threatened and if it materializes it is likely to paralyze traffic east of Santa Clara. The grinding of the sugar crop proceeds uninterruptedly with no change in prices.

Far Eastern Trade News

JAPAN

Japan's foreign trade for the second 10 days of March shows exports of 55,100,000 yen and imports of 103,300,000, according to the weekly cable from Acting Commercial Attaché Frank Rhea, Tokyo. In comparison with the previous 10-day period there were increases of 22,100,000 and 107,200,000 yen in exports and imports, respectively, causing a decline of 4,900,000 in the amount of the adverse balance. The adverse balance for the period from January 1 to March 20 totals 305,400,000 yen, the largest ever recorded during a similar period with the exception of 1924 when reconstruction demands brought the unfavorable balance for the first three months to well above 400,000,000 yen.

PHILIPPINE ISLANDS

The leading export markets of the Philippines were inactive during the week ended March 27, according to cabled information from Assistant Trade Commissioner E. B. George, Manila. Actual transactions in abaca (manila hemp) were few, on a very quiet mar-

ket. Prices of this commodity are now declining, though very slowly. Most sellers are delivering against old higher-priced contracts and are not interested in present values. Abaca production is improving, as compared with the past two months, but is still below that of a year ago. Light buying on the copra market during the week was offset by very light production. The price of resecado copra is still maintained above American oil parities. Most local mills are practically out of the market and representatives of American mills are buying sparingly. Sugar is proceeding steadily. Improved weather conditions have caused further revisions of the estimates of both the current and next year's crops. New figures are now in the course of preparation.

AUSTRALIA

Wool sales at Sydney during the week ended March 28 showed a firmer tendency, with best merino bringing around 34.5 per pound, according to cable advices from Trade Commissioner E. G. Babbitt, Melbourne.

Present prices are expected to be maintained throughout the remainder of the season. There were few local transactions in wheat during the week, with the price per bushel about 6s. 2d., as compared with 6s. 4.5 d. on February 18 and 6s. 10d. during the early part of February. Wheat shipments since the January boom, consequent upon high prices at that time, have been lighter. Practically the whole crop is now in. The Commonwealth loan of £7,000,000, which was placed on the local market at 6 per cent, for the benefit of the States, in accordance with the Premier's conference held in February, was reduced to £5,400,000 and closed with the total amount fairly subscribed.

CHINA

Increased apprehension over the probable renewal of hostilities is undermining the optimism that has prevailed in the Shanghai import and export markets since the beginning of the year, according to the weekly

cable from Commercial Attaché Julean Arnold, Peking. Import orders have been adversely affected although there is considerable speculative buying of China produce. Banks continue to maintain a cautious attitude, nevertheless, silver rates are easier and the March settlements on the Shanghai Stock Exchange have been completed satisfactorily. The local piece-goods merchants are refraining from placing new orders until they have liquidated their present heavy stocks.

Gross imports into the port of Shanghai during 1924 totaled 483,500,000 haikwan taels (haikwan tael averaged \$0.89 in 1924) against 419,600,000 the previous year. The principal contributors to the 1924 trade were the United States, 112,300,000 haikwan taels; Great Britain, 106,600,000; Japan, 98,500,000; and Germany, 25,100,000. The advance in the price of American wheat is seriously affecting American sales of flour in the China market.

MONTHLY CABLE REVIEWS

LATIN AMERICA

Richard F. O'Toole, Chief, Latin American Division

RAINS HELP ARGENTINE SITUATION

Based on cable from Commercial Attaché Edward F. Feely, Buenos Aires, March 28

Recent rains have improved pasturage in Argentina and conditions are now excellent for fall plowing and wintering livestock. An increased acreage of wheat is probable. Federal revenues are showing a gain over last year. The export movement in agricultural products is dull except for meat. The Government is renewing short term notes at 4½ per cent. Bank rates are easier due to increased circulating medium. The exchange market is also more active with a buying tendency. German manufacturers were the successful bidders for recent orders of car wheels and steel pipe. Charter and berth rates are lower. Imports from the United States were slightly in excess of February figures according to bank collections.

Final Figures for 1924.

Argentina's final official trade figures for 1924 are: Exports, 1,011,394,000 gold pesos, an increase of 31 per cent over 1923, and imports 828,700,000 gold pesos, a decrease of 4 per cent compared with 1923. The total volume of 1924 trade was 14,400,000 tons, an increase of 31 per cent over 1923. The Argentina mortgage bank loaned 201,997,000 paper pesos during 1924.

Quarterly Exports

Exports of Argentine products from January 1 to March 26, compared with the corresponding period of last year were: Wheat, 1,524,000 and 1,566,000 tons; corn, 361,000 and 151,000 tons; linseed, 172,000 and 551,000 tons; oats, 190,000 and 217,000 tons; butter, 296,000 and 470,000 cases; sheepskins, 3,711 and 8,125 bales; birdseed, 535 and 1,772 tons; beef, 2,214,000 and 2,025,000 quarters; mutton, 1,070,000 and 1,156,000 carcasses; wool, from October 1 to March 26, 132,900

and 184,000 bales; dried and salted hides, 1,868,000 hides, and 1,381,000 hides.

Economic Improvement Expected in Bolivia

Based on cable from Vice Consul A. Ostertag, La Paz, March 28

General conditions in Bolivia point to economic improvement within the next few months. The dry goods and machinery markets are dull, the foodstuffs market is normal, and the building materials and paint markets are active, with collections satisfactory. Exchange remained steady during the month, averaging 2.96 bolivianos to the dollar. A balanced national budget for 1925 has recently been submitted to Congress and approved. A loan of 600,000 pounds sterling has been executed by the Government, the proceeds of which are to be applied toward the completion of the Potosi-Sucre Railway. The contract for construction work involved in this deal has been awarded to the Bolivia Railway Co.

Industrial Exhibition During Centennial Celebration.

An international industrial exhibition will be held at Tela Central Station of the Guaqui La Paz Railroad, La Paz, during the nation's centennial celebration in July and August of this year, to which American manufacturers are invited to send exhibits. Approximately 50 per cent reduction is offered on railway freights for foreign exhibits; import duties will be exempted, and exhibition space will be free.

Export and Import Trade.

Mineral exports in February showed a tendency to decrease, due to a number of holidays during the month. The exportation in metric tons was as follows: Tin—3,854 to Great Britain; lead—1,652 to Great Britain, 680 to Germany, 880 to Argentina, 108 to Belgium, 28 to Spain, and 22 to the United States;

copper—850 to the United States and 45 to Great Britain; silver—405 to the United States, 102 to Great Britain, 100 to Belgium, and 7 to Germany; anti-mony—85 to the United States and 53 to Great Britain; zinc—124 to Great Britain; bismuth—21 to Great Britain and 2 to Germany.

Imports in February showed an increase over January. The principal items were iron and steel from Belgium, Great Britain, and the Netherlands; machinery from the United States and Germany; cotton goods from the United States and Great Britain; hardware from the United States and Germany; automobiles from the United States; foodstuffs from the United States, Great Britain, Peru, and Chile; and petroleum products from the United States and Great Britain.

Increased Confidence in Chilean Business

Based on cable from Commercial Attaché Ralph H. Ackerman, Santiago, March 28

A feeling of greater confidence is apparent in all lines of business in Chile since the return to that country of President Alessandri than has been the case at any time since the recent Government upheavals. One evidence of this better feeling is seen in a general inclination to renew stocks. Appearances indicate that the economic situation in April will be improved especially in the central and southern zone, the north being slower to react. Credit, nevertheless, remains tight, which restricts the volume of trade, but banks are lending more freely and many large importers are getting back to their former basis of operation. Bank rates continue to be as high as 10 to 12 per cent on first-class loans, with stock-exchange rates reduced to 24 per cent. Operations have increased in volume. Stocks and bonds show an upward trend; commercial and savings deposits are believed to be increasing; and collections are improving.

Industries Active.

The demand for agricultural products continues good, with high prices prevailing. A heavy movement of products to the seaboard has been recorded. Manufacturing is fair, with production benefitting from improved collections. Wholesalers are optimistic; their turnovers are more active, and as a consequence orders for future arrival have shown a tendency to increase. Failures during the month have not been above normal.

The average of exchange for the first 20 days of March was 8.92 paper pesos to the dollar. Circulation of paper on February 27 amounted to 305,799,678 pesos.

Import Trade in Many Lines Improved.

The sale of automobiles of all types is smaller than it has been, although trucks are selling better, and the prospect for an increased sale of tractors is good. No change has been recorded in the tire trade. Demand for industrial and mining machinery has improved, with European competition in industrial and wood-working machinery very strong. There is a slight improvement over February in the demand for electrical equipment, although it is not so good as it was last year. Motors and radio are moving well. There is a renewed call for agricultural implements. Hardware, iron and steel, dyes and chemicals are slow, with competition increasing. The textile market is much better than in February, particularly in gray goods. Some sales of winter goods for quick shipment have been made. Arrivals have been larger than in February.

The number of building permits shows a tendency to increase.

Mining Activities.

Nitrate exports during the first 20 days of March reached 1,000,000 metric quintals. Sales have increased slightly, while stocks abroad and on the coast are being maintained at approximately the same levels as during February.

Production of copper and coal continues high, the market for foreign coals showing increased activity along the coast. One sale of American coal at 33 shillings for arrival at nitrate ports in March-April has been reported, as have also transactions in West Hartley coal, involving steamers in transit and April-May arrivals at a price of 37 shillings. A cargo of German Westphalian coal, to arrive at a nitrate port by motor vessel in June, is placed at 36 shillings. Chilean coals are still quoted at 82 pesos per ton.

Floods in Peru Hinder Trade

March has proven a disastrous month in Peru for the agricultural industry and trade in general. Heavy floods and continuing rains throughout many sections have caused damage estimated as high as 4,000,000 Peruvian pounds. Railway lines have been washed out in many sections. The central railway was out of service the entire month, and four to six months will be required for repairs. The greatest damage to property was incurred in the city of Trujillo, half of which was destroyed. In Lima the city's electric power plant was damaged to such an extent that operations in all industries depending on it have been curtailed to a few hours daily. Sugar and cotton planters have been heavy losers, and many small planters were financially ruined. For the wealthy planters able to survive, these losses will be partly offset next season, as good crops are practically assured, regardless of rainfall.

Supplies Limited.

Mines in the Cerro de Pasco region are still operating with supplies on hand, but may have to close down if the railway service is not soon resumed. Lima has been almost entirely cut off from the surrounding country. No goods or salesmen can be sent into the interior, and all coastal cities have been so damaged that their purchases are confined strictly to bare necessities. It is estimated that there will be sufficient sugar available for this year's domestic needs, but very little for export. Because of the tremendous increase in living costs and suffering among the poor, preference is being given to the clearance of foodstuffs through Callao customhouse, and a proposal has been made to Congress that materials necessary for the rebuilding of Trujillo be admitted free of duty.

Demand for Building Materials—Automobiles Imported.

A great deal of reconstruction will be necessary, including railroad bridges as well as city and farm buildings, which should create a sharp demand for cement and structural steel. A sales tax of one-half centavo each on cigarettes has been imposed, the proceeds to be devoted to road building. The Government is also appropriating funds for the relief of flood sufferers.

Imports of automobiles in March through the port of Callao covered 128 passenger cars and 50 trucks.

New Import Duties—Exemptions.

A law signed March 18, placed an additional duty of 2 per cent ad valorem on all imports except rice, vermicelli products, flour, lard, tea, and wheat, and an additional 5 per cent ad valorem on parcel-post imports, to be devoted to public instruction. However, decrees effective March 29 permit potatoes, jerked beef, garden produce, and coffee to be imported free of all duty and exempt from consular charges for a period of 60 days. In addition a central sugar committee has been authorized to import from the United States on its own account white sugar up to 1,000 tons, as required for consumption, free of all import duties and consular charges.

The gold reserve fund as of February 28 was 5,076,092 Peruvian pounds, and the notes in circulation totaled 5,828,133 pounds. Exchange has fallen from \$4.22 to the pound on March 1 to \$4.11 on March 28.

Uruguay Business Dull

Commercial Attaché Lew B. Clark, Montevideo, March 28

Business is dull in Uruguay. The wool market continues inactive with the clip only about half sold. Prices range between 8.50 to 9 pesos per 10 kilos. The frigorificos are more active with fat cattle worth 10 and 11 centesimos per kilo on the hoof.

Typical imports for the February 21 to March 21 period were: Agricultural implements, American 1,600 cases and European 29 cases; cotton yarn, American 140 cases and European 60 cases; sewing machines, American 15 and European 190; typewriters, American 36 and European 32; cement, American 1,000 barrels and European 7,000 barrels; and wire, European 1,800 rolls and none from the United States.

Money is tight in Uruguay. Loans are bringing 9 per cent, overdrafts 8½ per cent, and fixed deposits 6½ per cent. Little improvement in the financial affairs of the country is likely until the wool situation clears. Exchange is quiet, around 105 pesos to the dollar.

Conditions Satisfactory in Venezuela

Based on cable reports from Consul W. P. Garrety, Puerto Cabello; Consul A. H. Gerberich, Maracaibo; and Vice Consul A. R. Williams, Caracas, March 24

General business conditions were good throughout Venezuela during March with exchange steady at 5.17 bolivars to the dollar. (At par 5.18 bolivars equal \$1.) The Banco Neerlandio Venezolano is being organized at Caracas by local capitalists with the former manager of the Dutch bank of that city in charge.

Considerable Stocks of Coffee Held—Cacao Prices Decline.

Coffee prices continued to decline with the European buyers apparently waiting for a further drop in coffee values and the Venezuelan coffee exporters are holding stocks hoping for a recovery in the market.

Cacao showed a further decline and was quoted at 65 bolivars per sack of 50 kilos as compared with 70 bolivars during the preceding month and 56 bolivars in March, 1924.

Reports from Puerto Cabello are that general conditions in that district are good notwithstanding the decline in coffee prices.

Construction Activities.

Maracaibo reports that plans are being made for the establishment there during the present year of a cold

storage plant, a textile mill and a factory for the manufacture of sanitary drinking appliances.

The oil companies that are building loading terminals on the Paraguana peninsula are storing oil there pending the completion of these facilities and will ship oil in tankers direct to the United States, when the work is finished.

Trade Still Dull in Porto Rico

Trade Commissioner L. W. James, San Juan, March 28

The commercial situation in Porto Rico shows little improvement. Better collections and local sales are expected for April, as money now going out to sugar and tobacco industries should then reach general circulation. Practically all lines of merchandise show normal to heavy stocks in the hands of importing distributors and only a small demand on the part of retailers. Merchants generally complain that sales are slow and collections poor.

Sugar and Tobacco Crops Being Marketed.

The sugar crop is being ground normally with export shipments regular and about equal to those of last year. The sucrose content of the cane is still low but improving slowly. The tobacco crop is now coming on the market with the amount estimated to be from 20 to 25 per cent below last year. The quality is good with satisfactory prices. The flowering of the new coffee crop indicates that it will be better than that of the present season.

Imports are slow with importers holding rather large stocks of foodstuffs, hardware, textiles, shoes, drugs, and most manufactures. Lumber and other building material is well stocked and the present movement is slow but improvement is expected shortly. Automobile receipts continue heavy and sales are holding up well, particularly those of the cheaper cars. The lack of money in circulation and increasing prices of many articles is blamed for the slow assimilation of imports.

Mercantile Business Slow in Dominican Republic

Consuls C. B. Hosmer and W. A. Bickers, Santo Domingo, March 26

The domestic mercantile movement is definitely subnormal and banks report that collections continue very unsatisfactory. The agricultural outlook is favorable, prospects for cacao, coffee, tobacco, and corn are excellent. Sugar yields are low but are showing some improvement. The production of sugar to March 1, amounted to 115,000 short tons, compared with 110,000 to the same date in 1924. Mills expect to reach their estimates; two mills expect to exceed theirs. Exports of sugar are slow with cacao and coffee normal and the total slightly subnormal.

Work on the Government irrigation projects near Monte Christi and the reconstruction of the Santiago-Puerto Plata electric plant has begun. The first unit of the reconstructed electric plant at Santo Domingo is now operating.

Customs collections for February amounted to \$370,000; internal revenue collections to \$207,000, exceeding those for the same month of 1924 by \$105,000 and \$21,000, respectively. An unusual number of American commercial representatives are now visiting the Republic.

FAR EAST

H. A. Butts, Acting Chief, Far Eastern Division

Indian Situation Continues to Improve

Based on cable from Assistant Trade Commissioner E. G. Sabine, Bombay

With the gradual clearing up of political unrest in India the situation appears more favorable than for several years, and all factors are tending to improve import business. Exports during the month continued very heavy, and bullion imports commenced to decline. As warm weather approaches the number of American and other foreign commercial travelers passing through India is decreasing. Recent arrivals report considerable trade, however, especially in bazaar lines. The first tourist ship of the season arrived in Calcutta recently with 400 Americans on board, many of whom were business men. A number of Indian and British merchants are expected to visit the United States during the next two months for the purpose of making business contacts.

Financial Situation Reported—Customs Revenue.

The Finance Bill has passed the legislative assembly with several reductions, notably the salt tax. The Government has confirmed the report that it will allow reductions in provincial contributions recommended in the annual budget. Money continues tight, due to the heavy requirements for financing bullion, rice and cotton transactions, but the situation is not critical. The bank rate remains unchanged. Trade demands on March 13 had increased about 57,100,000 rupees as compared with February 20, according to the Imperial Bank statement. Government deposits over the same period increased 21,200,000, while other deposits had advanced about 3,600,000 rupees. On March 13 the Imperial Bank's cash had declined 20,300,000 rupees as compared with February 20, leaving the ratio of cash to liabilities 13.47 per cent.

The exchange situation on March 27 was featureless, with rates steady. Gold arrivals during January and February were especially heavy, and it is estimated that the amount on hand is sufficient for two months' supply. Imports of bullion are on the decline. Silver stocks are also ample. The Imperial Bank reported that clearings during the four weeks ended March 14 had decreased about 42,500,000 rupees from the figures of the preceding four weeks.

Customs revenue collected on imports of sugar, yarn, textiles, iron, steel, liquors, oils, hardware, and automobiles, and export duties on jute, rice, tea, and kerosene, showed increases, while import duties on matches, machinery, and railway materials registered declines.

Raw Cotton Market Quiet—Other Commodities.

The market for raw cotton continues quiet, with a tendency to weakness; stocks are low and buyers cautious. Piece goods show no improvement, and prices for some qualities have declined one-quarter anna per pound. Yarn is slow, but the feeling is slightly better. Large stocks were moved during the latter part of March and dealers are expecting a revival of the up-country demand. There is a good inquiry for jute and hessians and the tendency is becoming firmer, owing to speculative demands. From present indications the crop will be better than last year.

The shellac market is quiet, only small amounts being moved at irregular prices. Tea improved somewhat during the latter half of the month, but the offering of Ceylon teas of inferior quality at reductions has somewhat unsettled the market. Chemicals are dull, with the dye business limited. German competition in dyes is keen. Cawnpore hides and Madras sheep are dull, with no demand at lower prices. Sugar prices are steady, with low stocks and light requirements. Rice is quiet at lower prices, and stocks are low at both large and small mills. Wheat exports are light, with limited supplies and prices higher. Iron and steel are reported indifferent, and prices weaker. Bazaar lines are generally unimproved, due largely to the money situation. German competition in bazaar lines is not as keen as had been anticipated, especially in Calcutta.

Automotive Trade Fair—Spring Plantings.

Automobiles and light trucks are moving moderately well. No reduction in the import duties on motor vehicles has disappointed the trade somewhat, and it is generally believed that the lower petrol tax will stimulate sales only slightly. Several further price reductions have been made in automobile prices, especially in British makes, the result largely of the increased foreign purchasing power of the rupee consequent upon its rise in international exchange, which allows automobiles to be landed in India at less cost.

Weather conditions continue favorable, and spring plantings are reported heavier than last year.

Far Eastern Trade and Economic Notes

Yokohama Recovering as an Export Port.

Although the city and port of Yokohama was practically wiped out in the great earthquake of 1923, there has been a remarkable comeback during the past year, and the port now handles almost as much trade as before the disaster. Temporary handling and transportation facilities have replaced those destroyed by the quake; raw-silk conditioning and trading conveniences have been restored; and banks and commercial companies have returned to the city. It is not surprising, therefore, to learn that the declared exports from this port to the United States aggregated \$251,673,774 during 1924, compared with \$237,866,151 in 1923. The gain was not quite as large, however, as these figures indicate, since the month of August is not included in the 1923 figure, owing to the destruction of all records, while the 1924 also includes approximately \$4,500,000 worth of tea which was shipped from the near-by port of Shimizu, although this item is not included in the 1923 total. (Consul Graham H. Kemper, Yokohama, Japan.)

Japan's Population Increase Exceeds Normal.

An official estimate of the population of Japan proper at the end of October, 1924, places the total at 59,138,900, an increase of 657,400 in comparison with December, 1923. This increase is at a rate of 789,000 per annum, or somewhat above the normal gain, which is usually estimated at 750,000. The population by principal cities indicates a very sharp increase in Japan's urban population, the four cities of Nagoya,

Kyoto, Osaka, and Kobe having recorded a gain of 637,349 since the census of 1920. Tokyo, with a pre-earthquake population of 2,173,201, now has 1,917,308 inhabitants, while Yokohama has 389,700, compared with 422,938 before the 1923 disaster. (Acting Commercial Attaché Frank Rhea, Tokyo.)

Philippine Trade Advancing

Cable from Assistant Trade Commissioner Edwin B. George, Manila, March 30

Total Philippine trade in February advanced 6,000,000 pesos over the previous month and 8,000,000 pesos over February of last year (1 peso=\$0.50). Increased exports were responsible for 4,000,000 pesos of the improvement over January. Shipments of Philippine produce in February attained a larger total value than in any month since March, 1924, while imports were greater than any month since July, 1924.

Philippine export is normally heavy the first half of the year, and leading export commodities, especially abaca (manila hemp), have sustained unusually high-price levels since the latter part of last year. This improvement in the islands' produce markets may be considered largely responsible for the corresponding advancement in import trade.

Leading Commodities Exported and Imported.

Details of Philippine February trade and comparisons with February of last year follow:

Leading commodities in Philippine trade

Commodities	February, 1924	1925	
		February	First two months
EXPORTS			
Abaca (manila hemp).....	Pesos 3,949,000	Pesos 6,774,000	Pesos 13,112,000
Sugar.....	13,422,000	11,371,000	19,333,000
Coconut oil.....	3,081,000	2,435,000	4,983,000
Copra cake.....	271,000	377,000	734,000
Cigars and cigarettes.....	819,000	761,000	1,470,000
Leaf tobacco.....	544,000	126,000	1,826,000
All other articles.....	4,880,000	6,427,000	11,062,000
Total.....	26,966,000	28,271,000	62,520,000
IMPORTS			
Iron and steel manufactures.....	2,145,000	3,659,000	7,030,000
Cotton and manufactures, except cloth.....	865,000	1,187,000	2,260,000
Cotton cloth.....	2,616,000	3,627,000	7,276,000
Meat and dairy products.....	971,000	772,000	1,764,000
Automobiles, tires, and parts.....	459,000	696,000	1,635,000
Wheat flour.....	919,000	1,137,000	2,104,000
Paper and manufactures.....	518,000	573,000	1,062,000
Leather and manufactures.....	143,000	199,000	399,000
All other articles.....	8,020,000	11,793,000	21,628,000
Total.....	16,656,000	23,643,000	45,088,000

EUROPE

Samuel H. Cross, Chief, European Division

Danish Industries Disturbed by Labor Conflicts

Based on cable from A. E. Fenslau, trade commissioner's office, Copenhagen, March 26

Improvement in financial conditions has attended the operation of the exchange-stabilization plan, and confidence in the ultimate success of this measure is growing. A disturbing element in the financial, as well as the industrial situation has now developed, however, by the outbreak of serious labor conflicts. The effects of these disturbances are also being felt by business in general and, as a consequence, the immediate outlook is somewhat obscured. With the decline in prices, which set in during the past month, and the uncertainty surrounding the industrial situation, a cautious attitude is being taken.

Conflict's Wide Scope Does Not Include Transportation.

Failure to reach an agreement regarding new wage scales led to the outbreak of strikes and lockouts, involving 60,000 workers, which went into effect on March 19. These conflicts, affecting the iron, metal, machinery, margarine, sugar, oil-extracting, and building industries, are threatening others, with the danger of serious complications. In view of the gravity of the situation, very energetic efforts looking to an adjustment of the disputes are being made. As the conflicts have not yet extended to transportation workers, there is no interference with shipments of Danish farm produce, the predominant factor in Danish economic life.

Work in Danish shipyards, one of the most important industrial activities of the country, has been practically suspended, however, and this interferes with work on many new vessels that are being constructed for foreign account. The machinery industry likewise is tied up. Unemployment prior to the outbreak amounted to 44,000; or the same figure as during February. This represented a large improvement over the

corresponding month of 1924, when the number of unemployed was 56,000.

Money Market Stringent.

A noticeable stringency obtains in the money market, as a direct result of the continued reduction in outstanding notes and the restrictions enforced on extension of credits.

The note circulation declined from 416,700,000 crowns on February 13 to 402,500,000 crowns on March 23, with an attendant increase in the percentage of metallic cover. Foreign-exchange holdings of the Bank of Issue, on the other hand, amounted on February 28 to 23,600,000 crowns as compared with 27,800,000 crowns on January 31. Deposits of the Danish private banks during January decreased from 2,429,000,000 to 2,408,000,000 crowns, while loans and discounts increased to 2,529,000,000 crowns from that of 2,518,000,000 crowns for December.

Annual statements made public are, on the whole, very favorable, although several large corporations have been obliged to pass dividends.

Stock Exchange Weak—Price Levels Lower.

The labor conflicts have brought a tendency toward weakness in stock-exchange operations. Investors are hesitant, and trading has been very slight. The stock-exchange indexes, as of March 21, were: For banks 79, for shipping 85, and for industries 130, as against 81.5, 96, and 135, respectively, as of February 14.

Danish exchange has appreciated to a considerable extent, partly as a result of the exchange-stabilization measures and partly as a result of very large exports. The Danish crown is now quoted at 18.3 cents, as compared with 17.8 cents a month ago. The present rate is, therefore, considerably in excess of the minimum of 17.4 cents, which is to be maintained by the Bank of Issue up to June 30 of the current year.

The general decline in prices during February is reflected in the wholesale index, which was reduced from 234 to 230, principally by the fall in prices of feedstuffs, particularly cottonseed cake.

Agricultural Exports Large.

No interruption has occurred in shipments of farm produce. The quantities moved remain very high, particularly as regards bacon and eggs, and prices obtained in export markets are profitable. Feedstuff prices, on the other hand, have declined, much to the advantage of the farmer. After having constituted a serious menace and caused considerable losses during the past three or four months, the foot-and-mouth disease is now gradually receding; this will tend to increase shipments of livestock and meats which hitherto have been very much restricted.

January Foreign Trade Improved.

With a substantial decline in total imports and a slight increase in export shipments, the Danish adverse trade balance for January was reduced to 22,000,000 crowns from the 50,000,000 crowns for December. Imports, valued at 229,000,000 crowns in December, were reduced to 204,000,000 crowns in January. The principal import values, in crowns, were as follows (December figures in parentheses): Grains, 29,000,000 (31,000,000); textiles, 17,400,000 (16,700,000); feedstuffs, 35,000,000 (34,700,000); groceries, 10,400,000 (11,300,000). The number of imported automobiles rose from 80 in December to 108 in January. It will be noticed that imports of grain remain very high, and feedstuff imports have increased still more to take care of the expanding agricultural output.

Exports Show Slight Gains.

Reexports during January were valued 2,000,000 crowns lower than in December, when their total reached 14,000,000 crowns. Exports of domestic merchandise, on the other hand, increased from 165,000,000 crowns in December to 170,000,000 crowns for January. The values in crowns of the principal exported items, compared with December figures (in parentheses), were as follows: Dairy products, 63,300,000 (57,800,000); packinghouse products, 57,000,000 (45,200,000); eggs, 12,000,000 (10,000,000); and livestock, 4,000,000 (6,600,000). Cement shipments declined from 37,420 metric tons in December to 29,795 metric tons for January.

Italian Industries Surmount Difficulties

Based on cable from Commercial Attaché H. C. MacLean, Rome, March 27, with cooperation of consuls at Genoa, Milan, Turin, Leghorn, Palermo, and Naples

The Government decree requiring 25 per cent margins on all security purchases in Italy was followed by a considerable break in prices on the stock exchanges. Modifications in the decree, however, allowing the use of securities as margins up to a certain percentage of their market value and establishing a ruling whereby only 5 per cent margin was required during March and an increase of 5 per cent in each succeeding month until the full 25 per cent shall be reached in July, have mitigated the effects of the decree; the tone of the markets has improved accordingly, with somewhat stronger prices. Money is now more abundant than expected, and the danger of serious difficulties at the time of monthly settlements has passed. Interest

rates have become somewhat higher; call loans have reached 5½ per cent and discounts 7 to 8 per cent.

Business interests have expressed great satisfaction over the decision of the Government to apply the income tax only to distributed profits instead of taxing new securities issued above their par value. This form of taxation hampered the expansion of business without producing any great amount of revenue for the Government.

Labor Uncertainty Continues.

The agitation on the part of metal workers in Lombardy, which at one time involved as many as 120,000 men, is now ended, but the question of wages is not yet definitely settled. Wool manufacturers and building contractors have granted increases in order to avoid interruptions to production. A general readjustment of wages to the new level of the cost of living is now in progress, and the position of workers is strengthened by the shortage of skilled labor. Such readjustments will be necessary so long as the cost of living continues to advance as at present. Unemployment at the end of February showed no change from the previous month, with 156,000 workers of all classes unemployed.

Probable Extension of German Modus Vivendi.

The present modus vivendi with Germany expires on March 31. In view of the impossibility of concluding a new commercial treaty by that date, it is probable that the modus vivendi will be renewed in spite of the opposition of Italian manufacturers.

Government Deficit Slightly Increased.

Government revenues in February showed an increase of only 34,000,000 lire, as compared with February, 1924, while expenses showed an increase of 254,000,000 lire. As a result of this advance in expenses, the deficit for the eight months ended February 28 was 187,000,000 lire, as compared with only 167,000,000 lire, at the end of January.

The internal debt on February 28 stood at 91,805,000,000 lire, or 35,000,000 lire more than on January 31, owing to the issuance of new Government securities. Short-term notes, however, were reduced during the month by 108,000,000 lire, and Treasury cash was increased by 509,000,000 lire.

Issue Banks Reduce Circulation.

The circulation of the three Italian banks of issue totaled 17,471,000,000 lire on February 28, a decrease of 180,000,000 lire as compared with January 31. A further large reduction was affected during March, though statements showing its exact amount have not yet appeared. Ordinary discounts had advanced to 5,041,000,000 lire by the end of February, from the 4,994,000,000 lire of a month earlier, and discounts of the Consortium for the Subvention of Industrial Values made a slight advance to 4,121,000,000 lire from the 4,115,000,000 lire on the earlier date. The Bank of Italy reports a profit of 76,000,000 lire for the year 1924.

Remittances of Italian emigrants during 1924 were greater than during the previous year. Those sent through the postal savings banks in the first 11 months of 1924 totaled 507,000,000 lire, as compared with 484,000,000 lire in the entire year 1923.

New Investments Continue High—Failures Numerous.

Industrial investments during February continued at the high rate shown in the previous two months.

New investments amounted to 570,000,000 lire and withdrawals of capital totaled 73,000,000 lire, thus leaving a net investment of 497,000,000 lire, as compared with 374,000,000 lire in February, 1924. The present condition of security markets, however, is not favorable to further new stock issues.

After a temporary reduction in number of failures to 522 in November, an increase to 597 was noted in December and a further advance to 669 in January. The latter figure was exceeded only in May, 1924, when 721 failures occurred.

Activity in Metallurgical and Engineering Trades.

The iron and steel industry continues to be well occupied, and consumption is increasing. The engineering trades are busy, especially automobile manufacturers. The Fiat Co. reports an increase of 230,000,000 lire in sales during 1924 over the previous year, with a total of 780,000,000 lire; its exports comprise 70 per cent of its production.

All Textile Mills Busy.

There has been no decline in activity in the cotton mills. Production in 1924 was slightly greater than in the previous year, and unfilled orders on December 31 showed a considerable advance. Exports in 1924 increased 15 per cent over the previous year. Wool mills are busy, and the export demand is growing. Conditions in the silk industry are satisfactory and stocks of raw silk are low.

Other Industries Well Occupied.

The minor Italian industries are all well occupied except the tomato-preserving industry, which has large unsold stocks on hand and will reduce production this year. Building construction is manifesting pronounced activity in all large Italian cities.

The situation in the wheat market is uncertain, owing to the decline in prices. The consul general at Genoa reports that, with heavy arrivals, large stocks, and weak demand, importers have suffered considerable losses. The consul general at Naples reports that lower prices have stimulated purchases, in spite of the large stocks on hand. The price of bread has been reduced.

Price Indexes High.

An indication of the striking increase in prices during recent months is given in Professor Bachi's index of wholesale prices for February, which averaged 105.7 as compared with 91.7 for February, 1924. These indexes are based on average prices in 1920, which until December, 1924, represented the highest level reached. The increase did not begin until after July, 1924, when the index was 90.9. The advance during February was less pronounced than during the previous month.

January Imports Unusually Great—Crop Prospects Good.

Italian imports during January reached a value of 1,828,000,000 lire, as compared with 1,168,000,000 lire in January, 1924. This increase resulted, for the most part, from advances in a few basic products—wheat by 276,000,000 lire, cotton by 108,000,000 lire, sugar by 67,000,000 lire, and coal by 25,000,000 lire. There was also an increase in exports, but smaller in amount. Total exports in January, were valued at 1,119,000,000 lire, as compared with 840,000,000 lire in January, 1924.

The general outlook for crops is good and weather conditions are favorable. A reduction in the acreage of sugar beets is predicted.

Norwegian Industries Operating on Full Time

Based on cable from A. E. Fenselau, trade commissioner's office, Copenhagen, Denmark, March 26

Public attention during the past month has been focused mainly on the labor situation. Wage negotiations involving 65,000 workers have been under discussion, and the Government proposal for slight wage increases was finally accepted by both parties and labor conflicts were definitely averted. The general industrial revival that has been in evidence since the latter part of 1924 thereupon received further impetus and crystallized the prevailing impression that the current year will be one of marked prosperity.

No outstanding development has occurred in the financial field, but indications of betterment are not lacking. Norwegian exchange has given proof of further strength, the note circulation is contracting, and liquidation of old commitments is continuing. Foreign-exchange reserves are expanding. The stock exchange, under pressure of annual dividend payments, is somewhat weaker.

Government Planning Extensive Loan Operations.

Preparations are being made by the Government to contract several loans during the year to meet maturing obligations. It is expected that a large part of this financing will be taken care of by the domestic market. The proposed loan by the city of Oslo (Christiania) of 50,000,000 crowns, mentioned in COMMERCE REPORTS of March 2, has not been issued. It is stated that the Government has recommended that municipal borrowings be confined to strictly necessary requirements. A municipal loan of 8,000,000 crowns was, however, floated during March.

Administered Banks Issue Reports.

The Centralbank, whose administration has been extended one year, reports increased profits for 1924. These have been written off on old risks, the total of which was increased during 1924 by additional losses on several commitments. A report of Den Norske Handelsbank estimates losses to creditors and depositors of about 35 per cent; plans for the reconstruction of this institution are being abandoned, although its branch offices may be reorganized as separate institutions. Some improvement was discernible in the annual accounts of the Foreningsbank, but financial reorganization has been postponed.

While the administration period of two large provincial banks (in Stavanger) has been extended, in addition to the Centralbank and the Foreningsbank, it is now announced that other applications for renewal will be rejected by the Minister of Finance. The authorities are adopting a firmer administration policy, with a view to terminating the bank crisis with the least possible delay.

A minor provincial bank was placed under administration during the month as a result of heavy withdrawals of deposits. At the present time administered banks number 30 and represent approximately 40 per cent of the total deposits of Norwegian private banks.

Money Market More Active.

Greater industrial and trading activity has increased the demand for accommodations, but the money market on the whole shows improvement. In line with the deflation policy of the Bank of Issue, outstanding notes are contracting, the total on March 23 being 354,500,000 crowns as compared with the weekly aver-

age of 369,000,000 crowns for March, 1924. Loans and discounts have touched a new level at 854,000,000 crowns, compared with 417,000,000 crowns a year ago. Additional purchases by the Bank of Issue have increased the foreign exchange reserve to 42,800,000 crowns, as against 27,200,000 crowns last month.

Deposits of the Norwegian private banks during December rose to 2,525,000,000 crowns, from 2,410,000,000 crowns for November. Loans and discounts, on the other hand, were reduced from 2,352,000,000 in November to 2,332,000,000 crowns in December.

Norwegian exchange has made substantial gains during the past month, advancing from 15.2 cents on February 25 to a current value of 15.8 cents, or 60 per cent of par. This is attributable to several causes, among which are expanding industrial output, heavy volume of exports, and improved financial conditions.

Stock Exchange Dull—Capital Issues Heavier.

A slight recession characterized the stock exchange, under the influence of annual dividend payments. Banking shares show the greatest weakness. There was a slight drop in transactions, from 2,500,000 crowns for January to a total of 2,100,000 crowns for February. The stock exchange indexes, as of March 16, were as follows: Banks, 108; shipping, 121; and industrials, 254; this compares with 112, 130, and 255, respectively, of a month ago.

Capital issues were higher during February, totaling 3,900,000 crowns as against 2,000,000 crowns for January.

Wholesale prices averaged slightly higher, the index rising from 278.5 for January to 280.8 for February, principally on account of an advance in grain prices. Commercial failures during February dropped to 62, as against 74 during January.

Export Industries Active.

With the amicable settlement of wage disputes, all obstacles to further industrial progress have been

eliminated. The Norwegian lumber, wood-pulp, and paper industries have been stimulated by the increased demand resulting from the temporary standstill of Swedish mills. The fish canning and the metal and mining industries are also reported on full-time operation. Unemployment declined during the month and now stands at 21,000.

January Foreign Trade Greatly Improved.

A falling off in imports and expansion of exports caused considerable improvement in the Norwegian foreign trade for January, and reduced the unfavorable balance for that month to 13,000,000 crowns from the 44,000,000 crowns for December. Import values dropped from 139,000,000 crowns in December to 108,500,000 crowns in January. The principal items of import for January were, as follows (December figures in parentheses and all in metric tons): Coal and coke, 157,000 (222,000); mineral oils, 7,000 (23,000); and iron bars, 4,000 (4,000). Imported automobiles numbered 92 and motor cycles 6, as compared with 83 and 7, respectively, for December.

Exports rose in value from 94,700,000 crowns in December to 95,400,000 crowns in January. The crown values of principal items were, as follows (December figures in parentheses): Paper and pulp, 26,400,000 (27,400,000); lumber, 6,500,000 (6,400,000); minerals, 13,700,000 (10,000,000); metals, raw and half-finished, 10,520,000 (7,300,000), and fish products, 17,700,000 (15,200,000). Cement shipments totaled 25,200 metric tons, as against 16,358 tons in December.

Exports to the United States, declared through American consulates during February, totaled \$1,504,000 as compared with \$1,761,000 for January. The chief items for February were, as follows (January figures in parentheses): Wood pulp, \$763,000 (\$593,700); fish, \$243,000 (\$246,000); cement, \$86,000 (\$94,000); aluminum, \$13,000 (\$233,000); and paper, \$81,000 (\$158,200).

GERMAN IRON AND STEEL INDUSTRY IN 1924

Notable Improvement in Both Iron and Steel Production—Steel Association Restricts Output—Ore Imports Increasing—Capital Shortage Hinders Export Sales

G. E. Phoebus, Iron and Steel Division

Although the year 1924 could not be characterized as satisfactory for the German iron and steel industry, conditions during the latter months were better and prospects for 1925 indicated improvement. The course of the year witnessed the eradication of some of the more pressing difficulties and brought readjustments that reacted to the good of the industry.

Despite the fluctuations in the market, activity in the German iron and steel works became brisker as the year progressed. During the early months of 1924 the steel plants operated at about 50 per cent of capacity. By the end of the year this had increased to 70 per cent or 75 per cent. The acceptance of the Dawes scheme was largely responsible for this, bringing a new impetus to business at a time when the market had been exhibiting a downward trend.

Increase in Production.

A considerable improvement in the volume of iron and steel turned out by the German works was manifest for 1924. It is estimated that the production of pig iron approximated 8,000,000 metric tons and that

the output of steel ingots approached 10,000,000 tons, gains of about 70 per cent and 50 per cent, respectively, over the 1923 output. It should be remembered, however, that the year 1923 was subnormal because the activity of the iron and steel industry was seriously deranged by the complications arising from the occupation of the Ruhr district.

The production for 1924 does not compare favorably with that of 1922, a difference of about 1,400,000 tons of pig iron and 1,700,000 tons of steel ingots being noted. In making this comparison it should be borne in mind that the year 1922 represented the highest point in the postwar production. This was due to the artificially stimulated activity of all steel consuming industries resultant upon the inflation boom.

Steel Association Begins Control of Output.

The 1924 production of steel would have been somewhat larger but for the enforced reduction of the December output of the companies subscribing to the German steel association. A reduction of 20 per cent in the output of steel was decided upon by the associa-

tion for the month of December. The restriction on the production of semimanufactured iron and steel prepared for the market was lighter, in order to insure a supply of these articles to the consumers thereof. A reduction of only 10 per cent was made effective on these products.

The reorganization of the association among the producers of raw steel was one of the outstanding features of the year. The German Raw Steel Union was established in November. In the months immediately preceding its formation many works reported sacrifice domestic and foreign sales in order to realize ready cash. This, together with the generally depressed market conditions, led the producers of raw steel to give serious consideration to the reorganization of the former cartel. By the end of October most of the works had come to the conclusion that the price cutting was not making for permanent relief and that further reductions were impossible. When this attitude on the part of the heavy industries came to be realized by the consuming plants there was a revival of buying and a stiffening of prices, even before the success of the syndicate was assured.

Negotiations for Organization of Subsidiary Associations.

At the time of organization, the Raw Steel Association was composed of 31 plants. The management of the association was intrusted to the Union of Steel Plants, a joint stock company, with headquarters at Dusseldorf. More than 95 per cent of the German output of raw steel was represented in this association. It was anticipated that the membership of the association would be enlarged to include other works which had not, up to that time, signified their intention of joining. Furthermore, negotiations were placed under way for the organization of subsidiary associations to cover the following products: Semifinished steel, bar and fashioned bar iron, rolled wire, rough sheet metal, and tubes and pipes.

Those who are especially interested in the work of the association should consult a report that appeared on page 765 of COMMERCE REPORTS for March 30, outlining the problems that confront the German raw steel union.

Credit Restrictions Have Detrimental Effect.

In its efforts to preserve the recently attained stabilization of the mark, the Reichsbank exerted a hampering influence on the iron and steel market by heavily restricting all credits to the industry. Transactions lagged during the spring and summer. In May one of the largest European producers of high-tempered steel, the Stahlwerk Becker, had to go under receivership to avoid bankruptcy proceedings. It was not until late in the year that a satisfactory plan was arrived at for the rehabilitation of these important steel works.

The stringency of credit became lessened upon the signing of the London agreement for the war reparations. This reacted very favorably for the iron and steel industry and contributed largely to its improved condition at the close of the year.

Shortage of Coal and Scrap.

Among the factors which adversely affected the German iron and steel industry during 1924 was an unsatisfactory situation with regard to the coal supply. A strike in the coal industry served to bring a number of iron and steel works located in the Ruhr district to a standstill in May. Furthermore, concur-

rent with the improvement in the iron and steel industry that marked the latter part of 1924, there developed a shortage of scrap which caused some concern.

Heavy Importation of Ores.

The question of the supply of iron and other ores has merited considerable attention. Even before the war Germany imported a large proportion of the iron ore consumed in its furnaces. The loss of the Lorraine ore deposits has served to intensify the need for importation. It has been said that the German trade deficit for 1924 is due in part to tremendous receipts of iron ore and other iron and steel raw materials during the final quarter of the year. At all events the German official trade statistics show very heavy receipts of ores during the last two months of the year. Of the 3,076,181 metric tons of iron ore imported during 1924, 982,000 tons entered the country in November and 823,015 tons in December.

Sweden has been of prime importance in satisfying the iron ore requirements of Germany. During the whole of 1924, 2,048,790 tons of iron ore were received from that country, 498,943 tons of this amount representing December entries. Spanish mines contributed 335,150 tons of ore in 1924; France accounted for 166,633 tons, and Algerian shipments totaled 142,056 tons.

Decline in Manganese Imports and Total Ore Exports.

The importation of manganese ore into Germany fell off from 67,651 tons in 1923 to 41,229 tons in 1924. The difference would have been greater had it not been that the improvement in the iron and steel industry served to increase the rate of importation late in the year. Nearly one-third of the annual imports were received during November and December.

With the exception of shipments to Polish Upper Silesia, amounting to 116,542 tons, Germany exported only about 12,500 tons of iron ore during 1924. The total exportation of iron ore was equivalent to only one-half of the shipments for the preceding year. The exportation of manganese ore from Germany dropped from 7,623 tons in 1923 to only 367 tons in 1924.

Efforts to Expand Foreign Markets.

At the beginning of the year the domestic market was disturbed by the breaking up of the former German steel association, while French, Belgian, and Luxembourg competition on the German market began to increase, due to the depreciation of the franc. German companies strove to meet this competition by making sacrifice sales. It appeared necessary to counteract the declining home market by bolstering up the foreign trade. Despite the efforts of German producers to improve their outlying markets, however, the total exportation of iron and steel did not show a remarkable advance over 1923 if allowance is made for the exceptional difficulties that arose in that year because of the Ruhr occupation. One reason that is advanced for the failure of iron and steel exports to make a still better showing is the shortage of capital, which restricted the granting of credit to foreign purchasers.

Increase in Exports Results in Favorable Trade Balance.

Although the hopes of some concerns for an extensive export business may not have been fully realized, the foreign trade for the year showed noteworthy improvement over the preceding year. During 1924 Germany exported 1,634,675 metric tons of iron and steel, as compared with 1,380,061 tons during 1923, according to the German official trade returns.

That the German iron and steel industry was in a better position to satisfy the needs of the domestic market was testified to by the fact that imports in 1924 were equivalent to but 68 per cent of the receipts of the preceding year. This has helped to reverse the situation from an unfavorable trade balance for iron and steel products in 1923 to an excess of exports for 1924.

The following table summarizes the foreign trade of Germany in iron and steel during the two years under discussion:

Foreign iron and steel trade of Germany

[In metric tons]

Articles	Exports		Imports	
	1923	1924	1923	1924
Pig iron and ferroalloys.....	92,384	67,230	313,425	263,897

Total.....	1,380,061	1,634,675	1,926,494	1,316,050

¹ Exports of certain machine parts are not reported as iron and steel products in the German official trade statistics but are included with machinery.

Had German producers of iron and steel not made appreciable price concessions, their trade balance might have remained unfavorable. As it was, the lowering of quotations in certain foreign markets caused their competitors to complain that they were dumping goods upon the world markets. The heavy industry denied this charge, claiming that it must undercut to counteract the natural advantages of the Belgian and French producers who, it was said, were favored by exchange depreciation, reparations coke supplies, lighter taxation, and materially lower freight rates.

German Industrialists Complain of High Transportation Costs.

Freight rates were believed to constitute one of the major items in raising the production costs for the German iron and steel industry. This phase of the industry's problems has, if anything, been rendered more difficult of solution by the consummation of the Dawes plan, as it is extremely doubtful if the railway administration will find it advisable to make any concessions. It is claimed that rates on the haul from the Ruhr district to the German ports are about 100 per cent above the pre-war level. German manufacturers hold that this burden is especially onerous in view of the favorable location of the Belgian plants, with their very short haul to the seaboard, and of the lower transportation charges enjoyed by the competing producers in Alsace-Lorraine and Luxemburg.

Railway Purchases Restricted.

A prominent German iron and steel industrialist was quoted in the German press as declaring that the tremendous load that the German railroad system had had to shoulder as a result of the Dawes plan had greatly restricted the purchases of the railroad, which formerly had been considered the largest buyer in the iron market. It was predicted by him that in the coming year the railroad would give but few orders for locomotives and railway cars, thereby causing considerable loss to this branch of the industry, which might or might not be able to equalize this shortage of orders by means of its export trade and the reconstruction of its plants.

MEXICO OUR BEST LATIN AMERICAN RADIO MARKET

Exports to Each of Five Principal Latin American Markets Exceed \$100,000—Mexico's Purchases Amount to Nearly \$400,000

Basil D. Dahl, Electrical Equipment Division

[This is the second of a series of articles in a general world survey of radio markets. Information regarding Asia and Africa will be published in an early issue.]

While Europe and Canada have become the best foreign markets for American radio apparatus, consuming approximately 50 per cent of the total radio exports from the United States during 1924, American manufacturers have not concentrated all their efforts on the development of these two desirable market areas. They have also been active in Latin American countries, exports of radio equipment from the United States to those countries during 1924 having reached a total value of \$1,354,707—approximately a 30-fold increase over shipments of \$43,786 worth of radio goods to those markets in 1918. Total exports from the United States to each of the Latin American countries—with the exception of British Honduras, Honduras, and Uruguay—during 1924, exceeded 1918 shipments to all of them.

Central America and the Caribbean Islands.

Although the degree of interest in radio and the number of receiving sets in use varies throughout Central America and the numerous Caribbean islands, the interference of static and the resulting unsatisfactory reception is prevalent throughout the entire region, materially influencing sales possibilities.

Latin America Largely Dependent on Radio Imports.

Some of the Latin American countries have a domestic radio manufacturing industry but they are, nevertheless, dependent on outside sources for a considerable portion of their supply. American manufacturers must, therefore, in addition to meeting this domestic competition, meet that of other interested foreign manufacturers. That they have done this is evidenced by the increasing demand for their products in these markets. With continued careful attention to the desires of the purchasers, satisfactory and proper representation, and a continued production of quality,

receiving sets and parts, American radio manufacturers should maintain their favorable position in these expanding markets. Conditions influencing the radio trade in various Latin American countries follow:

MEXICO

Mexico at present offers a very good market for the sale of American radio apparatus. Some American receiving sets were imported into Mexico in 1922, but trade at that time was limited because the Mexican Government prohibited the erection of broadcasting stations in that country. When this opposition was withdrawn in 1923, several broadcasting stations were established, the market for radio sets and parts expanded, and the trade soon assumed a position of commercial importance. Exports of radio apparatus from the United States to Mexico during 1923 were valued at \$281,275, and according to preliminary figures, at \$393,517 during 1924.

The present market for radio apparatus in Mexico is not, however, uniform throughout the entire Republic. It is estimated that in Mexico City and vicinity there are approximately 12,000 receiving sets in operation; while in the city of Chihuahua only slight progress has been made in this business. Around Frontera and Manzanillo, few sets are in operation, reception being highly unsatisfactory during much of the year because of static disturbances. Mazatlan is reported to offer a fair market for one to five tube receivers. In this district, listeners are dependent almost entirely on broadcasting from Mexico City, 600 miles distant and, consequently, the three-tube set enjoys considerable popularity. In Tampico, it is estimated that 250 receiving sets are in operation at present. The price factor has caused portable sets to be frequently purchased on this market and has practically eliminated the more expensive cabinet receivers. Tampico also offers an active market for radio parts, home building of sets being very popular among the amateurs. This particular market is dependent largely upon the programs of the local broadcasting stations, it being possible for the radio fans to receive from these stations even during the summer without serious interference from static.

Generally speaking, receiving sets are not used to any great extent in the Republic of Mexico from May to November, because during these months static causes unsatisfactory reception, except from local stations. This fact should be kept in mind by American manufacturers interested in entering the Mexican market and they should arrange their sales campaigns accordingly, especially if their plans include sending a traveling representative to the Republic.

The only restrictions maintained by the Government on broadcasting and receiving, at present, are: The privilege of censoring broadcasting material, the imposition of a license fee of 100 pesos for two years upon the broadcasting station, and a tax of 5 pesos for two years upon the owner of a receiving set.

Radio equipment is not manufactured in Mexico and consequently the demand is met entirely through importation. The United States is the principal supplier, but there are also a limited number of German sets for sale and in use. This competition has not developed to a great extent in Mexico, however, it being estimated that approximately 95 per cent of the sets in use are of American origin.

COSTA RICA

In Costa Rica, all radio installations are under Government control. Receiving sets may be installed but sending sets are restricted. The broadcasting stations in Cuba are regularly received and quite often stations in the Southwestern States of the United States, New York, and San Francisco are

"picked up." Only American sets have been imported, purchases in 1924 totaling approximately \$40,000. Costa Rica can not be considered as a great future market for American supplies, but it is believed that a rather attractive small field can be developed.

GUATEMALA

It is estimated that 39 radio sets have been installed in Guatemala City and 14 at other places in the Republic. Approximately 75 per cent of the total is of American origin, the remainder having been imported from Germany. Most of the sets in use have been purchased direct from the manufacturers in these two countries, but some receivers are now being imported by dealers in electrical supplies and equipment. The Guatemalan Government levies a charge of \$5 for the installation of a receiving set but there is no subsequent charge for operation.

HONDURAS

Interest in radio is increasing in Honduras but the absence of near-by broadcasting stations or facilities for the upkeep of storage batteries retards development.

NICARAGUA

About six receiving sets are in use in Western Nicaragua. They were imported individually by the present owners. Several attempts have been made to develop this market but the public has shown very little interest. A limited market for the best receiving sets might follow satisfactory demonstrations.

PANAMA

In Panama there is no broadcasting and the market has decided limitations. Local merchants are not inclined to stock radio apparatus and sets.

SALVADOR

Inhabitants of Salvador report fair reception, but they must depend entirely on the broadcasting stations in Mexico, the United States, and Cuba, as there are none in this Republic. There are 20 receiving sets, all imported direct, in use at present.

CUBA

Of the Caribbean islands, Cuba offers the best market for radio sets and parts. Approximately 3,000 receiving sets are in use in Habana at present, although the constant interference of the official transmitting station at Moro Castle hinders the reception of desirable broadcast material. The Government is, however, considering the use of line telegraphs to Pinar del Rio, where a transmitting station is being reconstructed. If this is done, the present local interference will be removed and the market should expand materially—especially for high-grade receiving sets capable of picking up United States broadcasting stations.

The active sales in the city of Habana are not, however, characteristic of the entire island. In Matanzas, for instance, it is reported that radio dealers have closed their shops because of lack of sales. In Santiago, also, there is considerable dissatisfaction with radio, it being believed that the large amount of iron ore in the surrounding mountains increases the static and makes satisfactory reception practically impossible. This city has no club or society devoted to wireless and radio experimentation, and although efforts have been made by newspapers and other media to awaken public interest, they have so far been rather unsuccessful.

There is very little, if any, foreign competition in the Cuban market, radio receiving apparatus and accessories being im-

ported exclusively from the United States so far as is known. Very keen competition prevails among the representatives of the various American manufacturers.

Reliable Cuban importers are usually granted 30 to 90 days' credit on their purchases, but it seems advisable that payment on the basis of cash against documents should be insisted upon unless the importers are known to be very reliable. The duty levied on electrical apparatus, radio sets, parts and accessories thereof (according to paragraph 326 of the Cuban import tariff) is 20 per cent ad valorem on imports from the United States.

Other West Indies.

Very little, if any, development has taken place in the use of radio receivers in Guadeloupe, Martinique, Jamaica, Santo Domingo, and Haiti. A few sets are in use in the latter territory but the potential market can hardly be said to be larger than that offered by an average American town of 1,000 inhabitants.

In Porto Rico, there are approximately 2,000 receiving sets, chiefly of the crystal type, in use. The broadcasting station at San Juan is experimenting with a view to extending its activities and if this is successful the market should increase slightly.

Radio regulations existant in Trinidad merely require that each user shall have a Government license permitting him to operate his receiving set. No difficulty has been experienced in procuring this license but only six receiving sets—all of American origin—are in operation on the island at present. There are no near-by broadcasting stations and only the relatively expensive receiving sets meet with any degree of success, because it is the desire of all users to receive from American stations. A long-range set must be used as New York is approximately 2,045 miles distant.

BRAZIL

The interference of static causes radio reception in Brazil to be unsatisfactory during the summer and early fall, but a considerable market has developed in certain parts of the Republic.

In Sao Paulo, for instance, the radio club organized in 1923, together with one of more recent origin, is developing a strong local interest in radio, that has resulted in a considerable sale of complete sets and parts. Sales are expected to increase considerably in the near future. In Rio de Janeiro, where there are two broadcasting stations, approximately 1,500 receiving sets are in use. They are chiefly of the tube type, crystal receivers not being popular in this locality.

In Porto Alegre, there are approximately 200 sets in use, while in Santos it is reported that they do not have more than 50 or 60. The domestic radio manufacturing industry has met with little success.

It is imperative that sets made for the Brazilian market be able to receive the broadcasting stations at Buenos Aires, as it is upon those sources that the Brazilian radio enthusiast depends for his programs. American receiving sets, where used in Brazil, are well liked. Receivers made by French or German manufacturers are being sold entirely on a price basis. Brazilian dealers are convinced that American products are more highly developed scientifically than those of our two principal competitors, but the price militates against their sale to the person of average means.

CHILE

Radio is very popular in Chile, it being estimated that 25,000 sets are in use at present, most of them being of the crystal type. Although sales are active, and it seems that the market will develop materially in the future, radio dealers in Chile are reluctant to increase their present stocks because of the general

uncertainty in business and the unfavorable rate of exchange. It is believed that the greatest future market will be for radio parts rather than complete sets.

PARAGUAY

There is no broadcasting station in Paraguay, the nearest ones being those located in Buenos Aires. As a result radio is practically undeveloped in Paraguay, and future possibilities are uncertain.

URUGUAY

Although there are two broadcasting stations in Uruguay, a radio listener is not satisfied unless his receiving set will readily pick up Buenos Aires. As the sets in operation are not generally capable of this long-distance reception, the Uruguayans are not very favorably inclined toward radio. Leading merchants in Montevideo seem to believe, however, that the sale of the better types of receiving sets will increase during the winter (May to September).

RADIO EXPORTS TO LATIN AMERICA

Exports of radio apparatus to 11 Latin American countries from the United States, 1918 to 1924, inclusive, are shown in the following table:

United States exports of radio apparatus to Latin America

Country of destination	1918	1919	1920	1921	1922	1923	1924
Central America:							
British Honduras	\$4,035					\$2,699	\$605
Costa Rica		\$1,415	\$988	\$1,621	\$201	5,466	44,080
Guatemala	86	1,576	6,184	484		3,449	56,532
Honduras	2,339	1,647	2,477	13	8,323	8,662	18,039
Nicaragua		2,494	998	1,532	77	1,824	51,278

¹ Telegraph instruments, including wireless.

² Preliminary.

NOTE.—Export figures, with the exception of 1924, are from Commerce and Navigation; preliminary figures for 1924 are from the records of the Electrical Equipment Division.

Argentine Immigration Favorable

The migratory movement to the Argentine Republic was fairly intense during 1924, although it did not come up to the proportions of the previous year, according to the Times of Argentina. Between second and third class passengers, who can be regarded as constituting the immigrant element, there arrived during the past year 159,940 persons; in the same period departures totaled 46,100 persons, thus leaving a migratory surplus in favor of the Republic of 113,840 individuals. This surplus is considerably lower than the one shown by the great immigration movement in the previous year. Types of immigrants in recent postwar years differ substantially in comparison with those who used to come to the Republic before 1914. Speaking generally, the new arrivals are most select, better educated, and economically many times better off. As to nationality, the Italians still maintain first place with a large preponderance, followed by nationalities of Central Europe. These immigrants are proving themselves to be laborious and enterprising, large numbers of them having established themselves for their own account as colonists, agriculturalists, or artisans.

MOTOR ROADS IN LATIN AMERICA: BRAZIL

Frank B. Curran, Transportation Division

[The following extract from *Motor Roads in Latin America*, a handbook prepared in the Transportation Division and which will be off the press shortly, indicates the scope of that compilation. The general transportation situation is described and the effect of the topography and climate on transportation is discussed. The roads are traced on maps, listed in tables that give their location, length, width, and condition; and their construction, maintenance, administration, and financing are treated in more detail than in the following article. The book will be ready for distribution in a few months.]

The increasing interest in good roads that is being shown by Latin American countries is indicated in the following table, where most of the figures under the headings "Good" and "Passable all year" represent roads that have been constructed within the last five years. In fact, practically all the roads now used by motor traffic have been improved or constructed since 1916, when the demands for better roads on the part of the rapidly growing groups of automobile owners began to crystallize into a definite movement.

General Status of Roads in Brazil.

The prosperous and thickly settled southeastern States of Brazil have better highways than have the other States of the Republic, but São Paulo is the only one whose highways approach the status of those in the United States. This section of Brazil has 1,886.1 kilometers of good motor roads, 8,287.3 kilometers passable for automobiles in all seasons, and 6,900.1 kilometers passable in the dry season, or 57 per cent of all the roads in Brazil suitable for motor traffic, 79 per cent of the good motor roads, 48 per cent of the roads passable for automobiles in all seasons, and 66 per cent of those passable in the dry season. Good roads connect the city of São Paulo with the interior and with the southern cities of Minas Geraes. Roads under construction or projected will connect São Paulo with Paraná and Matto Grosso, and others will be opened between Rio de Janeiro, São Paulo, and the capital of Minas Geraes. In many sections of these States automobile bus and truck lines serve as links between railroads and furnish transportation for regions not reached by railroads or navigable rivers.

The eastern and northeastern coast States possess 21 per cent, or 492.3 kilometers, of the country's good motor roads; 41 per cent, or 7,004.4 kilometers, of those passable all year; and 26 per cent, or 2,781.6 kilometers, of the roads passable for automobiles in the dry season;

a total of 34 per cent, or 10,278.3 kilometers, of all motor roads in Brazil. Pernambuco, Piauí, and the States lying between them have a well-connected system of roads traversing their whole area, but the larger States of Bahia and Maranhão have very few roads, and Pará has none.

The interior States, sparsely settled, and dominated by the great river systems, have only 2,804 kilometers of motor roads, or 9 per cent of the total. None of these can be classed as good. Roads passable all year are represented in Matto Grosso and Goyaz by 1,990 kilometers (11 per cent); roads passable in the dry season only, by 814 kilometers (8 per cent). The only roads in Amazonas and in Acre Territory are those passable in the dry season; these comprise 60 kilometers in Amazonas and 20 kilometers in Acre.

The rivers in this part of Brazil not only provide means of transport but make road construction prohibitively difficult because of the number of bridges required and the periodical floods. However, except in Acre, new roads are planned or are under construction.

Construction and Maintenance.

Roads in Brazil are mainly of rolled earth, graded and rolled and drained by ditches. A few have been macadamized, and occasionally short stretches of asphalt paving are seen. In most places, especially on the central plateau, the roads are near to soil that is well adapted for construction uses, and if properly maintained would be suitable for motor traffic the year round. Specifications for construction and maintenance vary in the different States, as do the methods of financing and carrying on the work. The cost of construction varies according to the nature of the work, the location, availability of labor and material, etc. Specifications for roads receiving Federal subsidy are as follows: Width, 4 meters in mountainous countries and 5 meters elsewhere; maximum grades, 6.5 per cent in mountainous countries and 3 per cent elsewhere (in case of unsurfaced roads these limits can be increased to 7 per cent and 3.5 per cent, respectively); minimum radius of curves, 30 meters in mountainous countries and 50 meters elsewhere. In several of the States convict labor is used on the roads.

Administration and Finance.

Brazil is a very loosely knit federation of States which were Provinces in the days of the Empire. They are autonomous and, under the constitution, reserve to themselves all powers except those given to the Federal Government. The latter has control of the army and navy, customs duties on imports (export duties may be levied solely by the States), the right to establish banks of issue, the postal services, ports and coastal shipping services, currency, weights and measures, treaty making and naturalization, and has jurisdiction over the navigation of rivers running through more than one State. The Federal executive power is invested in the President, who is elected every four years. He has a cabinet, selected by himself, composed of seven Ministers of State.

The ministry of agriculture, commerce, and industry is responsible for public works, but roads and bridges are generally built by the department of public works of the State where the work is done; the principal duty of the Federal ministry in connection with roads has been to administer the decrees of January 11, 1922, of August 10, 1922, and of January 26, 1923, providing for subventions to those engaged in building roads. Instructions issued by this ministry provide in part that—

Individuals or companies, States or municipalities that may have constructed roads will be assisted in paying for the work

by payments up to 2,000 milreils per kilometer, to be paid only once, for stretches not less than 20 kilometers in length. Plans must be submitted to the ministry beforehand.

Various other conditions, with regard to width of roads and bridges, construction of culverts and bridges, and similar matters, are made by the ministry subject to amendment by the Federal executive as occasion may require.

The leading States have voted laws making concessions to private initiative, offering money premiums per kilometer constructed, and appropriating large sums for the improvement and maintenance of roads.

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

WORLD TRADE IN EGGS AND EGG PRODUCTS

China Leads World in Production and Exportation of Eggs and Egg Products—England Buys Over 200,000,000 Dozen Eggs Annually—Establishment of Standards in Egg Export Trade

M. A. Wulfert, Foodstuffs Division

The volume of the world trade in eggs in the shell is estimated at 700,000,000 dozen in 1913 and 450,000,000 dozen in 1923. The trade in egg products (albumen, yolk and whole egg, both dried and liquid, and frozen whole egg) amounted to about 120,000,000 pounds in 1923.

Factors Contributing to Decreased Trade in Eggs in Shell.

The decrease in the quantity of eggs in the shell entering world commerce is due in part to the development of the poultry industry in almost every country in which such an industry is possible, which has resulted in a tendency toward a sufficient domestic production for home consumption. The decrease is also due in large measure to smaller shipments of eggs from Poland and Russia (including Siberia), the largest pre-war source of eggs, and to the great reduction in German demand. There are, however, some countries in which it is not possible to produce a sufficient quantity of eggs to meet domestic demands, and these must necessarily depend upon a foreign source to supplement the domestic supply.

Some countries have a large import trade in eggs and also a large export trade. These countries, which, as a rule, have a large egg production, import during the season of low production and export during the season of high production. This is true of France, the Netherlands, Belgium and some of the other European countries.

China the World's Largest Exporter of Eggs.

Before the war Russia, including what is now Poland and the Baltic States, was the largest egg-producing country, and in 1913 exported 264,000,000 dozen, sending 38.7 per cent of its exports to England and 27.9 per cent to Germany. These exports ceased during the revolution in Russia. Exportation was resumed in 1923, when it is estimated that 7,500,000 dozen eggs were exported from present-day Russia, 50 per cent of the exports going to Germany.

China now produces more eggs than any other country, and in 1923 was the largest exporter of eggs, shipping 91,754,000 dozen to other countries in that year.

These exports went mainly to countries bordering on the Pacific Ocean, with the exception of the shipments to England, which have taken place only in recent years. Japan and Formosa purchase about 75 per cent of the total Chinese egg exports. The Chinese trade has trebled since 1913. The Chinese eggs are smaller than those produced in the United States and the greater part of the eggs are used in the manufacture of egg products.

Countries Leading in Production of Eggs.

The following table shows the countries which are the largest factors in the world trade in eggs and egg products:

Principal countries entering world trade in eggs and egg products

[All figures represent thousands]

Articles and countries	Imports		Exports

¹ Including present-day Poland, but not the Baltic States.

² Including dried and liquid albumen and yolk and whole egg and frozen egg.

³ Figures not available.

France and Denmark Increase Exports.

France ranked fifth as an egg-exporting country in 1913, but in 1923 was the second largest egg exporter. In 1913 the exports from France were but little less than those from China. France ships eggs principally to Great Britain, Belgium, and Spain.

In Denmark special attention has been paid to the development of the poultry industry with a view to producing eggs for export. The industry is probably more highly organized in that country than in any other, and, as a consequence, Denmark has risen from the sixth position to the third position as an egg-exporting country, and in 1923 furnished one-ninth of the total world exports. Great Britain is the principal market for Danish eggs. Such purchases by Great Britain in 1913 represented over 94 per cent of the total Danish exports of eggs and over 20 per cent of the British imports. After the war, however, Denmark turned to continental European countries for an outlet, as Great Britain was taking larger quantities of eggs from Africa, Australia, and North America. It is estimated that three-fifths of the egg production of Denmark is exported, and these exports rank third in point of value of agricultural produce exported from that country.

Poland Hampered by Lack of Cold-Storage Facilities.

The Baltic countries are very active in developing their poultry industries and are gaining importance as exporters of eggs. Eggs from these countries go chiefly to England, but small shipments are sent to Germany.

The egg trade of the Netherlands has decreased and this country has dropped from third place as an exporter in 1913 to fifth place in 1923. England, Belgium, and Switzerland afford the best markets for eggs from the Netherlands. Prior to the war Germany took the bulk of these exports.

Italy, Poland, Rumania, Czechoslovakia, and Yugoslavia are all factors in world egg-export trade. Poland has a large and well-developed poultry industry and exports a large quantity of eggs, but owing to lack of adequate cold-storage facilities these eggs have to be exported as soon as produced, regardless of market conditions. A movement is on foot, however, to remedy this condition. England, Switzerland, Austria, and recently Germany are the principal markets for Polish eggs. Italy's exports of eggs have dropped from 40,966,000 dozen in 1913 to 14,819,000 dozen in 1923. These eggs are shipped to Switzerland, Great Britain and Belgium.

United States Leads Egg Trade of Western Hemisphere.

In the Western Hemisphere the United States is the principal egg-exporting country. While small exports are made from Canada, that country imports considerably more eggs than it exports, the imports in 1923 amounting to 8,319,622 and the exports to 3,613,531 dozen.

Although the poultry industry in Argentina is unorganized, the egg production is large and that country now has a rapidly growing export trade. Egg exports from Argentina were very small up to 1920, when they amounted to 1,882,654 dozen, and in 1923 2,500,000 dozen were exported. Eggs from Argentina go to the United States and to England, as well as in smaller quantities to other European countries and near-by South American countries. The Argentine egg trade will no doubt increase rapidly if satisfactory markets can be found.

Eggs from Africa Marketed Chiefly in England.

Africa is represented on the world egg market by exports from Egypt, Morocco, and British South Africa. British South Africa was formerly a heavy importer of eggs. Its export trade, which is of recent development, now amounts to nearly 2,000,000 dozen annually.

Eggs from Egypt and British South Africa go to England, while those from Morocco go about equally to Spain and England, 83 per cent of the Spanish imports being from Morocco. England consumes more than 90 per cent of the total egg exports from Egypt, the total exports for 1923 amounting to 13,044,660 dozen, which was about 75 per cent of the entire production. Egyptian eggs are smaller than those produced in the United States, and the yolks are said to be larger in proportion to the whites. Shipments from Egypt begin in November and cease in July.

England the Leading Buyer of Eggs.

England is by far the largest egg-importing country, taking in 1923 200,459,430 dozen eggs from outside sources (including a small quantity from its colonial possessions), compared with 215,755,700 dozen in 1913. These imports, which represent 60 per cent of England's annual egg consumption, come mainly from Denmark. Heavy shipments also come from Ireland, Egypt, and China, while other countries participate in smaller measure in this trade.

The egg-import trade of France almost balances the egg-export trade, the imports coming at a time when egg production is low. Imports in 1923 came largely from Yugoslavia, Italy, and Algeria.

Switzerland imports a large quantity of eggs, considering the population of the country. In 1923 these imports amounted to 19,826,353 dozen and came from near-by European countries. There is little room for the expansion of the egg industry in Switzerland, and that country must depend upon foreign countries for the greater part of its supply.

The Scandinavian countries, except Denmark, are importers of eggs and buy chiefly from Denmark and the Baltic States.

Germany Shifts from an Importing to an Exporting Market.

The most striking change in the world egg-import trade is noted in the case of Germany. In 1913 Germany imported 275,714,000 dozen eggs. These imports dropped to 194,000 dozen in 1923, while the exports rose from 801,757 dozen in 1913 to 1,070,000 dozen in 1923. Poland furnishes most of the eggs imported into Germany, and the adjacent European countries supply the remainder.

The Belgian import and export trade is about evenly balanced. Belgium produces 95 per cent of its egg requirement. Shipments are made in the laying season, while the bulk of the imports arrive during the colder months. Belgium protects its egg industry by prohibiting the importation of eggs at times when production is sufficient to satisfy the domestic demand.

The West Indies, Central America, and South America (except some of the larger Republics) are importers of eggs, and the United States shares largely in these markets.

Trade in Egg Products.

China is the principal factor in world trade in egg products (albumen, yolk, whole egg, both liquid and dried, and frozen whole egg), and supplies 90 per cent of the total world exports of about 120,000,000 pounds, roughly estimated as the product of about 100,000,000 dozen eggs. Exports of egg products from China increased from 45,000,000 pounds in 1913 to 107,690,000 pounds in 1923. England takes one-half of these exports and the United States one-fourth, and the rest is shipped to Germany, France, and other European countries, except a small portion sent to countries on the Pacific coast. Some of the European countries

manufacture egg products, but these do not enter into world trade in any considerable measure.

Efforts to Establish Egg Standards.

In those countries in which a foreign trade in eggs is being encouraged and developed movements are under way to improve and guarantee the quality of eggs which enter world trade. Denmark is probably the first country in which an egg-exporting board was established for the purpose of fixing standards for eggs destined for foreign markets. Members of the cooperative organizations established for the export of eggs must stamp their product so that the producer may be identified. The eggs are then carefully sorted, candled, and packed for shipment. The care with which this is done has created a reputation of highest quality for Danish eggs, and consequently they command the top prices on the world markets.

Numerous egg-marketing cooperatives have also been formed in the Netherlands, these dealing principally with eggs for export, and the methods of handling and marketing eggs for export trade by these organizations are very similar to those pursued in Denmark.

Other countries are following the example set by Denmark. Northern Ireland has been active in developing an export trade in eggs, and has recently established a requirement that all eggs entering foreign trade be tested, graded, and packed according to Government regulations. Persons carrying on export

trade in eggs must register their premises with the Government.

Canada, New Zealand, and British South Africa are also endeavoring to establish governmental regulations covering the grading, packing, and marketing of eggs, especially of products which are to be shipped to other countries.

Additional information regarding foodstuffs appears in this issue under the following sections:

Cable review, Far East: Indian situation continues to improve.
Cable review, Latin America:

Trade still dull in Porto Rico.

Conditions satisfactory in Venezuela.

Floods in Peru hinder trade.

Economic improvement expected in Bolivia.

Cable review, Europe:

Danish exports in January.

Italian crop prospects good.

Far East: A quarter century of China's trade.

Tariffs and trade regulations:

Austria: Relaxation of import restrictions.

British Honduras: Import duties temporarily increased by 10 per cent surtax.

British India: Import and export duties on certain foodstuffs increased.

Canada: Changes in import duty.

Czechoslovakia: Restriction on imports of bees, beeswax, and honey.

Newfoundland: Duty on meat removed.

New Zealand: Import prohibition on wheat and flour removed.

TOBACCO

Tobacco Section, Foodstuffs Division

CIGARETTE AND TOBACCO TRADE IN CHINA

Based on report by Trade Commissioner G. C. Howard, Shanghai

Cigarette smoking, a habit of recent development in China, exemplifies the luxury purchasing power of a people with a low per capita wealth. The huge volume of the cigarette business is said to have been built up systematically through intensive advertising, merchandising, and distribution. China began importing cigarettes in a small way about 1890, and they were gradually adopted by the Chinese in the treaty ports, until in 1910 nearly 3,750,000,000 were imported.

Growth of Cigarette Import Trade.

The following table shows not only the growth of total cigarette imports into China, but the principal countries of origin for the years included:

Chinese imports of cigarettes
(In thousands)

Years	United States	Great Britain	Hongkong	Total from all countries
1910	532, 112	2, 112, 566	217, 616	3, 723, 545
1914	202, 650	4, 480, 957	368, 934	6, 130, 453
1919	4, 239, 735	153, 483	707, 005	7, 771, 947
1923	8, 197, 159	518, 825	400, 637	10, 116, 893

The years considered are the ones showing greatest trade fluctuations and it will be noted that an increase

in total imports of about 2,000,000,000 cigarettes marks each period.

American Cigarettes in the Lead.

Prior to 1917 the United Kingdom had furnished from one-half to two-thirds of China's cigarette imports, while the United States contributed less than one-eighth. The statistics of recent years, however, show the relation of the two countries as a source of supply to be directly reversed. In 1919, for instance, China imported about 8,000,000,000 cigarettes, 4,000,000,000 of which came from the United States; and of the 10,000,000,000 imported in 1923, 8,000,000,000 came from the United States.

It is impossible to state what quantity of American cigarettes find their way into China through Hongkong. However, it is of interest to note that in 1923 Hongkong imported cigarettes valued at £97,289 or about \$445,080, from the United States, and a large portion of these were reexported to China.

While the importation of cigarettes has grown rapidly, this by no means illustrates the growth of consumption in China, which has been conservatively estimated to be about 40,000,000,000 per year, compared with about 60,000,000,000 in the United States.

Leaf Tobacco Imports—Native Tobacco from Virginia Seed.

Imports of leaf tobacco, according to the Chinese Maritime Customs, amounted to about 14,000,000

pounds in 1910, increased to approximately 20,000,000 pounds in 1916 and reached 42,000,000 pounds in 1923. Imported leaf tobacco is used almost entirely in the manufacture of cigarettes. It is probable that some American leaf tobacco reaches China through Hongkong. In 1923 the official records of Hongkong show imports from the United States to the value of about \$387,000, while United States consignments to Hongkong for the same period amount to a little more than half a million pounds.

In addition to the imported leaf large quantities of native tobacco are consumed by the manufacturers, both for making cigarettes of pure Chinese tobacco and for blending. China produces all the varieties of tobacco grown in the United States and many additional types not found there. Owing to the prevalent custom in China of classifying produce under the name of the district in which it originates it is impossible to give a type corresponding either to the American commercial or botanical classification. In both Shantung and Honan Provinces much tobacco is pro-

duced from Virginia seed brought over from America each year, and the cultivation is supervised by American tobacco experts.

Cigarette, cigar, and pipe tobacco are all grown in China. The greatest quantities are consumed in cigarettes, which bid fair to displace the old water pipe. Native pipe consumption ranks as a decreasing second, and cheap cigar consumption an increased third.

Tobacco Manufacturing Industry.

Allowing 3 pounds of tobacco per thousand cigarettes, the imports of tobacco in 1923 would be sufficient to manufacture approximately 14,000,000,000 cigarettes. On this basis it is estimated that about 47,000,000 pounds of Chinese tobacco are used annually to manufacture cigarettes, although no definite data are available in substantiation of this estimate.

Aside from the imports of raw tobacco, the tobacco industry in China is responsible for the importation of large quantities of materials such as paper, foil, cardboard, glue, printing ink, and other appurtenant articles.

CHEMICALS

Charles C. Concannon, Chief, Chemical Division

THE COMPETITIVE CONDITION OF THE GERMAN CHEMICAL INDUSTRY.

Trade Commissioner William T. Daugherty, Berlin

The dominant position held by Germany before the World War as an exporter of chemical and allied products has been seriously threatened since the conflict. Severe competition has developed, especially from the United States, England, and France.

Losses in Export Markets.

Germany has lost more than half of its pre-war dyestuffs' markets, which covered about 75 per cent of the world's demand for coal-tar dyes. In 1913 Germany exported in excess of imports about 373,000 metric tons of Thomas meal, while in 1924 imports exceeded exports by 497,000 tons—explained by the crippling of the German steel industry, incident to the cession of Alsace-Lorraine; the withdrawal of Luxemburg from the German Customs Union; and the partition of Upper Silesia. Exports of superphosphate exceeded imports by 229,000 tons in 1913 and 4,100 in 1924, this fertilizer being prepared, with sulphuric acid, from rock phosphate imported chiefly from the United States.

Soda-Ash Industry Affected—Sulphuric Acid—Cyanides.

Germany's soda-ash industry suffered in postwar years, until 1923 chiefly on account of the lack of raw materials and inadequate transportation facilities. Germany, normally self-contained in this important chemical, had to import considerable amounts. This industry, however, recovered to a great extent in 1924, and is now exporting to world markets. Exports in excess of imports amounted to about 67,000 tons in 1913, 12,000 in 1920, 64,000 in 1922, 66,000 in 1923, and 14,000 in 1924. The pre-war markets for caustic soda have been won, to a great extent, by England and the United States. In 1924 Germany imported about 50,000 tons in excess of exports.

Germany's net¹ imports of sulphuric acid in 1924, amounted to 44,000 tons, against 65,000 in 1913, and net receipts of pyrites, around 1,000,000 tons in 1913, declined to 452,000 in 1924.

Another notable loss occurred in the export of cyanides for gold extraction. England built this industry up during the war so that it now dominates Germany's former markets.

Potash Export Low, but Prospects for Sales Encouraging.

Exports of potash fertilizers, amounting to but 337,400 tons of pure potash in 1924, reached only 66 per cent of the corresponding sales of 506,087 tons in 1913—attributable to postwar competition by Alsace-Lorraine, which acquired former German potash mines under the peace treaty. There is scarcely any doubt, however, that this industry promises to expand its export sales in large measure in coming years. Direct by-products from the German potash mines and electrochemical production from waste liquors of potash, or from sodium chloride, abundantly present in the potash deposits, will be sold in greater quantities in export markets in the future. Germany's potash deposits are unquestionably the nearest approach to a monopoly that this country has in chemical production.

Gains Made by the Domestic Chemical Industry.

The most conspicuous gains toward a complete emancipation from imports are: The development by air fixation of the direct synthesis of ammonia and of nitrogen-containing salts, and the production of calcium carbide for the manufacture of cyanamide.

The Haber-Bosch process of air fixation, introduced in Germany in 1912—chiefly to meet the enormous demand for explosives and fertilizers—developed greatly

¹ The term "net imports" indicates excess of imports over exports; "net exports," the excess of exports over imports.

during the war. This development made it practically unnecessary for Germany to import Chile saltpeter, net receipts, accordingly, declining from approximately 747,000 tons in 1913 to 3,611 in 1924—a saving of about 200,000,000 gold marks.

The calcium carbide industry was also developed to meet war needs. It was at first intended that war-time cyanamide production should be diverted mostly to use for agricultural fertilizer. Since 1918, when peak production estimated at 325,000 tons was reached (30,000 to 45,000 tons pre-war), the use of carbide surpluses for the manufacture of acetic acid, acetone, and carbide alcohol was advocated. The pre-war importation of 21,000 tons of gray acetate of lime (of which almost 99 per cent originated in the United States) had declined in 1924 to around 2,158 tons. Germany, undoubtedly, is using other processes for its production of acetic acid and related products. A net import of around 46,000 tons of calcium carbide in 1913 corresponds to a net export of a few hundred tons in 1924. Germany's air-fixation industry, and calcium carbide production, have brought about a unique revolution within the local chemical industry.

Thomas Meal Replacing Phosphate Rock Imports.

Unfavorable financial conditions were largely responsible for the decline in imports of phosphate rock from the United States and elsewhere in postwar years; but superphosphate is also being replaced considerably by Thomas meal. In 1913 Germany imported about 923,000 tons more rock phosphate than was exported, while net imports in 1924 amounted to around 271,280 tons. Approximately 80 per cent of Germany's imports of rock phosphate in 1924 originated in the United States, against 45 per cent in 1913. Because the German Thomas meal supply has been seriously crippled by the reduction of Germany's steel-producing apparatus, a net export by Germany of about 273,000 tons of Thomas meal in 1913 corresponds to a net import of 497,000 tons in 1924—from Alsace-Lorraine, France, and Luxemburg. It is often stated that Thomas meal, being free from acid, is more suitable to certain areas of German soil than rock phosphate. Production of the so-called "Rhenania" phosphate, a war-time emergency product, is scarcely sufficient to offset the rock-phosphate shortage. Although the two "Rhenania" phosphate plants at Brunsbüttelkoog in Holstein and at Porz near Cologne, respectively, are said to have a capacity of 150,000 tons annually, they are only producing probably one-half this amount.

Sulphuric Acid Industry Largely Dependent on Pyrite Imports.

The shortage of rock phosphate at the expense of German crops also explains, in part, Germany's lower consumption of sulphuric acid. Net imports of sulphur pyrites, moreover, in 1924 reached only about 45 per cent of their 1913 level. Pre-war (1913) production of sulphuric acid amounted to 1,727,400 tons (calculated to monohydrates), against 947,000 in 1921. The local sulphuric-acid industry at present is more dependent on imported pyrites than in 1921, as the zinc blende roasting plants in Upper Silesia were lost

to Poland with the partition. The "Badische Aniline" gypsum process for making ammonium sulphate in connection with its air-fixation process at Oppau and Merseburg survived the war. Available sulphuric acid in Germany must, of course, be consumed largely by the 60 or 80 superphosphate plants, the soda ash, and associated chemical industries, and manufacturers of ammonium sulphate.

Rock Salt and Potash Mines Yield Mineral Wealth.

In its rock salt and potash mines, Germany has two practically inexhaustible sources of mineral wealth for its chemical industry, as well as an immense export surplus. The net export of salt increased in postwar years, reaching about 963,000 tons in 1922 and 730,000 in 1924, compared with approximately 410,000 in 1913. Exports are chiefly sent to Czechoslovakia, Hungary, Norway, Denmark, and Sweden, and, about 24,000 tons were exported to the United States in 1924. High freight rates create the tendency to cause the export of the higher percentages of the fertilizer salts, containing from 12 per cent to 17.9 per cent K_2O and refined salts from 18 per cent to 42 per cent K_2O . Carnalite, containing less than 12 per cent K_2O , can be used profitably only for fertilizer within German borders. The salts which are not intended for fertilizer are refined to potassium chloride—a considerable export article—and potash, magnesium sulphate, sodium sulphate (Glauber salts), magnesium chloride, and bromine. A net export of 393,355 tons of potassium chloride in 1913 corresponds to a net export of 110,766 tons in 1924. Figures for other products are: Potash magnesium sulphate, 59,171 in 1913, and 33,913 in 1924; Glauber salts, 73,000 in 1913 and 56,500 in 1924; magnesium chloride, 40,000 (1924); bitter salts, or magnesium sulphate, 25,000 (1924); and bromine, 551 (1924).

Sodium chloride and potassium chloride are, furthermore, the basis for the electrolytic production of chlorine and the chlorates. Chlorine, listed in foreign-trade statistics under the head of compressed gases, is a German export article, around 500 tons probably being sold to foreign countries in 1924. Germany also exported approximately 27,000 tons of chloride of lime, bleaching lye, hypochlorite, barium peroxide, and hydrogen peroxide in 1924, and exported in excess of imports about 12,000 tons of potassium chlorate, exclusive of the explosives. The electrolytic branch of the potash industry produces metallic magnesium and could produce others of the alkali metals, but so far market demand is too limited to give them an important place in export commerce.

German Chemical Trade Summarized.

The current figures of Germany's monthly summary of foreign commerce do not include reparations deliveries and no responsibility is assumed for the accuracy of data covering entrances and clearances over occupied territory borders. It is possible, therefore, that Germany's export trade is more favorable than current statistics indicate. It should also be mentioned that certain bulk commodities which properly belong to the category of chemicals are not included, while some whose "chemical" character is questionable are listed. The following table, nevertheless, shows, approximately, Germany's foreign trade for 1924, with comparative data for 1913 and 1923:

Germany's foreign trade in chemicals

Items	1913		1923		1924	
	Metric tons	Gold marks	Metric tons	Gold marks	Metric tons	Gold marks
IMPORTS						
Chemical and pharmaceutical products, dyes and coloring materials.....	2,059,384	430,385,000	336,652	90,464,000	793,111	144,785,000

Chemical and pharmaceutical preparations (n. e. s.).....	48,257	101,256,000	28,561	70,215,000	19,748	80,498,000

Sulphur Imports in Excess of Pre-War—Declines in Other Groups.

In one notable case, Germany has been importing in excess of pre-war. This is sulphur, most of which originates in the United States. In 1913 Germany imported 46,636 metric tons of sulphur, of which 7,053 tons or 15 per cent originated in the United States. In 1923 Germany's sulphur imports amounted to 53,249 tons, of which 46,232 or almost 90 per cent originated in the United States, and in 1924, 68,435 tons, of which 56,716 or 83 per cent came from the United States.

This unique instance of an import increase, compared with pre-war receipts, may be explained by the expanding use of sulphur in the manufacture of disinfectants, insecticides, fungicides and similar products, and by the rubber vulcanizing, glass, and other industries. In other groups, however, imports have declined greatly from their 1913 level, attributable, generally, to the economic situation and the difficulty of financing imports.

Decline of Gold Values Important in Considering Exports.

According to these figures, Germany's total exports of chemicals in 1924 were 50 per cent of their corresponding volume in 1913, and 60 per cent of their corresponding value. It should be remembered, however, that the value of gold in terms of goods has declined. Total exports amounted to 2,442,088 metric tons, valued at 580,544,000 marks, in 1924, against 4,903,800 tons, worth 956,414,000 marks, in 1913.

The most important group, in bulk and value, is the heavy chemical, which includes potash exports, the largest single item.

Coal-Tar Dyes Exported—Other Exports.

The dyes and colors group, including coal-tar dyes and mineral colors, is of outstanding interest considering Germany's former dominant position as a manufacturer of coal-tar dyes. Exports in this group declined from 261,739 tons, valued at 298,044,000 marks, in 1913, to 103,671 tons, worth 189,604,000 marks, in 1924. The 1924 exports were 39 per cent of the volume of corresponding 1913 exports and 64 per cent of the value. The present tendency is for Germany to export the more valuable dyes. Those listed in export trade in the last two years are compared with the 1913 items in the following table:

German export of coal-tar dyes

Items	1913	1923	1924
	Metric tons	Metric tons	Metric tons
Aniline dyes.....	64,288	28,895	22,029
Alizarine dyes.....	11,040	886	1,331
Indigo.....	33,353	3,717	4,257
Total.....	108,681	33,508	27,617

Germany's 1924 exports of coal-tar dyes, excluding reparations deliveries and ignoring lost records of exports by the occupied territory (the coal-tar dye industry being largely centered in the occupied Rhineland) amounted to only about 25 per cent of their 1913 volume. In 1923 the percentage was somewhat higher.

In no case do figures of 1924 exports show a near approach to their corresponding 1913 level. In the group of varnishes and lacquers exports in 1924 were only 69 per cent of 1913; ethers, alcohols, volatile oils, artificial perfumery and cosmetics, 52 per cent; artificial fertilizers, 5 per cent; explosives and related products, 50 per cent; and chemical and pharmaceutical preparations, not otherwise specified, 40 per cent.

Imports Decline Greater Than Export.

The import decline has been even greater than in the case of exports. Total imports of chemicals in 1924 amounted to 793,000 tons, against 2,059,000 in 1913, the former figure being only about 38 per cent of the latter. Corresponding values are 144,785,000 marks against 430,385,000 marks, the former being 34 per cent of the latter figure. This circumstance may be explained largely, as mentioned above, by Germany's emancipation from Chilean saltpeter and carbide; moreover, the country has not been in a position to finance imports as in pre-war years.

In the artificial fertilizer group (exclusive of potash), imports in 1924 almost approached the 1913 level. Thomas meal, before the war, recorded an export surplus. The 1924 imports of artificial fertilizers amounted to 543,707 tons, against 587,026 in 1913—92 per cent of pre-war.

Additional information regarding chemicals appears in this issue under the following sections:

Tariffs and trade regulations:

British India: Import duty on matches reduced.

British Honduras: Import duties temporarily increased by 10 per cent surtax.

TEXTILES

Edward T. Pickard, Chief, Textile Division

WORLD TEXTILE NEWS IN BRIEF

Wool Exported from Liverpool.

Exports of East India wool to the United States from the Liverpool consular district during February amounted to \$84,440 as compared with \$1,924,116 during January. This large drop in the value of exports was due to the fact that no auctions were held during February. The first series took place from January 12 to 16, and the second series is scheduled to begin March 3. (Vice Consul L. S. Armstrong, Liverpool.)

Japanese Silk Exported.

Raw silk exported from Japan during January amounted to 26,012 piculs, valued at 54,756,197 yen (picul=133 $\frac{1}{3}$ pounds; yen= about \$0.38 at current exchange during January). Of this amount, the United States took 25,513 piculs, worth 53,759,304 yen. Smaller shipments were sent to France and Canada, and minor ones to Australia and British India. (Secretary to Commercial Attaché M. Katsumata, Tokyo.)

Canton Silk Shipments Reported.

American demand was fairly good in the Canton silk market during December and the first part of January, but European buyers showed little or no interest. During the second half of January and the early part of February the market was very quiet and little business was transacted. Shipments of raw silk during the nine months ended January 31, 1925, totaled 4,955,840 pounds; waste silk, 5,867,466 pounds; and pierced cocoons, 582,800 pounds. (Trade Commissioner O. S. Watson, Canton, February 5.)

Italian Lace and Embroidery Industry Active.

The Florentine lace and embroidery industry is of peculiar interest because American capital has been very active in its commercial development. Furthermore, the United States is the chief foreign destination for products of this nature, other markets being England, Canada, Mexico, Australia, and South America. The activity of the industry was satisfactory during 1924, shipments from Florence to the United States being valued at \$831,370, compared with \$588,438 during 1923. Linen and threads used in this industry are of Belgian, Irish, Italian, and French production, there having been during the past year an increase in the use of Belgian products. (Consul J. E. Haven, Florence.)

United States Shipments of Cotton Goods to Noncontiguous Territories.

Shipments of cotton cloth from continental United States to its noncontiguous territories during February, 1925, showed a marked increase in the case of Hawaii and Porto Rico, and a slight decrease for Alaska, as compared with February, 1924. The totals for the shipments during February, 1925, were as follows: To Alaska, 29,545 square yards, valued at \$9,096; Hawaii, 721,528 square yards, worth \$161,373; Porto Rico, 3,032,547 square yards, with a value of \$538,853. Hosiery shipments were in dozen pairs as follows: Alaska, 366, \$1,379; Hawaii, 1,939, \$7,506; Porto Rico, 23,741, \$38,942. Other knit goods were shipped as

follows; To Alaska, 1,448 pounds, \$3,036; Hawaii, 24,342 pounds, \$22,208; Porto Rico, 26,604 pounds, \$21,861.

Piece-Goods Samples from Syria Available.

American cotton goods are little known in the Beirut market, with the exception of gray sheetings, according to a report from Consul P. Knabenshue, Beirut. In most classes of cotton goods, American manufacturers should send samples and quotations for the consideration of local dealers. White shirtings, cambric, black sateen, and oxford are demanded in large quantities. Imports of cotton textiles during 1924 amounted to 5,739,231 kilos, valued at \$5,854,161 (kilo=2.2046 pounds). Samples of textiles sold in this market, together with prices and description, will be made available to firms on the exporters' index upon application to the New York district office, Bureau of Foreign and Domestic Commerce, or to the Textile Division, Washington. Refer to file No. 164480.

Government Orders for Polish Textile Industry.

Strong competition is being encountered on the Polish market in white goods imported from Czechoslovakia and Austria. These imports can be delivered against open credit, whereas Polish manufacturers demand 30 to 40 per cent cash and the balance on two-month notes. The textile industry is counting on Government orders to effect further improvement in the situation. The ministry of war has already declared its intention of ordering 26,000,000 zloty (zloty=\$0.19 at current exchange) worth of wool goods, 12,000,000 zloty worth of cotton goods, and jute material to the amount of 1,000,000 zloty. Other large orders are expected from the railway ministry, the ministry of interior, and the post and telegraph department. (Acting Commercial Attaché L. W. Rogers, Warsaw, February 23.)

Activity of Austrian Spinning Mills.

Cotton spindles in place in Austria during the six months ended January 31, 1925, were numbered at 986,186, according to a report of the Austrian Cotton Spinners' Association. This number excluded spindles spinning waste and twisting spindles, but included 565,118 ring spindles and 47,699 other spindles spinning Egyptian cotton. It is expected that 5,800 more spindles will be mounted during 1925. The association report does not state the degree of average activity. On the basis of 986,186 spindles in place and twenty-five 48-hour weeks which elapsed during this period, after deducting seven week-day holidays, the total theoretical capacity was equal to 1,183,400,000 spindle hours. In view of 443,800,000 idle spindle hours reported by the association, theoretical activity totaled 739,600,000 spindle hours and averaged 63 per cent of capacity. (Assistant Trade Commissioner Elbert Baldwin, Vienna, February 27.)

Wool Textile Exports from Italy Increase.

Wool stocks from last year's clip are exhausted in Italy and it is too early to venture any forecast as to

this year's clip, according to a recent report of the Italian Wool Association. Combers, on the whole, are working normally. Spinning mills are engaged on orders for prompt delivery, but a certain slackness in new orders for domestic consumption has been noted. On the other hand, the demand from abroad for yarns is active, particularly in the medium and cheaper grades. Weaving mills are well supplied with orders for summer goods, both for domestic and foreign trade. Exports of unprinted wool textiles, which make up the bulk of Italy's foreign sales of wool manufactures, amounted to 6,253 tons during the first 11 months of 1924, as compared with 3,148 for the like period of 1923 and 1,952 tons for the first 11 months of 1922. Yugoslavia, Austria, British India, Greece, Egypt, Dutch Indies, European Turkey, and Argentina are Italy's best customers. The growing development of Italy's foreign markets for wool textiles is an important factor in the future of the industry as there seems to be no prospect of an increased demand at home; on the contrary, domestic consumption has shown a tendency to decline. (E. Humes, clerk to commercial attaché, Rome, February 28.)

German Firm Desires American Market for Wool Waste.

A German firm desires to ship wool waste to the United States, according to a report from Commercial Attaché C. E. Herring, Berlin. This firm is at present exporting large amounts through French connections. It, however, desires to ship direct if a satisfactory market can be found. Further information will be made available upon application to the Textile Division, Bureau of Foreign and Domestic Commerce, Washington.

German Textile Raw Material Market During 1924

Vice Consul S. R. Lawson, Dresden

The general price level of textile goods in the German market is, to a great extent, regulated by the situation in the raw-material markets. While cotton depreciated during 1924 by nearly one-third, wool appreciated by 25, 50, and even 60 per cent, according to the grade. Considerable increases also took place in the price of flax, hemp, and ramie, while silk dropped somewhat. As regards the price level of manufactured goods, it may be found that the appreciation of raw materials affected the sales prices of the manufactured product more strongly and faster than the tendency toward depreciation.

Cotton Prices Fluctuate.

The cotton market during 1924 was subject to extraordinary fluctuations, American cotton at Bremen having fallen approximately 82 per cent during the year. The price of Egyptian cotton, which is used principally in the manufacture of fine yarns and fabrics, showed a tendency to advance toward the end of the year. The imports of raw cotton increased considerably in 1924, amounting to 1,343,301 bales, compared with 991,320 for 1923. Of the 1924 total, 1,071,349 bales came from the United States, 182,980 from British India, and 59,186 from Egypt. Business on the Bremen cotton exchange, which had been comparatively lively throughout the year, declined somewhat at the end of 1924. Stocks on hand totaled 66,000 bales at the beginning of January, 1924; 92,000 on August 1; and 181,290 on December 12.

Prices of cotton half-finished goods, which depreciated throughout 1924, have become quite firm of late, in accordance with the general tendency of the raw-material market. Cotton yarn (No. 20), which was quoted on the Stuttgart exchange at 113 cents per kilo (kilo=2.2046 pounds) at the beginning of the year, attained its highest level of 116 cents in February, 1924. A steady decline in price then set in, and after a temporary reaction in May the lowest level of 88 cents was reached in September. A slight revival was apparent at the end of the year. Cotton fabrics followed the cotton-yarn curve, but were slightly less affected by the depreciation on the raw-material market. The price of yarn decreased approximately 18 per cent during 1924, while fabrics declined from 7 to 9 per cent. Sewing thread was even much less affected. The high price of thread is partly due to the strict control by the German yarn syndicates, and partly to the high price level of the Egyptian cotton used in this industry. Imports of cotton yarns practically doubled during 1924, amounting to 44,747 metric tons, compared with 22,978 in 1923. The coarser yarns originate chiefly in Czechoslovakia; Alsace-Lorraine supplies the greater part of the medium; while the fine yarns come chiefly from Great Britain.

Wool Prices High with Reduced Consumption.

Wool prices have risen to such high levels as to cause a considerable decrease in the consumption of wool besides turning the demand more and more to the cheaper grades. The demand, however, is greater than the supply and prices have continued firm throughout the year. There has been an increase in the consumption of wool for carded yarns, while the interest in worsted yarns, which was especially lively during the first half of 1924, has considerably slackened. German purchases in the world markets during 1924 were in excess of those made in 1913, and amounted to 147,157 metric tons of raw wool. Of this total, Australia furnished 41 per cent of the merino and Argentina 48 per cent of the crossbred.

Silk Consumption Increases.

Silk consumption showed a marked increase in 1924, due principally, it is claimed, to the fact that silk has become a relatively cheaper raw material than wool and flax. Imports of raw silk increased from 765 metric tons in 1923 to 1,400 in 1924, and those of rayon from 268 to 1,086. Imports of silk yarns showed increases, with the exception of floss silk yarns, which declined slightly. Outside of a small temporary reaction at the beginning of October, 1924, the price of raw silk fell steadily throughout the year, due primarily to the decline on the Italian and Swiss markets.

The Crefeld silk industry has been well occupied during the latter part of 1924 and has sufficient orders on hand, it is claimed, to maintain full operation during the next few months.

Miscellaneous Fibers Imported.

German imports of raw flax in 1924 amounted to 11,555 metric tons, an increase of about 38 per cent over 1923. The most important countries of origin were the Baltic States, the Netherlands, and Belgium. Flax tow imports showed an increase of approximately 70 per cent and amounted to 4,196 metric tons. In this commodity the most important country of origin was Poland, followed by the Baltic States and Belgium. Imports of hemp and hemp tow also were larger—17,897 and 5,175 metric tons, respectively, in 1924. These imports were supplied largely by Italy. In

1924, 112,357 metric tons of jute and jute butts were imported into Germany, as compared with 92,919 in the preceding year. Practically all of this material came from British India. Imports of ramie, sisal, manila, and other vegetable fibers also increased, amounting to 26,623 metric tons in 1924. The chief country of origin for ramie was China, and for manila, the Philippines, while the Netherlands East Indies and British East Africa furnished the greater part of the sisal.

Australian Wool Market

Trade Commissioner E. G. Babbitt, Melbourne, February 20

Neither continental nor American buying is active in the Australian market compared with December sales, due possibly to exchange rates. At a joint conference of the Australian Wool Growers' Council and the National Council of Wool Selling Brokers of Australia, held in February, it was resolved to curtail offerings in view of the limited buying power as evidenced at recent auctions. This will have the effect of extending the season over a longer period, but it is hoped that a greater stability of prices will result.

Discussions have been taking place for some time between Bradford manufacturers and Australian wool-growers with regard to the adoption of a woolen wool pack. No agreement as yet has been reached.

South African buyers are at present in Australia procuring Australian merino stud rams. During the past 15 years, over 28,000 stud sheep have been bought from Australia by South Africa.

Wool Exported—Depression in Wool Mills.

Wool exports from Australia, from July 1, 1924, to January 31, 1925, totaled 1,038,705 bales—a net in-

crease of 108,079 over the corresponding period of 1923-24. The National Council of Wool Selling Brokers report that from July 1, 1924, to January 31, 1925, their receipts in store aggregated 1,851,562 bales. Of this amount 1,060,503 have been sold, leaving 771,473 in store. The wool shipped from the Commonwealth during this period was valued at £39,333,062.

Australian wool mills are suffering from a period of depression, due, it is claimed, to the high prices of raw wool and to the disastrous effects of foreign competition, particularly from Germany. Many of the Australian mills manufacture only all-wool fabrics, while the foreign imports are, for the most part, wool mixture materials, which sell at a lower price. Australian all-wool blankets and flannels, for example, are particularly good of their kind, but quite often the purchaser is satisfied with a mixture obtainable at a lower cost. Those mills which manufacture several classes of material are not experiencing much hardship.

Additional information regarding textiles appears in this issue under the following sections:

Cable review, Latin America:

Increased confidence in Chilean business.
Economic improvement expected in Bolivia.
Conditions satisfactory in Venezuela.

Cable review, Far East: Indian situation continues to improve.

Tariffs and trade regulations:

Austria: Relaxation of import restrictions.

British Honduras: Import duties temporarily increased by 10 per cent surtax.

British India: Import duties increased.

AUTOMOTIVE PRODUCTS

Percy Owen, Chief, Automotive Division

PRODUCTION FIGURES FOR UNITED STATES AND CANADA SEPARATED

In line with its policy of increasing the comprehensiveness of its statistics wherever possible, the Automotive Division presents for the first time in the following article separate production figures for the United States and Canada. Through an arrangement effected with the Bureau of the Census, the National Automobile Chamber of Commerce, and individual manufacturers, separate production statistics for the two countries which properly constitute the home of the American automotive industry are now being collected. These separated figures have been secured for the entire year 1924, but could not be carried back beyond that year. Beginning with this issue, passenger-car and truck production figures will be announced for the United States and Canada each month in this section of Commerce Reports.

FEBRUARY PRODUCTION SHOWS SUBSTANTIAL GAIN

Production of cars and trucks in the United States and Canada for the month of February numbered 287,116, as compared with 240,950 for the preceding month. Automotive exports decreased slightly in value, to \$21,978,227, from the \$22,322,911 total in January. These figures, however, were larger than the monthly average during 1924. The ratio of exports to production dropped from 9.4 in January to 7.7 in February.

The following table, which summarizes production and exports during January and February, shows for the first time separate production statistics for the United States and Canada:

Export and production of American passenger cars and trucks (complete or chassis), by number, for February, 1925

Item	January, 1925			February, 1925		
	Cars	Trucks	Com- bined	Cars	Trucks	Com- bined

Increased Exports of Passenger Cars.

Exports of passenger cars from the United States were valued at \$11,653,478, as compared with \$11,240,679 in January. Canadian exports of passenger cars likewise rose from 3,732 in number, valued at \$1,830,427, to 4,008 valued at \$1,843,551. Truck shipments, however, declined perceptibly.

The following table shows these shipments in detail:

Exports of passenger cars, motor trucks, and busses (complete or chassis), from the United States and Canada during February, 1925.

² Not listed separately prior to Jan. 1, 1925.

Accessory Shipments Show Improvement.

A noticeable gain is evident in the value of automobile parts for replacement and of automobile service appliances. Motor cycles and aircraft, however, as

well as electric trucks, trailers, and automobile engines, were all below the January figures.

The following table contains the statistics of these shipments:

Other automotive exports from the United States during February, 1925

Item	February, 1924		January, 1925		February, 1925	
	Number	Value	Number	Value	Number	Value

Palermo Port Traffic Declines

Port traffic at Palermo declined during the calendar year 1924. Inward cargo aggregated 537,457 tons, and outward cargo 121,549 tons, compared with 554,348 and 123,800 tons in 1923. [Further details may be obtained from the Transportation Division or through the district and cooperative offices of the Bureau of Foreign and Domestic Commerce, by requesting Report No. 163545.] (Consul Edward I. Nathan, Palermo, Italy, February 20.)

Marseille Makes Reductions in Port Charges

Reductions and changes in port dues on vessels, taxes on merchandise, and taxes on passengers, were ordered by a decree dated January 8, 1925. [Details may be obtained from the Transportation Division or through the district and cooperative offices of the Bureau of Foreign and Domestic Commerce, by requesting Report No. 163861.] (Consular Clerk A. C. Houghton and Vice Consul Alfred D. Cameron, Marseille, February 24.)

AGRICULTURAL IMPLEMENTS

George B. Bell, Chief, Agricultural Implements Division

UNITED STATES EXPORTS OF IMPLEMENTS

Shipments of agricultural implements during the first two months of 1925 have been proceeding at approximately the same level as during the corresponding months of 1924. January exports were valued at \$4,595,268, and February exports at \$4,435,309—a decrease of a little over \$150,000. Exports in January, 1924, amounted to \$4,367,083, and in February to \$4,415,527.

Tractor Shipments Increased—Plows.

The only item showing any notable increase this year is wheel tractors, of which 1,593 valued at \$1,038,508 were exported in February as compared with 1,293 valued at \$870,296 in February, 1924. A slight decrease was shown in the export of plows in February of this year, which amounted to 17,739 valued at \$364,799, as compared with 18,609 valued at \$381,373, in February, 1924. The increases or decreases which occurred during February as compared with a year ago were in most cases quite small.

Gain in Exports of Harvesters and Binders.

Exports in harvesters and binders showed a slight increase, principally to European countries other than Belgium, Denmark, France, Spain, and the United Kingdom. Shipments to France decreased about 40 per cent in February, as compared with a year ago, while those to Spain increased from 348, in February, 1924, to 405 in February, 1925. None were exported during the month to Argentina, Australia, and British South Africa, but six were sent to Canada. During the month, five combined harvesters and reapers valued at \$4,517 were sold abroad.

Trade Developed in Sprayers and Dusters.

Sprayers and dusters exported during February amounted to 751, valued at \$14,646. Since this is a new classification, no comparison can be made with exports in February, 1924. It is, however, a consider-

able increase over sales in January, 1925, which amounted to 182, valued at \$2,348. Figures showing countries of destination of sprayers and dusters for February are not available, but the January figures show that Canada was the largest purchaser, taking 115 valued at \$815, and British South Africa was the second largest, taking 36 valued at \$584, although in point of value Argentina was second, with 4 valued at \$666. Cuba and Greece each took 12 sprayers and dusters, while Mexico, Jamaica, and Haiti each purchased 1.

Harvesters and Threshers Sold—Lawn Mowers.

Combined harvesters and threshers were shown separately for the first time in January, 1925, and exports were distributed as follows: 615 to France, 70 to Canada, 50 to the United Kingdom, and 13 to other countries.

In February, 1925, 11,108 lawn mowers, valued at \$69,454, were exported. This is a slight increase over January, when 10,082 valued at \$59,257, were exported. The largest purchaser in January was the United Kingdom, which took 6,475 machines. In addition, 396 lawn mowers were shipped to the Irish Free State. Other large purchasers were France, taking 1,067, and Australia, taking 1,023.

Additional information regarding agricultural implements appears in this issue under the following sections:

Cable review, Latin America: Increased confidence in Chilean business.

Tariffs and trade regulations:

British Honduras: Import duties temporarily increased by 10 per cent surtax.

Canada: Changes in import duty.

"Foreign trade opportunities."

INDUSTRIAL MACHINERY

W. H. Rastall, Chief, Industrial Machinery Division

DECLINE IN GERMAN MACHINERY SALES IN JAPAN

Vice Consul Erik W. Magnuson, Stuttgart, Germany

Exports of machinery from Germany to Japan showed a decided increase from 1920 to 1923, nearly equaling 1913 figures in the latter year, but declined sharply in 1924, falling to about 60 per cent of exports in 1913. Comparing Germany's machinery trade with Japan in pre-war years with that of recent years brings out many striking changes in the types of machinery sold. For example, German shipments to that market in 1913 consisted largely of textile, metal-working, and hydraulic machinery. In 1924, a much more varied line was sent to Japan; exports of hydraulic machinery

fell off heavily, and German internal-combustion engines were introduced. Other lines of German equipment now on the Japanese market not exported to any great extent in pre-war years to that country are pumps, bakers' machinery, refrigerating equipment, and cranes.

Textile Machinery Sales Decline.

While the principal part of the textile machinery sold by Germany to Japan in 1913 consisted chiefly of looms, the demand is now for textile finishing and spinning machinery. Sales of German textile-finishing machinery increased from 217 metric tons in 1913 to 910 tons in 1923, but declined during the first 11 months of 1924 to 480 tons. Exports of looms decreased from 937 metric tons in 1913 to 116 tons during 1924.

German Metal-Working Machinery Sales Half Those of 1913.

Japan is still a fair market for German metal-working machinery, 633 metric tons of this equipment having been sold during the first 11 months of 1924, which amount was about half that shipped in 1913. No woodworking machinery is on record as being exported. German exports of internal-combustion engines showed a marked increase during the 11-month period of 1924 when 493 tons were purchased, in contrast with 52 tons in 1923 and 64 tons in 1922.

German Machinery Introduced for First Time in Japan.

German machinery introduced into Japan for the first time, according to official statistics, included, during the first 11 months of 1924, refrigerating machinery weighing 135 tons, pumps, 106 tons, grain cleaning machinery, 52 tons, and paper-making machinery, 15 tons. The following table, from official German figures, gives German machinery exports to Japan in 1913, 1920, 1922, 1923, and January-November, 1924:

*German machinery exports to Japan**[In metric tons]*

Class	1913	1920	1922	1923	January-November, 1924
Steam and gas turbines.....			128	86	
Internal combustion engines.....			04	52	493
Hydraulic machinery.....	1,300		171	800	
Refrigerating machinery.....					135
Pumps.....					106
Cranes.....					95
Spinning machinery.....	527	208	501	727	87
Looms.....	937	190	324	200	116
Textile finishing.....	217	179	513	910	480
Metal working machinery.....	1,354	92	656	784	633
Sugar mill equipment.....			399		
Bakers' machinery.....			260	330	214
Grain cleaning machinery.....					52
Paper making machinery.....					15
Other machinery, n. e. s.....	1,194	25	1,730	1,374	1,089
Total.....	5,529	604	4,854	5,263	3,515

[Exports of industrial machinery from the United States to Japan in 1923 amounted to over three times the pre-war figure, or nearly \$12,000,000. In 1924, Japan purchased metal-working machinery valued at \$1,980,000 from the United States.]

Machinery Market of China Unchanged in 1924

Trade Commissioner G. C. Howard, Shanghai

A review of the engineering and machinery business in China for 1924 shows little of importance as differing from the situation in 1923. There was a continued absence of orders placed by the Government for railway materials and machine-shop supplies. Practically all the Chinese industrial enterprises maintained the policy of buying mill supplies and equipment necessary for plant operation in sufficient quantities for monthly needs only, and in some cases only to meet daily requirements. This has led the importing and engineering houses to cater to the trade from stock deliveries as the only way to secure business. During 1924, there was a regular market for supplies of various kinds but few large contracts have been placed for new enterprises, most of them being for small extensions to already existing factories. The unfavorable financial condition of many of the railroads of north

China have made sales of railway machine-shop equipment difficult.

Textile Industry Depressed—Outlook More Favorable.

Although the depression in the textile manufacturing industry continued throughout 1924, the outlook at the end of the year appeared more favorable, pointing to a revival in this industry during 1925, although the increased activity will probably not result in orders for textile machinery for some time. A considerable amount of refinancing of cotton mills has been under negotiation in 1924, but the financial condition of many of the Chinese-owned mills is still very unsound. Several Chinese mills have come under foreign management, and where strict foreign supervision and control can be exercised beneficial results have been noted in many cases.

Prices quoted on spinning machinery by British and American manufacturers have been nearly the same, but British manufacturers of looms are quoting lower prices. British and American manufacturers are the principal competitors in the textile machinery market, although French and German offerings have increased slightly in 1924.

Machine Tool Market Dull.

The machine-tool market has been dull generally, although considerable quantities of metal-working machinery were sold to arsenals in 1923 and delivered last year. Practically all the arsenals are running at full capacity with the machinery heretofore ordered installed and in operation. In the machine-tool market, as well as in general machinery lines, the year 1924 was a period of curtailed business with keen competition on orders of any importance. Credit questions have been subjected to the keenest scrutiny and there has been a growing tendency for foreign firms to refuse to finance engineering contracts on long-deferred terms.

Additional information regarding industrial machinery appears in this issue under the following sections:

Cable review, Latin America:

Floods in Peru hinder trade.

Economic improvement expected in Bolivia.

Far East:

A quarter century of China's trade.

Agricultural New Zealand progressive industrially.

Tariffs and trade regulations:

British Honduras: Import duties temporarily increased by 10 per cent surtax.

British India: Import duty reduced.

Canada: Changes in import duty.

List of "Bureau's special circulars available."

"Foreign trade opportunities."

New Postal Regulations in Lithuania

The Minister of Communications has published the following regulations, effective December 1, 1924, regarding changes in the postal tariff.

Postage on registered evaluated letters is 0.25 lits for every 20 grams or fraction thereof. [One lit equals 10 cents.]

Insurance charges are assessed on the value of the letter—25 lits for a value up to 100 lits, and an additional 0.10 lits for every further 100 lits of value.

Registration fees are fixed at 0.25 lits per letter.

The limit of weight is 10 kilos.

The limit of registered value is 50,000 lits for open letters and 20,000 lits for sealed letters. (Commercial Attaché C. J. Mayer, Riga, Latvia.)

CONSTRUCTION NEWS

Compiled in Industrial Machinery Division

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce or its district and cooperative offices by mentioning the country and reference number given. Where no reference number is given further information is not available.]

Construction Projects Announced in Canada.

Recent construction projects announced in Canada as reported by Assistant Trade Commissioner Walter J. Donnelly, Ottawa, include a \$1,000,000 distillery, new headquarters of an insurance concern involving \$750,000, a \$350,000 steam plant, and a \$350,000 collegiate building. Further details regarding these and other constructional activities are available to accredited American concerns who apply to the bureau or any of its district offices. Reference No. 35X.

Montreal Grain Elevator to Have Addition.

Subject to the approval of the Government at Ottawa, the Harbor Commissioners in Montreal will add, during the summer, a new storage unit of 3,000,000 bushels capacity to one of the elevators at Tarte Pier. This will bring the storage capacity to 5,000,000 bushels, a previous section of 2,000,000 bushels being constructed in 1924. Reference No. 164258. (Consul General Albert Halstead, Montreal, Canada.)

Funds Provided for Transportation Development in Eastern Africa.

Sanction has been given to an expenditure of approximately £100,000 for improvements to the existing customs wharf at Dar-es-Salaam, according to the East African Standard. A further loan has been sanctioned for improvements to Kigoma Port. (Consul Avra M. Warren, Nairobi, Kenya.)

City of Havre Considering New Station.

The municipality of Havre has under consideration a project for the erection of a new railway station, the details of which will not be made public until the next municipal election, which takes place in May. It is expected, however, that the building will be constructed of concrete, and that the front, faced with white stone, will be decorated with columns and statues. Reference No. 164245. (Consul Lester Maynard, Havre, France.)

Grinding Mill Added to Paper Plant in Canada.

A paper mill in British Columbia is reported to have recently awarded a contract for the construction of a grinding plant to cost about \$1,000,000. A development program entailing the expenditure of \$4,000,000 is contemplated, including an increase in the hydroelectric plant. Contracts for part of the equipment have already been awarded, it is announced. The plant may be reached by ocean-going vessels. Reference No. 164292-A. (Consul General Augustus E. Ingram, Vancouver.)

More Construction Proposed in Vancouver.

Tenders have been asked for the construction of a four-story hospital at Nanaimo, on Vancouver Island. The building will be of reinforced concrete, with stucco exterior, 110 by 125 feet.

The early construction of two moving-picture theaters in suburban districts of Vancouver has been

announced. Each theater will be 50 by 130 feet and one story in height, with a seating capacity of 1,000. The equipment will be modern in every respect. Reference No. 164292-B. (Consul General Augustus E. Ingram, Vancouver, British Columbia, Canada.)

Brazilian State Announces Road-Building Plan.

The delegate from the State of Minas Geraes to the Third National Road Congress described the road building plans of his State which call for the construction of nearly 15,000 kilometers of road. The State road administration now has about 300 kilometers under construction, 150 kilometers approved for construction, and studies are being made in connection with the proposed building of over 1,000 kilometers more. Minas now has about 6,000 kilometers of roads, against an estimated length of railway lines of 7,200 kilometers. The State roads administration claims that the State needs 36,000 kilometers of automobile roads. (Assistant Trade Commissioner A. Ogden Pierrot, Rio de Janeiro.)

Government of Palestine to Erect Harbor at Haifa.

Haifa has been selected by the Government of Palestine as the place best adapted and lending the most natural advantages for the construction of a port, writes Consul Oscar S. Heizer, Jerusalem. It is not known when the work of construction will commence, but further details will be published when received in Construction News.

Railroad to Run into Gold Field in Canada.

The Ontario Government has definitely decided to start the construction of a 37-mile extension of the Larder Lake Branch of the Temiskaming and Northern Ontario Railway into the Rouyn gold fields of northwestern Quebec, according to an announcement before the Ontario Parliament. It is expected that the spur will be completed by December 1, 1925, and will cost about \$1,750,000. It is said that the proposal followed upon a decision of the various operators in Rouyn to construct a customs smelter there as soon as steel reached the camp. (Vice Consul G. E. Seltzer, North Bay, Ontario.)

Recife, Brazil, to Have New Market.

The municipality of Recife has provided for the construction of a new market in the suburb of Magdalena. This new market will contain 152 stalls for food-stuffs and other wares besides special sanitary stalls for fresh meat. (Vice Consul Fred C. Eastin, jr., Pernambuco, Brazil.)

Construction Proposed of 30 Apartment Houses in Madrid.

An Asturian contractor proposes to erect 30 apartment houses, containing 1,723 apartments, each with a yearly rental of 660 to 15,996 pesetas. (The peseta is now worth \$0.14.) The site of the scheme is just east of the royal palace and close to the railway station Del Norte, on land now filled with small and humble houses. The contractor estimates the cost of urbanization of this area at 30,000,000 pesetas, and the cost of construction of the proposed houses at 37,000,000 pesetas. (Consul Augustin W. Ferrin, Madrid, Spain.)

RUBBER

P. L. Palmerton, Chief, Rubber Division

TREND OF OUR EXPORT TRADE IN RUBBER GOODS

E. G. Holt, assistant chief, Rubber Division

American exports of rubber goods during January and February were valued at \$6,885,042 as compared with \$5,737,159 in the first two months of 1924. In accordance with the usual seasonal trend, however, exports of waterproof rubber footwear decreased sharply during February, and influenced by this decline—in addition to the fewer number of business days in the month—the value of all rubber goods exports for February decreased to \$3,161,309 from \$3,723,733 in January and \$3,027,840 in February, 1924.

Automobile Tire Trade Steady.

Over 105,000 automobile casings were exported in February as compared with 112,000 in January, showing that the tire trade is holding up steadily. Exports of automobile inner tubes declined in about the same ratio, from 93,000 in January to 88,000 in February; and solid tires from 8,326 to 7,992. The average unit value per casing in February was \$11.58, per inner tube \$1.98, and per solid tire \$25.50—a decline as compared with January for casings and solid tires and an increase from \$1.82 for inner tubes. The chief markets for casings were Argentina, 15,454; the United Kingdom, 10,983; Uruguay, 7,325; Brazil, 5,259; Cuba, 5,097; Australia, 5,013; Straits Settlements, 4,907; Philippine Islands, 4,098; Mexico, 4,035; and Belgium, 3,482.

Decreased Trade in Rubber Footwear.

Exports of each class of rubber footwear declined sharply in February. The period from February to May, inclusive, is usually dull in the export trade in waterproof footwear, since the principal European markets import chiefly during the latter half of the year. Exports of rubber boots declined from 138,000 pairs in January to 49,000 pairs in February; rubber shoes from 90,000 pairs to 44,000; and canvas rubber-soled shoes from 404,000 to 324,000, lower shipments to Argentina being mainly accountable for the decline in this item. The trade in rubber heels and soles was also light; exports dropped from 280,000 pounds in January to 187,000 in February, due chiefly to reduced shipments to Mexico.

Mechanical Rubber Goods Exports.

The mechanical rubber goods trade in February was about equal to that in January, although exports of rubber packing were relatively low. This trade—especially that in rubber belting—has been less active during the last four months than during any other period for the past year and a half. The average value per pound of rubber belting exports in 1924 was about \$0.59; during February, the average unit value was only \$0.52. The leading markets for belting in February were Canada, 48,006 pounds; Chile, 40,001; Mexico, 23,156; the United Kingdom, 22,618; Sweden, 13,826; the Philippines, 13,234; Japan, 12,102; and British Guiana, 11,684. Rubber hose went principally to the United Kingdom, Mexico, Canada, and British South Africa in February.

Trade in Other Rubber Goods.

Over 16,500 water bottles and fountain syringes were exported in February, Argentina, Uruguay, Germany, Cuba, and Great Britain being the chief markets. The trade in bathing caps showed a considerable advance over January, 24,746 dozen being exported in February as compared with 15,477 dozen in January; most of these went to Canada, France, Sweden, the United Kingdom, Denmark, and Switzerland; Norway, Spain, and Egypt were also fairly important markets. The European trade is stocking up for the coming season.

The value of rubber toys, balls, and balloons exported during February was \$87,703, the United Kingdom being the largest market. The Netherlands market took \$10,815 worth; Canada, \$6,978; Germany, \$7,777; Belgium, \$2,286; Australia, \$3,675; British South Africa, \$3,676; and Sweden, Mexico, Cuba, Argentina, and British India over \$1,000 worth each.

British Exports of Tires and Rubber Footwear

Assistant Trade Commissioner William M. Park, London

The United Kingdom exported in January 54,788 automobile casings, valued at £134,455, which, at the average exchange rate of \$4.78 for the month, equals \$642,695 or \$11.73 per casing. The United States exported about 113,000 casings in January, Canada about 60,000, and France approximately 172,000. Statistics of January exports from Italy, Germany, Belgium, and Japan are not yet available.

Leading Tire Markets.

British India was the destination of 7,205 casings exported from the United Kingdom, and was by far the leading market. Dunlop tires dominate the Indian market, with Michelin a close competitor. American makes are, however, slowly increasing their share of the Indian trade. Mexico took 4,099 British tires in January; on this market Dunlop has made considerable headway during the past year. Next in order come British South Africa 3,971 casings; Brazil, 3,454; Irish Free State, 3,197; Italy, 2,926; Australia, 2,674; and Argentina, 2,354.

The British West Indies took 2,277 British tires in January; during 1924 more tires were sent to these Islands from the United Kingdom than from the United States, while exports from Canada slightly exceeded those from the United Kingdom. Cuba took 1,995 tires; British West Africa, 1,974; and Egypt, 1,586. Denmark, New Zealand, British Malaya, and Ceylon, each took from 1,000 to 2,000.

Trend of Rubber Footwear Exports.

Exports of rubber footwear from the United Kingdom in January amounted to 293,796 pairs, valued at £35,649, or \$170,402. The low average value of \$0.58 per pair indicates that the footwear consisted largely of cheap plimsolls and similar canvas rubber-soled shoes, though all kinds of rubber boots and shoes are included under this class of British exports. Norway was the leading market, taking 60,660 pairs, valued at £6,335, and Germany held second position with 36,420

pairs, valued at \$3,256. Germany is importing rubber footwear on an increasing scale in recent months, more especially canvas rubber-soled shoes; important shipments to Germany from the United States and Canada occurred during the closing months of 1924. Next in importance among January markets for British rubber footwear are British South Africa, 34,428 pairs, valued at \$3,621; New Zealand, 28,248 pairs, valued at \$3,150; Australia, 23,892 pairs, valued at \$3,207; the Netherlands, 20,436 pairs, valued at \$2,095;

Sweden, 18,492 pairs, valued at \$4,026, and Egypt, 13,668 pairs, valued at \$984.

Additional information regarding rubber appears in this issue under the following sections:

Tariffs and Trade Regulations:

British Honduras: Import duties temporarily increased by 10 per cent surtax.

Canada: Rubber footwear exempted from sales tax.

List of "Bureau's special circulars available."

"Foreign trade opportunities."

ELECTRICAL EQUIPMENT

D. S. Wegg, Acting Chief, Electrical Equipment Division

BELGIUM WIRING PRACTICE NOT ADVERSE TO AMERICAN DEVICES

Assistant Trade Commissioner Leigh W. Hunt, Brussels

Belgian wiring regulations, as adopted by the Comité Electrotechnique Belge, and contained in the Règlement Technique General, to which all wiring in Belgium must conform, are not adverse to wiring materials and devices of American manufacture approved by the American Underwriters' Laboratories, except in so far as insulated wire is concerned. Insulated wire, to be sold readily in Belgium, must bear the identifying mark of approval of the Comité Electrotechnique—two white threads woven in the insulating cover. All Belgian electrical firms must subscribe to these regulations before they are accepted as members of Chambre Syndical des Electriciens Belges.

Electric-lighting companies inspect interior lighting installations before cutting them in on their lines. Wiring installations are also inspected by insurance companies.

Bergmann Tubing in General Use.

Interior wiring in Belgium is installed in Bergmann tubing. This may be either on the surface of the walls and ceilings or concealed, but the latter method is employed almost entirely in new construction. Rubber insulated wire must be used. The metric wire gauge is employed in Belgium, and, although 1-millimeter wire is the generally accepted minimum, the use of smaller wire is permitted.

Rotary Switch and Edison Socket Predominate.

The rotary switch is the most popular type in Belgium, and although others are seen they are usually found in old installations.

The bayonet type of socket was formerly employed in Belgium to almost as great an extent as was the Edison screw type but the latter now predominates. It is quite customary to install special receptacles for the attachment of electric heaters, toasters, radiators, and other household appliances but they are seldom located near the floor, it being the usual practice to place them in the wall at a height of approximately 4 feet.

American Safety Switches Not in Use.

Of the various types of fuses manufactured, the Edison screw plug is most commonly used in Belgium. It is required that switch units and fuse blocks be of nonflammable material and the general practice is to employ porcelain units. It is believed that the in-

roduction of American safety switches would serve no particular end as those now employed meet all the requirements for safety and are also practical and simple.

Current Usually Sold by Meter.

Each household or individual user of electricity is furnished with a meter, the common size installed in dwellings being 15-amperes. In some of the old installations, however, electricity is still being supplied on a flat rate, a certain sum per lamp per month being charged.

Wiring of Old Dwellings Difficult.

In the wiring of old as well as new dwellings Bergmann tubing is used. When the installation is made after the building has been constructed, surface wiring is used because the interior walls of Belgian homes are usually made of brick and consequently it is very difficult to wire under the surface.

American Devices Well Received.

Wiring materials and devices of American manufacture, except the wire itself, are very well received in Belgium. This is especially true of American-made switches of the rotary type and Edison sockets. Price is an important item to the Belgian purchaser but the present tendency of the retailers is toward quality merchandise. If this demand becomes more prevalent, American manufacturers of wiring materials and devices should find an ever-increasing market in Belgium for their products.

Electric wiring is done by well-established firms, or by individuals who are often electricians working with one or two laborers.

[Belgium wiring regulations, Règlement Technique General (in French), is available for loan by the Electrical Equipment Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., and can be obtained by referring to Report No. 22706.]

Conditions in Austrian Electrotechnical Industry

Assistant Trade Commissioner Elbert Baldwin, Vienna

At least 80 per cent of the electrical machinery industry of the former Austro-Hungarian empire has remained in the territory of the present Austrian Republic. The output of this industry is now considerably greater than the consuming capacity of its domestic market and correspondingly dependent upon foreign purchasers.

Difficult to Maintain Export Trade.

It has been very difficult for Austrian manufacturers of electrical goods to maintain their export trade, however, because of tariff barriers and the money stringency generally prevailing in eastern and central European markets. It is true that their domestic market has, in postwar years, expanded as a result of the development of hydroelectric power and the electrification of Austrian railroads, but the larger machinery units required by these developments do not afford the industry the same opportunity for manufacturing efficiency as did the pre-war mass production of smaller units. Furthermore, profits derived from the growth and development of domestic electrification have been partially absorbed by necessary adaptations of plant and equipment.

Competition Unfavorable to Austrian Sales.

The number of workmen employed by the industry is practically the same as in pre-war years but the output is lower. Furthermore, competitive conditions are unfavorable to Austrian manufacturers, their prices being 20 per cent or more above pre-war rates, whereas German prices have increased approximately 10 to 15 per cent.

Another disadvantage is the congestion in the market caused by the resale of electrical equipment purchased during the period of currency depreciation. This condition has largely caused the decrease in the production of high tension machinery to 50 per cent of the pre-war output.

Some encouragement is found, however, in the prospect of further electrification developments and the eventual demand for electrical machinery and equipment arising from this advancement.

Exports Show But Slight Increase.

Austrian exports of electrical goods, according to available statistics, showed little change in volume for the first six months of 1924, but there was an increase of about 50 per cent in their value over the corresponding period of 1923. Exports to Italy showed a slight increase, this growth being attributed to a semigovernmental order for a water-power plant of 8,000 horsepower capacity. Even though tariff rates in Czechoslovakia and Hungary are high, Austrian exports to these two countries during 1924 were slightly larger than during the previous year. Greater sales to Hungarian dealers, effected on a contingent basis, were stopped on January 1, 1925, by the excessively high Hungarian tariff which became effective on that date. Austrian exports of electrical goods to Switzerland were also a little above those of the preceding year. The value of electrical equipment exported by Austria to Poland, Rumania, and Yugoslavia during 1924 was less than that of 1923. The decline in the trade with Poland and Rumania was caused largely by the capital stringency obtaining in those countries. A revival of trade with Yugoslavia is anticipated and exports to Czechoslovakia may increase.

Status of Shannon Hydroelectric Scheme

Vice Consul Harold M. Collins, Dublin, Irish Free State, February 24

The Irish Free State Government has decided to proceed with the scheme proposed by the Siemens Schuckertwerke of Berlin for the hydroelectrical development of the River Shannon, according to a statement made on February 23 by the Minister of

Industry and Commerce. The necessary legislation will shortly be introduced in the Dail, he said, and the undertaking should be completed within three years. The detailed plans worked out by the German firm, and approved by a board of European experts appointed by the Free State Government, are now being printed, and their early publication is expected.

Terms of Agreement.

Thus far, no announcement has been made concerning the method of procedure which will be adopted in prosecuting the undertaking. Under the terms of its agreement with the Siemens Schuckertwerke, the Government may carry out the development as a State enterprise, giving the Siemens Schuckertwerke preference in awarding contracts for engineering and material, or it may give the German firm a 12 months' option to carry out the project as a private enterprise under State control. It is noteworthy that the Siemens firm has just incorporated a company in the Free State.

British Electrical Exports Increase During January

British electrical exports for January, 1925, increased £471,885 over those of January, 1924, and £350,349 over those of December, 1924. The greatest single increase during the first month of this year as compared with the corresponding month of 1924 was in the class of submarine telegraph and telephone cables. There was a considerable decrease, however, in each of the two classes, electrical instruments, and switchboards. Complete figures for January, 1924 and 1925, are given below:

Exports of electrical material from Great Britain during January—

Articles	1924	1925
Electrical machinery:		
Railway and traction motors.....	£39,849	£72,156
Other motors and generators.....	237,103	258,830
All other sorts.....	175,840	240,292
Electric wires and cables, insulated:		
Rubber insulated (not being telegraph or telephone wires or cables).....	105,932	124,936
Insulation other than rubber (not being telegraph or telephone wires or cables).....	109,811	111,827
Telegraph and telephone wires and cables (not being submarine cables).....	66,521	84,214
Submarine telegraph and telephone cables.....	36,373	273,516
Telegraph and telephone instruments and apparatus (except wireless valves).....	195,794	255,252
Carbons, electric.....	1,765	4,080
Electric lamps and parts:		
Electric glow lamps.....	27,319	43,722
Arc lamps and electric searchlights.....	402	235
Parts thereof (except carbon rods).....	1,127	6
Batteries and accumulators (including parts).....	54,074	77,152
Electrical instruments (other than telegraphic and telephone); commercial (including ammeters, voltmeters, etc.) house service meters and scientific.....	46,687	17,055
Switchboards (other than telegraph and telephone).....	13,287	7,290
Electrical goods and apparatus, all other sorts.....	143,757	150,388
Total.....	1,255,650	1,727,585

Possible Market for Electrical Household Appliances in Australia

Consul Henry H. Balch, Adelaide

It is believed that a market for electric washing machines and vacuum cleaners could be developed in southern and western Australia. These household appliances are not at present used to any appreciable extent, but since the standard of living in Australia is quite similar to that in the United States, and since labor for household service is both expensive and

scarce, it seems that such appliances should sell readily where electric current is available.

Manufacturers desiring to enter this market would do well to plan on conducting an educational campaign, and they should, furthermore, pursue a sales plan that will permit of all necessary demonstrations to show the merits of the appliances offered. Satisfactory results could hardly be expected through merely appointing an agent and having him purchase a stock.

[Further information can be obtained from the Electrical Equipment Division, Bureau of Foreign and Domestic Commerce, by referring to Reports No. 164298 and No. 164470.]

Italy's Electrical Trade With United States Increased

Commercial Attaché H. C. MacLean, Rome

Imports of electrical goods into Italy from the United States during the first 11 months of 1924 show very substantial increases over the corresponding period of 1923, according to Italian official records. As compared with the first 11 months of 1922, however, importations of generators, motors, and transformers fell off in 1924.

Increased Imports of Generators from the United States.

The importation of generators and motors into Italy from the United States for the first 11 months of 1924 totaled 1,882 quintals, as compared with 189 quintals and 3,396 quintals for the same periods of 1923 and 1922, respectively. The importation of generators and motors into Italy from all countries totaled, in quintals 14,950, 14,053, and 14,950 during the months of 1924, 1923, and 1922, respectively. The following table, stated in quintals, of 220 pounds, shows Italian imports of generators and motors from the principal countries of origin:

Italian imports of generators and motors.

(In quintals)

Country of origin	January to November—		
	1922	1923	1924
Germany.....	10,038	7,273	5,699
Hungary.....	1,388	3,773	2,141
United States.....	3,396	189	1,882
Czechoslovakia.....	19	43	1,828
France.....	175	446	1,166
Great Britain.....	1,606	867	242
Switzerland.....	733	557	1,152

Larger Purchases of American Transformers.

During the first 11 months of 1924, Italy imported a total of 6,300 quintals of transformers, of which 1,160 quintals were supplied by American manufacturers. This is considerably greater than the 707 quintals supplied by the United States during the corresponding period in 1923, but it is slightly less than that supplied during the first 11 months of 1922, when it reached 1,446 quintals. The total importation of transformers into Italy during the first 11 months of 1923 amounted to 7,926 quintals, and 10,845 quintals for the corresponding period of 1922. The purchases of this equipment from Germany, the only important country of origin besides the United States, for the first 11 months of 1922, 1923, and 1924, were 6,884, 5,607, and 3,909 quintals, respectively.

Miscellaneous Equipment Shows Gain from United States.

Considering only the first 11 months of each year, Italy's imports of electrical apparatus and equipment not specified, from the United States totaled 1,095 quintals for 1924 as compared with 337 and 232 quintals for the corresponding periods of 1923 and 1922, respectively, whereas imports in this class from all countries amounted to 9,724 quintals in 1922, 8,944 quintals in 1923, and 8,850 quintals in 1924. Germany has been an active supplier of this class of electrical equipment, but the amount it has furnished Italy has decreased steadily during the last three years, the totals being, in quintals, 7,808, 6,101, and 5,468 for the first 11 months of 1922, 1923, and 1924, respectively.

Electrical Trade Notes

Fire-Alarm System Opportunity in South America.

An important city in South America, which at present has a very unreliable fire alarm signal system, is reported to be favorably inclined toward the installation of modern, efficient, and reliable signal apparatus. Further information may be obtained from the Electrical Equipment Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., by referring to Report No. 25219.

Irrigation Project in Mexico Contemplated.

The Mexican Secretary of Agriculture and Interior recently had under consideration a petition for a concession to construct a large irrigation project in that country. An expenditure of 20,000,000 pesos is involved in the project and it is planned that besides providing irrigation for 200,000 hectares (approximately 500,000 acres) of new land, the project will furnish electric power in the neighborhood. (Consul Thomas D. Bowman, Mexico City.)

Guatemala City Electric Street Railway Contract Lapsed.

The Department of Interior (Ministerio de Fomento) Republic of Guatemala entered into a contract with a Belgian firm January 28, 1923, for the establishment of an electric street railway system in Guatemala City. In view of the fact that more than the stipulated time has passed without the required deposit of \$15,000, the President of the Republic has resolved to declare the contract lapsed. (American Minister Arthur H. Geissler, Guatemala City, February 23.)

Additional information regarding electrical equipment appears in this issue under the following sections:

Cable review, Latin America: Increased confidence in Chilean business.

Tariffs and Trade Regulations:

Austria: Relaxation of import restrictions.

British Honduras: Import duties temporarily increased by 10 per cent surtax.

Canada: Export duty established on hydroelectric power.

\$15,000,000 Loan for Sorocabana Railway

The Government of Sao Paulo on March 17 signed a contract with an American banking firm for a 25-year loan of \$15,000,000 for the Sorocabana Railway. Bonds at 95, bearing 8 per cent interest, will be issued. (Trade Commissioner Richard M. Connell, Sao Paulo, March 18.)

IRON=STEEL=HARDWARE

Luther Becker, Chief, Iron and Steel Division

UNITED STATES IRON AND STEEL EXPORTS DECREASE

The exportation of iron and steel from the United States dropped to a very low point for February, only 102,302 long tons having been shipped abroad in that month, or a drop of 28 per cent from the preceding month, and reaches an uncommonly low level. The most striking losses were in tin plate, galvanized sheets, black steel sheets, and rails.

Contrasts with Trade of a Year Ago.

The iron and steel trade with foreign countries for the opening months of 1925 shows up poorly when contrasted with the beginning of the preceding year. The year 1924 opened with a very active foreign market, 249,126 tons of iron and steel having been consigned to foreign lands in January of that year and 165,912 tons in February. Shipments of rails, tin plate, and boiler tubes and welded pipe were especially heavy for the latter month.

Details of the export trade in iron and steel for January and February, 1925, are presented in the following table:

Exports of iron and steel from the United States

(In gross tons)

Articles	January, 1925	February, 1925	January and February, 1925
Pig iron, not including ferro-alloys.....	1,298	1,413	2,711

Forgings.....	87	173	260
Ferromanganese and spiegeleisen.....	1,189	838	2,027
Total.....	141,714	102,302	244,016

Exports of iron ore rose from 339 tons in January to 1,361 tons in February. The trade in wood screws increased also, amounting to 658,421 gross in February as compared with 613,693 gross in January.

Imports of Raw Materials Advance.

An exceptional situation for the United States foreign trade in iron and steel has arisen in that imports for February were within 10,000 tons of exports. This should not be viewed with anxiety by American producers of finished products, since the total figure for imports, 92,380 tons, mostly represents raw materials. Receipts of pig iron, ferromanganese, ferrosilicon, and scrap aggregated 73,303 tons, thus leaving only 19,077 tons for imports of all finished and rolled iron and steel products. The rate of importation on the latter class would thus be only about one-half of 1 per cent of the month's ingot-steel production.

Philadelphia Receives About Half of Pig Iron Imports.

Of the 47,803 tons of pig iron imported, 17,628 tons came from British India. The Indian pig iron entered the country mainly through the Philadelphia customs district (11,229 tons), as did also large shipments from Germany (8,100 tons), the United Kingdom (7,240), and the Netherlands (1,000 tons). The Massachusetts customs district reported the receipt of 7,491 tons of pig iron from the Netherlands, 3,963 tons from India, and 1,065 tons from Belgium. It is interesting to note that 1,863 tons of Canadian pig were received through the Michigan customs district.

A comparison of the United States import trade in iron and steel for the months of January and February is afforded by the following table:

Imports of iron and steel into the United States

(In gross tons)

Articles	January, 1925	February, 1925	January and February, 1925
Pig iron.....	41,344	47,803	89,147
Ferromanganese, manganese metal, and alloys.....	6,690	10,342	17,032
Ferrosilicon.....	476	656	1,132
Scrap.....	14,113	14,502	28,615
Steel ingots, blooms, billets, slabs.....	985	4,006	5,991
Steel bars.....	2,535	2,864	5,399
Bar iron.....	679	816	1,495
Structural shapes.....	4,315	4,008	12,323
Rails and splice bars.....	3,354	1,931	5,285
Boiler and other plates.....	61	22	83
Sheets, skelp, and saw plates.....	434	60	494
Tin plate.....	143	46	189
Round iron and steel wire (all kinds).....	149	273	422
Wire rope and insulated wire.....	133	194	327
Flat wire and strip steel.....	470	98	568
Wire rods.....	1,002	780	1,782
Tubular products.....	55	2,825	2,880
Nails and screws.....	15	12	27
Bolts, nuts, rivets, and washers.....	112	11	123
Castings and forgings.....	112	231	343
Total.....	77,065	92,380	173,445

Increase in Iron Ore Imports.

During February 226,472 tons of iron ore were imported, a considerable gain over the January total of 174,398 tons. Receipts of manganese ore declined from 12,676 tons (manganese content) in January to 9,450 tons (manganese content) in February.

An important advance was noticed in the importation of card clothing. Receipts of this product which had dropped from 19,161 square feet in December, 1924, to 10,459 square feet in January, 1925, rose to 30,248 square feet during February.

Record Iron and Steel Production for Bilbao District

Consul H. M. Wolcott, Bilbao, Spain, February 27

The iron and steel manufacturers of the Bilbao region (Spain) report a record production in 1924, and decidedly the most prosperous year since the end of the war. The following figures have been obtained from the two principal local companies whose combined production represents over 90 per cent of the total iron and steel output of the factories of this district:

Production of principal firms in Bilbao district

Items	1923	1924
ALTOS HORNOS DE VIZCAYA, S. A.		
Pig iron.....metric tons..	203,608	319,312
Steel ingots.....do.....	288,377	302,830
Iron and steel, rolled.....do.....	170,020	195,859
Wrought iron.....do.....	247	396
Bar iron and steel.....do.....	58,521	67,428
Plates.....do.....	34,775	47,329
Tin plate.....do.....	6,569	8,812
Galvanized tubs and pails.....do.....	754	663
Coal consumed.....do.....	500,736	648,758
Average number of laborers employed.....do.....	6,500	7,621
COMPANIA ANONIMA BASCONIA		
Steel ingots.....metric tons..	44,719	55,924
Bar iron and steel, structural forms, etc.....do.....	83,415	41,787
Wrought iron.....do.....		1,532
Cast steel.....do.....		318
Commercial irons.....do.....	6,672	5,472
Plates.....do.....	14,004	41,708

Galvanized tubs and pails.....number..	433,030	319,180
Shovel plates.....do.....	69,954	111,196
Disks.....metric tons.....		1,251
Rivets, screws, and nails.....do.....		353
Gas coal consumed.....do.....	(1)	26,327
Other coal consumed.....do.....	(1)	31,715
Ferromanganese consumed.....do.....	(1)	368
Average number of laborers.....do.....	1,987	2,324

¹ Not stated for 1923.

The only other company of importance in this line at present operating in the district is the Sociedad Anonima Echevarria which has three small mills in the Bilbao region, chiefly devoted to the production of high-speed steel, steel wire, nails, and horseshoes. This company produces about 12,000 tons of steel annually.

Recent Additions to Plant Equipment.

The Altos Hornos de Vizcaya, S. A., has at present in process of installation a new "blooming" mill. Furthermore, it is stated, that during 1925 it will install an additional rail-rolling mill, modernize its blast-furnace equipment, and electrify its plants. Practically all machinery and equipment for these purposes has been purchased in England and Germany. This new equipment will considerably increase the capacity of the company's plant, and it is also hoped that it will reduce the cost of production, which at present is above the European average.

The Compañia Anonima Basconia, which is the second in importance in the district, has also improved its plant considerably within the past two years, including the installation of a new rivet shop and an additional shop for the construction of structural forms.

The prices on iron and steel are controlled by the "Central Siderurgica" of Madrid, and there was little change last year, except a 5 per cent reduction in pig iron.

Decline in Belgian Iron and Steel Production

Cable from Commercial Attaché F. W. Allport, Brussels, March 24

In general, the production of iron and steel in Belgium declined during February. Only in finished

iron was there an increase in output. Production in February included 245,000 metric tons of pig iron, 283,000 tons of raw steel, 6,000 tons of rough castings, 199,000 tons of finished steel, and 14,000 tons of finished iron. This compares with an output of 249,000 tons of pig iron, 240,000 tons of raw steel, 6,000 tons of rough castings, 200,000 tons of finished steel, and 10,000 tons of finished iron in January.

Markets Firmer with Some Speculative Purchasing.

The Belgian metallurgical markets, especially those for finished products, are firmer with some speculative buying in expectation of a price increase. It is probable that labor will accept a 5 per cent wage cut on the first of April. A corresponding reduction has been proposed for the first of May, also. The Ougree Marihay has recently received an important rail order from Denmark.

Solingen Cutlery Exports Approach Pre-war Volume

Assistant Commercial Attaché Douglas Miller, Berlin, Germany, February 24

The exports of Solingen cutlery products are reported to have been 5,431 metric tons in 1924, 4,835 tons in 1923, 6,799 tons in 1922, 4,615 tons in 1921, and 5,951 tons in 1913. Since a portion of the Solingen exports passed through the occupied territory, these figures can not be considered absolutely correct. Exports for the last two years should be somewhat larger.

Steady Gain in Monthly Exports.

German cutlery is selling abroad at about the same rate as before the war, according to this calculation. This is really a significant showing in view of the high domestic price level and the tariff barriers erected against German goods in many foreign countries. More significant, however, are the figures showing the monthly exports during 1924. In January 290 tons were exported. This figure showed a steady gain up to 413 tons in June, 520 tons in October, and 611 tons in December, the best month of the year. Figures regarding countries of destination have not yet been released by the German Statistical Office, however, it can be asserted that South America, the Far East, the Balkans, and near-by European markets are the best customers for Solingen products.

Iron, Steel, and Hardware Notes

Alpine Montangesellschaft Increases Production.

During February the Alpine Montangesellschaft, the largest Austrian iron and steel concern, produced 16,271 metric tons of iron ore, 22,409 tons of pig iron, 20,822 tons of steel ingots, and 15,930 tons of rolled products, as compared with 128 tons of iron ore, 14,160 tons of pig iron, 20,703 tons of steel ingots, and 14,792 tons of rolled products during January. While activity is relatively satisfactory, the volume of output attained in the preceding year has not been restored. (Assistant Trade Commissioner Elbert Baldwin, Vienna, March 4.)

Demand for Aluminum Kitchen Ware in Spain.

The Spanish representative of an aluminum company is reported as being enthusiastic over the Spanish market for aluminum bars and ingots, stating that the aluminum kitchen-ware business in Spain is especially prosperous. He claims, furthermore, that a large

part of the aluminum used for that purpose comes from the United States. (Assistant Trade Commissioner Albert Noel, Madrid, February 20.)

India Raises Iron and Steel Tariff.

Increases have been made by the Indian legislature in the British Indian tariff on iron and steel, hardware, and railway materials, according to a cable received on March 25 from Assistant Trade Commissioner Edward J. Sabine, Bombay. The new tariff awaits the signature of the governor before becoming effective.

Improvement in Czechoslovak Iron and Steel Industry.

There has been a considerable increase in the Czechoslovak demand for iron and steel, particularly from manufacturers of agricultural implements who are reported to have received large orders from Russia and the Baltic States. Also a large number of orders for iron and steel products have been received from abroad, notably from Italy (for shipbuilding material), Rumania, Yugoslavia, and Germany. (Commercial Attaché James F. Hodgson, Prague, February 16.)

Structural Steel Needed in Nova Scotia.

Large quantities of reinforcing bars and structural steel will be required for the new grain elevator at Halifax. Eastern steel firms will be the chief competitors. It has been reported that the Steel Co. of Canada has obtained a large order from the Canadian Pacific Railway for fishplates. (Trade Commissioner Lynn W. Meekins, Ottawa, Canada, February 28.)

Italy Expedites Transportation of Scrap.

Carloads of scrap and coal coming from France have frequently been delayed in the Modane yards (on French side of Mount Cenis Tunnel), imposing great difficulties to the ordinary operation of some Italian steel mills. At a recent meeting of officials representing the Italian State Railways and the Paris, Lyons & Mediterranean Railway Co., a study was made of measures calculated to remedy these deficiencies. This has resulted in expediting the eastbound traffic through Modane. (Trade Commissioner A. A. Osborne, Rome, February 14.)

Distribution of United States Imports of Tubes, Pipes, and Fittings.

The New York customs district reported the receipt of more foreign tubes, pipes, and cylindrical tanks during December, 1924, than any other customs district; 873 gross tons of cylindrical or tubular tanks (263 tons of which came from the Belgian Congo) and 79 tons of tubes, pipes, flues, etc., entered the country through that customs district. The Los Angeles district was next, with 389 tons of cast-iron piping, most of which came from Belgium. That country also sent 212 tons of cast-iron pipe to Porto Rico and 111 tons to the San Francisco customs district. The Philadelphia customs district recorded the receipt of 128 tons of cylindrical or tubular tanks.

Poland May Take Russian Ore.

Unconfirmed press rumors state that Polish Upper Silesian enterprises have contracted for 170,000 metric tons of Russian ore, but local firms in the metal trade express doubt that the Soviets will actually be able to deliver that much ore in the near future. (Consul D. R. Heath, Warsaw, February 20.)

Possibility of Polish Iron and Steel Combine.

Silesian and Congress Poland plants may unite to form a Polish iron and steel combine, according to reports in the Polish press. It is quite logical that some such step will be taken before long since there are not sufficient internal orders to keep the plants working near capacity. The export trade of the Silesian plants is not so extensive as to solve the problem. (Consul D. R. Heath, Warsaw, February 20.)

Swedish Plant Seeks New Methods for Making Malleable Iron.

Experiments have been made at a well-known iron works in the Goteborg consular district for the production of malleable iron and steel direct from iron ore concentrated without passing through the form of pig iron. The experiments are said to have been promising, provided that cheap electric energy necessary for this method can be procured in sufficient quantities. (Consul Walter H. Sholes, Goteborg, February 26.)

American Consumption of Swedish Steel Strips Heavy.

The iron and steel group of exports from Sweden in 1924 recorded a total net increase in value of \$1,078,649, as compared with the value of the 1923 exports. This was entirely due to the augmentation of the exportation of steel strips, used by the American safety razor industry, for although there were increases for other articles, there were approximately equal decreases. (Consul Walter H. Sholes, Goteborg.)

Sweden Expected to Export Large Quantities of Iron Ore.

The stock of the Grangesberg Co. has experienced an unusual rise, going from 226 on January 15, to 261 on February 10, despite the sluggishness of general domestic business. This gain is attributed to predictions that the exports of iron ore by this company will approximate 7,000,000 metric tons in 1925. About 5,000,000 tons of iron ore were exported by the company in 1924, and it seems to have entered into very large contracts for the present year, principally with Germany. (Trade Commissioner T. O. Klath, Stockholm, February 14.)

Iron and Steel Cables

Italian Demand for Iron and Steel Continues.

The Italian iron and steel industry continues active, and the consumption of its products is increasing. Pronounced activity marks building construction in all large cities. Building contractors have granted increases in wages. The agitation among the metal workers has ended, but the question of wages has not been definitely settled. (Cable from Commercial Attaché MacLean, Rome, March 27.)

Situation of French Siderurgical Industry.

The French iron and steel market is calm, and a greater degree of firmness is noted in its export markets. The restrictions on exports to England, Italy, and Belgium have been practically suspended. The proposed tariff on metallurgical products dominates the Franco-German treaty negotiations. (Cable from Commercial Attaché Chester Lloyd Jones, Paris, March 29.)

Plans for Rebuilding Peruvian Towns.

There is a proposal in the Peruvian Congress to admit materials for rebuilding Trujillo free of duty.

Half of this city was destroyed by the recent flood disasters, and the province of Trujillo was also greatly damaged. Much rebuilding of railways, bridges, and city and hacienda buildings will be necessary. There should be a sharp increase in the demand for structural steel and for all building materials. It is likely that the use of the improved types of construction will also call for a greater use of steel. (Cable from Commercial Attaché H. Bentley MacKenzie, Lima, March 30.)

Additional information regarding iron-steel-hardware appears in this issue under the following sections:

Cable review, Latin America: Floods in Peru hinder trade.
Tariffs and Trade Regulations:

British Honduras: Import duties temporarily increased by 10 per cent surtax.

British India: Import duties increased.

Canada: Drawback provisions.

LUMBER

Axel H. Oxholm, Chief, Lumber Division

FEBRUARY WOOD EXPORTS AND IMPORTS

Exports of wood and manufactures thereof from the United States during the eight months ended February, 1925, were valued at \$86,223,086, against \$103,625,046 in the corresponding period ended February, 1924—a decrease of approximately 17 per cent.

Exports during February, 1925, were valued at \$10,495,896, as compared with \$12,892,598 in the corresponding month of 1924, when very heavy shipments of reconstruction lumber were moving to Japan on account of the earthquake in the fall of 1923. Douglas fir was the largest species of sawn timber exported in February, 1925, amounting to 21,500 M feet, of which 600 M feet were "treated." Southern pine was next in importance, with 17,000 M feet, practically all "untreated." Logs and hewn timber amounted to 43,000 M feet, which included 11,500 M feet of cedar.

Exports of Softwood Lumber—Railroad Ties.

Softwood lumber exports amounted to 107,047 M feet during February, the largest species being southern pine, with 57,000 M feet. The principal markets taking this stock were the River Plate, 13,000 M feet; Cuba, 11,000 M feet; Mexico, 4,500 M feet; United Kingdom, 4,000 M feet; Dominican Republic and Spain, each 3,000 M feet; and Belgium, Germany, Italy, and the Netherlands, 2,000 M feet each.

Douglas fir was next in importance, with 32,850 M feet, going principally to Japan, 12,000 M feet; followed by Peru, 4,000 M feet; Cuba and Chile, 3,000 M feet each; and Australia and China, 2,000 M feet each.

Other softwood lumber exports included 10,000 M feet of hemlock, 1,500 M feet of spruce, and about 1,000 M feet each of western pine, white pine, redwood, and cypress.

Exports of hardwood and softwood railroad ties numbered 115,378 during February. Canada was the largest market, followed by Mexico, Cuba, Guatemala, and Honduras.

Hardwood Lumber—Cooperage and Miscellaneous.

Of the hardwood lumber exported during February, oak was the largest species with 14,500 M feet. The largest quantity went to the United Kingdom with 8,500 M feet, followed by Canada with 12,000 M feet, and Belgium with 1,500 M feet. Other hardwood exports included 4,500 M feet of gum, 2,500 M feet each of ash and poplar, and 1,000 M feet each of mahogany and walnut.

Cooperage exports included 5,200,000 slack and 2,651,000 tight staves, 233,000 sets of heading, 68,000

sets of tight and 42,000 sets of slack cooperage shooks, 16,000 empty barrels, casks, and hogsheads. Box shooks amounted to 6,300 M feet, of which 2,431 M feet were hemlock.

Among other items exported during the month were 5,500,000 square feet of veneer and plywood, 52,600 doors, 167 M feet of hardwood flooring, 2,100,000 pounds of handles and handle dimension for tools, and 642,000 pounds for agricultural implements.

Imports Remain Comparatively Constant.

Imports of wood and manufactures thereof in February, 1925, were valued at \$8,396,172 as compared with \$8,635,997 in the previous year. For the eight months ended in February, the total value was \$76,218,288, against \$77,923,495 in 1924.

The largest items were 109,000 M feet of softwood lumber, 161,100,000 shingles and 128,100,000 laths, mostly from Canada. Other items included railroad ties, numbering 88,000, and hardwood lumber, amounting to 5,500,000 feet.

February imports of mahogany logs were 7,200 M feet, of which 4,600 M feet came from Africa and 2,400 M feet from Central America. Approximately 3,000 M feet of Philippine mahogany lumber and 1,000 M feet of cedar logs were also received during the month.

Labor Difficulties in Swedish Lumber Industry

Commercial Attaché T. O. Klath, Stockholm, dispatch dated March 20

The most serious labor conflict in Sweden since 1909 is causing heavy losses and disruption of trade. It is said that 23,000 sawmill workers are affected.

Advance Lumber Sales—February Exports.

Advance lumber sales up to March 15, 1925, for delivery this year were estimated at 742,500 M board feet. It is stated that Swedish lumber exporters are experiencing difficulty in meeting Finnish and Russian White Sea quotations on account of the higher cost of production in Sweden.

February exports of sawn lumber amounted to 27,305 M board feet, including 8,568 M feet of box shooks. Exports of dressed lumber for the same month were 7,971 M board feet, including 593 M feet of box shooks.

British Lumber Trade Still Optimistic

Trade Commissioner Mowatt M. Mitchell, London, March 9

The British lumber market is distinctly optimistic, but as yet the activity anticipated since the beginning

of 1925 has not materialized. Buying is on a more or less hand-to-mouth basis, but consumption in practically all lines continues to be heavier than imports, and the time is approaching when large replacements will have to be made. This is particularly true of southern pine and Douglas fir.

Active Demand for American Hardwoods.

February arrivals of southern pine timber were less than 20 per cent of those for the same month last year, and were exceeded by deliveries from stock nearly three times over. Southern pine lumber is also moving rapidly into consumption. In both cases values are very steady and a rise is looked for. Douglas fir lumber and timber deliveries were almost 100 per cent greater than arrivals during February, and there is no indication that the price will move otherwise than upward. American hardwood consumption continues good and, although fairly heavy arrivals have come in recently, prices remain steady.

Capital Shortage Dominates Russian Lumber Outlook

Assistant Trade Commissioner Emil Kekich, Helsingfors, Finland, February 7

While it is believed that Russian authorities are turning their attention more than ever to the lumber industry as a means of increasing the financial resources of the country, lack of financial support on the part of the Government and difficulty in securing foreign capital are factors which indicate that Russian influence in the European lumber market this year will not be appreciably more pronounced than last. A slight increase in production is expected, but the absence of organization, transportation facilities, and money is too great to be quickly overcome.

Reports of actual activities in Russian lumber regions this winter are still meager, but Finnish operators estimate that the production may possibly exceed that of 1924 by 10 to 15 per cent. There is still some fear that if Russia continues to conduct its export lumber business as heretofore, confidence in price levels in other producing countries will again be somewhat uncertain, although not to the same extent as in 1924, owing to the curtailed production caused by subnormal weather conditions in northern Europe this winter.

CUT-OFFS

Finnish Advance Lumber Sales.

Finnish advance lumber sales up to March 15 for delivery this year are estimated at 792,000 M feet. Prices are fairly satisfactory. February ply-wood exports amounted to 27,000 tons. (Dispatch from Assistant Trade Commissioner Emil A. Kekich, Helsingfors, March 24.)

The Lumber Market in Czechoslovakia Improves.

The lumber trade, both domestic and export, of Czechoslovakia has recently shown some improvement. Offerings have been in greater volume than usual, with prices remaining approximately stationary. (Commercial Attaché James F. Hodgson, Prague, March 2.)

Australian Lumber Imports.

January imports of dressed lumber into Australia were valued at £149,700, while arrivals of rough lumber and timber were valued at £434,500. (Cable from Trade Commissioner E. G. Babbitt, Melbourne, March 21.)

American Lumber in China.

Douglas-fir stocks in Shanghai amount to about 65,000,000 feet. Tientsin recently received 2,000,000 feet, and 40,000,000 feet more are due to arrive before May 1. (Cable from Commercial Attaché Julean Arnold, Peking, China, March 23.)

Rumanian Lumber Exports.

Lumber exports from Rumania from January to September, inclusive, 1924, according to official data recently made available by the statistical division of the Ministry of Finance, were: Fir lumber, 371,655 M feet; other softwood lumber, 82,831 M feet; hardwood lumber, 12,112 M feet; laths and staves, 389 M feet; and fir logs, 169,517 cubic feet. (Acting Commercial Attaché Louis E. Van Norman, Bucharest.)

See also Tariffs and Trade Regulations:

Austria: Relaxation of export restrictions.

British Honduras: Import duties temporarily increased by 10 per cent surtax.

List of "Bureau's special circulars available."
"Foreign trade opportunities."

SPECIALTIES

Warren L. Hoagland, Chief, Specialties Division

LARGE GAIN IN FEBRUARY EXPORTS OF FURNITURE

Total exports of wood furniture from the United States in February, 1925, exceeded those in February, 1924, by almost \$100,000, or 50 per cent, amounting to \$309,733 and \$216,333, respectively. The largest gains occurred in store fixtures, school and church furniture, and other wood, willow, and wicker furniture. Shipments of chairs fell off considerably from February, 1924, as they did also from January, 1925.

Metal Furniture Sales Decreased.

For the first time since last fall, exports of metal furniture for February, 1925, declined from the corre-

sponding month of the previous year, and they were under those in January of this year. Most of the loss is accounted for by lower trade in safes, shipments of which in February, 1925, amounted to 422 valued at \$33,281 and in February, 1924, to 580 valued at \$88,134. Another reduction occurred in safety-deposit boxes and lockers, which is partly accounted for in the yearly comparison by the fact that bank vaults were included in this classification last year. Shipments of filing cases continued to show improvement over the previous year, the trade in this item reaching 2,768 in number valued at \$93,452 in February, 1925, compared with 1,988 valued at \$78,988 in February, 1924.

Glass Industry in Czechoslovakia Dull

Consul Charles S. Winans, Prague

Negotiations have recently been made for the establishment of a trust of glass manufacturers in Czechoslovakia, but no agreement has been reached.

The situation in the glass industry at present is believed to be more discouraging than it was in the first quarter of 1924. The limited activity in construction of factories has created but a small domestic demand for plate, roofing, and wired glass. The export of glass to neighboring countries has been met with competition from two new Austrian factories which not only produce enough to cover their home needs, but are able to compete with Czechoslovak products in the Balkan market, since prices of Czechoslovak glass exports are rendered almost prohibitive by high freight rates.

Good Business for German Glass Plants

Assistant Commercial Attaché Douglas Miller, Berlin

A sharp increase in the German demand for table glass is evident. The continuance of building which has allowed many families to move into new apartments throughout the winter has caused additional sales of glassware for domestic purposes. At the same time, building glass continues in demand not only for construction of dwelling houses but for industrial plants. The railways have just placed large orders for colored signal glass.

The hollow-glass industry, more particularly the manufacturers of lighting fixtures and chemical and medicinal glass, report good business. The bottle and mirror glass trade is less active. Most of the business in all these lines is for the domestic market, exports still remaining low. The German glass industry is at present considerably expanded over its pre-war proportions and contains a great deal of up-to-date machinery. This is particularly true of the luxury glass establishment, such as the Josephinenhütte, which now employs 1,000 workmen as against 250 in 1914.

Jewelry Industry Prosperous in Germany

Consul Erik W. Magnuson, Stuttgart

The jewelry industry in the Stuttgart district, centering at Pforzheim, did a good business during the last three months of 1924, but the jewelry industry is subject to a fluctuating demand dependent on seasons. On the whole, the Pforzheim jewelry industry is said to have done especially well in successfully retaining foreign markets against adverse competition during the period following the stabilization of the German currency.

Employment was good in the jewelry industry during the last quarter of 1924, and it is understood that 30,000 workers were engaged on full time at Pforzheim during this period.

Plated ware and jewelry exports to the United States, despite the holiday business, decreased from \$105,626 in the third quarter to \$42,513 in the last quarter of 1924.

German Musical Instrument Trade Brisk

Consul Erik W. Magnuson, Stuttgart

Business in the musical instrument industry in the Stuttgart district was brisk during the last quarter of

1924. Piano factories were well employed and good orders were received, although the industry still complains of curtailed credits on raw materials. No pianos are exported to the United States on account of the high tariff, it is stated, and apprehension is felt as to American competition in foreign markets.

The favorable situation in the Trossingen, Württemberg, accordion and mouth organ industry is reflected in the shipments to the United States during the last quarter of 1924, when the declared value of mouth organs exported rose to \$169,325 from \$76,392 in the preceding quarter, and the value of accordions to \$41,306 from \$15,916.

Specialty Briefs

Rumanian Company Wants Educational Films.

A company is now being organized in Rumania for the exhibition of educational films in schools, reports Commercial Attaché Louis E. Van Norman. This company is anxious to make connections with producers and distributors in the United States who would be interested in furnishing educational pictures to the Rumanian market. The Rumanian firm desires to receive the most complete information possible, particularly as to conditions and terms, which should be submitted through the office of the commercial attaché in Bucharest.

Exposition of Dental Supplies in Buenos Aires, Argentina.

A bulletin has been received announcing the Universal Exposition of Odontology to be held from October 10 to October 25 in Buenos Aires and setting forth the conditions under which exhibits may be made at the exposition. This bulletin will be loaned to interested firms upon application to the Specialties Division.

Dry Dock to Be Installed at Genoa

A project has been evolved for the construction of a dry dock about 250 meters long for repairing ships of the Duilio type (23,200 gross tons). An appropriation for this purpose has been sanctioned by the Government, and funds will be made available to the Consortium of the Port of Genoa. (Consul General John Ball Osborne, Genoa, Italy, February 25.)

Traffic Increasing on German Inland Waterways

Shipments of freight on German inland waterways increased to a marked extent in 1924. During the year a total of 46,569,000 metric tons of goods arrived at various inland ports, as compared with 15,613,000 metric tons in 1923 and with 58,679,000 metric tons in 1913. In 1924 goods totaling 41,765,000 metric tons were shipped from inland German ports, as against 17,013,000 metric tons in 1923 and 62,575,000 metric tons in 1913. (Assistant Trade Commissioner Margaret L. Goldsmith, Berlin, February 24.)

COAL

Charles F. White, Chief, Coal Division

DECREASE IN FEBRUARY COAL EXPORTS

Total exports of bituminous coal from the United States in February amounted to 820,407 long tons as compared with 979,600 in January. Exports during February were also considerably below the monthly average of 1924. The decline was due to smaller shipments to Canada, 587,205 tons going to that destination against 710,886 in January and a monthly average of 941,519 tons in 1924.

Overseas Shipments Fall.

Overseas exports during February totaled 233,202 tons against 268,714 in the preceding month. Larger shipments to Italy occurred, 51,726 tons going to that country against 44,616 tons in January. An important increase is noted in exports to Panama, 46,365 tons being consigned to that destination against 19,366 in the preceding month.

Decrease in Exports to South America.

Exports of bituminous coal during February to South American destinations, amounting to 16,020 tons, were considerably under those of January which totaled 105,358 tons. The decrease is due to some extent to lighter tonnage to Brazil, only 5,913 tons being shipped to that country in February against 80,785 in the preceding month. The February shipments to Brazil were also lower than any monthly exports during 1924. Other important declines are noted in shipments to Argentina, 6,547 tons in February against 12,656 tons in January, and to Chile, to which country only 87 tons were exported in February as compared with 2,998 in January, while no coal was shipped to Uruguay, although exports in January were 6,001 tons.

To Egypt and French Africa, other than Algeria and Tunis, exports in February were 5,126 and 7,029 tons, respectively, whereas no coal went to those destinations in the preceding month.

Decrease in Anthracite and Coke Exports.

The total exports of anthracite from the United States during February amounted to 288,971 tons against 296,075 in January. Decreased shipments to Canada were largely responsible for the lower total, as 277,989 tons were exported to that destination in February as compared with 291,976 tons in the preceding month.

The 61,130 tons of coke exported show a small decrease as compared with the 62,845 tons in January. Decreased shipments to Canada—57,554 tons in February against 61,109 in January—were mainly responsible for the lower total.

British Coal and a New Wage Agreement

Trade Commissioner Charles E. Lyon, London, March 2

In view of the complex organization of the British coal industry, negotiations respecting a new or amended agreement to supersede the present one that expires on June 30, 1925, are making progress along the most logical lines. This statement would hardly be indorsed

by the coal owners and workers who are now engaged in a series of conferences and controversies. To the outside observer, however, there is room for hope that the very frequency and lack of conclusiveness of the meetings serve to dilute or weaken the extremists' positions to such a degree that a compromise will automatically be reached. Only a compromise solution will meet the situation; a victory for any of the extremists will mean a strike or a lockout.

Conflicting Views Within the Industry.

The new agreement must harmonize not only the conflicting interests of owners and workers, but also the widely divergent views among different workers and leaders. There are also differences as between coal districts, clearly revealed in their recommendations to the Miners' Federation. Shortly before the end of 1924, representatives of coal owners asked the miners to send representatives to a meeting at which the causes of the crisis might be discussed. The reply was non-committal and the meeting did not result in progress so far as resolutions were concerned. A second meeting followed, with clearer definition of viewpoints, and now a third informal "get together" is promised, for an exchange of opinion that must result in some clearing of the atmosphere. Perhaps the main service of these informal conferences is to assure that the propaganda abundantly put forward by both sides shall be treated as mere publicity propaganda for psychological effect, leaving the real information of the situation for consideration of insiders—the only ones whose decision can become effective.

Recommendations by Miners' Representatives.

Early in 1925 the executive of the Miners' Federation requested the various districts to submit their views as to desirable action for consideration at the executive meeting on February 26. Including the 23 permanent officials and members of the executive committee, there were 182 persons at this conference, representing 795,300 members. It was at once found that there was an exceedingly broad list of recommendations, summarized as follows:

Notice to terminate the present national agreement, or, alternatively, proposals to modify it.

National or district wages agreements.

Periods of ascertainment—how long in months and under what conditions applied.

Should ascertainments include coking and by-product plants and allied activities.

Extent of rights of workmen's accountants in regard to ascertainments.

Basis for determination of profits.

Alterations of present ratios of profits to wages.

Recoupment of standard profits, continuance or otherwise.

What shall be minimum wages and what the relation to cost of living.

What shall be the recognized basis rates in future.

What subsistence wages shall be and to whom applicable.

Guaranteed weekly wages and other miscellaneous wages propositions.

Definition of costs other than wages and what shall be deducted therefrom.

Control of the industry.

Membership of the federation as condition of employment in or about the mines.

Miscellaneous propositions.

South Wales Miners Alone Advise Termination of Present Agreement.

Only the South Wales miners definitely advised termination of the present agreement; Scotland, Lancashire, and Forest of Dean suggest qualifications; while 11 other districts are far less extreme in their proposals. Some desire an automatic increase in wages related to the cost of living, and others wish a new minimum base wage. Here again are two extreme positions on a question of principle.

In order to avoid fruitless discussion and a split among workers, it was decided to refer the whole situation back to the districts, acquainting them with the details of all the proposals and asking for a revised report to be taken up at another meeting at the end of March. This action most nearly assures general agreement by workers and at the same time should eliminate the extreme positions.

Other Labor Organizations Invited to Conference.

Another reason for delay in decisions as to coal matters is the fact that the federation executives are arranging a conference with executives of the National Union of Railwaymen, the Amalgamated Society of Locomotive Engineers and Firemen, the Amalgamated Engineering Unions, and the transport workers' organizations. Invitations for this conference went out before the coal meeting of February 26, and no policy is announced to which the other unions will be asked to commit themselves. The likelihood of a triple alliance like that of 1921 is somewhat remote, as the general council of the trades union congress has not been invoked.

Profit-Sharing Fundamental Issue.

If action toward solution of the coal situation had been agreed upon at the executives meeting of February 26, there would be reason to fear a deadlock, and it is believed that the many opportunities for common counsel will result in a broadening of the viewpoint and some elimination of partisanship, until all parties to the new agreement are agreed upon the fundamental issue, namely, that "profit-sharing upon a more equitable basis" can only be considered after other policies have been agreed upon whereby profits may be made. The owners insist that these are not now being made on a scale to justify any elaborate "sharing" policy.

American Coal to Canadian National Railways

Trade Commissioner Lynn W. Meekins, Ottawa, March 17

The Canadian National Railways obtained 3,204,728 short tons of coal from American companies in 1924 as compared with 5,432,170 tons in 1923, according to the Canadian Minister of Railways and Canals. Receipts from Canadian companies were 2,136,311 and 3,231,897 tons in 1924 and 1923, respectively. While a greater amount of coal was received from American companies in 1924 as compared with 1922 when receipts were 2,955,464 tons, those from Canadian companies show a decrease of about 410,000 tons under the 1922 receipts of 2,546,735 tons.

Ohio Mines of Canadian National Railways.

The quantities received from the United States include 793,311 tons in 1922, 1,397,991 tons in 1923 and 1,266,253 tons in 1924, from Ohio mines owned by the Canadian National Railways. The total receipts also include 1,000,000 tons of American coal purchased an-

nually from United States' companies for use on the Canadian National lines in the United States.

South Wales Coal Trade Shows Improvement

The South Wales coal trade shows some improvement toward the end of March in all descriptions except steam coal, reports Trade Commissioner Charles E. Lyon, London, in a radiogram dated March 26. Prices are steady because of the lower production. Conditions in districts other than South Wales, however, are still depressed. The approaching Easter holiday will mean heavier shipments during the next fortnight, but no real improvement in the foreign position is seen.

Italian Railways' Welsh Coal Office Closed.

The Italian State Railways' coal office in South Wales has been closed after 30 years of operation. British coal in Italy is encountering strong American and German competition, while negotiations for Russian deliveries are proceeding, although no large contracts have yet been made. A Greek railway order for patent fuel has been obtained by Germany at 36s. 3d. c. i. f. Piræus, which is a full shilling below the British bids.

Further Wage Conference to be Held.

There were no important developments in the British wage controversy, but a further conference will be held next week. Freight rates from Wales are 16s. 6d. (\$3.94) to the River Plate and 9s. 9d. (\$2.33) to West Italy. Production of coal during the week ended March 14 amounted to 5,250,800 long tons. During the first 11 weeks of the present year 57,214,900 tons of coal were produced against 60,683,200 tons and 60,465,600 in the corresponding periods of 1924 and 1923, respectively.

German Reduced Consumption of Domestic Coal

Assistant Commercial Attaché Douglas Miller, Berlin

The warm weather in Germany has reduced the demand for fuel, particularly bituminous coal and coke. The industrial demands for coal have been maintained, but the drop in sales for domestic heating has caused the accumulation of unprecedented stocks in both Upper Silesia and the Ruhr. Strangely enough, the demand for lignite briquets for domestic cooking and heating has exceeded last year's figures. Of course, a minimum of these briquets are used the year round for cooking purposes, and they are almost exclusively relied upon to furnish domestic heating in mild weather.

Berlin Consuming More Briquets.

The city of Berlin, which imported 12,400 carloads of briquets per month in 1923 and 16,000 per month in 1924, increased its consumption to 19,000 carloads in January. This gain is largely to be accounted for by the fact that the purchasing power of the population has been increased and a higher standard of domestic comfort is now being maintained than was the case during the inflation period.

British Honduras: Import duties temporarily increased by 10 per cent surtax.

Canada: Change in import duty.

List of "Bureau's special circulars available."

MINERALS

Guy C. Riddell, Chief, Minerals Division

SOUTH AFRICAN MINING INDUSTRY IN 1924

Vice Consul A. H. Cawston, Johannesburg, February 9

The total production of minerals in the Union of South Africa during 1924 amounted to £53,958,000, excluding the gold premium on account of exchange, compared with £49,548,000 in 1923. Gold, excluding the premium of £3,827,918, accounted for £40,672,000. There were 28,581,000 tons of ore milled, which yielded 9,597,534 ounces of gold, the record production for South Africa, and an amount representing three-fifths of the world's total gold production. The nearest previous approach to this record was an output of 9,372,726 ounces in 1916.

Larger Profits on Gold—Working Capital.

Profit per ton on gold ore milled during 1924 averaged 10s. 3d., the best since 1910, when the amount was 10s. 6d. The total working profit for all the mines in 1924 was estimated at £14,650,000, from which amount must be deducted about £2,500,000 for Union and provincial taxes, about £1,350,000 for the Government's share on leased mines, and another £1,000,000 for such items as phthisis assessment, leaving almost £10,000,000, which compares with £9,310,950 made in 1909, the next best year. While some of the high-grade mines paid handsome dividends during 1924, some of the low-grade ones have been able to continue operations only by reason of the gold premium.

Although profits increased last year in the gold mines, working costs decreased; they were brought down to an average of 19s. 9d. per ton, compared with 22s. in 1923, and were lower than in any year since 1917. The fact that working costs decreased notwithstanding the greater depth of all the mines (the Village Deep mine has reached 7,000 feet and is now the deepest mine in the world) is due principally to the greater efficiency resulting from the use of jack-hammer drills, light enough for one man to handle without the aid of rigs. Further progress also was made in respect to metallurgy.

The mining industry spends about £30,000,000 per annum in South Africa, and contributes directly or indirectly 40 per cent of the Union and provincial revenue. About £13,500,000 are spent on supplies, the largest items being explosives and electrical power, each about £1,500,000, while coal and lumber account for about £1,000,000 each.

New Gold-Mining Companies Organized—Gold Refinery.

Among the gold-mining projects organized during 1924 were the New Pioneer Central Rand Gold Mining Co. and the Central West Gold Mining Co. The former was formed to take over the Spes Bona and New Goch mines located along the Rand at Johannesburg; it is estimated that approximately 1,000,000 tons of ore exist along the top level of these mining properties. The Central West Gold Mining Co., Roodepoort, started crushing within a year from the date of registration, and a tonnage of about 600,000 payable tons has been opened up. The plant has a capacity of 25,000 tons per month.

A gold refinery was completed during the year at Germiston, which will make it possible to send gold

directly from South Africa to India, oftener a more profitable market than London.

Other Minerals Produced—Base-Metal Development Probable.

Silver production in 1924 was valued at £212,602, compared with £197,054 in 1923; osmiridium increased from £43,528 in 1923 to £102,886 in 1924; diamonds from £6,038,207 to £8,029,466; copper from £394,578 to £511,844; and tin from £174,147 to £304,108. Small quantities of antimony, arsenic, lead, manganese, asbestos, and other minerals were listed, their total value rising from £285,308 in 1923 to £294,790 in 1924.

Although efforts continually are being made to obtain capital for the development of base metals, progress in this direction is slow—probably because in a country where precious metals and stones exist in large quantities capitalists prefer to invest their money in these, where possibilities of large profits exist, and where the risks are no greater than in base-metal propositions. It is, perhaps, this fact which explains the facility with which capital was obtained for the development of the platinum deposits recently discovered in the Lydenburg district of the Transvaal. Eventually, however, there is likely to be extensive development of the base-metal deposits which are known to exist in various parts of South Africa.

Country's Total Mineral Production Recently Published.

The government mining engineer's report, recently published, states the value of the total production of all minerals in South Africa as £1,113,041,176; of which gold accounts for £790,915,388, or about 71 per cent, and diamonds follow with £228,205,426. Of the total mineral production of the country, the Transvaal has contributed £867,437,577, and the Cape Province, £197,260,987. The significance of these figures can best be realized when it is considered that the mining industry of South Africa is only about 40 years old.

1924 May Remain the Record Year.

While 1924 was a record year for mineral production in South Africa, the large output does not indicate that important new discoveries were made, or that new mines were opened up; but, rather, that greater efficiency was developed. As it does not seem likely that any more gold discoveries of importance will be made in this country, and as several of the richest mines have gone about as deep as it is possible to work, it is considered probable that, barring unforeseen discoveries and unusual developments in the platinum situation, the mining industry in this country will soon be on the down grade, and many people believe that the peak already has been reached.

Recent Developments in the Production of Precious Metals in Czechoslovakia

Consul C. S. Winans, Prague, February 23

The Czechoslovak ministry of public works has recently conducted experiments for the washing of gold from sand taken from the River Otava, in the vicinity of Roudny, Bohemia, where the only gold mine in Czechoslovakia is located. As a result of these experiments, it has been reported that a sufficient quantity of

gold was found in the lower layers of sand to warrant a continuation of operations, and that the washing may prove more profitable than the mining of gold in Roudny.

The Ceskoslovenska Republika (official) has announced that a mining company has been recently organized for the purpose of mining lead and silver ore in Stribro, and that the southern drifts of the old silver mine "Mze" may be reopened. There were once valuable silver mines in this district which were devastated during the Thirty Years' War in Europe, but it is believed that the mineral resources were never exhausted.

Mining Notes from Ottawa

Trade Commissioner Lynn W. Meekins, Ottawa, Ontario, March 14

Although the shipments of silver from the Cobalt district of Canada in 1924 were 831,078 ounces less than in 1923, the present outlook indicates a considerable increase in production this year. The Keeley and Castle Trethewey properties are listed as having the largest ore reserves.

Much interest has been aroused by the recent discovery near Hope, British Columbia, of ore said to have a nickel content from 1.5 to 2 per cent. It is reported that an American company has bonded the enterprise.

The Consolidated Mining & Smelting Co. (Ltd.) has arranged for the treating of 4,000 tons of silver-lead concentrate at Kellogg, Idaho, as this concentrate can not be handled at present at the Trail, British Columbia, smelter.

"Future" Trading Revived by German Metal Bourses

Dealing in futures on the Berlin and Hamburg bourses commenced April 1. Copper and lead will be traded in at Berlin, and copper and tin at Hamburg. Future trade in silver will not be undertaken. It has been agreed that the minimum sale must amount to 10 metric tons, and that forward buying and selling up to four months may be undertaken. The number of firms operating on the Berlin bourse is estimated at between 60 and 70, and approximately the same is estimated for Hamburg. (From Das Wochenblatt der Frankfurter Zeitung.)

Belgian Petroleum Market

Assistant Trade Commissioner E. V. D. Wight, Jr., Brussels, March 2

The Belgian consumption of petroleum products showed continuing increases during 1924. The completion of available official statistics for the first 10 months by the addition of proportional amounts for November and December gives a total (confirmed by the trade) of 347,439 metric tons, valued at 353,416,467 francs for the year. These figures compare with 282,575 tons, valued at 288,140,664 francs, in 1923—an increase of 65,000 tons and 115,000,000 francs. Compared with 1921, consumption in 1924 increased by 218,537 tons and 217,538,000 francs.

Official Trade Data Issued.

Official statistics for the first 10 months of 1924 show that Belgian imports included 48,827 kilos of crude, 134,324,778 of gasoline, 88,562,507 of kerosene, 68,242,357 of lubricating oils, and 22,950,337 of heavy motor oils, making a total import of 309,128,806

kilos. Exports for the period amounted to 19,596,170 kilos, consisting mostly of lubricating oils.

Of the gasoline imported during the period, 76,875 tons came from the United States, 27,606 from Great Britain, 19,701 from the Netherlands, 9,411 from Russia, and 588 from Rumania.

Market Highly Competitive.

The Belgian petroleum market is one of the most keenly contested in Europe. Six of the large world companies are actively represented, and, due to this and other factors, Belgium is frequently the seat of price wars, especially in gasoline. In consequence of these conditions, gasoline prices fell early in 1924 to a low level of 90 centimes per liter to garage owners. A return to more nearly normal conditions brought the price to 2 francs early in the autumn. Since then there has been a decrease to 1.50 francs, now currently quoted, at which price replacement costs of petroleum companies are not covered.

In approximate figures, petroleum company directors in Belgium estimate that 70 per cent of the gasoline trade is divided between the Anglo-Persian and one of the other competing companies, leaving about 30 per cent to be distributed, almost equally, among the other four.

A Franco-Belgian company is securing its crude oil from Russia and Rumania. It is reported that this organization has just signed a contract with Russian representatives in Paris for delivery of 150,000 tons of Russian crude oil per year, of which about 40 per cent will be available for the Belgian market.

Austrian Production and Consumption of Petroleum Products

Assistant Trade Commissioner Elbert Baldwin, Vienna, March 3

Austria has no petroleum production, and petroleum products are either imported or are manufactured from foreign raw materials by the four refineries at Floridsdorf, Drosing, Angern, and Kargran. In addition to these refineries, a few small firms produce gasoline and lubricating oils.

Increased Output of Gasoline.

Gasoline production for automotive purposes is increasing. During the first three quarters of 1924 it amounted to 11,226 metric tons, almost double the total 1923 output of 5,712 metric tons; nevertheless, domestic production of gasoline and of other petroleum products is still far below consumption and is secondary to imports. Gasoline and kerosene are imported chiefly from Poland and Rumania, and most of the crude oil from Russia. Recently shipments also have been received from the United States.

Production and Trade Summarized.

Import, export, and production statistics for 1923 and the first half of 1924 follow:

Austrian petroleum imports, exports, and production for first half of 1923 and 1924

Products	Imports		Exports		Production	
	1923	1924	1923	1924	1923	1924
	Metric tons	Metric tons	Metric tons	Metric tons	Metric tons	Metric tons

Exportation of Fuel Oil from Rumania

Acting Commercial Attaché L. E. Van Norman, Bucharest, March 5

The Rumanian Minister of Industry and Commerce has conditionally approved the request of the Association of Petroleum Producers and Refiners of Rumania to permit the exportation of fuel oil, which has been prohibited since the war. Present stocks are estimated at around 60,000 tons, and as crude production is steadily increasing the producers and refiners have succeeded in convincing the Government that after filling the domestic needs of the country they still have considerable quantities that are becoming an increasing burden on storage capacity.

The minister has made the exportation of fuel oil conditional upon a reserve of not less than 30,000 metric tons kept on hand at all times, to provide for the needs of the State railroads for a period of at least 60 days, with a further stipulation that during the course of one month there can be exported only the balance remaining from the previous month after the domestic needs have been fully supplied.

By a Government decree published February 24, 1925, the price of fuel oil for State enterprises was increased from 15,000 to 16,500 lei per carload of 10 metric tons; the increased price to be effective throughout 1925. (The lei had an average exchange value of \$0.004982 in 1924.)

The Chinese Tin Trade in 1924

Consul A. B. Carlston, Hongkong

There were 4,807 long tons of tin exported from Hongkong to the United States and Europe during 1924, the United States taking 4,627 tons. In 1923 shipments totaled 5,624 tons, the United States receiving 5,149. The 1924 exportation to the United States had a declared value of \$3,819,698. December recorded the highest export during the year, March, November, and January coming next. During the first four months 2,144 tons were shipped to America, or nearly half the total, on account of the heavy demand, the prices being about 145 Hongkong dollars per picul (133½ pounds). In the latter part of April the prices dropped to 110 dollars and, in consequence, shipments were extremely small until November. (The Hongkong dollar had an average exchange value of \$0.5247 in 1924.)

Export to America Reflects Yunnan Situation.

The dry season in Yunnan, the principal source of Chinese tin, occurs from April to August. This is the period of least production, as, owing to the scarcity of water, the ores can not be treated. Hongkong refiners, accordingly, during that period have been forced to buy some of their tin from the Straits Settlements in order to meet local consumption, which maintained a high price. The price of tin in consequence, was entirely out of line with the foreign market, and it was not until the Yunnan imports greatly increased that export business especially to the United States, improved.

Grades Produced—Where Sold.

In addition to the supply of tin from Yunnan Province, a small quantity comes from Kwangsi, probably about 500 tons a year. The crude tin from both sources is refined in Hongkong and graded for export. Owing to its lead content the local refineries find it very difficult to bring up the percentage of their refined tin to standard, and the best they can do is to produce a

99 per cent or No. 1 Chinese tin. With lower grade crude tin the output is what is known as No. 2 or 98 per cent, No. 3 or 96 per cent, "Quar Hong" or 93 per cent, and "Sui Sek" or 50 per cent. Occasionally they produce a 99.5 per cent tin for the Japanese market and for local consumption, Singapore tin often being added to the crude to raise the percentage. Sometimes Singapore tin is used for the 99 per cent.

The "Sui Sek" is sold in South China for soldering purposes and for making utensils. The "Quar Hong" is shipped to Shanghai for manufacturing tin foils for sacrificial purposes. The No. 2 tin, 98 per cent, is seldom in demand; the 99 per cent has the greatest sale, and it is this kind that is chiefly exported to the United States. As its content is only a fraction of 1 per cent below the standard it serves just as well for most practical purposes. It can be bought for \$10 to \$30 below the ruling price of standard tin in the United States market.

Market Highly Speculative.

The tin market is strongly affected by speculation and prices may decline 20 or 30 per cent, or rise that much, upon slight influence. In 1924, for instance, business slackened in April and prices declined £80 a ton in a short period. When prices go down the Chinese merchants hold their stocks and refuse to sell.

Additional information regarding minerals appears in this issue under the following sections:

Cable review, Latin America:

- Increased confidence in Chilean business.
- Conditions satisfactory in Venezuela.
- Economic improvement expected in Bolivia.

Tariffs and Trade Regulations:

- Austria: Relaxation of export restriction on magnesite.
- British Honduras: Import duties temporarily increased by 10 per cent surtax.
- Newfoundland: Duties on kerosene removed.
- List of "Bureau's special circulars available."

London Port Charges Reduced

The Port of London Authority has made a reduction of 7½ per cent, effective February 1, in the following charges: On shipping—dock dues and additional rent, discharging and extra charges; on goods imported—landing and extra charges other than rent; on goods exported—charges other than rent. (Vice Consul R. Flournoy Howard, London, March 3.)

Brazilian Railway Extensions in 1924

The year 1924 was not an encouraging one for railway development in Brazil, for the financial condition of the country permitted only 380 kilometers to be built. About half of the new line—149 kilometers—is in the State of Rio Grande do Sul. In Bahia the lines of the Rede Bahiana were lengthened by 98 kilometers; those of the Central do Brazil were extended 56 kilometers; the railways of Goyaz 28 kilometers; and the Great Western 1 kilometer. These improvements have been criticized in the Brazilian press, which claims that the same amount of work on the service between Santos and Sao Paulo would have been of greater value to the country, and that by constructing lines of the Mogyana or the Sorocabana from Campinas to Santos the present congestion at the port of Santos would be relieved. (Assistant Trade Commissioner A. O. Pierrot, Rio de Janeiro, February 19.)

HIDES AND LEATHER

Wilbur J. Page, Chief, Hide and Leather Division

BRITISH LEATHER TRADES IN FEBRUARY

Harold A. Burch, office of commercial attaché, London

A slight falling off in the volume of British leather trades was experienced during February, but whether or not this was due to the short month or to a seasonal lull is difficult to say. Taken as a whole, the foreign trade in leather was not far behind the January figures, while in some sections advances are seen. Improvement is also noticeable over February, 1924. From the latest trade returns several outstanding features are noticeable. Imports of undressed hides and skins show that Argentina and Uruguay fell off in supplying this market with wet hides; the trade declined from 25,132 hundredweight, valued at £93,302, in January, to 20,612 hundredweight, valued at £82,140, in February. These figures coincide with current trade reports that Germany and the Scandinavian countries are buying more extensively in the South American market.

Germany Active in Purchasing.

A very noticeable decrease was shown in the supply of dry and dry-salted hides received by this market during February from the South American source. At the same time substantial increases are noted in the quantities received from the Netherlands, Australia, and British South Africa. In the exports of undressed hides and skins from Great Britain, the United States increased its purchases by 598 hundredweight, and Germany by 1,136 hundredweight. On the reexport side, a substantial gain was recorded in the dry and dry-salted varieties, with Germany again absorbing the largest amount, but only increasing its takings by 772 hundredweight, while France absorbed 1,436 hundredweight more. France also increased its receipts of the wet hides which were reexported from Great Britain.

Considerable Increase in Leather Exports.

In the leather section, notable changes included a decline in imports of undressed leather from Australia, which decreased from 3,251 hundredweight, valued at £21,626, in January, to 987 hundredweight, valued at £6,635, in February. Imports from British India also declined by 3,138 hundredweight during the month. Increases are found in the upper leather imports for box and willow calf, also patent, but kid upper decreased. The United States improved its position over January in supplying calf and patent, but Germany is yet far ahead in furnishing calf leather. However, by far the larger quantities of kid and patent leather are supplied by American tanners. British exports of leather during February increased considerably over January, with Germany and the United States taking larger quantities. Reexports of leather decreased, but not to any great extent.

Upward Price Tendency.

The demand throughout the month was not brisk and no improvement was noted over January, but a quiet, steady movement of stocks, particularly the odd lots and low grades, took place. Prices continued to harden with advances in most of the standard grades. Boot manufacturers sought bargain lots, not being will-

ing to pay advances asked, as the retailers have not yet paid the advances asked for the finished boots and shoes. The trade as a whole is considered quite sound, although business is decidedly patchy.

The following table shows in detail England's foreign trade in hides, skins, and leather during the month of February:

British foreign trade in hides and leather for February

Items	Quantity		Value	
	1924	1925	1924	1925

World-Wide Leather Exports

United States leather was exported during 1924 to 101 markets out of a total of 114 foreign markets. A few of the outpost markets of the world which did not consume American leather during the past year were Aden and Arabia, Armenia and Kurdistan, French Indo-China, Russia in Asia, Abyssinia, Belgian Congo, Liberia, and Madagascar. The various types of American leather which were exported during 1924 and the number of countries participating in the trade in each are as follows:

Grain side upper.....	65
Calf and kip upper.....	72
Goat and kid upper.....	83
Sheep and lamb upper.....	51
Horse and colt upper.....	41
Patent (all classes).....	83

Bag, case, and strap leather.....	21
Fancy leather.....	20

Argentinian Hide Production for February

There were 309,952 frigorifico hides produced in Argentina during February, according to a dispatch.

from Commercial Attaché E. F. Feely, Buenos Aires. The total production for the first two months of 1925 amounted to 629,322 hides as compared with 684,495 produced in the corresponding period of the previous year. There has been a slight increase in the quantity of stocks on hand during February.

EUROPE

Samuel H. Cross, Chief, European Division

UNITED STATES CHIEF SOURCE OF FRENCH IMPORTS

Based on reports from Commercial Attaché Chester Lloyd Jones, Paris

The principal customers of France in 1924 purchased goods of greater value than in the previous year. As in 1923, Great Britain led the list, followed closely by the Belgium-Luxemburg tariff union. Germany, the United States, Switzerland, and Algeria followed in the order named. This represents a rise by Germany from seventh to third place among the countries buying from France.

Imports from United States Lead in 1924.

Imports from the United States occupied first place during the year just closed, displacing Great Britain, the heaviest supplier during 1923. Next in order were Great Britain, Germany, Belgium-Luxemburg, and Argentina. The chief suppliers of France, excepting Great Britain, increased the paper franc values of their shipments. Purchases from the United Kingdom fell off with the easing of the French coal situation and shifted to Germany. This fact explains the marked rise in German sales in France, which made a gain greater than those of any other country and increased the German total by 92 per cent over that of 1923. The gains next in importance were made by the United States and Argentina.

Although the unstable conditions that surrounded trade between France and the United States during 1923 continued through 1924, they did not prevent a substantial increase in the value of the trade in both directions, as measured in paper francs. Certain lines showed decided gains and some underwent equally important losses, as in the previous year, but the total imports from the United States reached approximately 5,750,000,000 francs, where in 1923 they had been slightly over 5,000,000,000. Exports to the United States, which were slightly below 2,500,000,000 francs in 1923, reached 3,143,000,000 in 1924.

Major Imports from United States Show Quantity Gains.

The great variation that occurred in the gold value of the paper franc during 1923 and 1924, together with the method of valuing exports from France, makes it difficult to draw fair comparisons on the basis of declared values. A better idea of the actual flow of commerce between the two countries is given by comparing the weights of the various lines.

The five most important American products taken by France in average years are, on the quantity basis, cotton, petroleum products, copper, grains and flour, and machinery. Of these, the cotton, petroleum, cop-

per, and machinery made a better showing in 1924 than in 1923, and the last three have shown continuous increase since 1922. Grains and flour have declined continuously since 1922.

Among the less important American products whose French imports increased in quantity during the last two years were preserved and salt meats, hides and skins, lead, colors, inks, and crayons. Tobacco, feeds, zinc, and photographic films showed improved imports in 1924, though in 1923 they had fallen below the level of previous years. Animal fats and coal registered losses in 1924, as compared with 1923. American products whose French imports have fallen continuously since 1922 include iron and steel, preserved milk, sugar, stones and earths, and paper (except cardboard, which has steadily risen). There has been little change in the amount of trade in lumber and rubber products.

Exports from France.

In normal years the most important exports from France to the United States are silks, linen, and a group including books, papers, engravings, cinema films, and printed matter; less important are skins and furs, cotton textiles, and woolen textiles. Of these items, woolen textiles were exported in increasing quantities in both 1923 and 1924. Linen wear showed an increased quantity in 1924, but silks and cottons, and skins and furs declined.

Less important lines which showed increase in both years were colors, inks and crayons, perfumes and soaps, porcelain, glass and crystal, furniture, cheese, seeds, preserved vegetables, and pig iron and steel. The latter export reflects the new position of France in the metallurgical industry.

Increases in 1924 were shown in linen wear, tools, and table fruits. Exports of machines and stone and earths to the United States fell in 1924, and chemical products and aluminum declined in both years.

In general, the chief lines of American goods sought by France have been well maintained in quantity, with the exception of grains and sugar; the latter figures irregularly in French imports, owing to the limitations on its production with which France has had to contend since the war. French exports to the United States during 1924 show a less uniformly favorable development in their chief lines in the matter of quantity, but the branches where improvement has occurred have made a satisfactory increase in their number.

French Trade Balance Continues Favorable

The French export trade in the first two months of 1925 reached a total value of 7,157,000,000 francs, while imports amounted only to 6,519,000,000 francs, leaving a favorable balance of 638,000,000 francs. This favorable balance is accounted for mainly by exports of manufactured goods valued at 4,304,000,000 francs and by parcel-post shipments amounting to 294,000,000 francs, these considerably more than offsetting the imports of manufactured articles valued at 841,000,000 francs. In raw materials the imports were greater than the exports, amounting to 4,503,000,000 francs and 1,951,000,000 francs, respectively. Imports of food-stuffs reached a value of 1,175,000,000 francs and their exports only 608,000,000 francs.

In quantity, French exports during January reached 5,175,000 metric tons and imports 7,494,000 tons. Of the imports, however, coal receipts accounted for 4,029,000 tons.

Tax Receipts Decline in February.

Total French Government receipts from normal and permanent sources during January and February amounted to 4,546,000,000 francs, of which the February portion was only 1,869,000,000 francs. Of the February total, 465,000,000 francs represented direct taxes and 1,395,000,000 francs indirect taxes and monopolies; the receipts from exceptional sources amounted to 83,000,000 francs, and from posts and telegraphs 118,000,000 francs. (Commercial Attaché Chester Lloyd Jones, Paris.)

TRANSPORTATION

E. S. Gregg, Chief, Transportation Division

SHIPPING**British Guiana Royal Mail Contract Renewed**

Consul Gaston Smith, Georgetown, British Guiana

The renewal of the contract with the Royal Mail Steam Packet Co. for steamship service between Canadian and West Indian ports and British Guiana, which expires March 31, was discussed at a special meeting of the Combined Court of British Guiana on February 12. The renewal of the contract, with better service by four motor ships of 5,000 to 6,000 tons, having ample cold-storage space and suitable passenger accommodation and sailing weekly from Halifax or St. John's with calls at British West Indian ports and Georgetown, was proposed in a telegram from the Governor General of Canada.

The total subsidy asked is £110,000 yearly for ten years, approximately £13,000 more than the present subsidy. The subsidy is prorated among the Governments of Canada, the West Indies, and British Guiana. Under the old contract, British Guiana paid £7,500 per annum, and the Combined Court in special session has approved the payment of £1,000 more each year, or £8,500, as its share of the proposed increased subsidy.

Vessel Entrances at Horta, Azores, During 1924

Consul Reginald S. Castleman, Horta, Fayal, February 16

Vessels entering the port of Horta during the calendar year 1924 aggregated 240, of 846,717 gross tons, or 75,244 tons more than in 1923 but 204,188 tons less than in 1921, the peak year. The majority of these ships called at the port for repairs, water, bunkers, etc. The only service to Horta in the international passenger trade is by the Fabre Line; 27 of its vessels, of 163,624 gross tons, called during the year. Portuguese vessels calling in the passenger and cargo trade aggregated 35, with a total of 114,573 tons, and American

entrances comprised 11 ships of 46,183 tons.

[Details as to the nationality, number, and tonnage of all vessels calling at Horta during 1924 may be obtained from the Transportation Division by referring to Report No. 164095.]

Hamburg and Trieste Seek Czechoslovak Traffic

Trade Commissioner E. C. Squire, Hamburg

The Hamburg American, Hamburg South American, and Levant Lines will open a trade bureau in Prague on April 1 to cooperate with the existing German trade bureau for the purpose of increasing Czechoslovak traffic via Hamburg. This step, it is understood, is taken to offset the activities of the Italian agencies that are pushing the interests of Trieste.

Proposed Canadian Shipping Subsidy

Trade Commissioner Lynn W. Meekins, Ottawa, March 21

In considering the shipping subsidy proposed for Sir William Petersen (see *COMMERCE REPORTS*, March 23, 1925), the following resolution introduced by the Minister of Trade and Commerce was passed by the Canadian House of Commons on March 20:

That to give the Government of Canada control over certain ocean rates it is expedient to ratify and confirm the agreement between His Majesty and Sir William Petersen, K. C. B. E., as set out in the schedule to this resolution, and dated the eleventh day of December, one thousand nine hundred and twenty-four, and that in view of the provisions of said agreement giving the Government control over such rates and of the services to be performed thereunder, the governor in council may authorize payment out of the consolidated revenue fund to the said Sir William Petersen, K. C. B. E., of an annual amount of two hundred and seventy-five thousand pounds in the manner and for the period provided for in the said agreement.

The House referred the resolution to a special committee, which will make a detailed investigation of the bill and conduct hearings for all the interests concerned.

Birmingham-to-Mersey Canal Project

Vice Consul Oscar F. Brown, Birmingham, February 27

The construction of a canal from Birmingham through Wolverhampton and Stoke-on-Trent to the Mersey, capable of transporting 100-ton barges, is

proposed in a report to the Birmingham City Council by the special canals committee. The estimated cost of the project is £6,593,627 (\$32,000,000). This route is claimed to be more suitable and practical than a southern route to the Severn, which has been under consideration for some time. The plan calls for the unification, enlargement, and straightening of several canals that are already constructed, but which follow devious courses, are capable of accommodating only small craft, and are under different administrations.

[Further details regarding this project may be obtained from the Transportation Division by referring to Report No. 164735.]

RAILWAYS AND ROADS

Railways in Alberta, Canada

Consul Samuel C. Reat, Calgary, Alberta

Railways in the Province of Alberta, Canada, now total 4,822 miles, compared with 1,060 miles in 1905 and 4,097 miles in 1915, according to the annual reports of the provincial railways department. Of this mileage, the Canadian Pacific Railway operates 2,009 miles, the Canadian National 1,977 miles, the Edmonton Dunvegan and British Columbia 423 miles, the Alberta and Great Waterways 282 miles, the Central Canada 48 miles, and the Lacombe and Northwestern 49 miles.

There were 44 miles of new line built during 1924, of which the Canadian Pacific built 15, the Edmonton Dunvegan and British Columbia Grande Prairie branch 15, the Central Canada Peace River line 13, and the Canadian National 1 mile. The Edmonton Dunvegan and British Columbia extensions built by the provincial government to Wembley cost \$378,843, or about \$31,000 less than the estimated cost. The extensions to the Central Canada cost \$305,978, or \$25,000 less than estimated.

Railways of Central America and the West Indies

Railway lines in countries of Central America and the West Indies have an aggregate mileage of 7,977 miles, of which Cuban railways represent about 47 per cent. Curaçao has only 1 mile of line in operation, and several of the smaller islands of the Caribbean have no railways at all. The lines in operation in each of the countries of this region, together with the latest figures available as to the motive power and rolling stock of each, are shown in the following table:

Country	Total mileage	Locomotives	Cars ¹
Guatemala	685	78	1,575
British Honduras	48	4	72
Honduras	763	111	1,875
Salvador	215	27	356
Nicaragua	197	29	273
Costa Rica	667	101	849
Panama	469	69	1,534
Cuba	3,721	572	1,154
Barbados	24	5	17
Jamaica	200	48	521
Trinidad	173	35	703
Curaçao	1	(²)	10
Martinique	188	6	170
Virgin Islands	30	(²)	20
Bahama Islands	10	3	40
Antigua	20	4	15
St. Kitts	16	(²)	10
Dominican Republic	879	74	2,546
Haiti	173	17	122
Total	7,977	1,178	11,872

¹ Includes motor cars. ² Data not available. ³ Includes dependencies.

Detailed information regarding the railways in each of the countries listed above may be found in "Railways of Central America and the West Indies," by W. R. Long; published as Trade Promotion Series, No. 5, of the Bureau of Foreign and Domestic Commerce. Copies of this handbook may be obtained from the Superintendent of Documents, Washington, D. C., for 70 cents.

New Railway Yard for Madras

Consul Alfred R. Thompson, Madras, India, February 6

A marshaling railway yard will be built at Ton-diarpert (near Madras), India, to facilitate the sorting of freight cars coming into and going out of Madras, and the passing of cars through Madras between the northern and southern sections of the line. It is expected that freight trains may then be re-formed, so that when dispatched again their cars can be cut off en route and thus avoid complicated shunting and the resulting considerable delay.

American firms interested in sending catalogues that cover railway yard supplies are advised to address the Home Board for Indian Railways, London, which has charge of all purchases for the project.

Changes in Czechoslovak Railway Rates

Vice Consul J. L. Calnan, Prague

A schedule of new export rates on Czechoslovak railways went into effect February 1, 1925, under which reductions of 10 to 25 per cent are granted on the following commodities: Agricultural machinery, steam boilers, locomobiles, road rollers, iron and steel goods, mineral lubricating oils and petroleum pitch, bentwood furniture, beer, glass, cement, cellulose, clay pipes, and tiles.

A 10 per cent increase in passenger fares became effective the same date. This increase, however, does not affect the prices of monthly tickets for school children, weekly tickets for workmen, and transportation rates for baggage.

Bessarabian Highways to Be Improved

Commercial Attaché Louis E. Van Norman, Bucharest, February 23

The ministries of war and public works of Rumania have secured the necessary authorization to construct new highways and repair old ones throughout Bessarabia, where the roads at present are inadequate for economic needs or for possible military operations. Work will begin immediately, 8,000 soldiers being detailed for the purpose.

COMMUNICATIONS

Aviation Developments

Silesian Company Organized for Commercial Air Service.

Breslau will be linked with the network of passenger air lines in Europe by the services of the Schlesische Luftverkehrs A. G. (Silesian Air Traffic Corporation), founded in January, 1925, which plans to operate mid-week flights from Breslau to Dresden and Berlin, connecting with services from Berlin to London and Moscow, and from Dresden to Prague and Vienna. Four airplanes, supplied by the Junkers Works at a total cost of 386,400 gold marks (\$92,000), will be operated. (Consul John R. Minter, Breslau, February 7.)

Commercial Air Routes for Argentina Proposed.

The Aero Club Argentino has recently recommended to the President of the Republic the establishment of the following commercial air routes: Buenos Aires to Rio Gallegos in 17 hours, with stops at Azul, Bahia Blanca, Patagones, San Antonio Oeste, Trelew, Comodoro Rivadavia, Puerto Deseado, San Julian, and Santa Cruz; Buenos Aires to Asuncion, in 11 hours, with stops at Gualaguaychu, Concepcion de Uruguay, Colon, Concordia, Paso de los Libres, Posadas, Villa Encarnacion, and Villa Rica; Buenos Aires to Antofagasta in 12 hours, with stops at Rosario, Galvez, Rafaela, Santiago del Estero, Tacuman, Salta, San Antonio de los Cobres, Santa Atacama, and Santa Gorda; Buenos Aires to Montevideo. (Consul General Henry H. Morgan, Buenos Aires, February 3.)

Operation of Russo-German Air Service Company.

The air line between Moscow and Koenigsberg, established by the "Deruluft" May 1, 1922, has increased its trips from semiweekly to daily. Mail carried increased correspondingly, from 1,078 kilos in 1922 to 2,390 kilograms in 1924; freight transported increased from 51,868 kilos in 1922 to 68,694 kilos in 1924. The distance between Moscow and Berlin is covered in 24 hours. ("Foreign Trade," Moscow, February 7.)

Moscow-Paris Service Arranged; Moscow-London Planned.

An understanding has been reached between the "Deruluft" and the Dutch Aerial Communication Co. (Koninklijke Luchtvaart Mij. voor Nederland and Kolonien), which enables the former to maintain services between Moscow and Paris, via Berlin and Amsterdam, in connection with the Dutch company and the Aero Lloyd. In addition the Deruluft, the Aero-Lloyd, and the British Imperial Airway companies are planning night trips between Moscow and London, a journey which now takes about two days by the combination of Moscow-Koenigsberg air service, rail thence to Berlin, and Berlin-London air service. By coordinating day and night trips the trip Moscow-London will be covered in one day. ("Foreign Trade," Moscow, February 7.)

Civil Aviation in South Africa.

An experimental air service between Cape Town and Durban, with stops at Mossel Bay, Port Elizabeth, and East London, was inaugurated in January. The schedule is arranged to connect with mail steamers, and the saving in mail transit down to Durban as compared with the railway is estimated to be 40 hours.

At the beginning there will be but one flight each way per week, and military airplanes operated by

officers of the South African air force will be used. The Minister of Posts and Telegraphs has stated, however, that this is merely in the nature of an experiment to furnish data for the establishment of a commercial air service at a later date. For the present no passengers will be carried, but it is expected that each plane will have on board 800 pounds of mail matter. The following surcharges applicable to all matter will be in effect on this route: Inland letters, 3d. per ounce; oversea letters, 6d. per ounce; inland parcels, 6d. per pound; oversea parcels, 9d. per pound. (Consul General D. C. Poole, Cape Town, South Africa.)

Mails and Parcel Post

Postal Convention Between Persia and Soviet Russia.

A postal convention between Persia and Soviet Russia, signed at Moscow in 1923 and subsequently ratified by the Russian Assembly, has been submitted to the Persian Parliament for ratification. In view of Persia's recent ratification of the telegraph convention, signed in Moscow at the same time, that country's acceptance of the postal convention seems assured.

The convention provides for the regular exchange of ordinary and registered mail matter, not only between Persia and Russia but in transit through either of them for the other from a foreign country. Both land and sea routes are covered. Aerial mail service between the two countries is mentioned, and will be regulated by a special agreement when established. The provisions of the International Postal Convention are recognized, and an indemnity of 50 francs gold is provided in case of the loss of a registered consignment. The convention is to remain in effect until after one year's notice of renunciation by either party has been received by the other. (W. Smith Murray, second secretary American Legation, Teheran.)

Increased Postal Tariff Expected in Mexico.

It is reported that Mexican interior postal tariffs on all letters and packages will be increased by one cent during March. A special issue of stamps is to be used. Since the rate on mail matter from Mexico to the United States is the same as the interior postal rate, the increased charge is applicable to all mail and parcel post from Mexico to this country. (Commercial Attaché Alexander V. Dye, Mexico City, March 7.)

Telegraph Convention Between Persia and Soviet Russia

The Persian Parliament on January 27, 1925, ratified the telegraph convention between Persia and Soviet Russia, signed at Moscow in 1923. The convention in general covers exchange of telegraphic correspondence between the two countries, including the Federation of the Republic of Transcaucasus. Provision is made for connecting the two countries by six different wire routes and for the construction and operation of a radio service. All questions not covered specifically in this convention will be governed by the International Telegraph Convention of 1908. (W. S. Murray, second secretary, American Legation, Teheran.)

[The full text of this convention may be obtained from the Transportation Division or through the district and cooperative offices of the Bureau of Foreign and Domestic Commerce, by requesting Report No. 163244.]

FAR EAST

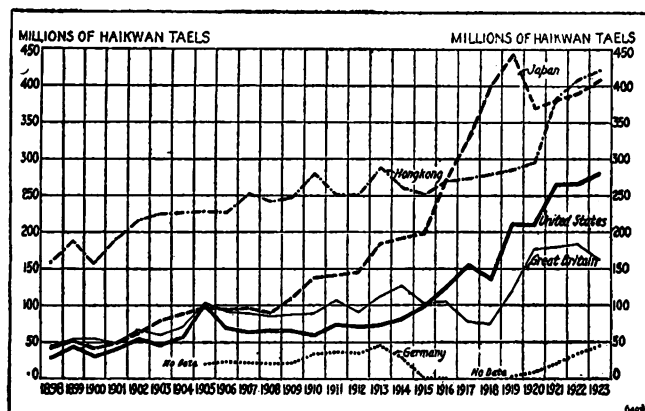

H. A. Butts, Acting Chief, Far Eastern Division

A QUARTER-CENTURY OF CHINA'S TRADE

Kenneth H. Dame, Far Eastern Division

China's foreign trade has shown a steady and pronounced increase since 1898 in spite of the many adverse factors affecting the transaction of business. In 1898 the total foreign commerce of the country amounted to 368,616,483 haikwan taels, while in 1923 it aggregated 1,676,320,303, or more than four times the 1898 total. Prior to 1914 the bulk of China's import requirements came from Europe, but with the outbreak of the World War these countries turned to the manufacture of war supplies and, consequently, China was compelled to look elsewhere for many of its necessities.

The accompanying chart shows the trend of China's foreign trade, by principal countries, from 1898 to 1923:

United States Must Compete with Europe.

With European countries temporarily engaged in internal conflict the United States had an opportunity to enter this market on a larger scale, and, in consequence, its share of China's imports increased from less than 6 per cent in 1913 to almost 19 per cent in 1921 but dropped to nearly 16 per cent in 1923. The European countries have reentered the China market. Germany, which lost practically all of its trade with China during the war years, and those immediately following the cessation of hostilities, has almost regained the position it held in 1914. France, Great Britain, and Belgium have also made rapid strides since 1921 and it is apparent that if the United States is to hold its trade position with China it must exert every effort to compete with the countries that are endeavoring to regain their old place in China's commerce.

China Rich in Natural Resources.

The wealth of China lies in its natural resources. Although primarily an agricultural country, rapid strides have been made in the development of native industries and resources. With huge stocks of coal, iron ore, and its wealth of man power China has the essentials for the development of a great industrial nation. China's present exports are 73 per cent agricul-

tural and involve perhaps 80 per cent of the people. The most important export commodities are silk, tea, sesamum seed, wood oil, wool, silk piece goods, hides and skins, while large quantities of tin, lead, zinc, and tungsten are produced. China also is the largest producer of antimony.

Machinery An Important Item in China Trade—Foodstuffs.

As industrialization progresses the machinery demand will grow and should become an important factor in the growth of American trade with China. This is especially true in the case of textile, flour-milling, and other power-driven equipment. The increase in the use of modern machinery is shown by the rapid growth in the imports of these items during the past 10 years. Total imports of machinery advanced from little more than 8,000,000 haikwan taels in 1913 to almost 29,000,000 in 1923.

Imports of foodstuffs, which have played an important part in China's foreign trade during recent years, have increased appreciably. Flour imports have more than doubled since 1913, increasing from 10,000,000 haikwan taels in that year to more than 27,000,000 in 1923.

World War Stimulated Industrial Development.

The World War acted as a stimulus to the development of China's native industries and natural resources and to-day China is going through the same process that every great industrial nation has encountered. It needs only the establishment of modern methods of production and adequate transportation facilities to make fuller use of them.

Agricultural New Zealand Progressive Industrially

Compiled from report by Vice Consul J. C. Hudson, Wellington

New Zealand, while a highly developed country, does not have an extensive system of secondary production, most of its products being those of the primary industries, which are exported in exchange for manufactured articles. The lack of a highly developed manufacturing industry is not due to unprogressiveness on the part of New Zealand's people, but to the characteristics of the country itself. By climate and topography the Dominion is peculiarly adapted to pastoral pursuits, and large numbers of sheep and cattle are raised.

Modern Machinery Used—Lack of Raw Materials.

Modern methods, however, are employed in the handling of primary products and in converting them into forms suitable for shipping. Most of the industries in the country use modern machinery wherever possible, the percentage of hand labor being low—including butter and cheese plants, shoe factories, woolen mills, meat-freezing works, the larger furniture factories, saw-mills, coal mines, mechanical engineering firms, machine shops, breweries, tanneries, soap factories, foundries, cement works, flour mills, sheet-metal works, harness and leather-goods concerns, coach builders, coal elevators, and fertilizer works.

A lack of raw materials, however, is a handicap to extensive industrial development, and the major portion of the manufactured products consumed are imported from other countries.

Tientsin's Industrial Development

Consul General C. E. Gauss, Tientsin, China

Tientsin, the most important port of north China, and the principal market for raw materials, with cheap and abundant labor and a large supply of coal, has made rapid progress as an industrial center during the past decade. This development is all the more remarkable since it was accomplished in the face of disturbed political conditions, flood, famine, and financial depression throughout the country. The cotton textile industry has grown until to-day there are modern mills representing over 325,000 spindles. The flour mill industry has expanded to a capacity of 47,000 bags a day. Rapid growth has also been made in the manufacture of glass, matches, cement, tiles, egg products, tanneries, and the carpet industry. The development of the coal mines has kept pace with the industrial growth of China.

Tientsin Open to Oversea Trade—Customs Statistics.

Since the conservancy work on the Hai Ho River has been completed vessels from Japan and China ports

are now able to proceed directly to Tientsin, and a substantial direct oversea trade has been established. With the use of ice breakers, this port in recent years has been kept open for winter navigation, relieving the situation under which Chinwangtao was used as the winter port for north China trade.

A brief review of the customs statistics shows a steady growth in the imports of machinery and a falling off in receipts of cotton piece goods, which are now being manufactured locally. Exports have more than doubled during the past decade while imports have increased 64 per cent over the same period.

Trade with the Far East Reviewed

Notwithstanding the unfavorable political and economic conditions in the Far East during the past year, the United States increased its oriental business and established new records in Australia and New Zealand. The future is promising and to assist traders interested in any of these countries the Far Eastern Division has issued a circular reviewing the situation for 1924. Copies of this circular may be obtained from the Bureau of Foreign and Domestic Commerce, Washington, or from any of the district or cooperative offices. Inquire for Special Circular No. 290—Far Eastern Division.

LATIN AMERICA

Richard F. O'Toole, Chief, Latin American Division

PROSPERITY CONTINUES IN SALVADOR

Consul W. J. McCafferty, San Salvador, March 2

Continued prosperity is evidenced everywhere in the Republic of Salvador, although exports of the most important commodities, particularly coffee, have not been as great as they were last year.

At the opening of Congress, on February 17, it was shown that revenues for the year 1924 for Salvador were the highest received in 28 years, notable increases being registered in both import and export tax receipts. Total receipts for Salvador in 1923 and 1924, together with total expenditures, were as follows: 1923—revenues, \$6,962,604; expenditures, \$7,482,586; 1924—revenues, \$8,941,878; expenditures, \$7,420,974.

Coffee and Cotton Markets.

The coffee market remained generally inactive and weak, and prices declined somewhat from the high prices of previous months. However, the lowest price was \$0.24 per pound, and recovery is anticipated.

Practically all the cotton gathered has been exported, Hamburg leading as the port of destination, followed by Havre and Liverpool. Some damage was done by the boll weevil in Salvador, but it was not so great as at first feared.

Work on the public improvements has proceeded, notable progress being shown in the pavement of streets and the building of the sanitary system of the capital.

TRINIDAD STILL DEPRESSED

Consul Henry D. Baker, Port of Spain, March 2

The cacao crop in Trinidad will be 25 per cent under last year's small crop and 40 per cent below the average. Considerable disappointment is felt as it was hoped that the improved prices now being realized would do much to restore prosperity to the island. The present price of about \$0.135 a pound is about \$0.05 per pound higher than a year ago and this is about the margin of profit now being realized, as last year the crop was marketed at approximately the cost of production. If present prices can be maintained and the crops improve, prosperity may eventually return to the industry, but it is not expected that the present year will record a great deal of progress.

Moratorium May Be Extended.

The local government is at present considering the question of extending the moratorium on estate mortgages, which has now been in force for about three years. It runs out in March of this year, unless renewed. An extension will probably be granted, at least until June, and perhaps until March, 1926. While this situation is naturally very unsatisfactory to the holders of mortgages, nevertheless unless further financial relief can be given to estate owners, it would seem likely that they would be unable to meet the expenses of proper cultivation. Probably very few of the holders of mortgages would wish to foreclose on es-

tates, until the industry offers more attractive returns. It is believed that unfavorable weather conditions were not the sole cause of the present poor crop, but that poor cultivation due to strained financial position was in a large measure responsible.

Crop Yields Vary.

The cacao crop will be finished by the 1st of April, although many estates have more or less of a production throughout the year. The yield of coconuts is also proving short, but prices are very firm, and in the main the situation seems satisfactory. The sugar crop is large but prices have shown no improvement and the net return may possibly not equal that of last year.

Economies Effect Favorable Revenue Balance.

The governor in a recent message to the legislative council expressed gratification at the satisfactory outcome of the colony's revenues for the year 1924. Although revenues did not come up to estimates, they more than covered expenditures, the actual figures amounting to \$8,065,747 and \$7,911,187, respectively. The favorable balance was brought about by effecting economies in expenditures which are to be continued during the present year.

United States Share in Uruguayan Trade

Consul O. Gaylord Marsh, Montevideo

The United States took the lead in supplying the Uruguayan market in 1924, having contributed merchandise to the value of 14,917,383 pesos, or almost 24 per cent of the total imports, while Great Britain was second with 11,392,159 pesos, and Germany third with 6,613,578 pesos. The principal imports from the United States consisted of petroleum products, motor vehicles, farm machinery, lumber, and sugar. Great Britain predominated in the textile and coal trades, and Germany furnished important items of hardware, chemicals, and miscellaneous articles.

Great Britain led in buying Uruguayan exports, having taken products valued at 24,253,643 pesos, or about 23 per cent. Germany ranked second with 17,731,605 pesos, and France third with 13,791,198 pesos. Belgium and Argentina took approximately 12,000,000 and 11,000,000 pesos worth, respectively, and the United States ranked sixth with 7,103,638 pesos. (The average value of the peso in 1924 was \$0.8227.)

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

FINAL CHILEAN BUDGET FOR 1925

Based on reports from Commercial Attaché Ralph Ackerman, Santiago

Almost the first act of the new Government Council of Chile was to officially decree a revised 1925 budget, providing for an appreciable increase in both gold and paper expenditures. The former budget, which was discussed in *COMMERCE REPORTS*, January 26, 1925, page 213, provided for expenditures of 414,381,300 paper pesos and 70,693,423 gold pesos. After the figures had been approved by the Government Council strong pressure was brought to bear by the various Departments which prompted the council not to decree this budget into law until further studies had been made. These were in progress when the movement of January 23 ousted the former council.

Receipts Estimated in Revised Budget.

In the revised budget ordinary receipts are estimated at 138,597,000 gold pesos and 216,096,034 paper pesos, and extraordinary revenues at 12,566,648 gold pesos and 49,294,159 paper pesos. Details of ordinary and extraordinary receipts follow:

GOLD		Pesos
Ordinary receipts:		
Duty on nitrate	77,740,000	
Iodine and borax	1,500,000	
Consular charges	5,000,000	
Lighthouses	750,000	
Santiago water supply	700,000	
Revenue from treasury	1,500,000	
Interest on municipal loans	1,407,000	
Import duties and warehousing, deducting 15 per cent in accordance with special laws	50,000,000	
Total	138,597,000	

Extraordinary receipts:		Pesos
Interest on State railway loans	8,966,648	
Valparaiso port works (loan)	2,600,000	
Constitucion port works	1,000,000	
Total	12,566,648	
Grand total	151,163,648	

PAPER

Ordinary receipts:		
Frontier customhouses	5,000,000	
Parcel post	5,000,000	
Transportation of packages	3,000,000	
Income from tax on transport	1,000,000	
Stamp paper, seals, and postage stamps	16,000,000	
Postal and telegraph services	11,000,000	
Tobacco	14,000,000	
Alcohol, wines, and beer	9,000,000	
Inheritance tax	3,000,000	
Sewerage	3,600,000	
Insurance companies' tax	2,000,000	
Sale of fiscal lands	500,000	
Rental of lands in Magallanos	200,000	
Auction lands in San Antonio	1,000,000	
Debtors from auctions	200,000	
Proceeds from National Mint	1,000,000	
Drinking water and drainage service	5,024,690	
Arica-La Paz Railway	12,571,345	
Income from treasuries	12,000,000	
Interest from Vales	2,000,000	
Tax on playing cards	600,000	
Income tax	100,000,000	
Receipts from identification service	4,200,000	
Operation of the Port of San Antonio	4,200,000	
Total	216,096,035	

Extraordinary receipts:		
15 per cent import tax (balance of 1924 authorized by Law No. 231)	11,837,050	
15 per cent import tax (calculating 1925 in accordance with Law No. 231)	15,665,000	
Valparaiso drinking water	3,244,540	

Extraordinary receipts—Continued.

Pesos

Service of irrigation bonds.....	2,961,760
Service of bonds, Law 3684.....	10,000,000
Service of bonds, Law 4041.....	2,000,000
Roads personnel (from roads receipts).....	735,800
Iquique drinking water.....	600,000
Dredging of Valdivia River.....	500,000
Amusement tax decreed by Law No. 77.....	1,700,000

Total 49,294,159

Grand total..... 265,390,194

Expenditures Authorized—Surplus.

Expenditures authorized amount to 472,680,110 paper pesos and 82,042,057 gold pesos, distributed to the different Departments as follows:

Ministry	Paper pesos	Gold pesos
Interior.....	81,430,896	111,666
Foreign Affairs, Worship, and Colonization.....	4,451,375	2,389,980
Justice.....	20,688,752	
Public Instruction.....	85,529,045	66,550
Treasury.....	72,981,150	65,567,580
War.....	80,602,428	79,000
Navy.....	45,735,322	6,029,475
Roads and Public Works.....	47,287,605	7,609,184

New Zealand Financial Returns

Vice Consul J. C. Hudson, Wellington

The New Zealand official returns for the first nine months of the fiscal year beginning April 1, 1924, show that the revenues collected amounted to £18,484,830, as compared with £18,210,924 for the corresponding period of 1923—an increase of £273,906.

The expenditures during this period were £20,116,238, compared with £18,997,259 for the corresponding months of 1923—an increase of £1,118,979. In the returns made public it is stated that the increase in expenditures was due chiefly to increments granted in the public service quinquennial reclassification, which was made last year, the increased expenditure involving the reversion to the 44-hour week in the second division of the railway service. Railway revenues suffered heavily as a result of the loss occasioned by the railway strike in 1924. Another item which will affect the fiscal returns for the fiscal year ended March 31, 1925, are remissions in taxation to the extent of about £850,000, made during last session.

Yearly Returns Compared.

The following tabulation shows the revenue, expenditure, and excess of both during the past few years:

New Zealand revenue and expenditure

Financial year	Revenue	Expenditure	Excess of—	
			Revenue	Expenditure
1920-21.....	£34,260,961	£28,068,730	£6,192,231	
1921-22.....	28,127,007	28,466,838		£339,831
1922-23.....	27,579,443	28,263,760	1,315,683	
1923-24.....	27,960,370	28,148,005	1,812,365

Australian Financial Items

Consul N. L. Anderson, Melbourne

Recent Australian Loans Raised in London.

Since September, 1924, the Australian Commonwealth and State Governments and various public utilities have added about £1,000,000 to the country's annual interest charge by the following loans raised in London:

Melbourne Tramways Board, 5 per cent.....	£750,000
Brisbane Tramway Trust, 5.25 per cent.....	1,500,000
Queensland, 5 per cent.....	4,000,000
Commonwealth, 4.75 per cent.....	6,000,000
Victoria, 4.75 per cent.....	6,000,000
New South Wales treasury bills.....	3,000,000

Heavy Imports Cause Large Australian Customs Surplus.

A return issued by the Australian Commonwealth treasury relating to revenue for the first six months of the financial year 1924-25 indicates the practical certainty of another record customs collection such as has prevailed in the last two years. Heavy imports continue, and every month has shown an appreciable increase of revenue. Among causes that are said to be contributing to this sustained volume of imports are the tariff preferences enjoyed by British goods—tariff preference is now given such goods even if only 25 per cent of their value is represented by British labor and (or) materials, but the ratio will be raised to 75 per cent on April 1—and large Australian credits in London, which make accommodation for importers easy to obtain, and which are augmented from time to time by Australian Government borrowings on the London market.

The customs revenues for the six months ended on December 31, 1924, amounted to £18,906,346, which represents an increase of £1,194,041 over the revenues for the corresponding period of 1923 and an excess of £1,906,346 over the budget estimate.

Australian Note Issue Unchanged.

A return by the Note Issue Department of the Commonwealth Bank of Australia as of the end of 1924 shows that no further expansion has taken place, the total issue remaining at £56,890,226. With only minor variation it has stood at that figure since last April. The present return covers the Christmas holidays. During that period there is always a large call for notes. This year the demand meant reducing holdings of the banks by £3,127,389, or from £32,835,458 to £29,708,069, the movement being on a more extensive scale than last year. The extra £15,000,000 note issue

agreed upon, chiefly to enable the banks to finance wool exports, evidently has been availed of for the establishment of credit without actual transfer of the notes of the banks.

Comparative figures of the note issue from the last three returns of the Commonwealth Banks are as follows:

Note issue of Commonwealth Bank of Australia in 1924

Items	Oct. 27	Nov. 24	Dec. 29
Notes held:			
By public.....	£23, 613, 093	£24, 051, 768	£27, 182, 157
By banks.....	33, 277, 133	32, 835, 468	29, 708, 069
Total.....	56, 990, 226	56, 887, 236	56, 890, 226
Gold held:			
Per cent of total issue.....	42. 96	43. 37	43. 78

Far Eastern Financial Notes

Mint Operations in Japan Curtailed.

New coins introduced into Japan by minting in 1924 amounted to 38,226,042 yen (1 yen=\$0.412 at average exchange for 1924), composed of 70,323,818 50-sen silver coins (35,161,909 yen); 16,889,758 10-sen nickel coins (1,688,975 yen); 99,515,807 1-sen copper coins (995,158 yen); and 76,000 5-yen gold coins (380,000 yen). Mint operations during the current year will probably be greatly curtailed, owing to reduction in the staff of the mint. The minting of 20-sen silver pieces will be suspended for some time, and no new 10-sen silver coins are to be struck henceforward, it is announced.

Budget Estimates for Bombay Anticipate Surplus.

Budget estimates for Bombay, India, municipality for the year beginning April 1, 1925, indicate an an-

ticipated surplus of 700,000 rupees (1 rupee=\$0.3565 at current exchange). Expenditures are estimated at 31,950,000 rupees against income of 32,650,000 rupees. There has been an average increase of 2,600,000 yearly in municipal expenditure during the past six years. For the years 1924-25 and 1925-26, 2,330,000 and 1,400,000 rupees, respectively, have been set aside for road construction. During the year 1923-24, 2,850,000 rupees were made available for this purpose. Other new undertakings provided for in the budget are a memorial hospital, medical college, and the chlorination of the city water supply. (Trade Commissioner Charles B. Spofford, Bombay.)

Financial Conditions in Indo-China Good.

The favorable financial situation of Indo-China continues to be maintained in spite of the consistent decrease in the price of rice, which has reached the lowest level in several years, with a consequent decline in the purchasing power of the native population. Total currency circulation, including paper and metal, amounted to 94,230,000 piasters in December, 1924. Metal reserves totaled 28,358,000 piasters, well over the 20 per cent legal minimum. A constant decrease in the currency circulation has continued since last May, while during this time the metal reserves have increased 300,000 piasters. The Credit Foncier de l'Indochine, a subsidiary of the Banque de l'Indochine, engaged in real-estate mortgage operations, has recently placed on the market a new issue of stock to the amount of 25,000,000 francs, one-half to be sold in Indo-China and the other half in France. This doubles the capitalization of the company. The Port of Saigon offered bonds to the amount of 600,000 piasters, bearing interest at 8¼ per cent, maturing in 15 years—part of an authorized issue of 2,000,000 piasters. (Consul L. L. Smith, Saigon.)

BUREAU'S SPECIAL CIRCULARS AVAILABLE

Many mimeographed circulars are issued by the bureau in addition to its various regular and special publications. These circulars are distributed to those interested, including persons and firms whose names are on the Exporters' Index, and copies may be obtained from the bureau or its district offices. Sixty-one circulars, as listed below, were issued by 16 different divisions during the week ended March 30.

AGRICULTURAL IMPLEMENTS DIVISION

- No. 2—Here and There in the Implements World.
No. E-34—Market for Internal Combustion Engines in Portugal.

CHEMICAL DIVISION

- No. 54-D—World Notes on Paints, Varnishes, and Pigments.
No. 82—A Brief Review for 1924 of the Nitrate Industry in the Antofagasta Consular District.
No. 83—Market for Fertilizers in the Malaga District of Spain.

COAL DIVISION

- No. 263—Exports of Welsh Anthracite to the United States and Canada.
No. 273—Progress in Indian Coal Mining.
No. 279—Deliveries of Coal Under Reparations Agreement to France and Luxemburg.
No. 281—British Coal Situation (Weekly Radiogram).
No. 301—Canadian Coal Import Duties Increased.

EUROPEAN DIVISION

- No. 33—Economic and Trade Developments.

ELECTRICAL DIVISION

- No. 342—Exports of Electrical Equipment from Hungary for the Quarter Ending December 31, 1924.

- No. 340—Progress in Indian Coal Mining.
No. 343—Exports of Electrical Goods from The Netherlands during 1924.
No. 349—Wiring Practice and Market for American Wiring Materials and Devices, Bahamas.

FINANCE AND INVESTMENT DIVISION

- No. 111—Danish Exchange Problems and Policies.

FOODSTUFFS DIVISION

- Foodstuffs 'Round The World:
Fishery News Section.
Confectionery Foreign Trade Notes Section.
Grain and Grain Products.
Foreign Notes on Meats, Fats, Oils, and Livestock.
World Dairy and Poultry News Section.
Canned and Dried Foods Section.

INDUSTRIAL MACHINERY DIVISION

- No. 520—Increased Demand for American Machinery in Germany.
No. 521—Progress in Indian Coal Mining.

IRON AND STEEL DIVISION

- No. 342—Market for Central Heating Equipment in Birmingham, England.
No. 343—French Production of and Foreign Trade in Iron and Steel in January, 1925.

LUMBER DIVISION

- No. 357—Sucker Rod and Handle Woods in India.
 No. 358—Notes on Japanese Lumber Industry.
 No. 370—Canada Needs United States Lumber Market.
 No. 388—Finnish Exports of Shorts, Staves, Box Shooks, and Hewn Small Timber.
 No. 394—Western Samoa Handle Market.
 No. 396—Outlook for Softwood Ties in the United Kingdom.
 No. 399—United States Wood Exports, 1924.

MINERALS DIVISION

- No. 30—Foreign Trade Notes.
 No. 155z—Austrian Market for Paraffin Wax and Candles.
 No. 190—Petroleum Imports of Bombay During Fourth Quarter, 1924.
 No. 192—Petroleum Imports of Calcutta in Fourth Quarter of 1924.

PAPER DIVISION

- No. 29—"Side Runs" of the Paper Trade—Weekly News Letter.

RUBBER DIVISION

- No. 825—Tire Exporters' Weekly News Letter.
 No. 826—January British Exports of Automobile Casings.
 No. 827—February Imports of Golf Balls.
 No. 828—February Imports of Rubber Tires.

STATISTICAL PRESS NOTICES

- Imports of Wheat from Canada into the Principal Northern Border Ports During the Week Ending March 21, 1925.

Imports of Wool and Manufactures.

- Imports of Jute, Flax, Hemp, Manila, Sisal, and Kapok.
 Analysis of Imports and Exports from the United States for the Month of February, 1924.
 Imports of Cotton and Manufactures.
 Domestic Exports of Coal and Petroleum.
 Exports of Grains, Edible Grain Products, and Feeds.
 Exports of Pork Products from Principal Ports of the United States During the Week Ending March 21, 1925.
 Domestic Exports of Meats and Fats.
 Domestic Exports of Cotton, Cotton Cloths, Yarn, Thread, and Hosiery.
 Exports of Grain and Flour from the Principal Ports of the United States to Foreign Countrise During the Week Ending March 21, 1925.
 Domestic Exports of Wool, Silk, and Artificial Silk (Rayon).

TEXTILE DIVISION

- No. 52-C—Weekly Bristle Report.
 No. 74-A—World's Wool Digest.
 No. 99-B—What the World's Cotton Goods Markets Are Doing.
 No. 122-D—Weekly Cotton Service Bulletin.
 No. 371—Conditions in Australian Wool Markets at the End of 1924.

TRANSPORTATION DIVISION

- No. 17—Foreign Shipping News.
 No. 17—Foreign Railway News.

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

COMMERCIAL TREATIES AND AGREEMENTS

FRANCE—LATVIA

Acting Commercial Attaché C. J. Mayer, Riga, February 19

Ratification of Commercial Convention.

The commercial agreement between France and Latvia, signed in Riga October 30, 1924, has now been ratified by Latvia and published as a law in the Latvian government gazette, Valdibas Vestnis, February 16, 1925. This agreement becomes effective eight days after the French Government receives official notification of its ratification by the Latvian Parliament, and is to run for a period of one year and thereafter for an indefinite time unless denounced three months before the end of the year by one or the other of the contracting parties. If the treaty is continued, it may be later denounced upon two months' notice.

Under the terms of the treaty all products of France and the French colonies and protectorates will be accorded most-favored-nation treatment in respect to import duties and surtaxes, and the coefficients or increases to which they may be subject. It is further provided that most-favored-nation status shall be extended to certain colonial food products such as coffee, tea, and spices; cotton, wool, and silk; rubber; and tobacco, for which France has created a special market, on the condition that they be imported into Latvia by French or Latvian commercial houses established in France, and whose names appear on a French commercial register.

The following Latvian products (List A) imported into France, or the French colonies operating under the French customs tariff, will be admitted under the minimum rates of the French tariff as actually established or such tariff as may later be established, in-

cluding all surtaxes and coefficients or other temporary increases which may be made effective:

Ham, salt-pork products, sausage wares, raw hides and skins, eggs, Dutch and Gruyere cheese, butter; potatoes; flax seed for sowing; common woods and most common-wood products; hemp and flax, raw, hackled, or combed; paper pulp; spirits and liqueurs; cardboard and paper, other than fancy, weighing under 30 grams per square meter; empty wooden casks, shaped builders' and cartwrights' softwood, dressed lumber (hard and soft), doors, windows, blinds, shutters, panels, and joiners' work of soft wood, and most small wooden-ware.

Reductions from the general rates of the French tariff varying from 15 per cent to 80 per cent of the difference between the minimum and maximum rates of duty are provided for a number of Latvian products (List B). These percentages of reduction remain the same, whatever changes may be made in the French rates of duty. The products and percentages of reductions (in parenthesis) in this second list are:

Excelsior (30 per cent); cements (25 per cent); carbonate of lead (30 per cent); starch, properly so called (30 per cent); electrical supplies of glass without parts of metal (25 per cent); window glass (20 per cent); bottles, flasks, etc. (20 per cent); certain unbleached fabrics of linen, hemp, and ramie (20 per cent); certain cotton fabrics, and certain woolen fabrics (30 per cent); most wooden furniture (50 per cent, 60 per cent, or 80 per cent, according to kind); moldings (50 per cent); wooden shoes (50 per cent); slats for roller blinds (40 per cent); wood turners' wares (50 per cent); wooden handles for agricultural implements (50 per cent); articles of wood not specified (80 per cent); and seagoing vessels and hulls, river boats, yachts, and pleasure boats (15 per cent).

Latvian products imported into French colonies not applying the French tariff will be accorded most-favored-nation status (preferential treatment of French products excepted).

Reciprocal unconditional most-favored-nation treatment is provided in regard to import and export restric-

tions and contingents, with the usual reservation in regard to matters of security of the State and in regard to sanitary regulations. The trade restrictions are not to be applied to French goods warehoused in the customs of Latvia for forwarding to neighboring countries, and no higher warehouse fees are to be charged on such goods than those applying on goods stored for consumption within the country. No fees are to be charged in either country on transit or warehoused goods other than handling and storage fees. Reciprocal most-favored-nation treatment is also made to include all changes in octroi, excise, and other local taxes applying on imports, exports, transit, and warehoused goods.

Certificates of origin from chambers of commerce, viséed by a proper consular officer, are required to be presented at time of clearance of goods.

The privileges of this treaty are not to include concessions which Latvia has granted or may grant to Lithuania, Esthonia, Finland, or Russia, nor those accorded to border traffic or resulting from any customs or economic union which may be entered into by either country. Latvia is not to receive on the list of goods in Schedule A the benefit of any tariff concessions France may grant in the adjustments of the obligations of any country with whom it was at war during 1914-1918.

Provision is also made for reciprocal most-favored-nation treatment of commercial travelers and their samples.

[A brief announcement of this treaty was made in **COMMERCE REPORTS** of December 15, 1924. The text of this treaty (in French) is on file in the Division of Foreign Tariffs and may be consulted by interested persons. In the absence of a treaty between the United States and France, the concessions extended by France to Latvia are not extended to American goods.]

FRANCE—PORTUGAL

Eugene A. Masuret, trade commissioner's office, Paris, March 5

Conclusion of Temporary Commercial Arrangement.

A commercial arrangement between France and Portugal, based on the former *modus vivendi* signed at Lisbon on January 30, 1922, was signed at Paris on March 4 and will be effective from March 15 to December 1, 1925, subject to the approval of the Senate and Chamber of Deputies. The principal concessions provided for in the arrangement are that Portugal is assured special facilities for the importation of her wines into France, in return for which France is to get the benefit of most-favored-nation treatment in Portugal and, in addition, has been granted exceptions to the present Portuguese import restrictions on automobiles.

[The *modus vivendi* of January 30, 1922, providing for most-favored-nation treatment between France and Portugal, expired in June 16, 1923. It is expected that a permanent treaty will be negotiated before the expiration of the present arrangement. At present, the importation into Portugal of automobiles weighing over 1,500 kilos is prohibited. According to the exceptions provided in the new arrangement, contingents of 100 chassis and 250 automobiles, weighing over 1,500 kilos each, are permitted to be imported into Portugal from France. The United States enjoys the benefits of most-favored-nation treatment in Portugal.]

HUNGARY—LATVIA

Acting Commercial Attaché C. J. Mayer, Riga

Most-Favored-Nation Treaty Ratified.

The Latvo-Hungarian trade agreement which was concluded on November 19, 1924, has been ratified by

the Latvian Government and published in the form of a law in the Government Gazette, *Valdibas Vestnesis* on February 18, 1925. This agreement is based on complete reciprocal most-favored-nation treatment which is applied to import duties, transit goods, trade restrictions, commercial travelers, trademarks and copyrights, and similar international relations.

A complete reciprocal freedom from restrictions is further provided for trade between these two countries, with the exception of such measures as bear upon the question of public security, sanitary regulations, war materials, and government monopolies.

The Latvian Government has reserved from most-favored-nation treatment, all concessions that may be made to any of the Baltic countries or to Russia. Both countries reserve the right to enter into customs unions with another country without extending such benefits to the other country.

The provisions of the treaty are to run for an indefinite period, and may terminate upon a three months' notice by one of the contracting parties to the convention. The agreement will come into effect ten days after the Hungarian Government is informed of its ratification by the Latvian Government.

GENERAL TARIFF CHANGES

BRITISH HONDURAS

Supplement to Government Gazette, Belize, February 23

Import Duties Temporarily Increased by 10 Per Cent Surtax.

A surtax increasing the import duties by one-tenth will be effective in British Honduras from April 1, 1925, until March 31, 1926, inclusive, according to an ordinance published in the Gazette Supplement of February 28, 1925.

TRADE LISTS AVAILABLE

The Commercial Intelligence Division has recently compiled the following trade lists, of which mimeographed copies may be obtained from the Bureau of Foreign and Domestic Commerce or its district or co-operative offices by referring to the titles and file numbers:

ELECTRICAL APPARATUS AND SUPPLIES

Importers and dealers:

Australia (revision).....	FE-23012-C.
Colombia (revision).....	LA-14027-A.
Cuba (revision).....	LA-31029-A.
New Zealand (revision).....	FE-24008-B.
Norway (revision).....	EUR-9010-B.
South Africa (revision).....	BE-6015-C.

RADIO SUPPLIES

Importers and dealers:

Cuba.....	LA-31058.
Norway.....	EUR-9051.
New Zealand.....	FE-24042.

Salvador.....	LA-29030.
Turkey.....	NE-6021.

SURVEY OF CURRENT BUSINESS

Prepared in the Bureau of the Census

The Department of Commerce announces the following further figures covering basic industrial and commercial movements in February:

Textiles.

Greater activity was noted in the textile industry during February than in either the previous month or February, 1925. Spindle activity reduced to a single shift basis was at the rate of 100 per cent of capacity for February as against 96 per cent in January, and 87 per cent a year ago. Cotton finishers operated during February at 66 per cent of capacity, as compared with 62 per cent in January, and 64 per cent a year ago. Billings of pyroxylin-coated textiles were less in February than in either the previous month or February, 1924, while unfilled orders were larger than at the end of January, but were less than a year ago.

Metals—Rubber Tires.

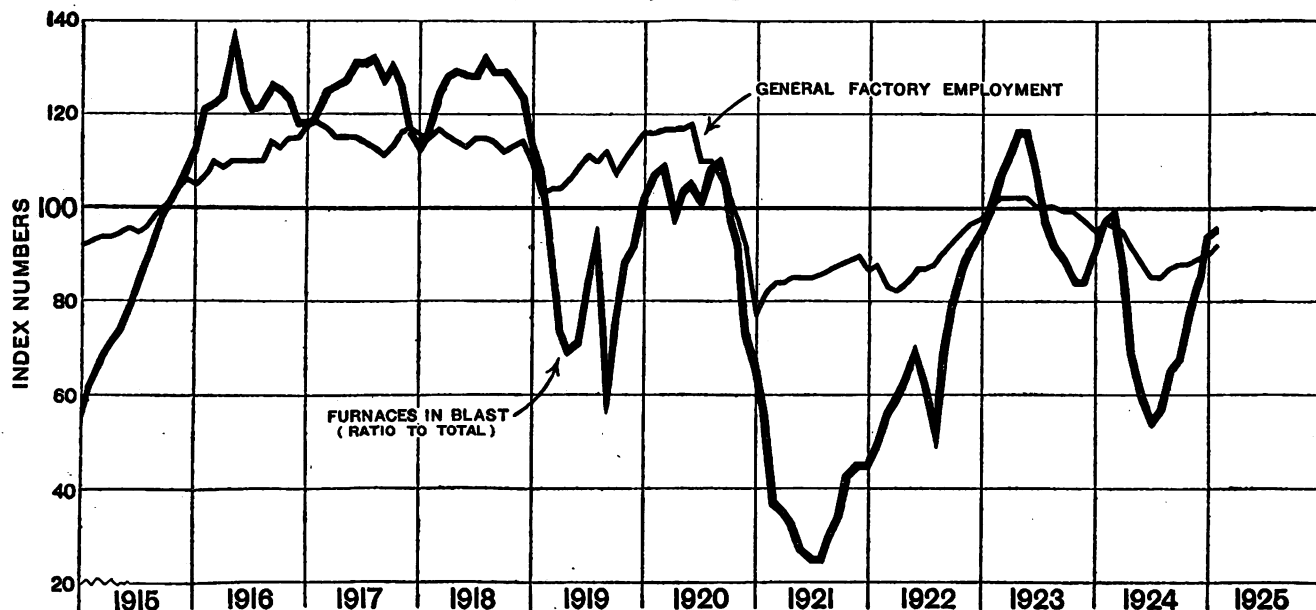

Revised data on bookings of steel castings indicate a decline from both the previous month and February of last year. Shipments of steel furniture were less in February than in either the previous month or a year ago, while foundry equipment sales and unfilled orders, although less than a year ago were larger than in January. Production of rubber tires was larger than in January but less than a year ago, while shipments were larger than last February, but less than in January, 1925. Manufacturers' stocks of rubber tires were larger than a year ago.

Building Awards and Building Materials.

February awards in 36 States contemplate new construction to the value of \$299,200,000 as compared with awards totaling \$296,473,000 in January and \$299,929,000 in February, 1924. In point of floor space, February awards represent a total of 46,861,000 square feet as against 48,536,000 in the previous month and 54,879,000 square feet a year ago. Compared with a year ago, in terms of floor space all classes of construction showed declines, while in terms of value the industrial and public buildings groups showed increases. The cut of Southern pine declined from January, but was higher than last February, while the cut of Douglas fir increased over the previous month, but was less than in February, 1924. Orders for both Douglas fir and Southern pine received during February were in larger volume than a year ago. Production of clay fire brick increased during February over the previous month, while production of silica brick and face brick declined from the same period. Compared with February, 1924, silica brick production showed an increase, while production of clay fire brick declined. Shipments of enameled baths remained practically at the January level, but were less than a year ago. Stocks of enameled baths increased over both comparative periods, while unfilled orders although less than a year ago, were larger than at the end of January. Production of Portland cement declined from both January and a year ago, while shipments and stocks increased over the same comparative periods. Contract awards during February for concrete paving represent increases over both the previous month and February, 1924.

GENERAL FACTORY EMPLOYMENT AND FURNACES IN BLAST

(1923 monthly average=100)

Data from Survey of Current Business.

The following table gives such data from the April issue (No. 44) of the Survey of Current Business as have been received up to March 26, 1925.

All items given in the following table correspond with similar information in the issue of the Survey of Current Business. These figures should always be read in connection with the detailed tables in the Survey, where specific descriptions

of the data and their sources are given. In addition to figures given from Government sources, there are also incorporated for completeness of service the figures from other sources generally accepted by the trades, the authority and responsibility for which are noted in the monthly Survey of Current Business, which may be obtained from the Superintendent of Documents, Washington, D. C., for \$1.50 per year.

1 Revised.

FOREIGN TRADE OPPORTUNITIES

Reserved information may be obtained from the Bureau and its district and cooperative offices by duly registered firms and individuals upon written request by opportunity number. The Bureau does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Symbols: * Reported by American consular officers; † Reported by commercial attachés and trade commissioners; ‡ Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

GET YOUR NAME ON THE EXPORTERS' INDEX

The Bureau maintains a classified index of American merchants and manufacturers interested in oversea trade and supplies them, without charge, with reserved and confidential information on foreign trade opportunities and trade lists and with other helpful data received from commercial attachés, trade commissioners, consular officers, and other official representatives abroad.

The distribution of the confidential information reserved from the Foreign Trade Opportunity announcements, the lists of dealers and importers in foreign countries submitted by various official trade representatives, the confidential circulars released from time to time, and other confidential and semi-confidential material received in and prepared by this Bureau is confined in general to American firms recorded in this special index. This is a confidential list, the object of which is to make certain that important confidential information relating to specific opportunities for the sale of American goods abroad, collected at Government expense for the benefit of American business men, is made available only to American firms which will use it in selling American-made products exclusively.

In order to have names recorded on the Exporters' Index it is necessary to fill out a form, stating whether the applicant is a manufacturer, manufacturers' agent, or similarly engaged in commercial activity, and specifying the goods manufactured or exported and giving certain other details. This form (Form 57) may be had upon application to the Bureau or its district or cooperative offices.

HEARING BY THE UNITED STATES TARIFF COMMISSION

PUBLIC NOTICE OF HEARING BY THE UNITED STATES TARIFF COMMISSION UNDER THE PROVISIONS OF SECTION 315 OF TITLE III OF THE TARIFF ACT OF 1922

Investigation No. 37 by the United States Tariff Commission for the purposes of section 315 of the Tariff Act of 1922.

Men's Sewed Straw Hats

Notice is hereby given, pursuant to section 315 of the Tariff Act of 1922, that a public hearing in the foregoing investigation will be held at the office of the United States Tariff Commission in Washington, D. C., at 10 o'clock a. m. on the 4th day of May, 1925, at which all parties interested will be given an opportunity to be present, to produce evidence, and to be heard with regard to the differences in cost of production, and of all other facts and conditions enumerated in section 315 of the Tariff Act of 1922 with respect to the following articles described in paragraph 1406 of Title I of said Tariff Act, namely:

Men's hats, sewed, wholly or in chief value of straw or other material or materials mentioned in said paragraph, namely, straw, chip, grass, palm leaf, willow, osier, rattan, real horse hair, cuba bark, and manila hemp being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

This notice shall be published by posting a copy thereof for 30 days prior to said 4th day of May, 1925, at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy thereof prior to said date once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in COMMERCE REPORTS, published by the Department of Commerce.

By order of the United States Tariff Commission this 31st day of March, 1925.

JOHN F. BETHUNE, Secretary.

COMMERCE REPORTS

A Weekly Survey of Foreign Trade

JULIUS KLEIN, Director Bureau of Foreign and Domestic Commerce

Editorial Board: Griffith Evans, Grosvenor M. Jones, E. Dana Durand, Eugene S. Gregg, and Archibald J. Wolfe

Sending Samples Abroad

Among the most difficult trade complaints may be classed the attempts to collect the value of samples sent to foreign agents.

Business in many lines can not be done without samples. Naturally the cost of samples is eventually absorbed in profits on business secured. But where no business results, unreturned samples are likely to form a considerable item of waste.

Individual claims for unreturned samples are, as a rule, not of sufficient importance to warrant legal proceedings or collection through outside agencies. It is in the aggregate that these items become a burden.

It is best to avoid controversies based upon unpaid samples, and it is only fair to state that in many instances the creditors themselves are to blame for the fact that samples are not returned or paid for.

Frequently samples are sent unsolicited and without a "meeting of minds" between sender and consignee as to the obligation to return them or to pay for them.

Under these circumstances, it is best to formulate certain lines of policy with regard to the question of manufacturers' samples.

No samples should be sent unsolicited if they are of sufficient value to establish an important credit item. A foreign firm has the right not to be forced to receive unsolicited samples or to be burdened with the obligation to care for them and eventually to pack them, ship them, or pay for them.

If samples are sent as a part of an agency arrangement, distinction must be made between those commercially usable and capable of being sold and those unfit for sale.

Depending upon the nature of the commodity, the cost of the samples may be either assumed by the sender or debited to the distributor, or the cost may be apportioned between them. In many lines of business samples may be considered an item of advertising expense.

An electrical supply firm with a wide range of samples includes in its agency agreement the following clause: "The agent will authorize the shipment of an initial range of samples and the shipment from time to

time of new articles, as well as the reshipment from time to time of samples which have become unfit for further demonstration purposes." The manufacturer allows a special agent's sample discount of 50 per cent on such orders.

One of the principal matters to consider in the question of samples that may become the subject of a controversy is to provide for responsibility in the case of deterioration or in the event of no business resulting.

It may be safely recommended that no samples of value should be sent without a thorough understanding on the part of both parties as to their responsibility.

[A. J. WOLFE.]

Netherlands East Indies as Market for Cotton Goods

The Netherlands East Indies is one of the world's most important textile markets. Located near the Equator, these islands have a population of approximately 50,000,000, and they import cotton cloths to the value of between \$40,000,000 and \$50,000,000 annually. The United States shares but slightly in this trade, notwithstanding that many of our products are or could readily be made suitable. The principal difficulty has been the developing of suitable agencies for distribution, but with careful study and application this problem can doubtless be overcome.

Trade Information Bulletin No. 327, "Cotton-Goods Market in the Netherlands East Indies," deals comprehensively with all the factors involved in the textile trade of the Netherlands East Indies. War and postwar conditions have brought about many changes both in the trade personnel and in the character of the goods sold. In 1913 England and the Netherlands shared about equally in the cotton piece goods trade of these islands, less than 1 per cent of the imports of cotton cloth coming from other countries. To-day, Japan is making heavy inroads into the business in the gray and dyed goods, while England has the "lion's share" of the trade in bleached goods and prints and the Netherlands supplies the bulk of the cambrics. The last-named class is also feeling the competition of cheaper Japanese cloths.

No dissatisfaction with the quality of American offerings exists in discerning quarters. There is the usual quota of confirmed critics who like to harp upon the abnormal circumstances under which American goods came to the islands in the postwar days and to stamp the frequently inferior products of that period as representatively American, but it is not believed that they are influential. The level-headed import managers of most of the houses of standing, who have every opportunity to become familiar with world products, acknowledge and respect the quality of American manufactures. There are a number of reasons why they can not see their way clear to buy American textiles under present conditions, but there are few antagonisms and few prejudices that would not be overcome by a good business proposition.

In other directions the difficulties are still serious, the main troubles being price and lack of organization. Most of the import houses are closely allied with British and other European principals either through capital investments or long-standing business relations. Racial kinship and custom exercise a marked influence on the opinions and decisions of local importers in favor of the home country.

There is no organization in the Netherlands East Indies capable of working with American manufacturers in minimizing the effects of ever-changing conditions in supplying and consuming countries. Such business as American exporters can get now must be largely opportunist, and opportunist business is usually a matter of price.

The weakest selling point of American cotton cloth is its price; the goods land in the Netherlands East Indies at a considerably higher cost than that of similar European products, and the market can not pay the difference. It is possible to find a limited outlet with the few big department stores and similar establishments catering to the European and better-class Chinese trade, but this business is insignificant compared with the immense turnover in merchandise taken by the natives. With the latter a high price almost automatically puts an article out of consideration.

In other words, big business can be done in the Netherlands East Indies only in cheap goods.

[JULIUS KLEIN.]

Misuse of Trade-Opportunity Service

Some months ago an American consul, with commendable enterprise, interested a Brazilian importer in "pogo sticks." The sale was eventually consummated, but not without embarrassments which, under less fortunate circumstances, would have nullified the efforts of the consular officer and might well have given American business methods a bad reputation.

A Trade Opportunity was published in *COMMERCE REPORTS* setting forth the interest of the Brazilian merchant in pogo sticks. Manufacturers and exporters

of the desired article, of course, took advantage of the information and corresponded with the Brazilian concern. But that was not all. Other American exporters, perhaps ill-advised through some misuse of the information, bombarded the Brazilian concern with proposals and quotations on a great variety of products, ranging from nails and hinges to coal in cargo lots.

As a result, the Brazilian concern was irritated and annoyed. The American consul had to do much explaining and apologizing. And American exporters were made to appear as unschooled and "enterprising" to the point of being positively troublesome. Such an erroneous impression as this should never have been created.

When a trade opportunity is published in *COMMERCE REPORTS* for pogo sticks, it should be understood to mean pogo sticks alone. It must be remembered, in this connection, that every country has its own peculiar merchandising methods. In Brazil, for example, drug concerns do not as a rule carry toilet articles, this latter business being specialized and having its own establishments.

Indiscriminate circularization based on Trade Opportunity information is a most questionable practice, which should be scrupulously avoided. [J. J. MARRINAN.]

International Sample Fair at Valencia, Spain

The International Sample Fair at Valencia, Spain, will be held from May 10 to 25, 1925. In accordance with a decree issued by the Spanish Government a year ago only one official sample fair is to be held in Spain each year, and more recently it has been decided that the official fair shall be held in alternate years at Valencia and Barcelona. Accordingly, the location in 1926 will be the latter city.

The lack of trade publications and advertising organizations in Spain makes it difficult to give publicity to American products in the usual way. Consequently sample fairs are of more importance in Spain than in some other countries. A recent communication of Commercial Attaché Cunningham, at Madrid, states that special commissions for the free entry of samples have been granted by the Spanish Government and that Spanish railroad and steamship lines are to give special reduced rates.

Application forms and descriptive pamphlets regarding the fair are available in the European Division of the Department of Commerce. As the blank states that applications must be filed with the fair committee by April 15, it will be difficult to obtain space this year except for firms already represented in Spain. The matter may be kept in mind, however, as an official fair will be held at Barcelona next year and at Valencia in 1927.

World's Commercial News in Brief

The following are brief items compiled from data cabled by Government representatives stationed abroad, from official foreign publications, and from other sources. Countries included in the "Monthly Cable Reviews" are omitted from this section.

European Economic and Trade Developments

For reasons of Bureau administration, this heading includes also Canada

BELGIUM

A treaty has been signed with the Netherlands regulating commercial navigation on the Scheldt and extending the international canal system. A temporary commercial agreement has been concluded with Germany. The price of bread has risen, notwithstanding the lower wheat prices on world markets. Flour prices are firm. Metallurgical plants at Charleroi have declared a lockout, effective April 15, in anticipation of a threatened strike. It is thought that such labor difficulties may be arbitrated after the forthcoming elections have clarified the general business atmosphere.

BULGARIA

Recent foreign-trade figures for 1924 show imports of 5,557,311,000 leva and exports of 4,902,538,000 leva. (The 1924 exchange average of the lev was 0.7281 cent.) Although an unfavorable balance is shown, it is thought that undervaluation of tobacco exports may be accountable and that in reality Bulgaria may make a reasonable claim to a substantial favorable trade balance for 1924. Agricultural products constitute 90 per cent of its exports. Germany occupies first place in the country's foreign trade in both exports and imports.

CANADA

Business is encouraged by an announcement at Ottawa that there will be no material tariff alterations during the present session of Parliament. The volume of wholesale and retail trade is not up to expectations for the season. The industrial situation remains in general stationary, but textile mills and boot and shoe factories are reported fairly active, and flour mills are working on orders previously booked. About 41 per cent of the blast furnaces were in operation in February. Pig-iron production during February increased 4 per cent over January; production of steel ingots and castings advanced 30 per cent. Steel manufacturers are well occupied on rail orders. Metal markets in general show weak tendencies, with diminished sales. The automobile trade is expanding, and a large demand is expected from the rural communities this season. Trade Commissioner Meekins, Ottawa, reports that gross earnings of Canada's principal railway systems during February were smaller than a year ago, but that marked reductions were effected in operating expenses.

FRANCE

The outstanding event of the week was the resignation of the Finance Minister and the discussion of the prospect of raising circulation from 41 to 46 billion francs in order to relieve the present urgent needs of the Treasury and to provide ready cash for commercial transactions. Alternative measures include a voluntary contribution from capital. February iron and steel

production was slightly below that of January. Net exports are practically unchanged. Some large orders for railway rolling stock have been given to German manufacturers.

GERMANY

Recent bank statements show a marked decrease in liquidity since the annual statement at the end of 1924. Those dated February 28 show for the six largest Berlin banks a decrease in the liquidity of assets from 61.6 per cent on December 31 to 54.1 per cent on February 28. Total assets continue to increase, having risen from 5.2 billion to 5.64 billion gold marks. Cash on hand and bills discounted declined, as did deposits in other domestic banks and in foreign banks. Deposits fell from 629 million to 642 million marks during this period. These balance statements reflect a recent credit restriction resulting from higher interest rates in the United States and England, and a consequent reduction in Berlin short-time deposits. Unemployment decreased during March from 593,000 to 540,000. A marked increase is reported in foreign orders for transportation material, machinery, and electrical goods. German iron and steel prices still remain approximately 30 per cent above French and Belgian prices, f. o. b. Antwerp. The cotton-spinning and weaving branches of the textile industry are well occupied; but the coal trade continues depressed, with extraordinarily large stocks on hand. Industrial wages continue to rise, although they are still below pre-war purchasing power.

HUNGARY

Revenues pledged to the service of the League of Nations loan amounted during February to \$4,400,000, several times the amount required. The balance now on hand for this purpose is \$7,000,000, and is considered satisfactory by the Commissioner General. The National Bank has declared a dividend of 8½ per cent for the first year of its operation; it now has a gold reserve of \$8,000,000. The Government has called for the deposit with its consul general in New York of all pre-war bonds of the Hungarian State loan series. Such deposits must be made by April 15 in order to preserve the rights of the bondholders. The bonds are to be sent to Budapest for examination, after which they will be returned to their owners. No announcement is made as to when or on what terms the bonds are to be paid.

ITALY

The Minister of Finance has announced a new issue of 1 billion lire, in 5 per cent nine-year bonds, for the retirement of other securities and for reduction of note circulation. This is part of the general plan to effect as great a reduction as possible in the circulation of notes emitted by issue banks for account of the

State. This does not necessarily entail reduction of total note circulation, inasmuch as there may be an increase in circulation for commercial account. Savings deposits increased from 8.8 billion lire to 9.6 billion lire during 1924, and during the first two months of 1925 have increased 150 million lire. The *modus vivendi* with Germany, which expired on March 31, has been renewed for the duration of the treaty negotiations. Italy has granted most-favored-nation terms on German bolts, screws, and furniture trimmings of iron and steel.

SPAIN

Although the credit balance of the Government with the Bank of Spain is steadily decreasing, no definite decision has been reached as to the date of new floating-debt issues that will be necessary if a debit balance with the bank is to be avoided. The Supreme Banking Council is studying the problem of regulation and inspection of banks, following suspension of payments by several that were well known. Mining

industries are expanding their activities. Higher prices for lead and a heavier demand have strengthened interest in further development of this metal.

NETHERLANDS

On account of the steady increase in prices of food-stuffs during the last three months, a number of trade-unions have petitioned the Government to establish a price-control commission, and the Government has granted the petition.

POLAND

The sugar industry is suffering from a low domestic consumption of only 6 kilos per capita, as compared with a German domestic consumption of 24 kilos per capita. While money in circulation has steadily increased since the organization of the Bank of Poland, the present small per capita circulation of 23 zloties (\$4.60) explains in some measure the high prevailing interest rates and the need for foreign loans.

Latin America at a Glance

ARGENTINA

Weather conditions are ideal in Argentina for agriculture and stock raising but exports are moving slowly. Imports are considerably in excess of those of 1924. The exchange value of the peso is lower because of scarcity of bills. Money rates are firm at 7 to 8 per cent. Bank deposits and loans have increased. Employers are again protesting the pension law. (Commercial Attaché E. F. Feely, Buenos Aires.)

CHILE

The general improvement in merchandising, which has been noticeable in Chile in recent weeks, continues. Trading on the stock exchange at Santiago is active, with prices tending to rise, and foreign exchange strengthening. There are evidences of labor unrest in the country, however, which are giving considerable concern to manufacturing industries and public utilities. Recent statistics of crop movements indicate that 3,000,000 metric quintals of cereals were transported by rail during the first three months of 1925, compared with 2,000,000 quintals in the same period of 1924. (Assistant Trade Commissioner C. C. Brooks, Santiago, April 6.)

PARAGUAY

Business is still somewhat depressed in Paraguay owing to damage to the cotton crop, but conditions are expected to improve soon.

BRAZIL

Important changes have been made in the rules of the Santos coffee exchange to curb speculation. Transactions effected are to be posted, specifying quantity, quality, type, and price and no quotation is to oscillate more than 1 milreis. The first automobile show for Rio de Janeiro is announced for August 1 to 15. (Commercial Attaché W. L. Schurz, Rio de Janeiro, April 4.)

PERU

Business conditions are still poor in Peru, with rains continuing over many sections of the country. The Central Railway, which, in common with other lines, has been inoperative since the recent disastrous floods and washouts, has now resumed service between Lima

and the interior, as far as Chosica, a distance of 25 miles. (Cable from Commercial Attaché H. B. MacKenzie, Lima.)

ECUADOR

Business conditions in Ecuador are fair, with exchange showing no great fluctuation. Approximately 70 miles of the Guayaquil-Quito Railway was washed out by the recent rains and it is estimated that it will be from four to six months before the line is again in use. Mail is being sent by boat and mule back from Guayaquil via Babahoyo to Quito, which takes a minimum of six days. (American Minister G. A. Bading, Quito, March 24.)

COLOMBIA

Business conditions are reported good in Colombia, with the movement of coffee steady at favorable prices and little fluctuation in dollar exchange. There is to be held in Cali an agricultural and commercial fair from July 20 to July 29, open to foreign manufactured products, provided they do not compete with native output. Those desiring to exhibit at this fair should address the Junta Organizadora de la Feria Exposion, Cali, Colombia, prior to June 30, 1925. (Vice Consul Lawrence F. Cotic, Buenaventura, and C. R. Hill, secretary to commercial attaché, Bogota.)

VENEZUELA

General conditions are good in Venezuela and exchange is steady.

DUTCH GUIANA

The consular agent at Paramaribo reports that nothing has been done with reference to the sugar refinery scheme reported in that colony. The project awaits the necessary capitalists to develop it. (Consul G. B. Smith, Georgetown, British Guiana, April 2.)

MEXICO

The general atmosphere in Mexico is slightly better than it was in the last week of March, and business turnover is also somewhat improved. Effective April 1 the Mexican Government has decreed a tax of 3 centavos (about 1½ cents) per liter on all domestic consumption of gasoline. This will impose a tax of

approximately \$0.06 on a gallon and it is estimated that it will produce some \$2,000,000 yearly, which is to be devoted to road construction. (Commercial Attaché A. V. Dye, Mexico City, April 4.)

CENTRAL AMERICA

There has been no appreciable change in conditions in Central America from those reported last week. Commercial travelers returning from various countries report good business in practically all lines except in Honduras, where conditions are still stagnant. Caution is recommended in extending credit to Syrian firms.

TRINIDAD

The falling off of cacao prices in Trinidad has again brought the price near to the cost of production and is causing apprehension. One-third of the cacao crop still remains in the hands of the producers unsold.

Shipments of sugar and petroleum are showing large gains over those of last year. An unusual number of fires has caused an increased demand for insurance. (Consul H. D. Baker, Port of Spain, April 4.)

PORTO RICO

There is little acceleration of retail business in Porto Rico. Stocks are heavy and importations slow. The agricultural outlook is fair.

DOMINICAN REPUBLIC

The mercantile movement is slow in the Dominican Republic and collections continue unsatisfactory. Importations, as reflected by customs statistics, appear to be holding up well in spite of the fact that stocks are increasing. The agricultural outlook still presents the most favorable aspect in the situation.

Far Eastern Trade News

INDIA

The Indian government finally has announced that the cotton excise tax will be continued, contrary to the general belief in Indian circles that it would be repealed, according to a cable from Trade Commissioner C. B. Spofford, Bombay. Two cotton mills at Bombay have closed since this announcement. The exchange market continued quiet during the week ended April 4, with prices slightly weaker. Trade demands were noticeably lighter, but the money market remained steady. The price of cotton is declining.

Indian merchandise exports advanced from 390,000,000 rupees in January to 429,400,000 for February, but imports declined from 243,400,000 to 187,800,000 rupees during the same period. Practically all principal imports declined as compared with January, while exports of wheat, raw jute and bags, rice, cotton, shellac, pig iron, and raw hides advanced considerably. Of imports, the share contributed by the United Kingdom during February, as compared with January, advanced from 57 to 62.5 per cent; Germany, from 6 to 7 per cent; and the United States, from 3 to 8.5 per cent, while Japan's share declined from 7 to 6 per cent over the same period. India's exports to the United Kingdom, Japan, and the United States during February advanced, as compared with January, while those to Germany declined. The amount coming to the United States was increased from 7 to 8.5 per cent of the total exported to all countries and was accounted for largely by greater shipments of jute and jute bags, shellac, and pig iron.

CHINA

General business conditions in China remain quiet, the only bright feature being the sale of 18 automobiles during the past 10 days to Peking military leaders, according to a weekly cable from Commercial Attaché Julian Arnold, Peking. Although prices of China produce are declining, very few orders have been placed, as buyers apparently are awaiting future developments and price stability. The Shanghai metal market has shown some improvement. Imports into Hongkong are very small and there are few orders for cotton piece goods, cotton yarn, and metals, since the merchants are attempting to liquidate the excess stocks now on hand. The lowering in price of both American and Australian flour has made this market somewhat

easier. The levying of a 5-cent tax on the imports of kerosene into Canton has caused grave apprehension among the American business men there, and the general belief is that more extensive taxation is to follow. The exportation of sundry articles from Canton has been very good lately. Declared exports to the United States during February from the six leading consular districts totaled \$15,025,000.

It is rumored that the Fengtien provincial government and leading officials and merchants of Fengtien propose to construct 150 miles of new railway between Mukden and Hailung in the near future.

AUSTRALIA

Australian wool continues to strengthen but wheat remains inactive, with prices unchanged, according to cable advices from Trade Commissioner E. G. Babbitt, Melbourne. Prices of greasy wool at the Brisbane sale brought an average of 30.5d. per pound during the week. Customs revenue collected during the nine months ended March 31, 1923, aggregated £28,380,000, or about £2,880,000 more than had been expected. An American motor company has purchased grounds for a branch factory at Geelong, Victoria, which is located across the bay from Melbourne. The labor situation is considerably improved.

JAPAN

Preliminary totals of Japan's foreign trade for March show exports of 151,400,000 yen and imports of 313,500,000, according to the weekly cable from Acting Commercial Attaché Frank Rhea, Tokyo. In comparison with the previous month there was a decline of 13,100,000 yen in exports, but an increase of 28,700,000 in imports. (Average values of yen, March, \$0.4096; February, \$0.3906.) The adverse balance for the month totaled 162,100,000 yen, against 120,300,000 in February. The less favorable showing was due to a decline in exports of raw silk and a heavy increase in arrivals of raw cotton, which were valued at 126,700,000 yen for the month. The Japanese Diet, before its adjournment on March 31, passed an act for the encouragement of the dye industry, which carries a subsidy of 4,000,000 yen to be expended during the next six years at the rate of not more than 1,000,000 yen per year.

MONTHLY CABLE REVIEWS

LATIN AMERICA

Richard F. O'Toole, Chief, Latin American Division

Cuban Sugar Crop About Half Finished

Trade Commissioner C. A. Livengood, Habana, March 31

Approximately 48 per cent of the total estimated Cuban sugar crop had been ground and had arrived at shipping ports by March 21, and 30 per cent had been exported. Arrivals at ports amounted to 2,207,770 long tons and exportations to 1,396,817 long tons, respectively, according to Himely's statistics. Although arrivals at ports exceed by 200,000 tons those for the corresponding date of last year, the progress of the crop is relatively behind owing to the abnormal production estimated for the present crop. Average prices of sugar, in warehouses at Habana, as shown by sales during February were 2.504 cents per pound; and for the first half of March, 2.69 cents per pound; or, on an average, more than 2 cents below prices for the same periods of 1924. As these prices are those which the cane planter receives for his share of the sugar crop, he is forced to practice economy, which is reflected by cautious buying in most lines of merchandise and slowness in collections. While favorable weather and improvement in the percentage of yield of cane ground over earlier predictions have given some basis for encouragement, the effect of sugar prices is shown by a marked contrast in the general business attitude compared with that observed in the early part of 1924.

Tobacco Crop Will Be Under Last Year's.

The scarcity of rainfall in some of the chief Cuban tobacco growing areas over a period of four or five months leads to the prediction by producers that the 1924-25 crop will be considerably less than that of 1923-24. The latter, which amounted to some 675,000 or 700,000 bales, was unusually large. While early rains might serve to alter present expectations, and it is impossible to predict the size of the new crop with any degree of accuracy, tobacco authorities have expressed the opinion that the reduction, as compared with the preceding crop, will be as high as 40 per cent. The greatest shortage is forecast in the Remedios region, which practically constitutes the Province of Santa Clara. Conditions attending the new crop lead to the expectation that the quality of tobacco produced will be excellent.

Labor Situation Still Unsettled.

The mill workers went out in sympathy with the strike which originated with the stevedores at Cayo Juan Claro. The strike at central Boston in the latter part of March has been settled. Sugar centrals Delicias and Chaparra are still closed as a result of strikes. The sugar cane planters of these mills are in the meantime demanding that they be paid for their cane on the basis of 5 arrobas (1 arroba=25.36 pounds) of sugar for 100 arrobas of cane instead of 4½ arrobas as heretofore.

Possibility of a railway strike in the eastern part of the island has recently given cause to some anxiety as

a result of demands presented on February 16 by the Railway Brotherhood in Camaguey to the Cuba Railroad. The demands are understood to involve an increase in wages, a reduction in the hours of labor, and important changes in the operation of the company. In view of the effect of the low prices of sugar on business conditions, the company is reported to consider it impossible to accede to the demands. The laborers in the meantime have initiated a policy of passive resistance. A railroad strike at this time when the sugar grinding season is at its height would constitute a serious injury to Cuban business. The difficulty has not yet been resolved, although to date a strike has not been precipitated.

Bank Clearings—Treasury Receipts.

Bank clearings for the month of February fell below those for the same month of last year, the figures being \$97,209,245 and \$110,798,311, respectively. This is the first month since 1921 in which a decrease was noted in comparison with the clearings of the previous year. Nevertheless, the clearings reported for February, 1925, have been exceeded by those of only four other months since the establishment of the clearing house in 1921, namely, February, March, April, and May, 1924.

Recent appropriations of Government funds for various purposes have reduced the amount in the National Treasury to \$20,315,376, as of March 25. March receipts up to the 25th were \$5,949,103. Revenues for April should be large, as the quarterly collections of the 1 per cent sales tax, which yields more than \$10,000,000 annually, are included.

Trade of Uruguay in March

Based on cable from Commercial Attaché Lew B. Clark, Montevideo, April 3

Holy Week is a holiday season in Uruguay and bank business will be closed. Bids for the Paso Molino sanitary construction work were opened March 30. Barth and Co., for Siemens Schickert, were the lowest bidders with 2,259,900 pesos.

Principal Imports and Sources.

March imports were as follows: Coal, American 7,000 tons, British 25,000 tons, German 2,000 tons; fuel oil, 8,000 tons; kerosene, 51,000 cases; gasoline, 128,000 cases; automobiles, American 256, European 30 (foreign assemblies), American 469; trucks, American 12, European 9 (foreign assemblies), American 48; tractors, American 20, European 1; lumber, American 200,000 pieces, others 48,000 pieces. Lumber stocks are plentiful. Prices of yellow pine and oak are \$60 and \$107, respectively, c. i. f. Montevideo.

Uruguayan customs revenues for March were 1,550,000 pesos.

Uruguayan declared exports to the United States for the month of March amounted to \$970,000, of which wool accounted for \$643,000. Last year, de-

clared exports for March amounted to \$611,500, of which wool accounted for \$177,000.

The hide take-off was as follows: Frigorificos 82,000, mataderos 25,000, and saladeros 5,000. Stocks are normal and prices 47 pesos Argentine gold for frigorificos. Hide exports were 118,000 dry and 66,000 salted. Wool exports amounted to 4,000 bales. Germany was the largest buyer with 2,000 bales and the United States the third largest with 500 bales.

Unfavorable Outlook in Ecuador

Based on cable from Consul Richard P. Butrick, Guayaquil, April 4

Business has been adversely affected in Ecuador by heavy rains which seriously damaged the Guayaquil-Quito railroad. Traffic on the Guayaquil end of this line has been suspended, and it will probably be several months before trains can be run from Alfaro, the terminal of the line across the river from Guayaquil to Quito. The route now being used to reach Quito is via the Babahoyo River and on mule back from Bucay to Rio Bamba, and from there by rail to Quito. This serious lack of transportation will materially affect the volume of imports destined for the plateau region and general business conditions throughout the country.

Textile Mills to be Closed—River Transport of Cacao.

It is reported that the cotton textile mills at Rio Bamba will have to close down, as it will be almost impossible to obtain the necessary cotton for the operation of these mills. Cacao entries will not be seriously affected by the washout on the railroad, as most of this crop is produced in the lowlands, where it is possible to use river transportation in getting it to the Guayaquil market. Import duties on foodstuffs have been temporarily removed.

Exchange remained fairly steady during March, being at 4.10 sucres to the dollar at the beginning of the month and closing at 3.95 sucres to the dollar.

Quality of Cacao Good.

The quality of cacao coming into the market during the month was good but considerably less in volume than in March, 1924, and the predicted gain in production over last year may not be realized. Exports of cacao during the first three months of 1925 were 4,500,000 kilos as compared with 10,000,000 kilos during same period last year. Exports during March amounted to 1,700,000 kilos as compared with 1,400,000 kilos during the preceding month and 3,614,000 kilos during March, 1924. Exports of cacao—45 per cent of which went to the United States—were valued at 1,800,000 sucres. The prevailing price declined from 55 sucres a quintal during the preceding month to 45 sucres a quintal during March. Stocks on hand are about 900,000 kilos.

Other Exports Decline.

Coffee exports showed a decrease in March, being 14,000 kilos as compared with 34,300 during February. Prices were steady, though they showed a decline from 82 sucres a quintal during the preceding month to 80 sucres during March. Stocks on hand are 23,000 kilos.

Other exports were: Panama hats, 4,000 dozen, being the same as during the preceding month; rice 5,000 kilos, prevailing price 27 sucres a quintal, stocks on hand 700,000 kilos; cinchona bark 5,000 kilos compared with 15,000 during the preceding month, prevailing price 50 sucres a quintal, stocks 2,500 kilos; and hides 57,000 kilos, stocks 18,000 kilos. There were no exports of cotton during March.

Total exports were 2,500,000 kilos valued at 2,800,000 sucres compared with 2,800,000 kilos valued at 2,000,000 sucres during the preceding month.

EUROPE

British Business Not Up To Expectations

Based on cable from Acting Commercial Attaché Hugh D. Butler, London, April 3

Disappointment characterized the business view for the first quarter of 1925. There was a sustained volume of orders, but no notable increase in new business as anticipated on January 1. The continued slackening in both domestic and export coal trade and the much-advertised loss to a German yard of an order for the construction of five motor ships intensified the negative aspects. Increased exports in a majority of manufactured goods and a substantially larger volume of raw-material imports for future manufacture were noted during the period.

Protection Considered by Certain Textile Groups.

Cotton manufacturers exported a larger volume. In recent weeks there was a spurt in large sales to India, chiefly of light fabrics, deliveries varying from May to July; but on the whole, Manchester lacks new cloth business in large quantities. The decline in cotton prices caused buyers to delay purchases in anticipation of lower levels, and the trade is hopeful that fluctuations will result in American cotton returning to a 13-pence level or lower. The wool industries were

quiet, because raw-wool prices were lower than Bradford levels. Worsteds manufacturers are estimated to be operating at 80 per cent. A 60 per cent decline in wool values causes a restricted purchasing of fabrics. The Board of Trade is now hearing the lace manufacturers' application for protection, but strong opposition has been presented by the importers and clothing manufacturers. No application has yet been made by hosiery manufacturers. The Bradford wool manufacturers are in a controversy regarding protection, and the Manufacturers' Federation will ballot members on the desirability of making application under the Government's regulations for an inquiry of the worsted industry.

Iron and Steel Progress Disappointing.

Iron and steel results for the first quarter were disappointing, as output has not increased. The March average daily production is estimated equal to that of February. The London steel exchange is of the opinion that a fair potential demand is held up, pending the outcome of the continental situation. The anticipated French dumping has not developed; instead, continental quotations have been stiffening recently, especially in semifinished steel. The Cleveland pig-iron trade during the last week of March experienced

ness in steel is general except for bright spots in the automobile, railway, and housing demands. The tin-plate industry has decided to continue the price-maintenance scheme another six months, and has reestablished the order-pooling arrangement. Consumption of scrap steel in tin-plate manufacture at 30 per cent below normal is a measure of the industry's activity. Machine-tool sales during the past quarter are estimated at 10 to 20 per cent below the previous quarter.

Automotive Firms Prepare for Spring Rush.

The light motor-car firms are fully engaged, working day and night shifts. Several new price reductions are announced for domestic and imported cars. Good weather favors a sales program, and the spring rush for cars has started. Importers of American cars believe the Board of Trade stipulations favoring duties, should application of British manufactures for import duty be considered, do not apply to American vehicles, and therefore traders are not expecting the duty to be reimposed. British tire manufacturers, except Dunlop, have filed an application for tariff protection under the new "Safeguarding of industries" scheme. Importers of American and Canadian tires are preparing to contest the issue, but the general opinion is that the duty is not likely. Dunlop 1924 profits were 50 per cent higher than 1923, and the volume of sales also increased.

Competition Keen in Shipbuilding.

In the shipping and shipbuilding field, the action of one British firm in placing an order for five motor ships with a Hamburg shipbuilder received vast publicity in the British press, as the German bid appeared impossibly low. Nevertheless, British yards continue to get new business. Another local firm has placed an order in British yards for three motor ships, at prices much lower than the German figure. The severest competition continues to come from Dutch subsidized yards. The scarcity of homeward charters characterized the shipping market. Shipping companies' shares have declined during the past quarter, but with a recent tendency to rise again.

Chemicals, Hides and Leather Prices Down.

Chemical prices tend downward, especially in pharmaceutical products, and the sales volume was fair. German-made chemicals find increasing difficulty in holding their share of the market. The Board of Trade committee, appointed to investigate the advisability of a safeguarding tariff on imported superphosphates, has met strong competition from organized farmers. The early opinion of the trade is doubtful, with chances against imposition of a duty. The March volume of dye sales was slightly better.

The hide and leather market shows no improvement, and tanners reduced their output in order to force raw-material prices down. The shoe manufacturers were again warned to revamp their production costs. Buying is slow as a result of the uncertain market and the financial conditions of tanners, whose reduced input shows a slow turnover.

Lumber and Petroleum Active.

The lumber market is active, softwoods slightly and hardwoods definitely better than last month, with indications of continued improvement. Hardwood prices rose slightly, and further advances are expected without any detriment to trade and with all consuming in-

dustries in the market. There are heavy demands for plywoods, with European mills reported oversold. American door importations are increasing with the progress of the housing campaign.

Petroleum imports of the last four weeks were the largest, with one exception, in the history of the industry. They consisted largely of crude oil, gasoline, and lubricating oils, in which American participation was normal. Retail-price increases of refined products are now less likely.

The nonferrous market is steady, with no features.

British Budget Shows Surplus.

March, the concluding and most important month of the fiscal year, is specially significant this year as the bank rate was raised to 5 per cent over some trade protests, which are still rather strong. Also, the new Government conversion loan at the end of the month is causing a restricted market for industrial loans, and there are very limited foreign placements, though heavy capital issues are anticipated early in April. The fiscal-year budget shows a surplus of £3,658,884. Total receipts amounted to £799,435,595, and expenditures to £795,776,711. Customs receipts comprised £99,300,000 of the total; excise, £135,100,000; motors, £16,100,000; estates, £59,400,000; stamps, £22,900,000; income and supertax, £336,500,000; corporations, £18,100,000; post office, £55,400,000; interest, £11,900,000; and miscellaneous, £4,300,000. Of total expenditures, the debt service consumed £357,100,000; roads, £15,500,000; local, £13,900,000; Northern Ireland, £3,800,000; other consolidated funds, £2,400,000; and civil services, £402,200,000. The new budget plans have not yet been announced. The industrial group in Parliament is urging a luxury tax on motor cars and other articles.

Coal Situation Worse.

March showed no improvement in coal conditions over the two earlier months. The local industrial demand is slack because trade improvement is slow and the foreign demand is poor. Many contracts have been lost to foreign bidders, with prices at the bottom. There is no apparent solution to the controversy over the new wage agreement that goes into effect July 1, though informal discussions continue. The minimum-wage bill was defeated in Parliament on March 27. Production during the first 13 weeks was considerably below the same period of the last two years.

The Irish Free State is giving favorable consideration to the Shannon water-power scheme to supply to Dublin more than 100,000,000 kilowatts at 1 cent per kilowatt. The cost is estimated at £7,000,000. The Mersey-tunnel project and the Manchester water supply are two other big construction proposals that are expected to proceed. Unemployment dropped to 1,201,300 on March 23, from 1,236,200 on February 23.

Further Gains in Swedish February Foreign Trade

Based on cable from Commercial Attaché T. O. Klath, Stockholm

In spite of a shorter shipping period, Swedish foreign trade during February produced results practically identical with those of the preceding month. Imports totaled 105,315,000 crowns, as compared with 105,060,000 crowns for January, and with 90,953,000 crowns for February, 1924. Exports during February remained at the same figure as for January, or 80,320,000 crowns, as against only 59,027,000 crowns

for February, 1924. As a result of the expansion in exports the unfavorable trade balance was reduced to 24,994,000 crowns, in contrast with the 31,926,000 crowns in February, 1924.

Grain Imports Especially Heavy.

As regards the various items, varying movements are noticed. The following chief items of import during February rose in value as compared with January (latter figures in parentheses): Grains and products thereof, 16,327,000 crowns (9,768,000); textile goods, 11,528,000 (9,111,000); vehicles and machinery, 8,964,000 (7,363,000); and unworked metals, 5,949,000 (5,194,000). Diminished imports during February were represented by the following commodities (January figures in parentheses): Textile raw materials, 8,558,000 crowns (8,877,000); groceries and provisions, 8,535,000 (10,149,000); and mineral raw materials, 8,500,000 (12,261,000).

Lumber, Pulp and Paper Shipments Lower.

Exports of wood pulp, paper, and rough lumber decreased, dropping from 23,531,000 and 8,574,000 crowns, respectively, for January to 20,988,000 and 6,358,000 crowns for February. Other chief exports rose during February, as shown by the following figures (January values in parentheses): Vehicles and machinery, 9,932,000 crowns (9,796,000); mineral ores, 8,871,000 (8,561,000); unworked metals, 6,308,000 (6,086,000); and manufactured metals, 4,921,000 (3,955,000).

Slackness in South African Trade

Based on cable from Trade Commissioner Perry J. Stevenson, Johannesburg, with cooperation of Consul R. P. Clark, Port Elizabeth, April 4

Although the business situation in the Union of South Africa showed some improvement in March over February, conditions in general have slowed up since the beginning of the year. This is due chiefly to the stagnation and depression prevailing in the wool market, although recently wool buying has been resumed on a restricted scale. Wholesale trade has been poor, and collections during the month were slow; retail trade is somewhat better. Local industries, especially in engineering lines, are more active; employment is increasing and the outlook is brighter.

Postal receipts during the fiscal year ended March 31, 1925, were £750,000 in excess of expenditures; the operation of the Government railways resulted in a surplus of £1,125,000. The improved financial position of the commercial and reserve banks has eased the extension of credit. The cost-of-living index during March showed a slight increase over February. Insolvencies during 1924 were 25 per cent less than in 1923; most of the decrease occurred in the agricultural class. The value of imports during February reached £5,300,627. Exports were valued at £4,555,359, including shipments of native gold and silver valued at £1,921,754.

Gold Returns Lower—Platinum Prospecting Active.

The output of the Transvaal gold mines during February totaled 753,925 ounces, or 69,767 ounces less than in January. At 85s. an ounce, the same as last month, the total valuation of the output was declared at £3,202,181, a decline of £307,510 from the January valuation. With the return of gold to standard price and the discontinuance of the gold premium, the profits of

the mines are lower. The mines are employing a greater number of whites, numbering around 20,000. The number of natives employed in these mines at the end of February was 182,099, as compared with 180,970 at the end of January.

With the increase of prospecting in the new platinum fields, a heavy demand has grown up for prospecting tools and equipment. It is not expected that there will be any demand for heavy machinery until next year. Ground in the Lydenburg platinum belt in the Northern Transvaal is being sought for freely, but the industry is still in the prospecting stage.

Crops Damaged by Heavy Rains.

During March rains were widespread, although irregular. Heavy rains over large areas of the Transvaal, Natal, Zululand, and the Cape Province seriously damaged crops, especially corn and cotton. Roads were inundated, and transportation has been disarranged. A good sugar crop is expected, however, with a yield of approximately 180,000 tons. Decreases are reported from a majority of the tobacco-growing districts, the crop yield being estimated at 25 per cent below that of last year.

Import Market Situation.

Although trade in cotton piece goods is weak, American orders continue well sustained. Stocks on hand are lower. The automotive trade is quiet and sales are restricted, with British and continental competition increasing. Imports of motor cars during the year are estimated at 2,200 to 2,400. A curtailment has taken place in building operations; the demand for timber although moderate is steady, and ample stocks are on hand. The coal trade has been picking up.

A fair demand exists for all classes of wool. Transactions are moderate in the face of weak competition. About 3,000 bales of wool are on hand. The local market for mohair and hides and skins is quiet; ostrich feathers are selling freely.

Czechoslovak Industrial Situation Continues Satisfactory

Based on cable from Commercial Attaché James F. Hodgson, Prague, April 4

A gradual increase in Czechoslovak production and exports was noted in the month of March. Economic relations between Czechoslovakia and Poland are markedly improved by the progress of negotiations for a commercial treaty, but the final closing of the treaty is delayed by Polish demands for either free importation for their agricultural products into Czechoslovakia or else a larger contingent of such products.

Interest Rates Raised—Deflation Continued.

The increase of the official discount rate from 6 per cent to 7 per cent, which was made on March 25, has been followed by an advance in the commercial-bank rates for loans on collateral to $9\frac{1}{4}$ per cent and in their interest allowed on deposits to $5\frac{1}{4}$ per cent, effective April 1.

On March 23 the bank-note circulation was 7,068,000,000 crowns, valued at \$212,000,000. This represents a continued decrease from the 7,179,000,000 crowns on February 23, the 7,499,000,000 on January 23, and the 8,211,000,000 on December 23. Balances

abroad and foreign currency decreased to 554,000,000 crowns from 615,000,000 on February 23, 660,000,000 on January 23 and 736,000,000 on December 23. Total cover for the currency fell to 2,964,000,000 crowns from the 3,152,000,000 on February 23, the 3,466,000,000 on January 23, and the 4,058,000,000 on December 23. Clearings fell to 5,529,000,000 crowns from 6,695,000,000 in February and 7,719,000,000 in January.

February failures numbered 43 and compositions 183, with total losses of 59,000,000 crowns, as against 42 failures and 230 compositions in January, with combined losses of 49,000,000 crowns.

Prices Lower—Foreign Trade Improved.

Prices declined slightly during the month. The retail index on February 15 stood at 929 and the wholesale index on March 1 at 1,034.

The month of February had a favorable trade balance amounting to 189,000,000 crowns (\$5,600,000).

The total exports amounted to 1,518,000,000 crowns (\$45,500,000), as against 1,507,000 in January, and were marked by an increase in iron and a decrease in sugar shipments. The total imports in February amounted to 1,329,000,000 crowns (\$39,900,000), representing decreases in cotton, flax, and tobacco purchases.

Coal Production Lower—Crop Prospects Good.

The depression in the coal-mining industry continues, and 15,000 miners in the Ostrava field are striking for a 30 per cent increase in wages. This brings the total unemployment in the country up to 84,000. The coal production in February amounted to 2,442,000 tons, as against 2,648,000 tons in January and 3,039,000 tons in December; that of coke rose from 114,000 tons in January to 142,000 tons in February, resuming the December level.

Weather conditions are favorable for crop development, there being sufficient moisture and mild temperatures.

FAR EAST

H. A. Butts, Acting Chief, Far Eastern Division

Japan's Trade During the First Quarter of 1925

Based on cable from Acting Commercial Attaché Frank Rhea, Tokyo

Preliminary returns of Japan's foreign trade for the first quarter of 1925 show the heaviest imports in the history of the country and a remarkable increase in exports compared with similar periods of preceding years. Exports during the quarter aggregated 463,073,000 yen, while imports amounted to 826,038,000, giving an excess of imports of 362,965,000. In comparison with the corresponding period of 1924 there was a gain of 126,517,000 in exports and 6,285,000 in imports, and a decline of 120,232,000 in the adverse balance of trade. Although the increase in exports is very striking the remarkable feature of the quarter's trade is the fact that imports should have exceeded the first quarter of 1924 when the special-duty exemptions were in effect and arrivals of reconstruction materials were at the highest point.

Depreciation of Yen A Factor in the Increase.

To a very considerable extent the depreciation in Japanese exchange has affected the above valuations. During the first quarter of 1924 the New York buying rate for the yen averaged \$0.4444, a decline of 10.8 per cent from the par of \$0.4985, while during the same period of 1925 the average was 39.46, a decrease of 20.8 per cent from par and of 11.2 per cent compared with the same period last year. It is apparent, therefore, that this substantial difference in quotations during the two periods is reflected in the trade totals and, in consequence, the increase in volume during the 1925 period was somewhat less than indicated by the valuations given in this report.

Export Advance General—Import Gain Due to One Commodity.

In the following table the trade for the period is given by leading commodities:

Japan's foreign trade by commodities

[In thousands of yen]

Items	First quarter of—		Items	First quarter of—	
	1924	1925		1924	1925
EXPORTS			IMPORTS		
Rice and paddy.....	92	1,041	Rice and paddy.....	14,268	8,608
Sugar, refined.....	6,472	7,052	Wheat.....	44,546	25,676
Waste silk.....	5,235	7,230	Sugar.....	14,196	13,299
Raw silk.....	112,808	150,656	Oil cake.....	37,897	37,050
Cotton yarns.....	18,390	22,988	Raw cotton.....	224,013	331,123
Silk textiles.....	24,391	22,456	Lumber.....	47,564	19,794
Cotton textiles.....	66,188	95,726	Woolen yarns.....	21,012	14,666
Potteries.....	5,327	6,467	Iron and steel.....	70,164	39,361
Aquatic products.....	5,144	6,196	Oil, petroleum.....	3,633	3,187
Iron and steel.....	1,249	1,000	Woolen textiles.....	20,518	32,245
Steel manufactures.....	3,064	3,680	Machinery.....	33,236	23,300
Machinery.....	2,275	2,326	All other.....	288,686	277,729
Rubber tires.....	699	902			
All other.....	85,222	126,364	Total.....	819,753	826,038
Total.....	336,556	463,073	Excess imports.....	483,197	362,965

An analysis of the foregoing figures reveals that the increase in exports was widely distributed, gains having been recorded in all important commodities, especially raw silk and cotton textiles. On the other hand, one essential raw material—raw cotton—accounts for the entire increase in imports, there having been substantial declines in every other important commodity with the exception of woolen textiles. From this viewpoint the trade of the quarter is most encouraging to Japan since it reveals a steady recovery in its industries and a contraction of the heavy speculative imports which characterized the corresponding period of 1924.

Swedish Shipyards Get Norwegian Orders

The steamship company Wied & Amundsen, Fredrikshald, Norway, is reported to have ordered a 7,600-ton motor ship from Kockums Verkstader, Malmo, Sweden, and the Norwegian steamship company Hjelm & Waage is said to have ordered a 6,650-ton motor ship from Oresundsvarvet, Landskrona, Sweden. (Trade Commissioner T. O. Klath, Stockholm, March 13.)

GERMAN IMPORTS HEAVY DURING 1924

Increased Imports, Amounting to 1.9 Billion Gold Marks Less Than 1913 Figures, were Financed Partially by Foreign Credits—Four-fifths of German Exports are of Finished Products

Based on report from Assistant Commercial Attaché Douglas Miller, Berlin

German trade during 1924, with its high percentage of exports of finished products and its disproportionately heavy imports of raw materials and foodstuffs, is interesting as an indication of the present industrial activity of the Reich. During last year shipments of finished products accounted for 79 per cent of the total German exports, whereas during 1913 the corresponding percentage was 63. The loss of Germany's pre-war position in the coal trade, through having been reduced from a coal-exporting to a coal-importing nation, plays an important rôle in the comparative volume of exports for the two years and consequently in the increased proportion of exports of finished products during 1924. The gold value of German exports last year was 65 per cent of the pre-war figures, while imports were 85 per cent. But if the difference in gold price levels is taken into account, total German trade is 56 per cent of pre-war trade as compared with 52.5 per cent in 1923, with 60.8 per cent in 1922, and with 36 per cent in 1920. On this basis, imports amounted to 62 per cent of pre-war and exports to 50 per cent of pre-war.

The official figures show total imports amounting to 9,316,841,000 gold marks and exports to 6,566,854,000 gold marks, leaving a net deficit for the year of 2,749,987,000 gold marks. This compares with 1913 figures of imports amounting to 11,206,000,000 gold marks, of exports amounting to 10,199,000,000 gold marks, and of net deficit amounting to 1,007,000,000 gold marks.

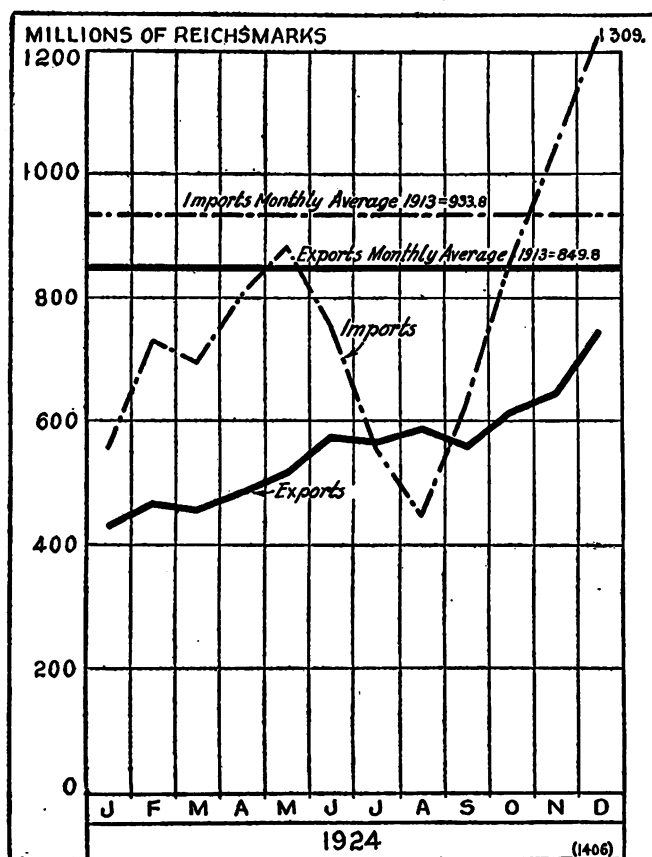

Foreign Capital Finances Huge German Imports.

The unfavorable balance of trade of 2,750,000,000 gold marks (\$650,000,000) is the largest ever rolled up in one year, and far exceeds any possible sum accruing to Germany through invisible exports. It is evident that these excess imports have been paid for in large part by the foreign credits granted to Germany by the United States, Great Britain, and other countries during the last four months of the year. These credits, recently estimated at \$300,000,000 over and above the official German loan of about 900,000,000 gold marks, have not as yet been entirely taken up, and many of them, particularly those from Great Britain, still remain on the books at the disposal of German industry. A second significant factor in the settlement of this adverse trade balance has evidently been the repatriation of German capital that had been sent abroad during the inflation period. This capital abroad was estimated by the Committee of Experts at between 6 billion and 7 billion gold marks. Responsible German opinion considers that a large portion has already returned.

Imports Based on Foreign Credits.

Violent fluctuations in import trade are revealed in a study of movements throughout the year. Two peaks were reached which could not be attributed to the seasonal curve of commercial exchanges. The first had its climax in May, and was caused by the release of a long pent-up domestic demand for foreign goods that coincided with the stabilization of German currency and the rise of German prices above world levels.

German purchasers were able to enter the international market with a stable currency and with fresh credits to buy foreign goods at lower prices than those current in Germany. The removal of a number of import restrictions by the Government, in order to force down domestic prices, operated to increase imports and purchases of tropical and semitropical fruits; in consequence, the takings of California prunes, raisins, and apricots reached high levels during this period. An additional factor in this movement was the exhaustion of German stocks during the depreciation period and the necessity of restocking low inventories.

German foreign trade for the year 1924

Credit Stringency Lowers Imports During Summer.

Although the climax of the excessive import movement was reached in the month of May, forces were at work months earlier which tended to reduce Germany's foreign purchases. The most important of these were the credit and currency shortages, caused by the policy of the Reichsbank and the large German private banks. On April 1, 1924, the Reichsbank began to restrict credits in a drastic manner in order to prevent a new inflation, and succeeded in forcing down excessively high prices in Germany and in retrieving the stability of the mark on foreign exchanges. At the same time the comparatively small amount of

liquid capital in the hands of business and the public was rapidly consumed, so that purchasers were unable to continue foreign buying. This caused a rapid decline in imports until the month of August, when they reached their lowest figure.

At this point new forces began to operate. The Dawes plan, which came into effect at the beginning of September, brought the foreign credits that once more enabled Germany to buy abroad. Imports shot up rapidly toward the end of the year, and for the month of December were almost three times the August amount. This high figure at the close of the year, however, can not be laid entirely to foreign credits. Part of it is due to the unfavorable crop of cereals, with a continued large import of American wheat and rye at high prices. Furthermore, on January 10, 1925, the most-favored-nation treatment, automatically applied to goods of the allied countries, came to an end; large shipments undoubtedly were sent to Germany at the last moment, especially from Alsace-Lorraine and the Saar, whose products were accorded free entry until this date.

Large Imports of Raw Products and Foodstuffs.

An analysis of the December figures shows that imports were made up of 382,000,000 gold marks for food and drinks, 455,000,000 for raw materials, 139,000,000 for semifinished goods, and 230,000,000 gold marks for finished goods. The high proportion of raw materials and half-finished goods imported in the last quarter indicates that these large amounts will appear later as exports of finished products in the current year. In this respect the German import surplus during the last quarter corresponds with that of the English import surplus, which has given little anxiety to that country.

Figures for the entire year show imports of these classes of goods in the following percentages of the total, as compared with the corresponding figures for 1913: Raw and semifinished goods, 50 per cent in 1924 as compared with 60 per cent in 1913; foodstuffs, 30 per cent in 1924 and 25 per cent in 1913; and finished goods, 20 per cent in 1924 and 15 per cent in 1913.

Exports Slowly Approaching Pre-War Level.

In contrast to the violent fluctuations in imports, German exports, which were at their lowest point in January, moved constantly upward throughout the year. Computed on a basis of 1913 price levels, gold values of exports at the beginning of the year were 47 per cent, or practically one-half of pre-war average; at the close of the year they had advanced to about 59 per cent.

This rising tendency was due to the fundamental improvement in the German situation. For the first time since the war, in 1924 German manufacturers have been able to buy foreign raw materials with a stable currency and have been able to calculate wages, general production costs, and sales prices with some measure of certainty. Interest had declined from its April rates of 40 to 60 per cent to a rate of 11 per cent at the close of the year.

While factories have steadily been returning to greater efficiency, wages have risen very slightly and

are now only about 25 per cent above the pre-war level in gold. German industry is still overstaffed and burdened with high overhead, including taxation; but relief has been extended by the Government in tax cuts at the close of the year, particularly the turnover tax, which has been reduced in stages from 2½ to 1½ per cent. The pressure of domestic financial difficulties is thus appreciably relieved.

Distribution of Germany's Foreign Trade.

The proportional increase in trade is directed toward the Asiatic and American continents. Germany is developing its markets in China, Japan, British India, and Latin America; but with the exception of the United States, these markets are small relative to German total trade. Sales in Europe, Germany's largest market, are slightly less important than formerly. This is accounted for by the decreased shipments to Russia and the Balkans, which are no longer able to purchase German products in normal quantities, and by the lessened exports to France and Belgium where German goods have been heavily handicapped by tariff restrictions and political factors. A number of the neighboring countries, however, are taking an increased proportion, in particular the Scandinavian countries.

In general, Germany's trade is still disadvantaged by several factors. These include the creation of new competitive industries in pre-war markets, discriminatory tariff barriers still existing in a number of its most important export fields, and lack of operating capital necessary for the normal financing of foreign trade. Their results are shown in the fact that Germany's foreign trade is only 50 per cent of pre-war figures, whereas total world trade is more than 80 per cent, if estimated on the 1913 price basis.

Increased Postal Rates in Italy

An increase in Italian postal rates, to compensate partially for the higher salaries that will be paid to Government employees, became effective March 16. The rate on letters to any destination within the country has been increased from 0.50 lire for each 15 grams or fraction thereof to 0.60 lire, and that on local letters to be delivered within the same district from 0.25 lire to 0.30 lire. Corresponding increases have been made in the rates applying to other classes of mail matter. (Commercial Attaché H. C. MacLean, Rome, March 7.)

Harbor Facilities and Fees at the Port of Memel

Facilities for loading and unloading vessels at the port of Memel are located at the one municipal and the several private wharves. The municipal wharf is equipped with two 2½-ton electric cranes and one ordinary lifting crane that has a capacity up to 35 tons. The minimum depth of water alongside this wharf is 8 meters. Lighters, tugs, and labor are available at all times in the harbor. The tariff of harbor fees is being revised, and it is reported that changes are contemplated which will facilitate increased traffic—among others, a regulation whereby vessels calling at the port of Memel more than eight times will be required to pay only one-quarter of the prescribed harbor fees. (Consul H. E. Carlson, Memel, Lithuania, February 24.)

FIVE YEARS OF MEXICAN TRADE, 1919-1924

Mexican 1924 Trade Less Than That of 1923—Mineral and Vegetable Products Mexico's Chief Imports

By Hector Lazo, Latin American Division, based on official statistics of Mexico and the United States

An interesting study just issued by the Mexican Department of Statistics for the five-year period 1919-1924 shows wide variations in the values of imports and exports of Mexico by commodities. While the prices of commodities entering into the foreign trade of Mexico have fluctuated considerably in that period, there have also been decided differences in the volume of goods imported and exported. The following table gives imports and exports of Mexico by major classifications for the years 1919 to 1924, values in United States currency, conversions being at the rate of two Mexican pesos to the dollar.

Mexican trade, 1919 to 1924, inclusive

Commodity classification	1919	1920	1921	1922	1923	1924
IMPORTS						
Animal products	\$11,040,613	\$19,901,295	\$26,725,387	\$20,509,206	\$19,611,394	\$17,208,088
Vegetable products	21,624,972	23,662,540	42,171,680	22,955,777	23,673,090	22,840,927
Mineral products	26,899,727	46,059,362	48,120,402	28,204,414	35,169,594	35,830,333
Textiles and manufactures	15,972,139	27,577,583	41,759,965	20,014,306	19,343,077	20,976,598
Chemical pharmaceutical products	9,585,173	15,799,570	13,843,352	10,746,665	9,650,116	10,945,430
Spirituous beverages	1,989,731	4,065,373	7,879,378	2,058,557	1,880,551	2,134,047
Paper and manufactures	4,212,845	4,484,300	6,238,391	5,519,093	4,980,161	4,569,980
Machinery and apparatus	12,068,211	26,243,929	32,993,278	17,430,825	19,711,168	18,089,338
Vehicles	5,969,337	8,460,911	10,102,761	9,519,113	9,398,740	9,594,258
Arms and explosives	1,542,916	1,731,264	1,949,604	2,763,540	2,261,439	1,641,985
Miscellaneous	8,943,515	14,748,482	15,167,393	11,562,724	11,862,614	8,402,114
Total	118,519,179	197,731,525	247,001,504	151,404,180	157,553,764	152,232,778
EXPORTS						
Animal products	7,665,408	3,248,043	1,145,936	2,153,792	2,186,284	2,313,968
Vegetable products	60,728,644	52,697,508	30,364,649	32,783,243	37,137,270	43,038,291
Mineral products	125,661,143	364,099,461	344,708,179	435,070,586	328,043,679	308,813,622
Miscellaneous	2,839,804	7,607,485	2,395,777	2,260,388	2,409,182	1,575,620
Total	196,894,999	427,652,497	373,614,591	472,273,009	369,776,415	355,746,501

While imports for 1924 were uniformly larger than the corresponding commodity imports for 1919, exports for 1924 show a decrease in all but mineral products as against 1919. However, in the six-year period under review, the year 1919 represented the one of lowest trade figures. Discounting the years 1920 and 1921 because of artificial values due to inflation, the year 1924 is remarkably like 1922 as far as imports are concerned, but falls behind that year in exports; whereas 1923 was a better year for both imports and exports than 1924.

The falling off in trade in Mexico during 1924 may be explained in a measure by the revolutionary disturbances which practically paralyzed business for the first three or four months of the year.

Mexico's Important Agricultural Trade.

Mexico, although primarily an agricultural country, imports large quantities of foodstuffs—almost \$23,000,000 worth in 1924. The importance of foodstuffs in the trade is brought out in the following tables, which show Mexico's imports and exports of

the major agricultural products for the years 1919 to 1924.

The import and export trade in sugar and coffee follow:

Mexican trade in sugar and coffee

Year	Imports		Exports	
	Kilos	Value	Kilos	Value
SUGAR				
1919	20,895,427	\$3,063,286	8,644,856	\$1,589,837
1920	6,378,436	1,530,102	15,160,509	4,646,882
1921	18,815,202	2,288,729	175,493	15,049
1922	3,387,218	270,871	8,019	734
1923	402,385	64,349	10,076,439	1,246,076
1924	249,718	43,620	16,613,421	2,541,318
COFFEE				
1919	502,572	202,314	17,899,487	7,172,063
1920	4,516,222	1,320,393	10,460,441	4,673,921
1921	1,636,020	367,377	15,364,259	5,103,421
1922	365,035	95,086	25,276,947	8,592,853
1923	1,192,784	328,363	17,569,078	6,876,114
1924	2,024,399	608,904	14,398,937	6,180,108

The anomaly of a sugar-producing country importing over 10,000,000 pounds of that commodity is explained by the fact that the imports were almost totally of refined sugar; and the same may be said with respect to the coffee imports, although the greater part of the coffee imports are of green coffee.

During the same five-year period Mexico was importing rather large quantities of wheat, wheat flour, and corn and exporting at the same time corn and wheat in varying quantities. These factors are brought out in the following table:

Mexican imports of flour, wheat, and corn

Year	Flour		Wheat and corn ¹	
	Kilos	Value	Kilos	Value
1919	42,581,341	\$5,465,846	9,560,926	\$587,153
1920	18,895,965	2,632,791	21,668,201	1,288,100
1921	28,001,639	2,751,981	270,491,131	10,073,250
1922	22,801,096	1,754,343	80,812,895	2,790,328
1923	37,727,421	2,654,382	2,995,940	151,559
1924	26,079,859	1,852,484	16,318,045	726,003

¹ Up to the second semester of 1922 wheat and corn were grouped together. From the second semester of 1922 on wheat was classified separately. Imports from 1922 are, therefore, corn only.

Wheat imports in the second semester of 1922 amounted to 6,938,911 kilos, valued at \$327,558; in the whole year 1923 the quantity was 58,280,398 kilos and the value \$2,710,652; and in 1924 the quantity was 43,367,580 kilos and the value \$1,969,556.

Exports of corn and wheat are shown in the following table:

Mexican exports of corn and wheat

Year	Corn		Wheat	
	Kilos	Value	Kilos	Value
1919	4,357,373	\$145,933	264,000	\$13,579
1920	8,217,353	307,633	180,709	8,195
1921	525	28	120	7
1922	118,757	5,474	—	—
1923	1,651,928	52,217	2,240	100
1924	723,400	35,933	—	—

Other agricultural products exported by Mexico during the sexennial under review are shown in the following table:

Mexican exports of tobacco, henequen, beans, and cotton

Year	Tobacco		Henequen		Beans		Cotton	
	Kilos	Value	Kilos	Value	Kilos	Value	Kilos	Value
1919.....	576,356	\$474,621	112,994,593	\$29,945,329	635,287	\$143,464,33	425,246	\$8,227,607

United States an Important Source of Supply.

The importance of the United States as a supplier of Mexico's imports, particularly in foodstuffs, may be gauged from the following table, which gives the exports from the United States to Mexico of wheat flour, wheat grain, and corn for the five-year period. The United States furnished a very large part of these three commodities. However, it must be borne in mind that the following table is based on United States statistics of exports, whereas the foregoing ones are Mexican import statistics, and that because of differences in classification, in time, and in compilation of data, the statistics can not agree.

The following statistics are of United States exports of wheat flour, wheat grain, and corn to Mexico:

United States exports to Mexico

Year	Wheat flour		Wheat grain		Corn	
	Barrels	Value	Bushels	Value	Bushels	Value
1919.....	502,477	\$5,639,847	134,003	\$329,187	133,887	\$246,746
1920.....	243,439	2,862,188	299,211	814,702	770,814	928,957
1921.....	353,155	2,841,303	2,661,109	3,842,886	11,871,546	10,130,949

1923.....	436,203	2,515,970	2,078,789	2,616,364	129,166	137,365
1924.....	388,431	2,247,103	1,436,992	1,819,581	788,920	949,297

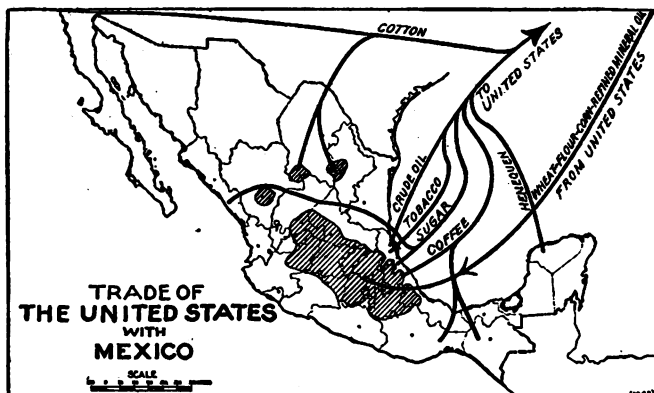

While Mexican cattle shipments to the United States were important prior to the revolutionary outbreaks, United States purchases of cattle from that country in 1921 were less than 10,000 head, and less than 13,000 in 1923. Cattle imported into the United States from Mexico in 1912 numbered 315,187 head, valued at \$4,463,917, which largely explains the small trade of recent years—namely, the destruction or exportation of herds during the years 1910-1920 in order to obtain funds for revolutionary purposes.

The following table (from United States statistics) shows the cattle trade of the United States with Mexico in the years 1919 to 1924, inclusive:

United States trade with Mexico in cattle, 1919-1924

Year	Imports		Exports	
	Number	Value	Number	Value
1919.....	90,541	\$2,724,419	23,923	\$823,250
1920.....	58,926	1,847,851	27,758	1,478,779
1921.....	9,100	191,473	138,239	5,139,263
1922.....	30,127	406,606	71,173	2,408,011
1923.....	12,632	181,813	20,525	812,401
1924.....	11,275	205,953	54,785	986,277

Similarly, while the United States purchased an average of approximately 41,000,000 pounds of sugar annually from Mexico during the five-year period, sales of refined sugar to that country averaged some 12,500,000 pounds a year. The United States imported also approximately 30,000,000 pounds of green coffee annually from Mexico, and exported over 500,000 pounds of green coffee and some 425,000 pounds of roasted coffee annually, approximately 1,000,000 pounds of coffee going every year from the United States to Mexico.

Shaded area contains the major portion of the people of Mexico. Lines showing exports from Mexico to the United States originate in the area where the commodity is produced in Mexico, while those indicating imports end in the area of greatest population where the largest demand exists.

The northern tropic passes through the southern tip of Lower California, hence much of Mexico is in the tropics. Most of the people, however, live on the plateau where the climate is relatively temperate.

The following table shows this interchange of sugar and coffee between the United States and Mexico, 1919 to 1924:

United States trade with Mexico in sugar and coffee

Year	Imports		Exports	
	Pounds	Value	Pounds	Value
SUGAR				
1919.....	20,645,866	\$2,442,463	25,792,525	\$2,470,250

1924.....	3,608,603,000	61,071,563	119,467,648	5,056,380

The production of Mexican cotton has for many years been one of the most important agricultural pursuits in many regions. A great deal of it is raised in Lower California, which has but inadequate transportation connections with the rest of Mexico. Accordingly,

large amounts of cotton are imported into the United States and reexported to Mexico for consumption by the Mexican mills. However, Mexican production has generally exceeded consumption, and varying amounts of cotton come into the United States annually.

United States trade with Mexico in cotton, 1919 to 1924

• Year	Imports		Exports	
	Pounds	Value	Pounds	Value
1919.....	30,890,061	\$10,168,237	338,673	\$111,133

RADIO PROGRESS IN THE FAR EAST

Radio Interest Spreading Slowly in Far East—Australia Assumes Position of Leading Market in 1923 and Expands Approximately 500 per cent in 1924

Basil D. Dahl, Electrical Equipment Division

Exports of radio sets and parts from the United States to Asia, Africa, and Australia during 1924, totaled \$1,541,222, according to preliminary figures. This is a decided increase over the total of \$366,369 of radio apparatus exported to those markets in 1923.

Australia is the leading market for American radio manufactures in these areas, Japan being second in importance and New Zealand third—from the standpoint of total purchases during 1924. Australia was the destination of approximately 68 per cent of all radio apparatus shipped from the United States during 1924 to the markets under consideration. The greatest growth in Australian purchases took place from July to November, 1924, inclusive.

British South Africa during 1924 did not rank very high as compared with other world radio markets, but it is believed that this area presents a good potential field and a marked development should take place during the present year. British South Africa has its own broadcasting stations and considerable interest in radio is evidenced.

Expansion of Markets Foreseen.

As compared with the United States, radio broadcasting and receiving got a rather late start in Africa, Asia, and Australia. It is expected, however, that the growth which has taken place to date will continue and that these markets will, as a result, expand.

The radio situation in Asia, Africa, and in Australia is covered in the following statements:

ASIA

Although great progress has not been made in the use of radio equipment in southern and southeastern Asia, interest is evident, and it is believed that considerable development will take place in the future.

Arabia.—Climatic conditions and the absence of available broadcasting material in Arabia practically prohibit the introduction of radio receiving sets in this peninsula at present. A slight market might be developed, however, if the proposed broadcasting station in Turkey is erected and placed in operation.

India.—An import permit must be obtained in India from the Government by the prospective user of a receiving set prior to the importation of radio material. The quantity importation of radio sets into India is thus made difficult.

Burma.—The use of radio has been stimulated somewhat in Burma through the installation of a broadcasting station in Rangoon. The policy of the Government toward broadcasting has not as yet been formulated. The present market on the island of Ceylon is very limited, especially for the products of American radio manufacturers.

Java.—Several applications for permission to erect broadcasting stations in Java have been tendered to the Government, but it will probably reserve this activity as a monopoly.

Siam.—There are no broadcasting stations in Siam nor have any permits to operate receiving sets been issued.

China.—The radio situation in China is not clearly defined. There is some broadcasting but the Government seems to be maintaining what is virtually a prohibition on the importation of receiving sets and apparatus.

Japan.—There is practically no market in Japan for radio receiving sets and apparatus at present. Radio broadcasting was reported to have begun in Japan about the middle of March which should initiate the development of a market.

Persia.—A report from Teheran states that there are a few receiving sets in use by the foreign military and diplomatic representatives residing in Persia.

AFRICA

Although the use of radio has not developed extensively in Africa broadcasting stations and the use of receiving sets are, by no means, unknown on that continent.

Algeria.—There has as yet been practically no market for radio equipment in Algeria, and it is believed that the future market will be largely restricted to the 800,000 Europeans residing in this colony. France enjoys considerable advantage in dealing with Algeria in general and in the radio field the same condition may hold true.

Senegal.—It is understood that there are no restrictions on the installation and use of receiving apparatus in Senegal and that permission from the local authorities is sufficient. The private use of radio receiving sets does not exist, however, in that country at present and it is believed that the great distance from established broadcasting stations precludes sales in the near future.

Union of South Africa.—The Union of South Africa, which has its own broadcasting stations, presents an active radio market at present and it is believed that it will be more favorable in the near future. It is necessary to procure a receiving license from the Government prior to the installation of a receiving set and the number of licenses issued, 2,000 in Cape Town and 3,000 in Johannesburg, is a fair estimate of the total number of sets in use in these two cities. The number in use in Durban has not been reported but there is considerable public interest there in radio. Most of the sets in use in the Union of South Africa are of British origin but those of American manufacture are known. American manufacturers who contemplate entering this field should seriously consider the location of their representatives relative to existing market centers.

Egypt.—The use of radio has not developed to any appreciable extent in Egypt. There are, at present, a number of Egyptian students studying radio abroad, presumably for the purpose of being entrusted with the direction and control of broadcasting upon their return. It has recently been intimated that members of the Bourse are interested in financing and erecting a broadcasting station at Cairo. If this becomes an actuality, the market should react by developing to a fair extent.

Kenya Colony.—Broadcasting has not started in Kenya Colony, the nearest station being Johannesburg, 3,000 miles distant. There is, therefore, no market for receiving sets.

Madagascar.—While Madagascar offers no radio market at present it is believed that the 30,000 European inhabitants are potential purchasers of receiving sets.

AUSTRALIA.

Exports of radio apparatus from the United States to Australia have increased from \$8,513 in 1920 to \$1,052,707 in 1924. This is approximately 17 per cent of last year's total exports of radio sets and parts from the United States to all foreign markets. In 1923, Australia imported from the United States \$210,214 worth of radio apparatus, thus attaining the position of our leading Far Eastern market—from the standpoint of purchases.

The marked increase in Australian purchases of radio apparatus from the United States in 1924, as compared with previous years, took place following the change in July, 1924, in Australian radio regulations. Prior to that time only sealed radio receivers could be sold and used in Australia. The tuning unit was so arranged in such sets that it would respond to one wave length only, with a 10 per cent variation on either side, and then it was sealed. Obviously, the owner of a sealed set could receive only that material which was broadcast on the particular wave length to which his receiving set was tuned. The new regulations removed this restriction, however, and permitted the sale and use of open receiving sets. Restrictions on the importation of sets have also been lifted.

Australia is well supplied with broadcasting stations. They are all licensed and divided into two classes, "A" and "B."

Class "A" licenses are remunerated from the revenue received from the users of receiving sets, while class "B" licensees are those firms or persons who desire to broadcast without remuneration from such revenue. The wave lengths to be assigned range from 250 to 2,000 meters.

All material broadcast from Australian stations is subject to censorship. Advertising matter may be broadcast for a certain length of time during each program provided it is previously announced.

It has recently been reported that amateurs throughout Victoria, New South Wales, and South Australia have heard American stations. There is a great deal of interest in radio in Australia, receiving conditions are favorable and it seems that this market should continue expanding. Receiving sets and parts of American manufacture are giving satisfactory results and enjoy a good demand.

OUR RADIO EXPORTS TO ASIA, AFRICA, AND AUSTRALIA

The following table shows the value of exports of United States radio apparatus to the principal markets in Asia, Africa, and Australia, in the years 1918 to 1924, inclusive:

United States exports of radio apparatus to Asia, Africa, and Australia.

Country	1918	1919	1920	1921	1922	1923	1924
Asia:							
British India.....	\$22	\$44	\$253	\$27	\$39	\$26,968	\$14,204
Japan.....	63,068	97,299	73,004	59,523	41,638	45,761	358,222

New Zealand.....	201	174	343	4,576	28,901	83,426	88,191
British South Africa.....			15,870	8,451	1,263		27,893

[This is the last of a series of articles discussing radio developments throughout the world. Europe and Canada were covered in the issue of March 30, and Latin America in the issue of April 6.]

CHEMICALS

Charles C. Concannon, Chief, Chemical Division

THE CHEMICAL TRADE OF BELGIUM

Large Increase in Imports—France the Principal Supplier, followed by Germany

Lloyd A. Nolan, Chemical Division

Belgium, a small country of about 11,373 square miles and a population of 7,539,568, is primarily an industrial nation, consuming large amounts of chemical and allied products. With a large transit trade, it is dependent to an unusual degree on the business conditions of the entire world.

Belgium's total imports of chemicals advanced from \$31,103,108 (1922) to \$40,623,198 (1923)—an increase of 29 per cent. Figures for these years include the trade of Luxemburg. The outstanding supplier was France, which in 1923 furnished 31 per cent of the country's total imports of chemicals or \$12,762,138—a gain of \$3,110,363 over the 1922 value of \$9,651,775.

The country of next importance was the United Kingdom, which in 1923 supplied about 12 per cent of the import requirements, or \$5,185,206, compared with \$4,006,767 during 1922. Germany ranked third. Its 1923 contribution of \$3,449,427 showed a decided decrease from \$5,829,167 in 1922. The Netherlands furnished \$2,947,042 during 1923 in comparison with \$1,872,127 in 1922—an advance of 61 per cent. Imports from the United States aggregated \$2,830,339 in 1923 compared with \$2,342,198 in 1922, representing

7 per cent of the total trade in chemicals. The remaining imports were obtained chiefly from Switzerland, Italy, and Spain.

Trade Promotion in Belgium.

Belgium can not be considered as a virgin field for the extension of American trade. Exports of chemical products from the United States, according to American data, reflected a favorable increase during 1923 compared with the previous year, but were considerably below the pre-war totals. With the return of more normal exchange, the prospects for a greater participation in the Belgium chemical trade are encouraging. Most American products under ordinary conditions can compete on the Belgian market with foreign goods, regardless of their origin—if not on the basis of price, then on the basis of superior quality.

Industrial Chemicals Form Largest Import Item—Sources.

Belgium's receipts of heavy chemicals during 1923 reached a value of \$11,217,277, representing about one-fourth of the total import trade in chemicals, in comparison with \$10,376,044 in 1922, almost one-third of the total importation of chemical products for that year.

France is the principal supplier of industrial chemicals for Belgian consumption, furnishing almost 50 per cent, or \$5,711,706, in 1923 and \$4,165,400 in 1922. Germany, the next country of importance as a source of heavy chemicals, registered a marked decline, contributing \$1,844,432 in 1923, or 16 per cent of the total, compared with \$3,167,910 in 1922, or 33 per cent of the total. The United Kingdom's share amounted to \$1,293,825 in 1923, or approximately 10 per cent, compared with \$928,856 in 1922, or about 9 per cent. Exports from the Netherlands amounted to \$560,659 in 1923 and \$451,095 in 1922, representing about 5 per cent of the total trade. The United States recorded a considerable decline—from \$1,175,514 in 1922 to \$412,360 in 1923.

Sodium Compounds, Sulphur, and Potassium Chloride.

Imports of sodium carbonate totaled 51,819 metric tons in 1923 and 47,959 in 1922. The bulk originated in France, 49,526 tons (1923) and 46,038 (1922), and the balance came from Germany, the United Kingdom, and the Netherlands. Receipts of sodium sulphate in 1923 reached 19,316 tons, compared with 22,893 in 1922. The United Kingdom supplied 12,310 tons (1923) and 9,079 (1922); France, 5,210 tons (1923) and 5,555 (1922); and the remainder was obtained from Germany and the Netherlands. Caustic soda received in Belgium comes almost entirely from France, 14,824 tons (1923) and 10,986 (1922).

Belgian imports of sulphur aggregated 7,553 tons (1923), compared with 4,257 tons (1922). America furnished about one-half of this requirement, or 3,325 tons (1923) and 3,470 (1922); the balance coming from the Netherlands, Germany, and Italy. Potassium chloride imports amounted to 14,119 tons in 1923, compared with 5,973 in 1922—an advance of over 100 per cent. France furnished about 90 per cent of these imports, and the balance came from Germany. The chief industrial chemicals exported from the United States, and their quantities and values for 1922 and 1923, are given in the table covering exports from the United States, according to American export figures.

Fertilizers Extensively Used.

Fertilizers are extensively and increasingly used in Belgium, in consequence of the limited extent of the country. Receipts in 1923 reached 453,136 metric tons, valued at \$10,888,172, compared with 298,457 metric tons, worth \$5,215,270 in 1923—an advance in value of over 100 per cent.

Crude calcium phosphate imported into Belgium totaled 218,069 tons in 1923 and 152,349 tons in 1922. Over 50 per cent originated in Tunisia—114,839 tons (1923), and 91,922 tons (1922). America's share in this trade reached 75,297 tons in 1923 compared with 49,888 in 1922, representing about 32 per cent of the total receipts of this product. The remainder came from Algeria, Morocco, France, and Oceania.

Receipts of Thomas meal into Belgium amounted to 33,067 tons in 1923 and 36,054 in 1922. In 1923 France furnished 94 per cent, compared with 90 per cent in 1922. The balance was obtained chiefly from the United States, with small amounts from Germany.

France is the chief source of supply for superphosphates. Total imports amounted to 32,929 tons in 1923 in comparison with 33,682 in 1922, of which France contributed 70 per cent in 1923 and 46 per cent in 1922. The Netherlands furnished the remaining requirements.

Total imports of nitrate of soda into Belgium aggregated 139,124 tons in 1923 compared with 25,789 in 1922. Chile furnished the bulk of these requirements, or 122,246 tons (1923) and 18,823 tons (1922). The Netherlands ranked second with 12,451 tons (1923) and 611 tons (1922).

Norway furnished the entire amount of calcium nitrate imported, which reached 4,386 tons (1923) and 3,652 tons (1922).

Receipts of sulphate of ammonia in 1923 reached 13,958 tons, compared with 14,924 in 1922. Germany contributed 11,280 tons (1923) and 1,424 tons (1922); France, 681 tons (1923), and 9,086 tons (1922); the Netherlands, 1,911 tons (1923), and 1,744 (1922); and the United Kingdom, 39 tons (1923), and 2,554 tons (1922).

Value of Imports of Paints, Pigments, and Varnishes Increased.

The import trade in paints and varnishes, including gums, resins, turpentine, paints, varnishes, linseed oil and pigments, amounted to \$5,952,364 in 1923, or an increase of 8 per cent over the 1922 total of \$5,475,416. Great Britain is the leading supplier, furnishing over 50 per cent of the total imports of paints and varnishes, or \$2,970,879 (1923) and \$1,937,879 (1922). Receipts from France of paints, varnishes, and allied products were valued at \$811,073 (1923) compared with \$816,871 (1922). The Netherlands' share of this trade totaled \$562,019 (1923) and \$451,431 (1922). The United States furnished \$458,688 in 1923 in comparison with \$379,999 in 1922. Imports from Germany showed a decided drop from \$459,063 in 1922, to \$229,617 in 1923.

The chief products of this group originating in the United States are turpentine, resins, white lead and zinc white, lampblack, lacquers, and varnishes. Imports of American turpentine into Belgium reached 715,299 kilos in 1922 and 599,971 kilos in 1923; resins rose from 1,226,775 kilos in 1922 to 1,447,764 in 1923; white lead and zinc white from 800,883 to 1,197,729; and lampblack from 72,529 to 106,501. The values of these respective products are enumerated in the table covering the principal American chemicals imported by Belgium, according to America data.

Larger Receipts of Naval Stores from the United States.

The United States furnished increased amounts of naval stores to Belgium in 1923, compared with the previous year. Shipments of American turpentine in 1923 reached 470,569 gallons, valued at \$461,794, an increase from 326,992 gallons, worth \$316,791, in 1922. Exports of American rosin in 1923 totaled 27,396 barrels, valued at \$240,072, in comparison with 34,455 barrels, worth \$166,223, in 1922—an advance in value of \$73,849.

Dyestuffs Required in Belgium.

Total imports of dyes in 1923 reached 32,990,885 kilos, valued at \$5,984,294, compared with 19,358,624 kilos, worth \$3,672,030, in 1922, according to the Belgian statistics. France furnished 56 per cent of the total in 1923, and 23 per cent in 1922. The Netherlands' share reached 7 per cent in 1923 and 8 per cent in 1922; Great Britain's, 6 and 8 per cent, respectively; and Germany's 6 and 36 per cent.

Exports of coal-tar colors, dyes, and stains from America increased from 107,712 pounds, with a value of \$76,342, in 1922 to 321,888 pounds, worth \$111,727, in 1923. At present, however, there is a limited op-

portunity for the sale of American dyes in that country according to Vice Consul Julian F. Harrington. Belgians prefer reparations dyes because they have used and found them satisfactory for a number of years, but price considerations play an important part in discouraging foreign competition on this market. The depreciated state of the Belgian currency and the low price at which reparations dyes are available in Belgium combine to make almost prohibitive importations of foreign dyestuffs into that country.

Indigo, chrome and sulphur blacks, other blacks, and certain other dyes constitute about 60 per cent of the consumption of dyes by the Belgian market. It is reported that approximately 90 per cent of the total importation of dyes is of German manufacture. The favored position of German dyes in 1923, as in 1922, was due, in part at least, to the importance of seizures or deliveries in accord with the provisions of the treaty of Versailles. These so-called "reparations dyes" greatly undersold dyes of other origin in 1923 and effectively hindered American competition. Vegetable dyes are not used to any extent, while the consumption of other dyes is confined principally to the textile, paper, and leather industries. As a result of the extensive production of coke in Belgium, benzol and other coal-tar distillates are manufactured on a large scale.

Market for Prepared Medicines.

The imports of prepared medicines into Belgium during 1923 reached \$1,994,859, compared with \$2,370,211 in 1922. France is the chief source of supply, having furnished 44 per cent (1923) and 43 per cent (1922). The United Kingdom's share amounted to 13 per cent in 1923 and 14 per cent in 1922; the Netherlands', 9 per cent in 1923 against 6 per cent in 1922; and America's, 4 per cent in 1923 compared with 3 per cent in the former year.

There is a good demand for prepared medicines. The numerous ills of the Belgian people include colds, asthma, rheumatism, liver trouble, stomach trouble, and gout. Prepared medicines for these ailments are the most popular on the market. Domestic production is of slight importance and may be estimated as approximately \$200,000 annually. Belgium medicinal products are not highly regarded by the medical profession and are seldom recommended. American prepared medicines are well received and are very well known. American manufacturers have, in general, adopted a liberal advertising policy and good returns have resulted.

Toilet Preparations Imported.

Belgium's receipts of toilet preparations during 1923 were valued at \$743,636, compared with \$926,869 in 1922—a decrease of \$183,233. France supplied the bulk of the requirements, 80 per cent (1923) and 81 per cent (1922); Great Britain furnished 2 per cent (1923), compared with 1 per cent (1922); while the United States and the Netherlands exported to Belgium less than 1 per cent each in both years.

The close proximity to Paris of the larger Belgian center of consumption of toilet preparations has militated against the development of an industry specializing in toilet preparations within Belgium itself, and has given France a dominant place in the Belgian market. There are, however, certain lines, such as dentifrices, shaving soaps, cold creams, deodorants, and manicure specialties—in which American ingenuity has developed mass production, attractive pack-

ages, and moderate prices—which show a promising field for American effort, and where pioneering has recently produced good results. Under favorable circumstances Belgium can not be an extensive market for American toilet preparations, but it, nevertheless, offers a moderate opportunity for expanding sales of inexpensive toilet accessories in daily use.

Chemical Trade Between Belgium and the United States.

The United States is more of a purchaser than seller of chemical and allied products in Belgium. The United States imported chemical products from Belgium to the value of \$4,390,882 in 1922 and \$5,432,677 in 1923—an advance of \$1,041,795, according to American statistics. Exports of these products from the United States to Belgium, however, totaled \$2,342,198 (1922) and \$2,830,389 (1923)—an increase of \$488,141, or 20 per cent, for 1923 over the previous year. The following table shows the value and quantity of the important American chemical products exported to Belgium, as compiled from Commerce and Navigation of the United States:

Principal exports of chemicals to Belgium from United States

Products	1922		1923	
	Quantity	Value	Quantity	Value

Increased Belgian Industrial Chemical Export.

The principal industrial chemical product exported from Belgium in 1923 was sulphuric acid, 166,281 metric tons being shipped. Other exports were ammonium sulphate, 22,336 metric tons; sodium carbonate, 37,291; sodium acetate, 1,075; sodium sulphate, 6,828; copper sulphate, 5,594; and potassium sulphate, 5,097. Exports in 1923 were greater than in 1922 in practically every case, with the exception of sulphuric acid. The production of chemicals has been greatly stimulated since the war, although the competition in this market of some products, such as caustic soda, cyanide of lime, potassium chloride, nitric acid, potassium carbonate, nitrate of lime, caustic potash, and sodium sulphate—principally from France and Germany, but also from the Netherlands and Great Britain—has resulted in imports which have far exceeded quantities shipped out of the country. Belgian exports of industrial chemicals go almost entirely to the Netherlands, France, the United States, Spain, Italy, and the Scandinavian countries.

Decline in General Chemical Export Trade.

The exports of chemical and allied products from Belgium amounted to \$23,674,029 in 1923 and \$30,981,446 in 1922—a decrease of \$7,307,417. The export items are as numerous as the import, since a large transit trade is carried on by Belgium. The chief chemical products shipped from Belgium to the United States are creosote oil, \$1,153,750 (1923) and \$184,485 (1922); chloride of potash, \$723,766 (1923) and \$535,205 (1922); paint and varnish gums, \$647,839 (1923) and \$497,648 (1922); manure salts, \$402,135 (1923) and \$280,654 (1922); and glue stock, \$215,181 (1923) and \$174,702 (1922).

Additional information regarding chemicals appears in this issue under the following sections:

Cable review, Europe: British prices tend downward.
Tariffs and trade regulations:

Argentina: Export duties on quebracho for April.

British India: Import duty on matches reduced.

Czechoslovakia: Relaxation on export restrictions.

AGRICULTURAL IMPLEMENTS

George B. Bell, Chief, Agricultural Implements Division

BRITISH IMPLEMENT INDUSTRY IMPROVES IN 1924

Wide Range of Implements Manufactured in Great Britain—Chief Export Markets for British Implements in Europe and British Colonial Possessions—Imported Implements Encounter Keen Competition

Assistant Trade Commissioner William M. Park, London

Improvement in the British agricultural implements industry was recorded during 1924. Exports increased substantially to a total value of £1,369,068 as compared with £1,021,328 in 1923. Imports also registered a gain in 1924.

Variety of Implements and Machinery Produced.

British manufacture of agricultural implements and machinery embraces practically all classes of such products. The country is well covered by domestic producers of the three main groups of implements, namely, those for tillage and preparation of the soil prior to the sowing of crops, those for the cultivation and care of growing crops, and those for the final harvesting of the crops. In addition, there is considerable British manufacture of implements and machinery which can not readily be classified in these three main groups, as, for example, potato machinery, feed grinders, ensilage cutters, tractors, farm engines, dairy equipment, poultry equipment, windmills, and farm pumps.

Britain Manufactures Implements to Cultivate Varied Crops.

The main British crops are wheat, barley, oats, hay, and potatoes. In a few counties hops is an important crop. Truck and vegetable gardening is also extensively carried on, and landscape gardening is developed to a very high degree. Of recent years, the manufacture of sugar from beets has grown in importance and the acreage and production of beets have increased accordingly. To this list must be added the important

dairying industry, not only of Great Britain but of Ireland as well, and the flax growing industry of the latter country. To gauge the range of British manufacture, therefore, it is only necessary to bear in mind that British firms produce modern and up-to-date implements and machinery for all these various agricultural crops and industries. In some lines, domestic producers practically control the home market and supply all of the local demand; in others, importing firms obtain a good share of the business. There are several hundred concerns scattered throughout the country producing one or more articles for use in agriculture, but of this number only about 50 are of outstanding importance to the industry, and devote themselves entirely to the production of agricultural implements and machines.

Principal Classes Produced Locally.

Plows in great variety and to suit the diversified soil conditions in Great Britain are manufactured in the country. The trade in single-furrow horse plows is almost entirely in the hands of British makers, but for double-furrow horse plows and double and triple furrow tractor plows importers of American and Canadian makes obtain a fair share of the trade. Other lines in which British manufacturers hold the major share of the domestic business are farm wagons, binders, all kinds of feed cutters, oil-cake breakers, root cutters, stiff-tooth cultivators, manure distributors, grain drills, elevators and stackers for hay and straw, peg-tooth harrows, tedders, potato planters and diggers, land rollers, threshing machines, and traction and portable engines.

Lines in which Importers Share.

About three-fourths of the agricultural tractors in use in Great Britain are of American manufacture, the remaining fourth being supplied by one or two well-known British makers. Until the past year or two, implements for the cultivation of sugar beets were supplied to the British market mainly by imports from the United States, but British firms have now turned their attention to these implements and are offering successful competition. American and Canadian binders continue to find a share in the British trade, and while very few spring-tooth cultivators are in use, owing to the generally heavy character of the soil, those employed where conditions permit are of American or Canadian make. Other lines in which foreign manufacturers, particularly American and Canadian, have obtained a hold in Great Britain, despite keen domestic competition, are drills for planting wheat, oats, barley, peas, and beans; agricultural stationary engines of horsepowers up to six; grass mowers; spring-tooth harrows, and hay loaders.

The trade in cream separators and most other lines of dairy appliances and equipment is likewise very much divided, and foreign producers vie with British domestic manufacturers in supplying the demand. The same thing is true of garden and horticultural implements and tools.

Competitive Prices Promote Import Trade.

Speaking generally, however, there is little doubt that if foreign competition were withdrawn British manufacturers would be able to supply the whole of the domestic demand for agricultural implements and machinery. The fact that they do not do so now is accredited more to the ability of well-known American, Canadian, and some other manufacturers to offer their products at competitive prices, than to the inability of British makers to produce similar equipment. Some of the larger British factories are modern in every respect and fully equipped for producing complete lines of implements and machines. British export trade in agricultural implements and machinery is much larger than the import trade. Thus, with a foreign outlet for what would be surplus domestic production if only the home market were considered, the British market is able to absorb a certain amount of foreign-made implements and machinery. But the import trade may only be regarded as an auxiliary to domestic production.

British Export Trade Meets American Competition.

European countries, British Colonial possessions, and South America are now the principal foreign markets for the British manufacturer. In Europe the larger proportion of British exports of mowers and binders goes to France and the Netherlands. Belgium and Germany take a few annually. Russia and the old Austria-Hungary used to be large markets for British heavy agricultural machinery, such as traction engines and threshers, but this business has practically disappeared due to the credit situation in those countries. British heavy machinery is also supplied in fair quantities to Argentina, but, throughout South American countries in general, United States competition has displaced the former large demand for British implements and machinery. In the case of British Colonial possessions, chiefly Australia, South Africa, and New Zealand, considerable sentiment exists in favor of

British supplies, and domestic manufacturers enjoy a lively trade in small and large stationary engines and a fair trade in mowers, binders, and other heavy machinery. But in these markets as well sales are divided and British producers find their chief competition from American manufacturers.

Export Trade of Last Two Years Compared.

The following table shows British exports of agricultural implements and machinery in 1924, compared with 1923. Substantial gains for the past year will be noted. Statistics in more detail as to countries of destination, or classification of the commodities, are not yet available from the customs. Furthermore, the figures do not include agricultural stationary engines, which can not be separated from the general classification of prime movers.

Value of British exports of agricultural machinery and parts

Countries of destination	1923	1924
Europe.....	£317, 908	£496, 365
United States.....	4, 987	8, 232
South America.....	110, 511	124, 733
British South Africa.....	153, 710	184, 116
British East Indies.....	47, 185	50, 379
Australia.....	144, 155	152, 485
New Zealand.....	33, 036	55, 886
Other countries.....	209, 836	296, 867
Total.....	1, 021, 328	1, 369, 063
PRINCIPAL CLASSES		
Shovels, spades, forks, and agricultural and horticultural implements and tools of all kinds.....	1, 207, 331	1, 382, 393
Tractors (including steam rollers).....	551, 305	723, 852

Two Export Methods Practiced.

Two principal export methods are employed by British manufacturers in transacting foreign business. It is estimated that the larger volume of sales of agricultural implements and machinery is made to the agents or buyers of British Colonial concerns. These agents are located in Great Britain, and handle the shipments. The next largest volume of sales is made through the manufacturers' established selling representatives in foreign countries, who are sent out by the factory to represent the firm and solicit orders and are usually on a straight salary basis. They are not looked upon as agents but as employees of the home office. Their orders are sent in direct to the factory, which makes the shipment and invoices the goods to the consignee through the selling representative. Very few British agricultural implement and machinery manufacturers maintain their own branch houses abroad. The efficient branch establishments and agency arrangements so common to the American manufacturers in their foreign business are one reason why they have practically supplanted British makers in many foreign markets. The latter are not so favorably situated with respect to service and the prompt furnishing of spare parts.

Commission houses handle very little, if any, British foreign business in implements, and the balance of sales made, not falling within the two categories mentioned, are direct to the foreign purchaser who has ordered from the factory.

General Condition of the Industry Improved.

A considerable trade improvement took place in 1924 and domestic implement and machinery producers, as well as importers, experienced better busi-

ness in the British market. There was a good crop; farmers received more money for their products, thus increasing their purchasing power and enabling them to buy more farm equipment. It was a relief to British makers especially, for they had felt severely the effects of adverse exchange situations in most European countries, as well as the augmented American and Canadian competition in South American and Colonial markets since the war.

The credit situation of the British farmer improved slightly with increased money, but farm-equipment producers found it necessary to share the benefit with banks and financial houses which exercised a certain amount of pressure in connection with farm mortgages and loans. However, the mere fact that the farmers were encouraged by receiving more money for their products caused them to purchase implements more freely, despite other obligations which might be due.

British implement and machinery makers were able to obtain raw materials at about the same prices ruling the previous year, and no important increases in wages to plant employees were found necessary. Prices for implements and machinery, therefore, remained stable, which factor was in itself a stimulus to sales.

Growth of Import Trade.

Added to the general improvement created by better crops and more money in the hands of farmers, importers of American and Canadian implements and machinery benefited by the continued rise in the exchange value of the pound sterling. Imports of agricultural machinery increased from £366,488 in 1923 to £429,467 in 1924, and implements and tools increased from £964,293 in 1923 to £1,078,252 during the past year. Tractor imports rose from £66,672 in 1923 to £232,230 in 1924. The figures for implements and tools, as well as tractors, include all sorts, in addition to agricultural, and are therefore only valuable in reflecting the generally improved tone.

Future Outlook for Sale of American Makes.

The tendency of the British farmer is to buy domestic implements and machinery in preference to any foreign makes. British manufacturers are, of course, in a better position to study the farmer's needs and supply the kinds of equipment best suited to local conditions. They are also prompt to appraise the value of any new foreign implement or machine coming into the market, and to produce similar articles if the demand appears so to justify. Implements for the cultivation of sugar beets offer the most recent illustration of this kind.

The classes of American, Canadian, and other foreign implements and machinery which are established on the British market have already been mentioned. A few well-known American firms have been established in Great Britain for many years and have obtained a sound footing through the high quality of their products. Branch houses have proved the more effective method of distribution. Due to keen domestic competition, however, importers declare that it becomes increasingly difficult to enlarge their average yearly sales.

It is safe to say, therefore, that while British domestic production remains effective, importers of the older

and more staple lines of American implements and machinery can compete only on a strictly quality and price basis. On newer products and specialties, which suit British conditions, a good market can be established fairly quickly.

Additional information regarding agricultural implements appears in this issue under the following sections:

Cable review, Latin America: Brazilian exchange weak during March.

Tariffs and trade regulations:

Canada: Changes in import duty.

Peru: New surtaxes levied.

Agriculture Leading Source of Spanish National Wealth

Based on report from Commercial Attaché Charles H. Cunningham, Madrid, February 23

Recent estimates from the Banco Urquijo place the national wealth of Spain at 218,150,000,000 pesetas (approximately \$31,000,000,000, at current exchange rates), and Spanish annual income at 24,293,000,000 pesetas. Agriculture is given first place as a source of national wealth, accounting for 76,675,000,000 pesetas. Among agricultural products bringing in the greatest income, cereal and vegetable crops rank first with a total yield annually valued at 4,501,000,000 pesetas; these are followed by root crops with a value of 880,000,000 pesetas, vines with 792,000,000, olives with 648,000,000, pasture and uncultivated lands with 644,000,000, fruit trees and shrubs with 446,000,000, and hay and fodder with 437,000,000 pesetas.

Closely related to agriculture, but considerably lower in value and income, is stock raising with an estimated wealth of 10,119,000,000 pesetas and an annual income of 1,214,000,000. The leading value is represented by cattle, of which there are 3,718,000 having an assigned capital value of 2,975,000,000 pesetas; these are followed in order by mules, swine, horses, sheep, goats, and donkeys. In point of number, however, sheep occupy first place with 20,500,000, and are followed by swine with 5,100,000, goats with 4,300,000, and cattle with 3,700,000.

Industrial Wealth Next to Agriculture.

Spanish industries, according to the survey, represent a total capital value of 48,247,000,000 pesetas and give a yearly income of 7,237,000,000 pesetas. The leading classes of industry, in their order as sources of income, are: Textiles, yielding 2,150,000,000 pesetas; foodstuffs (flour, conserves, etc.), yielding 1,900,000,000; metallurgical industries, yielding 950,000,000; tanning and leather trades, yielding 400,000,000; fishing, yielding 400,000,000; lumber and wood, yielding 350,000,000; tobacco manufactures, yielding 337,000,000; and stone manufactures, yielding 300,000,000 pesetas.

Other principal classes of wealth are buildings and fixed property valued at 35,700,000,000 pesetas; treasury debt held by Spanish private citizens and organizations, 12,623,000,000; capital of incorporated companies, 9,500,000,000; mining, 7,093,000,000; railroads, 7,000,000,000; and current accounts in banks, 6,179,000,000 pesetas.

AUTOMOTIVE PRODUCTS

Percy Owen, Chief, Automotive Division

1925 BEGINS AUSPICIOUSLY IN AUTOMOTIVE FOREIGN MARKETS

Automotive markets of the world, with few exceptions, have seen prosperous conditions during the first quarter of 1925. For the second quarter, the outlook is generally promising. Judged from the standpoint both of export shipments and of conditions in foreign markets, the year 1925 should produce foreign trade for American automotive manufacturers and exporters in even greater volume than that of the record-breaking year of 1924. The following paragraphs summarize conditions in leading countries during the first quarter of the year and prospects for the ensuing quarter:

ARGENTINA

The year 1925 has started with heavy automobile sales, and prospects for the immediate future are bright. The betterment in dollar exchange has enabled car importers to make fairly large reductions in prices, and it is generally believed that the number of cars sold during 1925 should reach 40,000. The public demand is for American automobiles, and the importation of American passenger cars keeps well over 97 per cent of the total. It must not be deduced, however, that automobile sales are easy in Argentina. Competition is extremely keen among over 50 firms, and the larger share of the business is going to the established houses who have agencies in the principal towns and whose cars are well known by much advertising. Of the 4,071 passenger cars imported in January, 60 per cent were of one light American make, and 58 per cent of the remainder were divided among four American companies long established in this market. Several of the representatives of American automobile manufacturers have lately moved their showrooms to prominent locations on Calle Florida or Avenida de Mayo, the two main business streets of Buenos Aires, and something like an "automobile row" is now in process of formation. Increased sales results have actually been noted from these moves. In 1919 the "saturation point" for the automobile market in Argentina was given as 150,000 cars. This number will be passed during the present year, with less prospects of saturation than at any previous time. (Trade Commissioner George S. Brady, Buenos Aires, February 25.)

AUSTRALIA

The automotive trade in Australia is quiet at the present time. The overstocking of some months past has been absorbed, with decided slackening of imports during the five-month period, July-November, 1924, as compared with the previous half year. Even with this, however, the five-month period showed a large increase over the total for the fiscal year 1923-24, and present stocks are sufficient to meet demands. Interest in the local situation centers on attempts to secure a simplification of tariffs and on the outcome of the Melbourne "bus war." Under present arrangements intricate invoices detailing values of component parts of imported chassis must be prepared, even though these parts are so essential that no chassis could be called complete without them. Simplification of the duties on motor chassis has been agitated for nearly two years in the Federal Council of Australian Motor Traders, and the case is now under consideration by the Tariff Board, with the traders hopeful of favorable action. The "bus war" has resulted largely from the withdrawal of permits from certain private bus lines and the giving over of this new form of transportation, wherever possible, to the tramways and railway lines. The public, dissatisfied with this arrangement, is clamoring for additional busses, asking specifically for the restoration of the old private enterprises. The need for new highways further complicates the situation. It has been estimated that 500 busses would be required to supply the service Melbourne needs at the present time. (Trade Commissioner E. G. Babitt, Melbourne, February 21.)

AUSTRIA

General economic conditions in Austria continue unfavorable. For some months past exports have been slack and the stock exchange lifeless. Business houses have considerable credits outstanding in Austria and the Succession States on which collections are very difficult. The buying power of the public is still very limited. The taxes on automobiles continue exces-

sive, in spite of repeated efforts to reduce them, so that the number of registered cars in the last quarter has increased very little. The present internal tax policy, notably that practiced by the city of Vienna and now followed by other municipalities, has induced many car owners to give up their high-power cars and either to go without or to use small cars or motor cycles. In spite of this difficulty, dealers in American cars expect to exhaust their 300-car quota this year. It is felt that prospects of future business not only in Austria but throughout Central Europe, once the annoying restrictions are removed, are such as to justify American importers in keeping strongly after the market. There are many potential buyers who are unable to pay cash and who are now deterred from purchasing by the high interest rates charged to dealers where they attempt to finance sales on an installment basis; the rates in such cases increase the selling prices of cars in Austria by about 24 per cent. The establishment of an American financing company would substantially increase the volume of sales of American products in this market. (Commercial Attaché H. Lawrence Groves, Vienna, March 18.)

BRAZIL

The first quarter of 1925 has been one of extreme activity in the local automobile market. The expected increase in the demand for cars materialized, and by the end of January practically all the local American agencies and branches found their stocks depleted to such an extent that unfilled orders soon became a source of considerable irritation to them. The large demand at this time is chiefly seasonal, although some dealers state that with energetic sales efforts they hope to continue their present rate of business. Port congestion at both Santos and Rio de Janeiro has prevented many dealers from getting sufficient cars to fill orders. American cars account for 90 per cent of the sales made in this market, and European competition is now centered chiefly in the Renault, Fiat, and Lancia cars. (Assistant Trade Commissioner A. Ogden Pierrot, Rio de Janeiro, March 9.)

CUBA

Sales of low-priced cars continue to show a decline. During December, January, and February sales aggregating 1,183 units of the three leading low-priced cars were made, as compared with 1,264 units for the previous quarter and 1,710 for the quarter ended September 1, 1924. For the months of January and February, 1925, these sales aggregated 764 units, as compared with 1,005 for the same two months of 1924. Low sugar prices are generally given as the cause of this situation; but since these cars go largely into the "fotingo" (small taxicab) service it is inferable that sales in those directions are being limited more and more to replacement rather than to expansion of service. Although January and February sales were 25 per cent lower than in 1924, nevertheless, if last year's trend is any indication, increased sales may be anticipated during the next few months. Sales of medium-priced cars increased during the quarter ended March 1, and those of high-priced cars remained practically unchanged. A 30 per cent increase in sales of light trucks has occurred, and a continued strong trade is anticipated in this line. Heavy trucks continue to sell slowly, but some improvement is anticipated since existing stocks have been largely cleared away. (Assistant Trade Commissioner O. R. Starckbein, Habana, March 7.)

DENMARK

Automotive sales in the British market improved somewhat during the first quarter of 1925, and the outlook for the com-

ing quarter is generally considered much better than for the corresponding period of last year. Removal of uncertainties regarding the sales-turnover tax, which was extended on February 1 for a further period of two years, stimulated demand despite the fact that the tax not only was not eliminated but was slightly increased. Orders that had been withdrawn during the uncertain period before the tax was extended were immediately placed, and the trade accordingly has improved. Low-priced and medium-priced cars are expected to increase their sales volume during the coming quarter. The one-ton truck should enjoy a steady demand, but the market for larger trucks remains very unpromising with the exception of busses. European competition is still confined to the Fiat and Citroen; English manufacturers appear to have had but small success in recent active sales efforts. A commission of 27 members has been appointed to investigate the possibility of coordinating bus and railway traffic, and it is expected that a system will be developed whereby the bus routes will serve as feeders to the railroads. (Commercial Attaché Harry Sorenson, Copenhagen, March 15.)

NORWAY

In Norway sales are not heavy, and dealers feel that the present year will hardly show an increase over 1924. Current economic conditions, with money exceedingly scarce and import duties heavy, are adverse factors. Sales are chiefly confined to low-priced cars and one-ton trucks. (Commercial Attaché Harry Sorenson, Copenhagen, March 15.)

EGYPT

Continued optimism is the dominant sentiment in the Egyptian automotive trade, with regard to the second quarter of 1925. Sales of both low-priced and medium-priced cars are expected to increase over the corresponding quarter of last year. Unusually high prices realized this season for Egyptian cotton in the world's markets have brought the motor car within the reach of the average prosperous fellahen (native farmers). Besides this basic wealth, another factor influencing increased car sales is the gradual expansion of touring areas, through systematic improvement of main roads throughout the country. Several makes of foreign cars were introduced for the first time early in 1925, notably the Ansaldo with an importation of about 50 touring cars. Bus sales are being curtailed by the government's refusal to issue operating licenses in certain districts until legislation controlling bus operation has been promulgated; but this situation is only temporary. In motor cycles, British makes continue to hold the upper hand, through horsepower, light construction, and low prices. French, Italian, and German accessories and equipment are quoted at prices considerably below those offered by American exporters, but American makes should command a share of the market on a quality appeal if properly pushed. (Trade Commissioner Richard A. May, Alexandria, February 25.)

FRANCE

Conditions in the automotive field in France during the first quarter of 1925 have shown little change from the last quarter of 1924. The feeling is current among those in close touch with the situation that for the present at least the domestic market can not be expected to consume the number of cars required to insure capacity operation of the factories. Despite the fact that exports of automobiles from France during the first quarter will show a good external market, manufacturers realize that various conditions which can not prove permanent, such as depreciated exchange, are responsible for a considerable part of the foreign business secured. Domestic demand has not come up to expectations, and the necessity for cultivating the home market as the real basis for production schedules is becoming more evident. Most of the automobile factories are working below capacity, and there is not the same activity in plant addition as at this time last year. There has been some increase of late in the number of American automobiles sold in France, probably 220 machines of three different makes having been marketed since the auto show in Paris last fall. Even this comparatively small volume of sales has been made possible only by the strong support given by the American manufacturers to their representatives in this country, by the fact that these three types appeal in some particular manner to the French public, and that their French representatives are especially qualified and positioned to sell American automobiles in France. With these three factors it is possible for certain American companies to enter this market, if they are satisfied to stand the expense necessary to introduce American cars in France and to expect the returns

from their investments to come in very slowly and gradually. (Assistant Trade Commissioner Wilson K. Ray, Paris, March 17.)

GREECE

According to dealers, the first quarter of 1925 has shown unusual activity in the automotive market, with American makes far in the lead. Bus and truck traffic is steadily growing, owing chiefly to the inadequacy of the railways. Taxi traffic is also developing in the Athens district, with the demand centering on small light models. The outlook for the second quarter is good, for the coming months are the best selling season of the year, but the market is now heavily stocked and dealers are more cautious, owing to recent fluctuations of the drachma. The market for light trucks and accessories is promising, but that for motor cycles is inactive. (Commercial Attaché Ray O. Hall, Athens, March 30.)

INDIA

With the books of 1924 closed, and showing that year to have been the most successful experienced by the automobile dealers of India since the postwar collapse, the year 1925 has started auspiciously. A number of dealers have gone into liquidation, but their passing has removed some of the uncertainty that formerly prevailed and has lent renewed confidence to those who have been able to weather the storm. A good deal of reorganization has taken place and, with the disposal of the overstocks now completed, the general situation is much better than a year ago. Favorable factors are found in the greater appreciation of facilities offered by time-sales finance companies and in the steadily rising rupee, which has made possible reductions of 5 to 10 per cent in retail prices of cars. Dealers now seem to be pursuing a policy of intensive merchandising, with a distinct restriction in the number of makes of cars they handle. Such a policy renders much more difficult the task of introducing a new car, but results in greater sales in the case of makes which are retained by the dealers. Truck sales are encouraging, especially in regions like the rural districts where cheap transportation as a supplement to the railroads is very much in demand. In motor cycles the British makes are outselling the American, five to one. In accessories American lines are well known, and a substantial part of the business is held by American firms. (Assistant Trade Commissioner Donald Renshaw, Calcutta, February 13.)

JAPAN

As usual throughout the winter months, sales of automotive vehicles in this market during the past quarter were somewhat below normal. April, May, and June, however, are recognized as the most active months in the local automotive market, and all dealers in this district are anticipating a substantial increase in the volume of business to be done within the approaching quarter. Imports of automotive vehicles, though still low, have remained fairly constant during the last half year; the months of November, December, and January showed a slight increase in number of vehicles imported, compared with the previous period. During January the United States supplied 83 of the 106 motor vehicles imported into Japan, and more than half of the 517,000 yen worth of accessories and parts. Dealers continue to maintain their stocks of passenger cars at as low a figure as possible. The truck market in the past quarter still failed to show any improvement, but with the fairly large purchases of material-handling machinery and equipment recently made by the Reconstruction Bureau, the prospects for disposing of at least a limited quantity of the excessive stocks of trucks still on hand are now more promising than at any time during the past year. (Assistant Trade Commissioner Robert J. Phillips, Tokyo, March 6.)

MEXICO

Optimism since the first of the year has characterized the automobile trade in Mexico City and a better feeling is manifest in all automotive circles, despite the fact that sales have not increased materially. Late in December, dealers in general believed that the automotive business, in all lines, should continue to show improvement, and their feeling has apparently been justified. Money, however, is not overabundant, and this is the principal factor that keeps the car and truck market of Mexico City from going forward. With a relaxation in money and the readjustment of the present unsettled conditions of labor and the land question, there is no doubt that sales will show a decided improvement over the previous year. A street-car strike, which began on March 1, has tended to in-

crease car sales, especially in the low-priced lines. Every available motor vehicle has been placed in service and, although these number into the thousands, they have been unable to cope with the traffic situation. Numerous replacements have been necessary and owners of "for hire" cars have increased their holdings. (Assistant Trade Commissioner Leonard M. Brin, Mexico City, March 10.)

POLAND

Increasing interest in taxicabs and motor trucks has developed during the first quarter of 1925, and despite the fact that the period is usually regarded as a dull season, sales of passenger cars have been at least double those during the corresponding period of 1924. Several new taxicab services are being established in Warsaw and other cities, and a good market for these vehicles should develop in Poland in the near future. The market for trucks is improving, and local dealers are receiving an increasing number of inquiries concerning American trucks. If American manufacturers can make proper credit arrangements with Polish dealers there is no reason why a considerable number of American trucks should not be sold here during the current year. The general situation has been improved by the *modus vivendi* signed at Washington on February 10. This secures the same advantages for American cars as are enjoyed by the French under a recently revised commercial treaty, and means lower selling prices. Local dealers are very optimistic over the outlook for the next quarter. The recent influx of foreign capital into Poland, including the American loan for \$35,000,000, has greatly increased confidence, and it is expected that this will react favorably on automobile sales. A considerable part of the loan will be devoted to assisting industry, and dealers think that important sums of this money will be used for better automotive equipment, especially trucks. (L. J. Cochrane, secretary to commercial attaché, Warsaw, March 15.)

PORTO RICO

The automotive market of Porto Rico has shown a marked degree of prosperity during the first quarter of 1925, although general business conditions throughout the Island are considered dull. The recording of 318 new cars and trucks during February set a new level for monthly registrations in the automobile business of Porto Rico; registrations for January, 276 cars and trucks, also were considerably in excess of those for the corresponding month of previous years. The automobile dealers of the Island are among the few classes of local business men who anticipate a prosperous year, although the excellent sales have not led them to display the overoptimism which prevailed last spring. The present heavy sales are believed to be due largely to the activities of the first "automobile paper" house to be organized in San Juan, which has been doing business here for about six weeks. Through the credit facilities thus provided, dealers are able to offer cars on terms of one-third cash and balance in twelve monthly installments, where before only six months time could be offered, and that only in a limited number of cases. Another important feature is the fact that this is the sugar-manufacturing season, ordinarily the most prosperous of the year. (Erwin P. Keeler, office of trade commissioner, San Juan, March 5.)

RUMANIA

The principal development during a generally quiet quarter has been the campaign in behalf of the Italian Fiat car, which is now reported to be enjoying a great vogue as a result of special sales efforts. The Fiat Company has opened a branch in Bucharest and has extended credit to customers. American makes, however, retain their popularity, even the more expensive types meeting with sales among the nobility and wealthy classes. (Acting Commercial Attaché Louis E. Van Norman, Bucharest, January 17.)

UNITED KINGDOM

Great Britain as an automotive market is making significant strides. Estimated sales and production figure just available for 1924 permit a comparison with 1923 and show unprecedented increases. British passenger-car production in 1924 totaled 102,000 vehicles, as against 66,000 in 1923; sales of new cars in England, Scotland, and Wales in 1924 amounted to 125,000, compared with 99,000 the year before. The 1924 production of commercial vehicles—trucks, taxicabs, omnibuses, and charabancs—reached 31,000 as compared with 22,000 in 1923, and total sales of new commercial vehicles were

52,000 as compared with the previous year's total of 41,000. British factories produced 135,000 motor cycles in 1924, against 95,000 in 1923, and sales of new motor cycles totaled 98,000 compared with 80,000 in the preceding year. British production of motor cars, especially light makes, during the first three months of 1925 is reported as well above the average, though actual figures are not available. Light-car factories are working full time in preparation for the spring purchasing rush. Except for price reductions forced on British makers, there is little evidence, in the face of increased production and sales and the nearly 50 per cent increase in export trade, that the domestic industry has sustained injury through removal of the import duties last August.

The increased number of cars imported since the first of the year reflects the improved market for American, French, and Italian makes, from which the main imports have been drawn. In January, 969 complete passenger cars were imported from the United States, the largest number of American cars so far brought into Great Britain during any single month. France was a close second, however, the imports from that country totaling 840 cars. Italy was third, with 465. The total number of imported cars decreased slightly in February, compared with January; but March is expected to show a substantial increase over either of the preceding two months.

The popularity of American cars continues to show improvement, although French and Italian makes are offering increasing competition in the light-car field. The market outlook for the ensuing spring and summer months is regarded by both manufacturers and importers as the best in the history of the trade. Several new types of British motor coaches have been placed on the market to cope with the increased demand for motor passenger transport, and a few American firms are contemplating similar action. Great Britain offers an excellent field for this development. So far, medium-priced coaches have been the more popular, with but few sales in the de luxe class. (Assistant Trade Commissioner William M. Park, London, March 17.)

Additional information regarding automotive products appears in this issue under the following sections:

Cable review, Latin America: Brazilian exchange weak during March.

Cable review, Europe:

British firms prepare for spring rush.

South African trade quiet.

Tariffs and trade regulations:

Austria: Relaxation of import restriction.

British India: Import duty increased.

Peru: New surtaxes levied.

Betterment of Greek Merchant Marine Planned

The Greek Council for the Merchant Marine is reported to be working on a plan for the betterment of the country's entire merchant fleet. The council will submit a bill providing for a subsidy in behalf of nearly all Greek vessels, so as to enable them to compete with foreign lines. Other bills will provide for docking facilities that would obviate the necessity for small boats and lighters. (George W. Osborn, clerk in consulate general, Athens.)

Central American Trade Information Bulletin Available

Get your copy of Trade Information Bulletin 329! The edition of the Mexican market analysis was exhausted within six weeks, and many requests for copies had to be refused. COAL

Charles P. White, Chief, Coal Division

THE COAL EXPORT SITUATION

Further Decline in February Shipments—No Improvement in British Trade—Consumption in Italy Remains Heavy with Price Advantage for American Steam Coal

Exports of bituminous coal from the United States during February, 1925, including shipments to Canada, suffered a still further decline from the total in the preceding month, which were less than those for December, 1924. The February total was 820,407 tons, compared with 979,600 tons shipped in January. Anthracite shipments, amounting to 288,971 tons, also registered a further decrease from 296,075 tons in January. Consignments of coke in February aggregated 61,130 tons, registering only a slight decline from the high figure of 62,845 tons in January. Total coal exports for February amounted to 1,109,378 tons, compared with 1,275,675 tons in January and 1,584,373 tons in February, 1924.

Destination of Exports—Chartering.

The following table shows the distribution of over-sea exports of bituminous coal and coke:

United States overseas exports of bituminous coal and coke
(Long tons)

Countries of destination	January-December, 1924		January, 1925		February, 1925	
	Coal	Coke	Coal	Coke	Coal	Coke
France.....	420,894	15,449	11,105	-----	7,942	714

Other overseas exports.....	156,588	84	-----	-----	12,155	-----
Total.....	3,875,785	97,983	268,714	1,786	233,202	3,576

There were 18 vessel charters made during the four weeks from February 28 to March 28 to move coal from United States North Atlantic ports, showing an increase of four over the preceding period. Of the total number of charters, eight were made to move coal to West Italy, six to South American destinations, and four to Montreal, Canada. Decreases are witnessed in ocean freight rates to European and North African destinations during the last part of March as compared with the first of the month.

Many Export Orders Lost by British.

The British coal markets are still depressed, particularly at Liverpool and in Scotland, and there is no sign of improvement, states Acting Commercial Attaché Hugh D. Butler, London, in a radiogram dated April 4. The local demand is slack because the im-

provement in trade is slow; the foreign demand is poor, and many contracts have been lost to foreign bidders. The French state railways' coal office in Cardiff has been closed after 20 years of existence. Exports from South Wales to France during 1924 fell more than 2,000,000 tons from the 1923 shipments.

Prices are at the bottom, and production during the first 14 weeks of 1925 was considerably below that of the corresponding periods of the past two years. There is no apparent solution in the controversy over a new wage agreement from July 1, although informal discussions continue. A meeting of the mining association and the miners' federation was called to decide the South Wales position. The minimum wage bill was defeated in Parliament on March 27.

Scandinavian Railway Orders Placed—Exports Decline.

A Swedish railway contract for 30,000 tons of D. C. B. coals has been placed with the British at 16s. 10½d. f. o. b. for April-September shipment. Contracts have also been placed for 10,000 tons of Wear special gas for the Fredericksborg gasworks at 25s. 3d. c. i. f. April-June shipment. The Norwegian state railways have placed orders for 35,000 tons of Durham steams at 19s. 2d. f. o. b. April-May shipment and for 15,000 tons at 18s. 4d. f. o. b. June-September shipment. Freight rates from Wales and Tyne to West Italy are 9s. 3d. \$2.21).

Recent British coal production figures were as follows for the week ended—

	Long tons		Long tons
February 21.....	5,356,900	March 14.....	5,250,800
February 22.....	5,270,700	March 21.....	5,257,900
March 7.....	5,185,700		

There was a still further diminution in the exports of coal from the United Kingdom during February, although the decline was not nearly as serious as that suffered in the previous month. The principal destinations of British coal exports during January and February, 1925, together with the cumulative total for the whole of 1924, are shown in the following table:

British exports of coal, coke, and patent fuel

(Long tons)

Items and countries of destination	January-December, 1924	January, 1925	February, 1925
Coal.....	61,651,273	4,866,051	4,344,008
France.....	14,534,844	1,050,465	1,049,197
Italy.....	6,706,198	530,105	614,607
Germany.....	6,824,071	281,630	313,013

Patent fuel.....	1,067,207	96,158	101,511

Italian Coal Market Continues Dull Although Consumption is Heavy.

Coal consumption in Italy continues heavy, although the market is still reported dull, cables Commercial Attaché H. C. MacLean, Rome, on March 30. Stocks at Genoa are reduced and now amount to 90,000 metric tons, and there are 25 steamers en route to Italy. There is a steady demand for American steam coal which is now quoted at \$7.65, as compared with British best steam at 36s. 3d. (\$8.66). American gas coal, priced at \$7.50, is still underquoted by the British at 28s. 9d. (\$6.87), all prices being c. i. f. Genoa. Freight rates from England are 9s. 6d. (\$2.27) and from the United States \$3.10. Imports of coal, coke, and manufactured fuel into Italy during January amounted to 508,000 tons on commercial account and 176,000 tons on reparations account.

German Sales Crisis Acute.

The sales crisis in the German coal industry is acute and present Ruhr stocks constitute a record, being estimated at 9,000,000 metric tons, while Upper Silesian stocks at the end of February were 282,000 tons, according to Commercial Attaché Charles E. Herring, Berlin, in a radiogram dated March 28. There is dissension in the coal syndicate, and it is proposed that it be reorganized and strengthened to create a better sales organization. The German January foreign trade coal figures show the first favorable balance in three years, coal exports being 1,376,000 metric tons and imports 881,000 tons; 53 per cent of the exports were sold to the Netherlands. Of the imports, 52 per cent came from Polish Silesia and 33 per cent from Great Britain. Coal production in Germany during February amounted to 10,500,000 tons, of which 8,400,000 tons were produced in the Ruhr and 940,000 tons in Upper Silesia.

French Industrial Coal Buying Moderate.

Industrial coal buying in the French market is moderate, while the demand for household grades is stronger because of the continued cold weather, states Commercial Attaché Chester Lloyd Jones, Paris, in a radiogram dated March 29. Prices of the principal industrial grades in the Nord and Pas de Calais are unchanged, while special qualities have been raised by 1 or 2 francs. Imports of coal, coke, and manufactured fuel into France during February amounted to 2,107,000 metric tons, while Orca coke receipts from March 1 to 25 were 296,000 tons. An unofficial report states a further increase of Orca coke prices to 145.70 francs. A Franco-Belgian agreement has been reached giving a summer discount to France on household fuel.

Alexandria Market Continues to Improve.

The Alexandria, Egypt, coal market continues to improve, cables Trade Commissioner Richard A. May, Alexandria, on April 6. Prices have declined two and one-half piasters per ton. Arrivals during March were 50,000 metric tons and there are 74,000 tons in stock.

Increased Activity for Foreign Coal in Chile.

Chilean coal production continues high, and the market for foreign brands shows increased activity along the coast, cables Commercial Attaché Ralph H. Ackerman, Santiago, on March 28. One sale of American coal for March-April arrival, at 33 shillings (\$7.88) c. i. f. nitrate ports, is reported. It is also reported that there is some West Hartley coal in transit for April-May arrival at 37 shillings (\$8.83). A cargo of German Westphalian coal by motor vessel, expected for June arrival, has been placed at 36 shil-

lings (\$8.60) c. i. f. nitrate port. Chilean coals are still quoted at 82 pesos (\$9.09).

German Coal Underquoting American in Argentina.

German coal at 34 shillings (\$8.12) is underquoting the American product at \$8.45, cables Commercial Attaché Edward F. Feely, Buenos Aires, on March 28. Imports of coal into Argentina from March 1 to 28 amounted to 139,000 metric tons, all of which came from Great Britain.

American Coal Underquoting British at Rio de Janeiro.

Imports of coal at Rio de Janeiro, Brazil, during the first 25 days of March amounted to 80,000 metric tons, of which 25,000 came from the United States, cables Commercial Attaché W. L. Schurz, Rio de Janeiro, on March 31. There are 85,000 to 90,000 tons in stock, while 35,000 tons are en route. The Brazilian Lloyd's coal stocks are low. American coal at \$8.85 is underquoting the British product at 39 shillings (\$9.32). Freight rates from the United States are around \$4 and from the United Kingdom, 15s. 9d. (\$3.76).

Commercial Services Rendered by Bureau and District Offices

Correspondence Division, R. H. Brasel, Chief

The following table shows the number of commercial services rendered by the Bureau of Foreign and Domestic Commerce in Washington and its 10 district offices in the United States during the period July 1, 1924, to March 21, 1925, and the week ended March 28, 1925:

Class	Period July 1, 1924, to Mar. 21, 1925	Week ended Mar. 28, 1925

PAPER

O. M. Butler, Acting Chief, Paper Division

THE GERMAN PAPER INDUSTRY DURING 1924

Increased Production of German Paper Absorbed by Domestic Market—Exports Decrease

Reports from Germany indicate that the past year has been one of continued disappointment in the paper and allied industries. No steps were taken by the Government to lower industrial taxes, and the slight decrease in the price of coal and in freight rates was more than offset by the steady advance in the price of pulpwood and other raw materials. The mills were better employed than during the previous year although numerous shutdowns were reported in the summer and fall. An improvement in the domestic market during the last months of the year, together with a renewed interest in German papers on the part of foreign customers, enabled a number of the plants to resume operations.

Increasing Costs of Production.

Manufacturers of paper and board claim, however, that the excessive cost of raw materials in their industries, together with increased wages and high freight rates, are forcing production costs to a point where they are finding it increasingly difficult to retain their position in the world's markets and show even a small margin of profit on their sales. The difficulties with which paper and board manufacturers have to contend are augmented by the short terms of payment granted by pulp manufacturers and by the high interest rates, which in many cases have compelled firms in urgent need of ready money to dispose of their stocks at prices lower than the cost of replacing them.

Substantial Advance in Output.

The German pulp and paper industry substantially increased its output during 1924, paper production amounting to 85 per cent of the production during the last pre-war year. The total output during 1924, according to statistics compiled by the German Paper and Pulp Association, amounted to 1,514,000 tons (short) of paper, 304,600 tons of board, and 1,438,000 tons of pulp—the amount in each case representing an increase of approximately 15 per cent over 1923. Manufacturers of newsprint were most active in expanding their production, the total output of this branch of the paper industry amounting to 390,900 tons, an increase of 24 per cent over 1923.

The Saxon paper industry at the end of 1924 reported an increased activity, following a renewed interest in both the domestic and foreign markets, but reports from other sections of Germany indicate that the paper industry is still feeling the effects of the depression experienced in earlier months.

Increased Production Absorbed by Domestic Market.

Notwithstanding a gain in production of both pulp and paper during the past year, exports were smaller than during 1923, the association mills reporting that 67 per cent of the newsprint and 70 per cent of the other classes of paper produced during 1924 were retained in the domestic market, in comparison with 53 per cent of the former and 64 per cent of the latter in the previous year. With the greater capacity of

the domestic market to absorb its prewar quotas and thus eliminate the factor of forced sales in the export trade, further increases may be expected in German paper and cardboard prices, which showed an upward trend following the rise in production costs during the latter part of 1924.

Decrease in Exports of All But Coarse Grades.

Exports of paper and board from Germany in 1924, according to official statistics, were 8 per cent under those of 1923. The decrease was most noticeable in fine papers and board and manufactured articles. Manufacturers of these lines complained throughout the year of the difficulty in meeting the rising production costs and high interest rates and successfully competing in the world's markets. An improvement in sales to foreign countries of a number of the finer classes, such as writing, bristols, tissues, and colored papers was reported during the last quarter, but it was not sufficient to bring exports for 1924 up to the level of the previous year. Shipments of printing and writing papers and coarse boards increased the volume of their sales, but to do so it was necessary to make several reductions in prices in order to offset the favorable credit terms quoted by English, Scandinavian, and North American mills in the European and South American markets.

The quantity of paper and paper products exported from Germany during 1923 and 1924, together with the value of the 1924 exports, are shown below:

Exports of paper and paper products from Germany in 1923 and 1924

Classes	1923	1924	
	Short tons	Short tons	Value
Printing paper.....	261,855	274,659	\$17,821,916

Other paper and board.....	7,900	6,238	2,935,016
Manufactured articles of paper and board, not including printed matter.....	29,982	22,853	10,767,358
Total.....	667,604	619,372	67,973,990

NOTE.—The above figures will not agree with those covering exports furnished by the German Pulp and Paper Association, since the latter eliminate paper manufactures and a number of other items included in the official statistics.

Loss Sustained in European and American Markets.

The greatest losses during 1924 occurred in the European market, where the total sales decreased from

379,038 tons in 1923 to 263,872 tons in 1924. Shipments to the United States during 1924 were also considerably less than during the previous year, owing to reductions in the sale of printing and wrapping papers. Exports to the Far East and South America were likewise under those of the previous year, according to the preliminary figures, but in view of the fact that exports to unenumerated countries of printing, writing, and wrapping papers, in which German competition was most active, were from three to four times as great as in 1923, it is probable that the final returns covering the total shipments to these regions will show an increase over 1923.

While exports of paper and paper products from Germany during 1924 show a reduction in comparison

with the previous year, the volume exceeded the 1913 shipments by 60 per cent. The value of the exports during the last prewar year, which reached a total of \$75,417,678, on the contrary, was considerably above the 1924 total of \$67,973,990, the decrease in the latter year being attributable to the change in the character of the exports in favor of the cheaper grades.

INDUSTRIAL MACHINERY

W. H. Rastall, Chief, Industrial Machinery Division

AMERICAN AND GERMAN MACHINERY TRADE WITH THE NETHERLANDS

Germany Fails to Regain Former Machinery Trade—Increased Demand for American Machinery in the Netherlands—Lessened German Competition

Vice Consul Erik W. Magnuson, Stuttgart, and J. H. Barker, jr., Industrial Machinery Division

Shipments of practically all classes of German machinery to the Netherlands have decreased continuously since 1921, declining in 1923 to less than 50 per cent of the volume of 1922. Last year German exports of machinery to the Dutch market amounted to 13,373 metric tons—2,000 tons less than in 1923. Although the Netherlands is still the chief market for certain kinds of German equipment and like Italy possesses advantages favorable to trade with Germany, such as close acquaintance, nearness to German manufacturing centers, etc., Germany has failed to regain its pre-war volume in the machinery trade of that market. A study of German official export statistics brings out interesting particulars of the decrease in the demand for German machine equipment in the Netherlands during the past two years.

Sales of German Metal and Woodworking Machinery Decline.

In 1922 Germany sold metal-working machinery amounting to 4,631 metric tons to the Netherlands, exceeding the 1913 figure by about 1,000 tons. Shipments of this equipment declined to 2,301 tons in 1923 and to 1,806 tons in 1924. The Netherlands was Germany's chief market for woodworking machinery in 1922, absorbing 2,083 metric tons, but dropped to fourth place among world markets for German machinery in 1924, buying 634 tons of this equipment. (Brazil purchased 1,863 tons; Argentina, 1,113 tons; and Austria, 813 tons.)

Sales of German Cranes and Excavating Machinery Decline.

Germany's largest exports of cranes and excavating machinery went to the Netherlands in 1922 and 1923, but in 1924 the Netherlands occupied fifth place as a buyer of excavators and third place as a market for cranes. Sales of excavating machinery decreased from 602 metric tons in 1922 and 1,010 tons in 1923 to only 68 tons in 1924. Shipments of German cranes to the Netherlands declined from 1,743 metric tons in 1922 to 593 tons in 1923 and 191 tons in 1924.

Decreased Demand for German Textile Machinery—Sugar-Mill Machinery.

German spinning machinery shipped to the Netherlands amounted to 519 tons in 1913, declining to 33 tons in 1922, 370 in 1923, and to 205 tons in 1924. Similar declines have occurred in other items of textile machinery. The Dutch market for German sugar-mill machinery declined from 2,105 metric tons¹ in 1913 to 383 tons in 1922 and 230 tons in 1923. No exports of sugar-mill machinery to the Netherlands are given in the official German statistics for 1924.

German Exports of Machinery to the Netherlands.

The following table gives details of the exports of machinery from Germany to the Netherlands in 1913, 1922, 1923, and 1924:

German exports of machinery to the Netherlands

[In metric tons]

Class	1913	1922	1923	1924

¹ A large share of this amount was doubtless reexported to the Dutch East Indies.

Germany Loses Trade in Power-Generating Machinery.

The Netherlands was the leading buyer of German internal combustion engines among the countries of the world in 1924 and also of pumps, elevators, blowing and ventilating machinery, and baker's machinery, although sales of all these items were considerably less than in 1923. The Dutch market was also the principal purchaser of German machine parts last year. A heavy decline, however, in sales of all types of German power-generating machinery to the Netherlands occurred in 1924. In 1922 and 1923 that country ranked first among Germany's markets for certain classes of this machinery and second in other power-generating equipment items, but in 1924 there were no exports of this machinery to the Netherlands listed in German statistics.

Sales of American Machinery to the Netherlands Increase.

Contrary to the experience of Germany in its failure to regain its pre-war standing in the machinery market of the Netherlands, the United States has increased its volume of shipments to that country, especially in the year 1923. The Netherlands purchased machinery from all countries amounting to only 52,309 metric tons in 1923 against 75,258 tons in 1922. In spite of this contraction of the Dutch market in 1923, sales of American machinery gained approximately 25 per cent over 1922. This increase is especially significant when it is recalled that active sales efforts were made by practically every European country in an attempt to regain business lost during the war and that in 1923 American trade was handicapped by the depreciation of the mark and other European currencies.

Decline in Sales of Certain American Machinery in 1924.

During 1924, American machinery sales to the Netherlands dropped about \$100,000 under 1923 figures, decreases occurring in exports of conveying equipment and unspecified machinery and parts. Increased sales of practically all other items of industrial machinery from the United States were effected during last year, however, in spite of a lessened demand for certain equipment.

Decided Gain in Sales of American Oil-Well Machinery.

American exports of mining, oil-well, and pumping machinery to the Netherlands amounted to \$29,193 in 1922, which advanced to \$51,286 in 1923. In 1924 the demand for this equipment increased, \$139,186 worth being shipped during the year. Exports of oil-well equipment last year amounted to about three times the 1923 figure. An increase of nearly 100 per cent occurred in exports of pumps from the United States to the Netherlands in 1924. The following table gives American exports of mining, oil-well, and pumping machinery to the Netherlands in 1922, 1923, and 1924:

United States exports of mining, oil well, and pumping machinery to the Netherlands

Class	1922	1923	1924
Rock drills.....			\$319
Mine hoists and derricks.....	\$115		
Ore crushing and sorting machinery.....		\$275	425
Other mining and quarrying machinery.....	25	5,657	228
Oil well drilling apparatus.....		7,725	2,900
Other oil well machinery.....	628	13,878	60,500
Centrifugal pumps.....	4,310	206	597
Steam pumps.....	16,517	5,809	14,488
Other power pumps and pumping machinery.....	7,598	17,736	59,729
Total.....	29,193	51,286	139,186

Increase of over 50 Per Cent in Exports of Machine Tools.

Although Dutch dealers held very heavy stocks of machine tools American exports of metal-working machinery to the Netherlands increased over 100 per cent in 1923 over those of the preceding year—from \$52,562 to \$123,859. A further gain was made in 1924 when exports of this type of equipment advanced to nearly \$200,000. Exports of lathes gained from \$3,172 in 1923 to \$16,672 in 1924, and shipments of sharpening and grinding machines from \$1,587 to \$81,387. Thread-cutting and screw machine exports from the United States to the Netherlands increased from nothing in 1923 to over \$17,000 worth in 1924.

Gains in Sales of Other American Equipment in the Netherlands.

Sales of power-generating machinery increased from \$16,054 in 1923 to practically double that figure in 1924. A striking advance also occurred in shipments of both factory sewing machines and shoe machinery. Exports of the former amounted to \$4,859 in 1923 and to over \$56,000 last year. Shoe machinery shipments to the Netherlands in 1923 were valued at \$6,134 and in 1924 at nearly \$40,000. Gains also occurred in exports of woodworking machinery, blowing and ventilating equipment, and flour and grist mill machinery last year. The following table gives United States exports of industrial machinery to the Netherlands during 1922, 1923, and 1924, according to the six principal machinery groups:

United States exports of industrial machinery to the Netherlands

Class	1922	1923	1924
Power-generating machinery, except electric.....	\$49,416	\$16,054	\$34,628
Construction and conveying machinery.....	11,741	160,803	41,318
Mining, oil well, and pumping machinery.....	29,193	51,286	139,186
Metal-working machinery.....	52,562	123,859	199,732
Textile, sewing, and shoe machinery.....	63,705	18,712	97,325
Other machinery, except agricultural.....	495,019	496,269	251,992
Total.....	691,696	866,988	764,179

America Able to Compete Successfully in Dutch Market.

The situation in the Dutch machinery market is another example of the lessened ability of German machinery manufacturers to compete successfully in world markets. The contrast between American gains in machinery sales in the Netherlands and German losses in that market in the last two years should be of interest to the American machinery manufacturer in considering the competitive ability of German machinery. Markets such as the Netherlands and other countries in close proximity to Germany have been so long thought to be particularly promising fields for the sale of German machine equipment that opportunities for American participation in this trade may have been neglected. The advantages of increased sales effort in the Netherlands and the possibility of a further increase in the demand for American machinery in that market are questions to be seriously considered by the American machinery exporter.

Additional information regarding industrial machinery appears in this issue under the following sections:

Cable review, Latin America: Brazilian exchange weak during March.

Tariffs and trade regulations:

British India: Import duty reduced.

Canada: Changes in import duty.

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

UNITED STATES IMPORT TRADE IN CANNED GOODS

R. S. Hollingshead

The import trade in canned foods is a matter of considerable interest to the canning industry in this country. It is claimed that some of the imported products are sold at a price below the cost of production here. Some of these goods are of a very high grade, and, owing to the willingness of many buyers to pay more for an imported article than for one of an equal grade of domestic manufacture, our producers are compelled to accept prices lower than the quality of their product merits.

Canned Foods Must Meet Standards Before Entry.

Under the pure food and drugs act imported articles are examined and before entry must meet standards at least as high as those which apply to similar articles passing into interstate commerce. The application of these standards is of value to the producer here, since many shipments of very low-grade products or products made under insanitary conditions are refused entry and hence do not get a chance to compete with the better goods produced here in clean, modern plants.

Types of Canned Foods Imported.

Although this country is by far the largest producer of canned foods and is also the chief exporter of such goods, considerable quantities are imported, not only of materials which we produce in small amounts but also of those which we export in very large quantities. The explanation of imports of the first class is obvious but perhaps is not so evident for the second class.

Our imports of sardines are in general of very high-grade products packed in olive oil, while the exports consist largely of a much lower priced article, packed in tomato sauce, mustard, or vegetable oils. In these products, as also in the case of some of the imported articles such as peas, the cost of hand labor is an important factor. The French "Petits Pois," which, by the way, come largely from Belgium, must, on account of the tenderness due to immaturity, be packed largely by hand and not by machinery, as is the case with the more fully developed peas which are canned here. Differences in character—for example, the Italian "Pomo d'oro" tomato—as well as the lower cost have created a demand for some products which can not be met by the domestic producers.

Sources of Imported Canned Foods.

The sources of our canned-food imports are very widespread. Large amounts of canned meats, mainly beef, come from Uruguay and Argentina and are probably the products of branch factories of American houses. Japan supplies canned crab meat. Canned fish, largely sardines and anchovies, come from Norway, France, Spain, Portugal, and Italy. Canada furnishes some canned vegetables, and larger quanti-

ties may be expected from that source, as canning is becoming an important industry in the southern and far western parts of Canada.

Increase in Canned Pineapple Imports.

Pineapple is the most important item in the import trade in canned fruit. The canning of pineapple is increasing quite rapidly in the Straits Settlements as well as in British South Africa. In neither district has the quality been as high as that of the Hawaiian pack. In spite of this, however, imports have increased, and it is believed that larger quantities will appear on our domestic markets. On account of classification changes, statistics of imports are not altogether satisfactory. Imports in 1923 have about doubled those of 1922, and the same rate of increase occurred in 1924. Total imports last year amounted to 4,713,955 pounds, valued at \$691,378.

Leading Imported Canned Foods.

The following table shows the quantity and value of the more important canned foods which are imported:

Leading canned foods imported into the United States in 1924

Foods and sources	Quantity	Value
	Pounds	
Canned meats.....	9,281,439	\$958,710

Norway.....	63,360	2,667

¹ Probably spiny lobster.

The following table shows the trend of the import trade in canned foods. Of great importance are the changes which have taken place in sardines and in tomato imports. The rapid increase in the imports of peas has apparently been checked, while the other items show only comparatively small changes. With the possible exception of crab meat, there does not seem to be any reason to expect any great changes.

Imports of canned foods into the United States

Canned foods	1922	1923	1924	Percentage change, 1923 to 1924

Volume of Danish Shipping Increased in 1924

The volume of shipping entering and clearing at Danish ports during 1924 was appreciably greater than during the preceding year, according to the Danish Statistical Department. Approximately 12,000,000 tons of goods were unloaded, as against 10,500,000 in 1923, and cargo loaded totaled 3,900,000 tons, as against 3,500,000 tons. (Commercial Attaché H. Sorensen, Copenhagen, March 18.)

RUBBER

Everett G. Holt, Acting Chief, Rubber Division

BETTER CONDITIONS IN EXPORT TIRE TRADE

Changing conditions in the export trade make it advisable for American tire manufacturers—particularly those companies which have curtailed their export activities in the last two years—to give closer attention to foreign sales during the coming months.

After the trade boom reached its peak in 1920, American tire exports declined steadily until about June, 1921. The gradual recovery which followed lasted until March, 1923, although price cutting instituted by European competitors constantly narrowed the margin of profit in the trade. In the summer of 1923 the price situation reached such an acute state as to make it extremely difficult for even the best-organized and most strongly entrenched American firms to realize profits from the business, while smaller competitors found it advisable to drop foreign business entirely. As a consequence American tire exports began a decline, which continued month by month until December, 1923.

Upward Trend in 1924.

In 1924 the trend was again steadily upward, and with the announcement of tire-price increases by European competitors in March and April of 1924 the upward movement was accentuated. Further price in-

creases have been made during the first two months of 1925. While the price situation is now sufficiently improved to make increasing competition from American firms well worth while, the margin of profit must continue slight. Those American firms which have supported their foreign agents during the period of very low prices will naturally be the first to benefit from the improved situation.

It is still difficult to induce foreign firms to take on new lines of tires, but with the reasonable hope of still further price increases in store the effort may be considered worth while.

[American firms undertaking an expansion of their foreign distribution are invited to call on the Rubber Division for information regarding tire prices in foreign countries, customs duties on tires, and lists of foreign firms which might be interested in their importation.]

Canadian Rubber Goods Exports Increase in February

Trade Commissioner Lynn W. Meekins, Ottawa, March 25

Canadian exports of rubber products increased in value from \$1,087,212 in January to \$1,209,825 in February, notwithstanding the shorter month. The upward trend of the trade was general for all import-

ant commodities, except waterproof rubber footwear and rubber hose. The number of casings exported increased from 63,864 in January to 67,016 in February; inner tubes from 70,800 to 80,318; solid tires from 775 to 1,016; rubber belting from 52,065 to 93,414 pounds; and canvas rubber-soled shoes from 145,941 to 175,261 pairs; while exports of rubber hose dropped from \$23,635 to \$10,441; and waterproof rubber boots and shoes from 86,508 to 58,428 pairs.

Destination of Casings Exported.

Of the casings exported, New Zealand took 23,286; the United Kingdom, 7,087; British South Africa, 6,532; Argentina, 4,783; Australia, 3,200; British India, 3,324; Dutch East Indies, 2,770; Straits Settlements, 2,220; and Denmark, 2,094. Belgium, China, France, and Sweden each took over 1,000 casings during the month. The largest shipments of inner tubes were to New Zealand, 20,978; Argentina, 10,905; British India, 7,065; British South Africa, 6,577; and the United Kingdom, 5,459.

Leading Markets for Rubber Footwear.

Canvas rubber-soled shoes were exported principally to three markets—the United Kingdom, 78,804 pairs;

Mexico, 82,175 pairs; and Denmark, 27,428 pairs. New Zealand took 10,966 pairs and Ecuador 4,600 pairs. Other rubber boots and shoes were exported to the amount of 58,428 pairs, valued at \$109,365, the United Kingdom being the leading customer with 29,436 pairs, New Zealand taking 18,500 pairs, and Newfoundland 7,894 pairs.

Rubber Belting Trade Increasing.

Rubber belting exports from Canada are constantly increasing. During the 12 months ended February, 1925, 769,756 pounds, valued at \$404,545, were exported as compared to 477,947 pounds, valued at \$274,644, the preceding year. The chief markets in February were British South Africa, 25,627 pounds; Brazil, 20,297; Sweden, 11,728; British East Africa, 9,885; the United Kingdom, 5,540; and Portuguese Africa, 5,460 pounds.

CONSTRUCTION NEWS

Compiled in Industrial Machinery Division

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce, or its district and cooperative offices, by mentioning the country and reference number given. Where no reference number is given, further information is not available.]

Construction Projects in Canada.

Recently reported construction projects throughout Canada involve \$350,000 to be spent on a proposed bulkhead in Toronto, \$400,000 to be expended on road work in Ontario, a packing plant comprising five buildings in Manitoba, a pumping station to cost \$125,000 in Ontario, and a \$300,000 gas plant in the same Province. Reference No. 35X. (Assistant Trade Commissioner Walter J. Donnelly, Ottawa.)

Approval Given for Harbor Improvements in Dutch East Indies.

At a meeting of the Soerabaya Harbor committee in December, approval was given for harbor improvements in 1925 costing 2,366,000 guilders and for improvements in 1926 costing 1,646,000 guilders. (1 guilder=\$0.40.) Among the more important improvements will be the completion of the Holland Pier, addition to coal docks, broadening of the Kalimas River, construction of an aqueduct, purchase of a fire engine costing 25,000 guilders, and a certain amount of drainage. Reference No. 163555. (Vice Consul Rollin R. Winslow, Soerabaya, Java.)

Government Railway Line to be Extended in Canada.

Legislation will be introduced in the provincial legislature now in session in Edmonton asking for authorization for an appropriation to build from 15 to 20 miles of an extension on the Lacombe & Northwestern Railway, the Government-owned line running northwest from Lacombe, Alberta. The extension will be built beyond the present terminus of Hoadley. (Consul Samuel C. Reat, Calgary.)

Increase of Manchester's Water Supply to be Recommended.

The waterworks committee of the Manchester corporation has decided to recommend that the city council proceed at once with the Hawes water scheme for increasing the city's water supply. This scheme is said to be the largest of its kind in England, involving an estimated expenditure of £10,000,000 and providing for the construction of 74½ miles of aqueduct, 28 miles of which will be underground. Reference No. 164802. (Consul Ross E. Holaday, Manchester, England.)

Construction of Market Hall and Slaughterhouse in Smyrna.

The mayor of Smyrna has issued a statement to the effect that the municipality is contemplating the engagement of a specialist or firm of engineers for the purpose of drawing up plans for a modern market hall and slaughterhouse which it is proposed to construct in this city and in its suburb, Cordelio. That official is desirous of entering into correspondence with an American specialist or engineering firm qualified to undertake work of that character, with a view to formulating arrangements for the adoption of plans and the construction of the foregoing buildings. Reference No. 164529. (Consul Samuel W. Honaker, Smyrna, Turkey.)

Argentina Announces 1925 Oil Development Program.

The Government of Argentina plans to proceed with the second year's part of a four-year program to develop the State petroleum interests. The original program called for the boring of 100 producing wells in the Comodoro Rivadavia field and 8 exploring wells, but due to the failure to sink 48 wells in that area, called for in the 1924 program, this number has been increased to 148 producing wells, making a grand total of 156 wells to be sunk in this field during 1925. In the Plaza Huincul field the 1924 program will be completed and as many more wells as possible in order

to determine the value of the field as an oil-producing center. Reference No. 164833. (Consul General Henry H. Morgan, Buenos Aires.)

Contract Closed for Railway in Ecuador.

Early in February the Ecuadorian Minister of Interior and Public Works signed a contract for the construction of the Quito-Ibarra section of the Quito-Esmeraldas railway project and for survey of the line from Ibarra to the port of San Lorenzo. Besides the building of the line itself, the contract covers the construction of stations, machine shops, water tanks, and the furnishing of equipment. Reference No. 163782. (Richard M. DeLambert, secretary at American Legation, Quito.)

Argentina Invites Bids for Sanitary Work.

Bids have been called by the Ministry of Public Works of Argentina for certain sanitary work in the towns of Tandil, Azul, Tres Arroyos, and Junin, which will be received until May 16, 1925. The work will include the provision of a public supply of drinking water with purification in the case of open source, underground piping and drainage. Reference No. 164967. (Consul General Henry H. Morgan, Buenos Aires.)

Funds Provided for Highway Construction in Brazil.

The Governor of the State of Pernambuco has opened a credit amounting to 108 contos of reis in favor of the Departamento de Viacao e Obras Publicas (Department of Transportation and Public Works) for the

purpose of constructing a highway, 49 kilometers in length, between the interior cities of Bezerros and Bonito. The city of Bezerros is situated on the Central Line of the Great Western Railway. Upon the completion of the above it is planned to construct another highway, 24 kilometers in length, connecting Bonito and the Sao Francisco Line of the Great Western Railway. (Vice Consul Fred C. Eastin, jr., Pernambuco.)

Argentina to Require Equipment for Harbor Maintenance.

The Government of Argentina is expected to ask for tenders covering three new dredgers which will be used in the improvement and maintenance of the various channels leading to Argentine ports. Two of the dredgers to be required will probably be of 6,000 and 5,000 tons displacement, respectively. (Vice Consul E. Kitchel Farrand, Buenos Aires.)

Project for Tin Smelter Planned in Netherlands East Indies.

The government of a Netherlands East Indies colony has appointed a commission to study the establishment of a central smelter at Tandjong, the port of Batavia, to reduce the alluvial tin recovered in the islands of Banka, Billiton, Singkep, and in the Malay States. The project is primarily intended to handle the tin from the Government fields in Banka and Billiton, but it is thought that the probable cheapness of operation will induce other producers in this part of the world to participate in the undertaking. (Consul Charles L. Hoover, Batavia, Java.)

IRON=STEEL=HARDWARE

Luther Becker, Chief, Iron and Steel Division

DEPRESSION RULES IN BELGIAN SIDERURGICAL INDUSTRY

Commercial Attaché Fayette W. Allport, Brussels, March 20

Existing unsatisfactory conditions in the Belgian iron and steel industry are not traceable alone to the political situation, but can be attributed as well to the continued uncertainty in the French exchange outlook, which renders merchants and buyers unwilling to commit for more than the needs of the moment. There is also the feeling that the iron and steel industries of Europe, practically all of which are producing more than in the pre-war period, have overestimated the absorptive power of their markets, and have now to face a period of diminished sales.

Lacking in Raw Material and Fuel Resources.

This situation has brought home to Belgian industrial and economic leaders the fact that the country has been putting too much emphasis on the heavy industries. Belgium's competitive position in this respect is inferior to that of France and Germany, as each of these countries possesses, or has possessed, resources of ore and coal, and has been able for this reason to develop its heavy industry more advantageously than Belgium, which possesses neither iron ore resources nor coal adequate for metallurgical purposes. The coal within the country is not suitable for smelting and is exported in exchange for coal suitable for industrial purposes.

Concentrated Development of Finishing Industries Urged.

Belgium normally has, however, an advantage over its competitors in the abundance of cheap skilled labor. There is a growing realization that the interests of the country might best be served by developing its industry to take greater advantage of this situation, abandoning efforts to extend the heavy industries further, and concentrating on the manufacture of finished or fabricated products. Although the situation in the iron and steel industry is undoubtedly unsatisfactory, it is thought by some that the difficulties have been exaggerated to give force to the efforts of employers for wage reductions and for increased hours of labor.

Disappointing Situation in British Iron and Steel Industry

Despatch from Commercial Attaché H. D. Butler, London, April 3

The British iron and steel industry has been disappointed by the results of the first quarter of 1925. Production has not increased; it is estimated that the March average daily output equaled the February rate, however. The London steel exchange is of the opinion that a fair potential demand is being held up pending the outcome of the Continental exchange situation. The anticipated French dumping has not developed; instead, Continental quotations stiffened recently, especially for semifinished steel.

Tinplate Prices To Be Maintained.

The Cleveland pig iron trade experienced during the last week of March a decidedly improved home and

export demand. Dullness is otherwise general for the steel industry except for the bright spots caused by the demands for automobile, railway, and housing purposes. The tinplate industry has decided to continue its price maintenance scheme for another six months and has reestablished the pooling arrangement for orders. The consumption of steel scrap in the manufacture of tinplate is 30 per cent below normal. This serves as a measure for the activity of the industry.

Iron, Steel, and Hardware Notes

Drop in French Iron and Steel Production.

Production of iron and steel in France during February was slightly below the January output. Net exports remained practically unchanged, however. (Cable Commercial Attaché Lloyd Jones, Paris, April 6.)

Belgium and France Ship Pipes and Tubing to United States.

During February the United States received 1,231 tong tons of cast-iron pipe from France and 605 tons from Belgium. Imports of other pipes and tubes amounted to 298 tons, 221 tons of which came from Belgium, 74 tons from the United Kingdom, and 3 tons from Germany.

Czechoslovak Steel Cartel May Become International.

The Czechoslovak iron and steel cartel proposes to extend its activities to include Polish Silesia, Hungary,

and Yugoslavia. The purpose of this is to distribute markets so as to reduce competition. Exports of iron from Czechoslovakia increased during February. (Cable from Commercial Attaché Hodgson, Prague, April 4.)

Better Situation for Remscheid Tool Industry.

The gradual improvement noticeable in the tool industry of the Remscheid and Velbert regions, Germany, continued throughout the early part of February with a steadily increasing volume of orders. While a certain setback was expected in some instances, it was hoped that the better tone would not disappear from the market. (Consul Leland B. Morris, Cologne, February 19.)

Additional information regarding iron-steel-hardware appears in this issue under the following sections:

Cable review, Europe: British results for first quarter of 1925 disappointing.

Cable review, Latin America: Brazilian exchange weak during March.

Tariffs and trade regulations:

British India: Import duties increased.

Canada: Drawback provisions.

Czechoslovakia: Relaxation of export restrictions.

Peru: New surtaxes levied.

HIDES AND LEATHER

Wilbur J. Page, Chief, Hide and Leather Division

ARGENTINIAN SALES OF QUEBRACHO EXTRACT TO PRINCIPAL MARKETS

J. Schnitzer, Hide and Leather Division

That Germany is forging to the front as an important purchaser of quebracho extract is clearly brought out by the statistics showing the exports of this product from Argentina. The total exports of quebracho extract from Argentina during 1924 amounted to 216,322 metric tons, over 22 per cent of which were purchased by Germany. During 1924 Germany ranked first in the purchase of this extract from Argentina, the United States second, and the United Kingdom third, while in the previous year the United States ranked first, Germany second, and the United Kingdom third.

Shipments of Quebracho Extract to the United States Decline.

The total exports of quebracho extract to the United States from Argentina amounted to 49,247 metric tons during 1924, the smallest amount since 1920. Argentina sold 47,495 metric tons of quebracho extract to the United States during 1920; the sales in the following year increased to 54,038 metric tons, declined in 1922 to 50,471 metric tons, and rose again in 1923 to 68,580 metric tons. The United States had been Argentina's principal market for quebracho extract for many years, until 1924 when Germany took the lead. The principal cause for this decline in shipments to the United States was the decrease in the production of sole, belting, and sheep skin leathers in the United States, respective declines of 22, 16, and 17 per cent having been registered in the total output for 1924.

Germany's Purchases Steadily Increasing—British Trade Well Maintained.

The total exports of quebracho extract from Argentina to Germany during 1920 amounted to only 7,683 metric tons, rising to 18,172 metric tons during the following year, to 46,955 metric tons in 1922, and to 53,822 metric tons in 1923. In 1924 they still further increased to 62,458 metric tons, or 13,211 metric tons more than the amount purchased by the United States during the same year.

Total shipments from Argentina to the United Kingdom during the past five years have been fairly steady. They have neither gone below 15,000 metric tons nor as high as 20,000 metric tons per year during this period, and amounted to 19,087 metric tons in 1924.

There has been a consistent increase in the total exports of quebracho extract from Argentina since 1921, beginning with 120,100 metric tons in that year and registering an advance of 7,736 metric tons in 1924 over 1923.

[Trade Information Bulletin No. 295 containing much valuable data on production, consumption, trade, and location of the quebracho industry is available on application to the Hide and Leather Division, Bureau of Foreign and Domestic Commerce, Washington.]

Prices Decline on German Hide Market

Consul General F. T. F. Dumont, Frankfurt on the Main, March 6

A notable change recently took place in the German hide markets when prices of raw hides and skins of German origin dropped heavily. The continued impossibility of clearing profits on manufactured

goods, accompanied by absolute lack of money, forced buyers to hold back, and not only checked the upward trend of prices of the last seven months but brought about considerable reaction. When bidding was unsatisfactory, the administrators of the auctions withdrew lots from sale, but even this, which at other times always had a magic effect on the market, failed to stimulate demand. Domestic goods can not depreciate much further without falling below market value, and German tanners hope that the fall in prices is permanent and is preparatory to a stabilization of prices at a level which will make a better market for leather goods.

Leather Prices not Effected.

While this change in the raw hide and skin market may eventually lead to better conditions in the leather industry and trade, it failed to improve the February situation. Its immediate effect was to cause buyers of finished leather to hold back in the expectation of corresponding reductions in prices of the leather in which they were interested. After the decline in prices of hides and skins, the leather market conditions for the first time in many months allowed a reasonable profit to tanners, and every effort was made to keep them stable. Prices had been automatically adjusted to the hide and skin market and sellers were naturally loath to make any reductions even when the demand fell off.

Abrogation of Sales Agreement With Forest Owners.

The abrogation of the agreement with buyers by the Union of German Hide Sellers was followed by a similar action by the union which unites the different associations of forest owners in Germany. The latter arbitrarily withdrew from its agreement concerning the sale of tanning bark and set up new conditions which buyers declared to be unacceptable. The tanners threaten to boycott German bark and to cover

their needs with foreign bark or tanning materials, notably from Czechoslovakia, Austria, and Hungary, if sellers refuse to ameliorate their terms. They claim to have sufficient orders on hand to make them independent of the German supply.

Few Sales on Leather Market.

Leather dealers and manufacturers of leather goods only made the most necessary purchases during February. Price concessions were rarely made, except in light sole leather and certain grades of upper leathers which were in great demand and of which stocks were plentiful. In general, the demand for all kinds of leather fell off toward the latter part of the month. The exception was in heavy goods, as a result of the recovery in prices of this raw material at the auctions. Buyers needs are extensive and stock is much depleted. Orders from shoe manufacturers for fine upper leathers were not as numerous as usual at this time of the year. The chief demand was for patent and black upper leather, these having lost their standing as luxury leather. Payments were very slow, and customers often waited for official notice of foreclosure before settling their accounts.

Additional information regarding hides and leather appears in this issue under the following sections:

Cable review, Europe: British prices down.

Cable review, Latin America: Brazilian exchange weak during March.

Tariffs and trade regulations:

Austria: Relaxation of export restrictions on raw hides and skins.

Argentina: Export duties on sheepskins for April.

Bolivia: Exemption of hides from export duty.

Czechoslovakia: Relaxation of export restrictions.

Peru: New surtaxes levied.

"Foreign trade opportunities."

SHOES AND LEATHER MANUFACTURES

A. B. Putnam, Chief, Boot and Shoe Division

SHIPMENTS OF FOOTWEAR TO NONCONTIGUOUS TERRITORIES INCREASES

The United States shipped 250,491 pairs of leather footwear, valued at \$468,250, to the noncontiguous territories during the first two months of 1925, as compared with 162,995 pairs, valued at \$369,729, consigned to these territories during the corresponding period of 1924. In a comparison of the quantities of boots and shoes shipped to Alaska, Hawaii, and Porto Rico during the first two months of several preceding years, it is noted that the total of 305,512 pairs sent in 1922 rose to 380,085 pairs in 1923 and declined to 162,995 in 1924. The trade is now once more on the upward trend.

Hawaiian and Porto Rican Trade Advances but Alaskan Declines.

Shipments of the current year consist of 144,601 pairs for men and boys, or 58 per cent of the total, and 105,890 pairs for women and children, or 42 per cent. The shipments to Hawaii amounted to 30,821 pairs, 26,214 pairs for men and boys, valued at \$82,059, and 4,607 pairs for women and children, valued at \$12,675. The total represents an increase of 17.2 per cent over

the quantity sold to this territory during the first two months of 1924.

Porto Rico likewise showed an increase in trade amounting to 64.3 per cent. The purchases of the 1925 period consisted of 116,111 pairs of boots and shoes for men and boys, valued at \$251,330, and 101,151 pairs for women and children, a total of 217,262 pairs, as compared with 132,253 pairs shipped to Porto Rico in the corresponding period of 1924. The Alaskan trade declined from 4,458 pairs to 2,408 pairs, valued at \$9,959. The larger demand was for shoes for men and boys.

Unsatisfactory Conditions in Belgian Shoe Industry

Lucien Putnam, office of trade commissioner, Brussels, March 6

The outstanding feature of the Belgian shoe industry is the period of calm which has prevailed since January, although retail merchants have been obliged to place some orders to keep abreast of the fashions. Nevertheless, many manufacturers can only maintain plant operation from three to four days a week, and even so, have not sufficient orders to keep their workers fully employed. In some manufacturing districts plants are entirely closed and some hundreds of workmen are idle.

Price Increase Expected—American Patent Leather in Demand.

The manufacturers have large stocks on hand, and, if prices were to drop materially, many failures might result. Fortunately, as is reported from various sources, an increase in prices is to be expected rather than a drop. Export orders are very scarce.

Patent leather still enjoys the best market, while colored glazed kid has not had the success expected. Only some firms manufacturing high-class shoes, and therefore able to ask a good price for colored glazed kid shoes, have developed their production to any extent. Fashion still commands brilliant showy footwear, and, consequently, American patent leather is still in great demand.

United States Imports of Leather Footwear

The leather footwear imported into the United States during February, 1925, amounted to 153,532 pairs, valued at \$236,060, comprising 95,814 pairs of leather boots and shoes free of duty, valued at \$215,400; 19,241 pairs of leather slippers, also free of duty, valued at \$10,868; and 38,477 pairs of dutiable footwear, valued at \$9,792. The February, 1924, imports consisted of 29,167 pairs of boots and shoes, 30,446 pairs of slippers, and 64,859 pairs of dutiable footwear (total 124,472 pairs).

Men's Shoes Constitute Largest Item—Women's Swiss Shoes Lead.

Of the boots and shoes imported during February of the current year, 73.2 per cent were for men and boys, 25.5 per cent for women, and 1.3 per cent for children. The boots and shoes for men and boys were purchased principally in Germany and the United Kingdom. These countries supplied, respectively, 54,090 pairs valued at \$53,343, and 13,559 pairs valued at

\$70,902, leaving a balance of 2,522 pairs as the quantity purchased in other countries.

Of the 24,441 pairs of women's shoes, valued at \$83,470, Switzerland manufactured 14,004 pairs (value \$54,772); United Kingdom, 2,834 pairs (value \$12,451); Czechoslovakia, 2,641 pairs (value \$6,189); and Germany, 3,767 pairs (value \$4,144). The children's shoes were purchased in Germany (983 pairs), Austria (216 pairs).

Increase in Leather Belting Exports from United States

The United States exported to foreign countries 182,024 pounds of leather belting, valued at \$276,552, in the first two months of 1925, an increase of 24.1 per cent over the quantity exported during the corresponding period of 1924. The countries purchasing more than 20,000 pounds during January and February, 1925, were British India, 35,420 pounds; South America, 25,553 pounds; Cuba, 25,113 pounds; and Mexico, 22,007 pounds. All of these countries purchased more belting during the 1925 period than in 1924, while the countries showing a decreased demand were Canada, China, Japan, and the Philippine Islands. The United Kingdom consumed 7,388 pounds in the same period of 1924 and 10,877 pounds in 1925. The larger sales appear to reflect an improvement in industrial activities abroad.

LUMBER

Axel H. Oxholm, Chief, Lumber Division

DISTRIBUTION OF EXPORTS OF SOUTHERN PINE IN 1924

Of American softwoods exported during 1924, southern pine was exceeded in volume only by Douglas fir.

The export of southern pine in 1924 amounted to 850,892,000 feet against 830,830,000 feet in 1923, thus representing a small increase.

Argentina and Cuba Take Most of Lumber.

As will be seen on the chart on the third page of cover, by far the greater portion of this species is exported in the form of lumber, either rough or dressed. The largest markets, Argentina and Cuba, purchased this kind of stock exclusively. England is the principal market for timber, which is largely used in shipyards, dock and harbor works, mines, and in construction where strength is required.

Wide Utility of the Wood.

Southern pine was one of the first American woods to be exported and as far back as 1823 it is mentioned in a Liverpool lumber agent's market report. Since that time its excellency of quality and usefulness for many purposes have become established practically all over the world, with the exception of the Far East, as will be seen on the map on the second page of cover.

Its uses are numerous, varying from decking for ships and supports in the gold mines of South Africa, to household furniture in many countries on the European continent. It is used for house building and construction in practically all countries which it enters. Although rated as a common utility and construction wood in this country, it is considered as a "de luxe" wood in many foreign markets.

The amount of southern pine exported, according to the degree of manufacture, is shown in the following table:

Exports of southern pine from the United States

Items	1924	1923
Logs.....	<i>M feet</i> 5,457	<i>M feet</i> 7,582
Timber.....	174,047	170,838
Rough lumber.....	562,126	487,064
Dressed lumber.....	108,662	164,746
Total.....	850,892	830,830

Latin America and Europe Constitute Principal Markets.

The principal market for southern pine is Argentina, taking about 180,000,000 feet, or a quantity slightly less than that of 1923. The Cuban market is next in im-

portance and took 153,000,000 feet of southern pine in 1924, representing a considerable increase over 1923 figures. The British market purchased 122,000,000 feet, or approximately the same quantity as last year. There was a slight increase in shipments to the Mexican market which totaled 69,000,000 feet in 1924. The other markets were, in the order of their importance, as follows: Italy, the Netherlands, Canada, Spain, Belgium, Uruguay, Germany, and Scotland, all of which consume between 15,000,000 and 40,000,000 feet. The remainder of the exports of southern pine were distributed among a great many smaller markets, chiefly in the West Indies. (See chart on the third page of cover of this issue.)

Present Shipments Mostly Semimanufactured.

Our southern pine shippers have reached most of the world's markets requiring quality softwoods. Southern pine, which is called pitch pine abroad, is well known from the Arctic regions to the Tropics. It is a wood of very special qualities, and there should be an excellent market abroad for small-dimension stock to be used for specific purposes such as flooring blocks, machinery parts, etc. Our shippers should endeavor to manufacture southern pine to the greatest possible extent at the manufacturing plants instead of shipping logs and square timber for remanufacturing purposes abroad.

Decreasing Lumber Stocks in Great Britain

Based on reports from Trade Commissioner Mowatt M. Mitchell, London, March 16, and Consul Robert R. Patterson, Liverpool, March 5

The best evidence of the increased consumption of lumber in Great Britain thus far in 1925 compared with 1924 is that stocks are decreasing in spite of heavy arrivals. Hewn hardwood timber imports totaled 596,000 cubic feet in February, 1925, as against 430,000 cubic feet for February, 1924; hardwood lumber, 23,640 M feet against 16,200 M feet; softwood lumber and timber, 82,200 M feet against 63,000 M feet; and dressed lumber, 12,600 M feet against 12,000 M feet. The attention of the lumber trade has, for the time, been largely diverted to Russia for the reason that the leading trusts have just issued their stock lists for the coming season's delivery and importers of this lumber and the market in general are busily comparing the prices asked with Scandinavian offers for similar specifications.

Active Demand for American Softwoods at Liverpool—Decline in Hardwoods.

The general condition of the lumber market at Liverpool during February was excellent, with consumption exceeding arrivals, heavy receipts of walnut lumber, particularly, having moved mostly into consumption. Deliveries of Douglas fir from stocks have exceeded arrivals during the past two months, and it is stated that present reserves are not too large for probable future requirements. Southern pine timber has been sold in large amounts and dealers state that the stocks are being rapidly reduced at the present rate of consumption. Southern pine lumber has likewise sold readily, and stocks are very moderate.

Unlike softwoods, the demand for American hardwoods has fallen off; heavy shipments have dulled the Liverpool market and stocks are ample. There were three auction sales of mahogany at Liverpool during February and practically all the wood offered was sold.

Argentine Lumber Market Active

Trade Commissioner George S. Brady, Buenos Aires, Argentina, February 26

The market for American southern pine and spruce in Argentina fell off during the early part of 1924, but has since regained its position. United States white pine, Douglas fir, and spruce encounter considerable competition from Brazilian Parana pine and Central European softwoods, so that any increases in American prices or decreases in European prices are immediately felt here. The unfavorable rise in dollar exchange during the early months of 1924 influenced lumber sales, but since July exchange conditions have bettered continuously.

Central European Woods Have Price Advantage.

Brazilian Parana pine is recognized as inferior to American softwoods, but it finds use in cheap constructions when there is considerable difference in price. Douglas fir has the disadvantage in this market of being under nominal size when dry. Central European softwoods still have a considerable price advantage over American and are coming into the market regularly.

Southern Pine Has Strong Foothold on Market.

For many uses there is no recognized substitute in Argentina for American southern pine. It is largely used in building construction, especially for flooring. The railroads also employ it in considerable quantities for car building. Paraguayan cedar is used for window frames, casements, and in other places. Its cost is higher than southern pine and it is more difficult to work, but its life is longer and its finish is admired for trim.

Chief Competition from Brazil.

The countries of origin of softwoods imported into Argentina during the first six months of 1924 and the quantities coming from each are as follows:

	M feet
United States.....	71, 156
Austria.....	5, 701
Brazil.....	32, 613
Canada.....	3, 812
Czechoslovakia.....	7, 373
Sweden.....	1, 477
Germany.....	1, 042
Italy.....	505
Poland.....	221
All other countries.....	8, 115
Total.....	127, 015

Imports from the United States consisted of 66,336 M feet of southern pine, 2,953 M feet of spruce, 1,401 M feet of white pine, and 466 M feet of Douglas fir. Those from Brazil were largely Parana pine while those from Canada were spruce.

Additional information regarding lumber appears in this issue under the following sections:

Cable review, Europe:

British market active.

Sweden's February exports lower.

TEXTILES

Edward T. Pickard, Chief, Textile Division

WORLD TEXTILE NEWS IN BRIEF

Hemp Cultivated on the Island of Gotland, Sweden.

Experiments in the growing of hemp on the island of Gotland have shown favorable results and a limited area will be planted next season. In the experiments, 80 kilos of seed (kilo=2.2046 pounds) per acre produced a crop of more than 2,400 kilos of air-dried hemp. Sweden now imports large quantities of this fiber from India and Italy. (Trade Commissioner T. O. Klath, Stockholm, March 3.)

Italy Produces Cellulose for Rayon Industry.

The manufacture of cellulose by new processes is being given official aid by the Italian Government. The growth of the rayon industry is one of the principal reasons for the desired expansion of the home production of this raw material. About 40,000 tons of cellulose are now used each year in making silk in Italy and there is every reason to expect that this amount will increase. (Vice Consul J. C. Dorr, Naples, March 11.)

Stocks of Wool in United States Bonded Warehouses Increase.

Stocks of wool in United States bonded warehouses showed a further increase at the end of February and amounted to 105,310,565 pounds, compared with 92,072,710 at the end of January. This increase of 13,000,000 pounds comprised every class except alpaca. The February total was divided among the various classes as follows: Carpet, 12,515,588 pounds; clothing, 20,373,277; combing, 67,305,842; mohair, 3,408,486; and alpaca, cashmere, etc., 1,707,372.

Egyptian Firm Desires to Export Carpet Wool.

A firm in Alexandria, Egypt, desires to export various types, colors, and qualities of Egyptian raw wools, according to a report from Trade Commissioner Richard A. May. These wools are usually harsh and generally are classified as carpet wools. Correspondence with this firm may be in either English or French and payment in pounds sterling or dollars. Further information will be made available to American concerns upon application to the Textile Division, Bureau of Foreign and Domestic Commerce, Washington. Refer to File No. 25515.

Cotton-Goods Stocks in Egyptian Bonded Warehouses Increase.

Stocks of cotton goods in Egyptian bonded warehouses at Alexandria made further advances during February, standing at the end of the month at 8,123 bales and cases, weighing 2,517,525 kilos (kilo=2.2046 pounds), as against 7,551 bales and cases (2,279,804 kilos) on January 31 and 6,828 bales and cases (2,142,516 kilos) on December 31, 1924. This increase, in a measure, may be regarded as seasonal, due to the heavy importations in preparation for the Ramadan holidays. Present stocks are but 241 bales and cases in advance of stocks at the end of February, 1924. The financial aspect of the cotton-goods import and retail trade has assumed a much more healthy tone in the past few weeks. (Trade Commissioner Richard A. May, Alexandria, March 7.)

Elastic Goods Imported into Egypt.

Elastic materials were imported into Egypt during 1924 to the value of approximately \$163,730. The chief articles imported under this classification were suspenders and garters and the bulk of these goods came from Germany, France, Italy, and Switzerland. American manufacturers thus far have secured a very slight share of this business. At present the Egyptian market is stocked with articles very cheap both in quality and in price. There is, however, an increasing interest in better-grade goods. Black and white suspenders are in greatest demand. Some of the very cheap ones retail at 15 to 25 cents each. Commission agents carry practically no stocks on hand but forward orders to manufacturers, who, in turn, ship directly to the retailers. Credit is granted on the average for two to four months. (Vice Consul R. H. Geist, Alexandria, March 4.)

Italian Wool Manufacturers Grant Wage Increase.

The manufacturers of the Biellese wool group in Italy have granted the workers a 20.35 per cent wage increase, of which 7 per cent represents an increase on basic wages, and 13.35 on cost-of-living indemnity. The latter is to be revised every four months on the basis of an average index number for that period in comparison with the average of the previous four-month period. For the benefit of the workers, a society is to be established which will provide sanitary and educational assistance. Of the total salaries 1 per cent will go to the upkeep of the society, 65 per cent of the cost of maintenance of which will be borne by the manufacturers and 35 per cent by the workers. The workers' contribution will be held out of their wages, thus reducing their actual wage increase to 20 per cent. (Clerk to Commercial Attaché E. Humes, Rome, March 14.)

Waterproof Garments Produced in Manchester.

The waterproof garment industry in Manchester is one of long standing and it is estimated that two-thirds of such garments manufactured in the United Kingdom are produced in Manchester and Salford. The Waterproof Garment Workers' Trade Union has approximately 4,000 members in Manchester alone, 75 per cent, women. The annual production amounts to 2,000,000 garments, according to reliable estimates. There are about 12 concerns capable of turning out 2,000 to 3,000 garments per week, and two of the firms can exceed that number. It is estimated that 75 per cent of the total production is exported, the principal markets being British Dominions, British East Indies, Denmark, France, and the United States. Manchester won its past reputation on handmade garments of very fine quality. The industry is now suffering from a flooding of the market with cheaper machine-made goods which do not prove so satisfactory to the customers. Efforts are being made to protect the manufacturers from this price competition. (Vice Consul C. W. Lewis, jr., Manchester, March 7.)

Market for Cotton Goods in Paraguay

Consul Digby A. Wilson, February 21

Paraguay furnishes a cotton piece-goods market worthy of the careful consideration of American manufacturers. In the absence of a domestic industry, all textiles must be imported from abroad, and the increased purchasing power of Paraguay is reflected in the improved market for cotton goods. Imports of this class in 1924 amounted to over 1,500,000 kilos (kilo=2.2046 pounds), or an increase of 30 per cent over those brought in during 1923. While American products are consumed in an important amount in Paraguay at this time, an apparent lack of interest by American manufacturers in the past has restricted the development of this small but important market. In this connection, it should be noted that the improved Argentine gold exchange now favors the sale of American cotton goods as against the British competing products.

Imports Summarized by Sources.

Imports of all kinds of cotton goods into Paraguay during 1924 amounted to 1,550,883 kilos, of which 23 per cent came from the United States, 49 per cent from Great Britain, 12 per cent from Italy, and 16 per cent from various other countries, including 33,594 kilos of canvas from Japan. In 1923 receipts totaled 1,523,767 kilos. The following table shows the sources of these imports by country of origin:

Cotton-goods imports into Paraguay

Countries	1923	1924	Countries	1923	1924
	<i>Kilos</i>	<i>Kilos</i>		<i>Kilos</i>	<i>Kilos</i>
Argentina.....	48, 139	44, 071	Great Britain.....	755, 451	759, 499
Belgium.....	12, 938	40, 820	Italy.....	39, 604	180, 132
Brazil.....	225, 149	54, 310	Netherlands.....	22, 338	14, 824
France.....	8, 895	16, 429	United States.....	364, 985	358, 270
Germany.....	4, 630	14, 630	All other.....	41, 738	68, 398

The decline in imports of Brazilian cotton goods in 1924 was due to the improved Brazilian exchange. During 1923 there was a temporary demand for these products in view of the low rate of the milreis. The Italian advance in 1924 was due to the firmer demand for cheap prints weighing over 2.5 ounces per square yard. The most important items in the American trade were canvas and prints, but it is noted that Japanese canvas was well received and indications point to larger imports during 1925.

The most important item in the cotton piece-goods trade of Paraguay is a cheap print weighing over 2.5 ounces per square yard. This class forms more than half of the total, amounting in 1924 to 875,169 kilos. A decided demand was evident for colored cotton goods during 1924, especially in vivid pinks, yellows, and greens which were consumed largely in the country districts. A heavy trade in shirtings was reported for the cities.

British Canvassing An Important Factor—Terms.

The cotton-goods trade of this country is controlled by Great Britain, largely because of price, but also because of the periodical visits of commercial travelers who keep in personal contact with Paraguayan buyers. While it is true that several wholesale dealers in Asuncion buy regularly from certain well-known American manufacturers, it is also true that a greater trade could

be secured if American travelers would include Paraguay when canvassing the South American markets.

A further obstacle to the development of this trade by American manufacturers is encountered in the terms of payment demanded. In some cases, credit of 60 days from date of invoice is granted to well-established importers, but, in comparison to the 120 days granted by British, French, and Italian manufacturers, it is of little competing value when the time of transit from American ports is considered. In most cases, Asuncion importers are called upon to cover before their goods have been received. The congestion in the river transportation system from Buenos Aires, and difficulties in customs-house despatch, make long credits essential to the development of this market.

Marking of Weight and Number of Threads Advised.

The new Paraguayan Customs tariff which goes into effect on September 1, 1925, is favorable for the sale of foreign cotton piece goods, as the duty chargeable in most cases is considerably below the present tariff. According to the new tariff the duty will be assessed on the number of threads in a 5-millimeter square. Although there are no specific regulations governing the marketing of textiles, it would benefit importers if all cotton piece goods were marked with the weight per 100 square meters, and the length in meters instead of in yards. It would also be advantageous if cotton goods were marked with the number of threads in a 5-millimeter square.

[A list of cotton-goods dealers in Paraguay will be made available to firms whose names appear in the exporters' index upon application to the Textile Division, Bureau of Foreign and Domestic Commerce, Washington.]

Italian Production of Cotton Goods Increases

No decline in the activity of Italian cotton mills was evident in 1924. Production in that year amounted to 108,000 metric tons (metric ton=2,204.6 pounds), compared with 105,000 during 1923. Unfilled orders on December 31, 1924, totaled 28,000 metric tons—a considerable increase over the 18,000 metric tons in unfilled orders at the end of the previous year. Exports showed an increase of 15 per cent during 1924. (Cable from Commercial Attaché H. C. MacLean, Rome, March 27.)

Additional information regarding textiles appears in this issue under the following sections:

Cable review, Europe:

British protection considered by certain groups.

South African trade slack.

Cable review, Latin America: Unfavorable outlook in Ecuador.

Tariffs and trade regulations:

Austria: Relaxation of import restrictions.

Argentina: Export duties for April on wool.

Bolivia: Reduction of export duty on wool.

British India: Import duties increased.

Peru: New surtaxes levied.

Madras Firm Wishes to Export Hides and Skins

A firm of general merchants and agents in Madras, India, wishes to export hides and skins to the United States. Further information concerning this firm may be obtained from the Hide and Leather Division by referring to Import Trade Request No. 29.

SPECIALTIES

Warren L. Hoagland, Chief, Specialties Division

AMERICAN PURCHASES OF SWISS WATCH MOVEMENTS

Consul Calvin M. Hitch, Basel, Switzerland

There were 411,854 watch movements, valued at \$836,534, exported from Basel, Switzerland, to the United States during 1924. The increase in numbers as compared with 1923 was approximately 40 per cent, while the increase in total value was only about 1 per cent.

While complete watches, on the other hand, increased only approximately 10 per cent in numbers in 1924, the value of them increased 60 per cent.

United States Principal Market—Industry Expanded.

The United States was the principal purchaser of Basel watches during 1924. Great Britain, however, was also a good customer, and Japan, China, Austria, and Germany increased their purchases considerably.

The watch industry of the Basel district has expanded rapidly in the past 10 years, and has become more dependent upon the American and eastern markets, as the European demand diminished during and after the late war. In 1913, for instance, the total value of the exports of watches and movements from Basel to the United States was \$25,338, while the total for 1924 was \$927,862.

Exports of Certain United States Specialties Increase

United States exports of bicycles, fishing tackle, and spectacles and eyeglasses increased considerably in February.

Bicycle exports showed substantial gains over the preceding month and over February, 1924. A gain in number from 310 to 704 and in value from \$7,262 to \$19,239 is recorded in February of this year over the corresponding month of last year. The February, 1925, shipments, in spite of the shortness of the month, were larger than those of January.

Exports of fishing rods, reels, and tackle for February, 1925, were valued at \$48,142 as compared with \$32,107 in January, 1925, and \$32,153 in February, 1924.

The export trade in spectacles and eyeglasses for February, 1925, exceeded in value that for February, 1924, by a wide margin, the figures for the two periods being, respectively, \$70,934 and \$41,849.

Saxon Musical Instrument Manufacturers Prepare for Spring Fairs

Consul Louis G. Dreyfus, Jr., Dresden, Germany

Saxon manufacturers of musical instruments were able in the inflation years, because of their very low prices, to economize by exhibiting only at the Leipzig Sample Fair, but now that normal conditions are re-established in Germany they find it necessary to give greater attention to exhibiting their goods owing to increasing competition from foreign sources.

It has been judged particularly advisable that the sample collections be displayed as conveniently as pos-

sible for foreign customers and the more important fairs held in the border cities meet this necessity very well.

Changes in Production Methods.

Considerable alterations have also been made in production methods during the past year with the view of attracting foreign business. Greater attention will be given to the individual taste of foreign buyers, and quotations will be given in foreign currencies, c. i. f. destination. Special consideration will also be given to import regulations, tariffs, and transportation conditions in the countries where the fairs are to be held. Elaborate literature on the Saxon musical industry has been prepared for foreign customers and the manufacturers anticipate satisfactory business from these new efforts.

Specialty Briefs

The Stuttgart Clock and Watch Industry.

The clock and watch industry in Wurttemberg and Baden underwent a considerable improvement during the last three months of 1924, as compared with the preceding quarter. Substantial orders were received, and a large part of the clocks and watches were shipped to China and Japan. Exports to the United States, however, fell off from \$87,906 during the third quarter to \$68,220 in the fourth quarter of 1924. (Consul Erik W. Magnuson, Stuttgart, Germany.)

Satisfactory Business in Pforzheim Jewelry Trade.

Business in jewelry and precious stones at Pforzheim, Germany, has been good, partly owing to orders for the Easter trade. Domestic business in gold and silver chains has been satisfactory, and also in small silver-plated goods and rings. There has been a continued domestic demand for high quality silver-plated goods, which has allowed plants to work full time. The manufacturers of heavy silver-plated tableware and similar products report a better business. This branch of the industry has been lagging behind up to this time, but now has considerable orders on hand for some months in advance. (Trade Commissioner Douglas Miller, Berlin, Germany.)

Crossword Puzzles Reach India.

The crossword puzzle is beginning to gain popularity in India as it has in America, according to a report from Vice Consul William H. Beach, Bombay. If discretion is used in selecting the types of puzzles, avoiding subjects peculiar to America, and choosing types suitable for the English population, and those for the Indian who is trying to learn English, it may be possible to develop a profitable market. A detailed report and list of dealers will be furnished on application to the specialties division, reference No. 164768.

COMMERCIAL LAW

A. J. Wolfe, Chief, Division of Commercial Laws

BANKRUPTCY REFORMS IN THE BRITISH EMPIRE

Guerra Everett, Division of Commercial Laws

Bankruptcy laws in the British Empire are not uniform. The Dominion of Canada has a Federal law applicable to all its Provinces, and so has the Commonwealth of Australia, but the Canadian and Australian acts differ from each other, although both are taken from the English. The English law is in force in certain of the Crown colonies, but in other territories, like Newfoundland and South Africa, bankruptcy legislation is local in character. While efforts are being made to standardize the law of the Empire, it is claimed that conditions in the various parts of the realm differ to such an extent that a uniform law might fail to meet the requirements of all colonies to an equal degree.

Activities Directed Toward Strengthening Prevailing Law.

In many parts of the Empire legislative activity is directed not so much toward securing substantial uniformity with the other colonies as toward strengthening the law in force. The universal demand is that more "teeth" be put into the prevailing statute. In Great Britain itself a committee was appointed by the Royal Board of Trade to consider what amendments to the Bankruptcy Act, 1914, recent experience has shown to be desirable, "more particularly in regard to the provisions for the discovery and punishment of offenses." Its report, which was presented to Parliament by command of the King, and a copy of which, transmitted by the American consulate general, London, is on file in the Division of Commercial Laws, shows that the committee took much evidence and held many sittings before coming to the conclusion that while with regard to the provisions of the act relating to the discovery of offenses no amendment is required, nevertheless, the definition and punishment of offenses were susceptible of modification.

English Law More Strict Than Colonial Laws.

The committee found, however, that the punishments suggested in several contemporary bills in Parliament were entirely too drastic, and that, as it stood, the English law provided exceptionally stern sanctions. Consideration should be given to the suggestion that creditors continue to sustain bankruptcy losses, more on account of laxity in the giving of credit than because of any inadequacy of the present law; nevertheless, a number of bolts were tightened in the committee report, which suggested, among other things, that acts and defaults of a debtor which are criminal offenses if committed within 6 months before the presentation of the bankruptcy petition, should be made criminal offenses if committed within 12 months before the presentation of such a petition.

Although there are 16 and 18 acts, respectively, defined as criminal offenses in the English and Canadian laws, many of the other laws in force in the British Empire define a much smaller number. This is the case in Newfoundland, for example, where only five offenses are provided against by the present law.

Newfoundland Law Subjected to Scrutiny.

A speech delivered before the Board of Trade of Newfoundland by former Premier W. R. Warren, on March 6, 1925, the text of which was transmitted to the Division of Commercial Laws by the American consulate at St. John's, supplements many reports received from the same source bearing upon the agitation for reform of the Newfoundland bankruptcy provisions. In this case there seems ample room for reform, although even here it is recognized that "you can't make a man honest by act of Parliament," and, consequently, that care in granting credit is more to be desired than bankruptcy laws with jaws of steel.

Amendment to South African Statute Proposed.

Other reports contain the information that in the Union of South Africa recent bills have been offered in the legislature to amend the local bankruptcy statute. It is intimated that the passage of at least one of these bills will affect the status of goods held on consignment, and, therefore, the Division of Commercial Laws is making an inquiry through the Cape Town office of the bureau concerning the extent of this projected reform. Persons interested will be kept informed upon request.

French Codes Extended to Alsace-Lorraine

Mitchell B. Carroll, Division of Commercial Laws

The civil and commercial codes of France, as in force January 1, 1925, have been extended, with certain exceptions, to Alsace-Lorraine. The application of the main body of French laws to the recovered Provinces has been envisaged since the close of the war, but the task was difficult because of the great difference in character of the German laws then in force, and of the danger of disturbing too radically the social and economic life of the inhabitants.

Civil Services Transferred to Central Authority.

An analysis of the law of June 1, 1924, which determines the new legal régime in Alsace-Lorraine, has been submitted to the Division of Commercial Laws by Consul Chester W. Davis, Strasbourg. The law transferred the powers formerly exercised by the commissariat general of the Republic of Strasbourg—which was abolished on January 1, 1925—to the Prime Minister of France. Under his authority, a secretariat general at Strasbourg will have general direction over the civil services of Alsace-Lorraine, comprising the French Departments of Haut-Rhin, Bas-Rhin, and Moselle, except those services which may be directly administered by the Ministry at Paris.

Civil Legislation Extended—Local Institutions Preserved.

Title I of the new law provides for the extension of the body of French civil legislation to the new Departments, with certain exceptions, and abrogates all local laws other than those specified to remain in force. Among those which still will be applicable are the codes regulating professions; the laws relating to social insurance, mining, navigable waters, and liens on vessels; legislation governing cooperative societies; and certain

laws governing property transfers and leases, service contracts and relations between master and servant.

Among the local institutions which were preserved with the ultimate view of assimilating them into French law are the registers for real property, the matrimonial register, and the legal régime as to insurance contracts and certificates of inheritance. These institutions are to be continued for 10 years during which time French legislators may consider the advantages of extending them to the whole of France.

French Civil Procedure Introduced—Local Statutes.

Among the rules of French civil procedure which are introduced are those requiring the proof of most legal transactions to be in writing, with the result of restricting the local method of proving many facts by oral testimony. The local laws regarding judicial sales of real property have been adapted to French legislation.

The new law also abrogates the local commercial statutes, unless specifically excepted, and names the French statutes which will be applied. Among the local laws to remain in force are those relating to loan banks and certain provisions relative to limited liability which are not found in French law.

Commercial Laws Affected.

The French law regarding the register of commerce is to be applied. Corporations organized under local law are permitted to change their by-laws so as to accord with French requirements within a certain period of years. The new régime also includes the French law on insolvency and judicial liquidation as applied to noncommercial debtors as well as to business houses.

Liability of Norwegian Government-Controlled Bank Adjudicated

Acting Commercial Attaché H. Sorensen, Copenhagen, Denmark

Since the passage of the bill providing for public administration of Norwegian banks in difficulties a number of disputes in connection with the application of this law have been brought before Norwegian courts. The courts further have been asked to decide whether or not the indebtedness of a person or firm to a bank under administration might be applied against the deposit of the same person or firm with the same bank, so as to secure a liquidation of the indebtedness.

Recently a Norwegian bank under administration brought claim against a Norwegian firm for payment of a note for 1,050 crowns. The firm admitted the indebtedness, but demanded that the sum be subtracted from the 60,000 crowns which it had on deposit in the bank, and of which it was unable to secure possession because of the bank administration act.

The court ruled that the fact that the bank under the administration act could not be forced into bankruptcy did not relieve it from the obligation to offset indebtedness against tied-up deposits.

Commercial Law Briefs

French Taxes Reduced 5 Per Cent for Advance Payments.

On March 11 a French decree was issued making effective article 6 of the law of February 28, 1925, which grants a 5 per cent discount on advance payment of income taxes and of direct and assimilated taxes. Exception is made, however, of the extraordinary tax

on excess war profits. (Commercial Attaché Chester Lloyd Jones, Paris.)

French Requirement of "Bordereau" Revoked.

Because of intense opposition, the French decree of September 16, 1924, requiring that all persons, firms, and banks handling coupons or negotiable securities keep a permanent record—"bordereau"—of transactions therein for tax-collection purposes, has been revoked by the decree of February 22, 1925, and such formalities are no longer required.

Japanese Exporters' Association Act Summarized.

Copies of the summary of the bills recently introduced in the Japanese Diet, known as "Exporters' Association act" and "Export Manufacturers' Association act," have been transmitted to the Division of Commercial Laws by Acting Commercial Attaché Frank Rhea, Tokyo, and may be consulted by reference to file No. 83547.

United States-Austria Copyright Arrangement Promulgated.

A proclamation extending to citizens of Austria the benefits of section 1 (e) of an act of Congress of the United States, approved March 4, 1909—which affords copyright on parts of instruments serving to reproduce mechanically musical works—was signed by the President on March 11, 1925. The proclamation is based on assurances received from the Government of Austria that similar protection is available in Austria to citizens of the United States.

Chilean Income-Tax Law Amended.

One of the principal objections to the new Chilean income-tax law was the omission of a provision for surtaxes. According to a cable from Commercial Attaché Ralph H. Ackerman, Santiago, amendments to the income-tax law providing surtaxes were decreed on March 13, copies of which are expected to be available to inquirers in the near future. The amendments to the law previously published on January 10, as well as a translation, have been received by the Division of Commercial Laws. Refer to file No. 163627.

Amendments to Canadian Copyright Act Proposed.

A special committee of the Canadian House of Commons is conducting hearings upon the bill to amend the copyright act of 1921, which went into effect January 1, 1924. One clause deals with the inclusion of radio broadcasting as coming under the term "performance"; while another seeks to repeal the licensing clauses of the present act, whereby the work of a Canadian or American author, which has not been published in Canada, can be produced in Canada by a Canadian publisher, on the securing of a license and the paying of a royalty to the author. (Trade Commissioner Lynn W. Meekins, Ottawa.)

Trading Stamps and Coupons Prohibited in South Australia.

A new act, known as the "trading stamp act, 1924," is to become effective in South Australia on March 1, 1925. By it trading stamps and coupons entitling the holder to free admittance to any theater or race course; travel by rail, tram, or boat; or to obtain or receive any valuable consideration or benefit or advantage of any kind whatsoever, become illegal. Any person who contravenes this act shall be liable to a penalty not exceeding £20. There is a section which states that "nothing herein shall debar any seller of goods from issuing therewith or in connection therewith a statement that in the event of insufficient quantity or defective quality a total or partial refund of the pur-

chase money may or will be allowed." A similar act is now operative in the State of Queensland. (Trade Commissioner E. G. Babbitt, Melbourne.)

Changes Proposed in Dutch Taxation.

In order to alleviate the heavy direct taxation in the Netherlands the Minister of Finance intends to introduce bills for the reduction of certain direct taxes, such as the income tax and defense tax No. II. It is further planned to compensate in part for the loss in State revenue by the institution of a luxury tax before next summer, which, it is estimated, would yield 25,000,000 florins (1 florin=\$0.399 at current exchange). In addition to placing a tax of 10 per cent on expenditures in hotels, restaurants, and similar establishments, the proposed measure would likewise levy this amount on various articles, such as pianolas and other mechanical pianos, music rolls, phonographs, and records. Moreover, a tax of 5 per cent would be levied on motor cars, auto chassis, coach work, motor cycles, side cars, pleasure craft, radio installations, and accessories. (Assistant Trade Commissioner Philip E. McKenney, The Hague.)

Government Supervision of Czechoslovak Cartels.

All cartels in Czechoslovakia will be subject to State supervision by virtue of a new law which is reported in the *Industrie und Handel Zeitung* of February 18. This supervision extends to both their creation and administration. A State economic commission is to be established which will require the registration of cartels and look into the conduct of their affairs. It is

to be composed of representatives of the administration of industry, commerce, and the consuming public. It will have the right of investigating their business methods, books, office accounts, and warehouses, and must be advised of their decision, amalgamations, and all business changes. Its powers are even to extend to recommending the revocation of the license to operate obtained through having registered, and the taking of punitive measures.

American v. Native Order Blanks in South Africa.

Because of the difficulties entailed in the use of order blanks sent by American firms to South Africa, Trade Commissioner Perry J. Stevenson, Johannesburg, discourages their employment. There is a law in that country against invoice forms being available as they might be used in preparing fraudulent invoices to present to the customs. While this law may not apply to order blanks there is a chance that the authorities would look with suspicion upon such forms unless the firm is actually engaged in business in South Africa through its own factory representative or branch. It is customary for local agents, who often represent several foreign firms, to use their own order forms. If there are any particular points that the American principal desires to have included in the contract, they can be covered in the instructions to the agent, and confirmed by the home company when the order is sent to them for acceptance.

MINERALS

Guy C. Riddell, Chief, Minerals Division

ESTHONIAN OIL-SHALE INDUSTRY IN 1924

Acting Commercial Attaché C. J. Mayer, Riga, March 5

Almost the entire 1924 output of oil shale in Esthonia was placed on the market, and it is estimated that an economy of 5,648,000 poods of coal, or 56,480 cubic fathoms of firewood, was made possible in consequence. The aim of the administration of the Esthonian Oil Shale Mines is to supply the domestic industries and railway with fuel and oil and to increase the exportable quantity of these products.

Annual Requirements.

The annual oil-shale requirements of the country are stated to include 10,000,000 poods for cement plants, 20,000,000 for other industries, 12,000,000 for railways, and 3,000,000 for various other consumers, making a total of 45,000,000 poods. In addition, 7,500,000 poods of shale are required for the production of the oil requirements of the country. Assuming an equal quantity of oil for exportation, 15,000,000 poods of shale would be required for oil production in addition to the 45,000,000 used directly as fuel, thus bringing the country's total annual requirements of shale to 60,000,000 poods. The reports for 1924 show that 25 per cent of the proposed program was accomplished in that year.

The estimates for 1925 call for the production of 8,300,000 poods of shale for cement plants, 2,000,000 for the "Turgel" paper mill, 1,200,000 for the Baumwollspinnerei, 1,400,000 for the Reval electric-power

plant, 4,000,000 for railways, and 2,100,000 for all other purposes, making a total of 19,000,000 poods. The shale requirement of the oil-distilling plant, which will commence work in the spring, is estimated at 5,000,000 poods for the year, so that an output of 24,000,000 poods is planned, of which 17,500,000 will be produced in Kuchtel and 2,500,000 in Kuckers; it will be necessary to take the remaining 4,000,000 from the stocks on hand.

Revenue from Oil-Shale Industry.

The State budget for 1925 provides a net profit of 20,366,421 Esthonian marks (the Esthonian mark exchanges at present at about 380 to the dollar) derived from the oil-shale industry, the turnover of which is being estimated at 225,320,810 marks. The sum of 36,800,000 marks of extraordinary expenditure has been provided by the 1925 budget, chiefly for construction work and the improvement of the machinery and equipment.

Distribution to Consumers Facilitated—Concessions Developed.

An oil tank holding 250,000 poods of oil has been taken on lease by the oil-shale mines in order to facilitate the distribution of oil to the consumers. The oil is being pumped from the reservoir directly into ships and cisterns.

As reported in Special Circular No. 111, the Esthonian Government granted up to April 1, 1924, a total of 38 concessions, on which only three firms are doing

practical work in mining and the erection of retorting plants. These firms are the State Oilshale Industry at Kohtla and Kukruse, the Esthonian Oil Development Syndicate at Vanamoisa, and the Esthonian Shale-Oil Co. at Pussi. All of the other concessionaires are engaged in investigation and preparatory work.

Galena and Graphite Obtainable in South America

A Uruguayan producer of galena and graphite desires to establish contact with American consumers of these minerals. Details of this opportunity will be furnished upon application to the Minerals Division, citing reference No. 161059.

Additional information regarding minerals appears in this issue under the following sections:

Cable review, Europe:

South African gold returns lower, but platinum prospecting active.

British petroleum market active.

Tariffs and trade regulations:

Austria: Relaxation of export restrictions on magnesite.

Bolivia: Additional export taxes established.

Chile: Asbestos roofing conditionally exempted from duty.

Czechoslovakia: Relaxation of export restrictions.

Newfoundland: Duties on kerosene removed.

Peru: New surtaxes levied.

List of "Circulars issued by the bureau."

"Foreign trade opportunities."

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

FOREIGN BORROWINGS OF JAPAN

Elgin E. Groscclose, special agent, Finance and Investment Division

The first large-scale flotation of Japanese bonds in the United States occurred in 1905, when New York shared with London, Paris, and Berlin in an issue of \$25,000,000 for the consolidation and redemption of the fourth and fifth issues of Exchequer bonds. A previous loan of £10,000,000—the first foreign borrowing of the Japanese Government—had been raised in London in 1899, for the purpose of meeting the expenditures required for the construction of railways, steel manufacturing, and the extension of the telephone system.

During 1905 Japan also raised \$60,000,000 in two issues of \$30,000,000 each, to meet the extraordinary expenses of the war with Russia—the first jointly in New York and London, and the second in London, New York, and Germany.

Loan for Reconstruction Purposes Floated in United States in 1924.

At various times in 1907, 1910, 1913, and 1920 Japanese loans were placed in London and Paris. In 1924 a \$150,000,000 loan was floated in New York for reconstruction purposes following the earthquake. This was the first Japanese governmental loan expressed in dollars. At the same time \$25,000,000 were raised in London. Of the \$150,000,000 loan an amount of about \$25,000,000 was sold abroad, largely in the Netherlands, and approximately \$66,000,000 of the loan were used to retire previous issues.

Industrial and Private Issues Offered.

The first Japanese industrial loan publicly offered in the United States was a Government-guaranteed issue in 1923—that of the Oriental Development Corporation—for \$19,900,000. In 1924 two issues were floated, one of the Industrial Bank of Japan for \$22,000,000 and one of the Great Consolidated Daido Electric Power Co. for \$15,000,000; and, recently, a \$15,000,000 loan was offered for the Toho Hydro-Electric Corporation. Although the Government has announced its intention of seeking no further loans abroad this year, large sums are being sought by private corporations, particularly hydroelectric enterprises.

Total Debentures of Banks and Corporations Summarized.

Since the earthquake the amount of loans floated at home and abroad has increased tremendously. Ac-

cording to an investigation made by the Industrial Bank of Japan, the total debentures issued by banks and corporations in 1924 amounted to 931,542,000 yen, compared with 282,661,000 in 1923. The totals for each year since 1912 follow:

	Yen
1912	15,650,000
1913	38,504,000
1914	6,961,000
1915	48,688,000
1916	47,860,000
1917	57,606,000
1918	78,529,000
1919	141,669,000
1920	142,780,000
1921	216,750,000
1922	173,150,000
1923	282,661,000
1924	931,542,000

Foreign Borrowing an Advantage—Need for Capital.

The advantage of foreign borrowing is indicated by the high interest rates prevailing in Japan. The average rate of interest on current deposits throughout the country has risen gradually from 3.2 per cent in 1912 to 3.6 per cent in 1921; on savings deposits, from 4.8 per cent to 5.1 per cent; on loans, from 9 per cent to 10.9 per cent; and on discounted bills, from 8.8 per cent to 10.7 per cent. Call money during 1924 reached its highest in January, at 9.67 per cent, and the lowest in June, 4.01 per cent.

The situation of Japan financially is similar to that of the western United States in its early days. A vast development is under way, for which the domestic supply of capital is insufficient. This handicap was accentuated by the earthquake and fire of September, 1923, and the restoration work consequent will require enormous expenditures for some time to come.

1924 Expenses of Dresdener Bank Large

Consul A. W. Kliefoth, Berlin

The Dresdener Bank, one of the large "D" banks of Berlin, recently issued its balance sheet for 1924. This shows that the bank was unable to reduce its general expenses to a normal level. About 80 per cent of the entire gross profits for 1924, amounting to 76,710,100 marks, was absorbed by operating expenses, which had only amounted to 33 per cent of the gross profits in 1913. The staff of the bank was very large

during the inflation period, and, although a considerable reduction was effected in 1924, it is still more than twice as large as in 1913. At the end of 1924 the staff numbered 11,567 persons, compared with 22,853 at the end of 1923 and 4,636 in 1913.

Dividend of 8 Per Cent Declared.

The gross profits were derived from the following items: Bills of exchange and interest, 33,980,000 marks; commissions, 42,200,000; and miscellaneous income, 540,000. Net profits totaled 8,349,878 marks,

out of which a dividend of 8 per cent will be distributed on 78,000,000 marks of capital stock, amounting to 6,240,000 marks. The legal reserve will be increased by 1,400,000 marks, or 30 per cent of the capital stock, and 300,000 marks will be placed in the pension fund.

TRANSPORTATION

E. S. Gregg, Chief, Transportation Division

AVIATION

Air Service Between Spain and South America

The first step toward the establishment of an air service between Spain and South America was taken on February 8, when the Spanish Government issued a decree providing for the creation of an aerial mail line to the Canary Islands. The decree provides that the concession for this service be awarded to a strictly Spanish corporation, which shall be entitled to the benefits of the decree relating to grants in aid of national industries.

The chief features of the proposed air service are:

1. A weekly round trip, increasable to two or more a week if required by the postal service, on days and hours which the Director General of Communications shall fix.
2. The service shall be rendered by machines having a minimum speed of 140 kilometers an hour when fully laden, a radius of action of more than six hours' flight at full speed, and a large capacity of 600 kilos which shall be reserved for mail.
3. The machines shall have two or more motors and shall be equipped with wireless.
4. The services shall be rendered in the following order: From Seville to Larache to Mogador or Agadir; from Mogador or Agadir to Cape Juby in land planes, from Cape Juby to Las Palmas; and from Las Palmas to Santa Cruz de Tenerife in amphibious planes.
5. There shall be principal air stations at Seville, Las Palmas, and Tenerife, all provided with such hangars and other equipment as may be deemed adequate for the successful operation of the line. The department of Government, in cooperation with the Bureau of Civil, Military, and Naval Aeronautics shall have charge of supplying equipment.
6. The life of the concession shall be 10 years, renewable for the same length of time by the common consent of the contracting parties, if considered advantageous to the interests of the administration.

German Air-Service Connections for 1925

Office of Commercial Attaché, Berlin, March 2

It is reported that during the coming spring the German Aero Lloyd (Deutsche Aero-Lloyd-Gesellschaft) and the Junker Airplane Transportation Co. (Junkers Luftverkehr A. G.) will maintain or take part in the following airplane connections:

Berlin - Hanover - Amsterdam - London.	Zurich - Stuttgart - Mannheim - Frankfurt - Dortmund - Bremen - Hamburg.
Berlin-Danzig-Koenigsberg.	Bremen-Hamburg-Copenhagen-Malmö.
Koenigsberg-Riga - Reval - Helsingfors.	Hamburg-Bremen-Amsterdam-London.
Koenigsberg - Smolonsk - Moscow.	Berlin-Copenhagen-Malmö.
Danzig-Stockholm (partly by night).	Munich - Stuttgart-Baden - Baden.
Berlin-Leipzig-Fuerth-Nuernberg-Munich-Innsbruck.	Berlin - Warnemuende - Stockholm.
Frankfurt - Fuerth-Nuernberg-Munich.	Berlin-Stettin.
Geneva-Zurich-Munich-Vienna-Budapest.	

Laguna, Mexico, to Have Aerial Transportation

Consul Bartley F. Yost, Torreon, March 10

A Mexican firm has purchased an airplane in the United States, with the expectation of starting an aerial transportation company in the Laguna consular district. Present plans include the location of a hangar on the automobile road between Torreon, Coahuila, and Lerdo, Durango, with arrangements for long distance trips to such other towns as Monterey, Chihuahua City, and Saltillo. A flat rate of 35 pesos (\$17.50) a trip for one passenger anywhere in the Laguna has been made.

SHIPPING

Routing Shipments to Cuba

Consul Frank Bohr, Cienfuegos, Cuba, March 9

Several instances, where instructions regarding the shipment of merchandise to Cuba were entirely disregarded or where no instructions were given and shipments consequently were routed in such a way as to cause inconvenience, delay, and unnecessary expense, have recently been brought to the attention of the American consul at Cienfuegos. In certain cases the wishes and interests of the consignee were subordinated to the convenience of the shippers or the interests of the forwarders who desired to use their own

agencies or representatives in Cuba; in other cases the improper routing seems to have been caused by inexperience of shippers or forwarders.

The advisable procedure in routing shipments is to send them as directly as possible. Facilities exist for direct and regular shipments from the United States to the three principal customs ports in the consular district of Cienfuegos—Cienfuegos, Caibarien, and Sagua la Grande—but not to minor ports and small interior cities. Shipments to the latter destinations should be sent via the Cuban ports that are most convenient to consignees.

Recommendations for Shipping Mailable Merchandise.

As a rule, shipments of mailable merchandise from the United States to the customs ports of Cienfuegos, Caibarien, Sagua la Grande, Trinidad, and Tunas de Zaza are sent by registered mail rather than by express. Besides expediting delivery, this method of shipping has an advantage in that the customs service maintains offices in the post offices, and consignees can therefore clear their shipments without employing customs brokers.

Considerable merchandise from the United States is also received by mail at interior points within the Cienfuegos consular district. Shipments to some 60 cities and towns near Cienfuegos are entered at customs ports and then forwarded to the outlying cities and towns for delivery. Shipments sent by express are generally entered at Habana or some other distant port, often to suit the convenience of particular express companies, and additional charges for customs brokerage and other expenses are invariably assessed.

Exhibits Available

Persons interested in the following reports may obtain them from the Transportation Division or through the district and cooperative officers of the Bureau of Foreign and Domestic Commerce, by requesting the proper exhibit number:

164174—*Prescott, Ontario*.—New steamship service for tourists on the Pacific coast of Canada by Canadian National Railways, to be inaugurated June 22. (Transmitted by Vice Consul Samuel E. Green, jr., Prescott.)

164092—*Genoa*.—Commercial movement of the port of Genoa in 1924; statistics of imports and exports by commodities. (Transmitted by Consul General John Ball Osborne, Genoa.)

164737—*Buenos Aires*.—Prevailing freight rates at port of Buenos Aires during January, 1925; rates to the United Kingdom and the Atlantic coast of the United States on grain, linseed, dry hides, and wool. (Transmitted by Cecil W. Gray, clerk to consul general, Buenos Aires.)

164726—*Antwerp*.—Administration of the port of Antwerp. (Transmitted by Vice Consul Juilian F. Harrington, Antwerp, February 20.)

164089—*Genoa*.—Traffic at port of Genoa in 1924, compared with 1923; statistics of entry and clearance and of tonnage, by nationality. (Transmitted by Consul General John Ball Osborne, Genoa.)

164747—*Georgetown*.—Comprehensive report on steamers' port expenses at Georgetown, British Guiana. (Transmitted by Consul Gaston Smith, Georgetown, February 20.)

219.—*London*.—Life-saving appliances rules; buoyant apparatus for foreign-going and home-trade passenger ships; instructions to surveyors by British Board of Trade. (Transmitted by Harold A. Burch, office of commercial attaché, London, March 12.)

164755—*Montreal*.—Notes on yearly port traffic. (Transmitted by Consul General Albert Halstead, Montreal.)

164762—*San Salvador*.—Notes on yearly port traffic, 1924. (Transmitted by Consul W. J. McCafferty, San Salvador.)

164756—*Naples*.—Notes on yearly port traffic, 1924. (Transmitted by Vice Consul Julian C. Dorris, Genoa.)

164748—*Helsingfors*.—Freight rates on principal commodities from Finland to the United States during February, 1925. (Transmitted by Consul J. F. McGurk, Helsingfors.)

164806—*Paris*.—French railway receipts, expenses, and operating ratios for 1924. (Transmitted by Consul Charles D. Westcott, Paris.)

220—*Brussels*.—Report by the Minister of Public Works of Belgium on the navigable waterways of that country (in French), with complete and detailed map attached. (Transmitted by Commercial Attaché F. W. Allport, Brussels.)

25845—*London*.—British railways protest against subsidized competition; a report on the methods of local taxation of the railways, to the benefit of motor-truck and bus lines. (Transmitted by Harold A. Burch, office of the commercial attaché, London, March 17.)

165290—*Buenos Aires*.—Published statement of the annual meeting of the Entre Rios Railway Co. (Ltd.). (Transmitted by Consul W. P. George, Buenos Aires.)

165323—*Munich*.—Regulations governing and announcement (in German) concerning German Traffic Exhibition to be held at Munich from June to October, 1925. (Transmitted by Consul Robert D. Murphy, Munich.)

165245—*Memel*.—Steamship services between Memel and foreign ports. (Transmitted by Consul H. E. Carlson, Memel, February 21.)

165425—*Zurich*.—Swiss Federal Railway budget for 1925. (Transmitted by Consul General Robert Frazier, jr. (on detail as inspector), Zurich.)

Miscellaneous 215—*Ottawa*.—Summary of monthly traffic reports of Canadian railways for the calendar year 1924; compiled by the Dominion Bureau of Statistics. (Transmitted by Trade Commissioner Lynn W. Meekins, Ottawa.)

164654—*London*.—Statement on return of sums payable out of the Exchequer in the United Kingdom in the financial year ending 1924 in respect of steamship subsidies for foreign and colonial services. (Transmitted by Consul L. C. Pinkerton, London.)

25098—*Vienna*.—Market in Austria for packing devices, including catalogues of packing devices now manufactured in that country, specifications and drawing of a widely used fiber box, and a box-stapling device sold extensively in Austria, Central European, and Balkan States. (Transmitted by Commercial Attaché H. Lawrence Groves, Vienna.)

Miscellaneous 216—*Paris*.—Inland waterways in France; detailed map showing canals, navigable rivers, river and sea ports, and steamship connections; also technical map of the Seine, giving details concerning its navigability, location of locks and bridges, mean water level at all points, etc. (Transmitted by Commercial Attaché Chester Lloyd Jones, Paris.)

Miscellaneous 217—*Foochow*.—Port charges at Foochow, including buoy hire, anchorage, tonnage, and fumigation fees, bill of health, and pilotage charges. (Transmitted by Consul Ernest B. Price, Foochow, China.)

25667—*Hamburg*.—Ship construction in German yards and Danzig during 1924, including details as to sizes and types of vessels and capacity of yards. (Transmitted by Trade Commissioner E. C. Squire, Hamburg.)

Miscellaneous 218—*London*.—National Maritime Yearbook, 1924; containing summary of agreements as to standard rates of pay, conditions of employment, and other determinations; revised to June 15, 1924. (Transmitted by L. A. Thorpe, clerk to commercial attaché, London.)

164724—*Zurich*.—Publications regarding the International Exhibition for Inland Navigation and Utilization of Hydraulic Power, to be held at Basel from July 1 to September 15, 1926; including letter from the organizing committee, regulations affecting exhibitors, exhibitor's application, and statement of aim and scope of the exhibition. (Transmitted by Consul General Robert Frazier, jr., Zurich.)

RAILWAYS**Proposed Railroad Construction in Spain**

Commercial Attaché C. H. Cunningham, Madrid March 9

After a careful study of extensions needed, that section of the Spanish Superior Railroad Council having to do with plans and projects for new construction has recommended the construction of 9,142 kilometers of railroad, involving the expenditure of 5,000,000,000 pesetas (\$700,000,000) over a period of 20 years.

Before passing finally on these plans, the council intends to publish them for public discussion during a

period of two months, and after they have received the approval of the General Staff of the Army and the Council of Public Works the final recommendations will be made to the Government.

The recommendations of the subcommittee fall into three classes—main lines, provincial lines, and local lines—of which 3,176 kilometers belong in the first class, 4,089 in the second, and 1,877 in the third. The principal lines already under construction are: The road from Gijon to Ferrol, 321 kilometers; Santander

to Calatayud, 424; Lerida to St. Giron (international railway between France and Spain), 175; Repoll to Puigcerda (also international railway), 51; and Alcaniz to San Carlos de la Rapita, 150, this last being on the new main line from Tarrogon to Madrid.

Of the 9,142 kilometers to be constructed, 1,374 are already being built. The Railroad Council is also outlining a plan of reconstruction and improvement of lines already operating and the acquisition of new material for them during a period of five years, involving an expenditure of \$196,420,000. Attention is also being given to the matter of financing these operations, and the improvements will undoubtedly be carried out by public loans. The sum of \$875,000,000 thus added to

the already outstanding debt of the Spanish railroads will constitute a heavy burden, considering their present earning capacity and low rate of dividends paid.

Additional information regarding transportation appears in this issue under the following sections:

Cable review, Latin America:

Brazilian exchange weak during March.

Unfavorable outlook in Ecuador.

Cuban sugar crop about half ground.

Cable review, Europe: British shipbuilding meets keen competition.

Tariffs and trade regulations: British India: Import duty on railway materials reduced.

List of "Circulars issued by the bureau."

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

COMMERCIAL TREATIES AND AGREEMENTS

AUSTRIA—SPAIN

Commercial Attaché C. H. Cunningham, Madrid, February 23
Assistant Trade Commissioner Elbert Baldwin, Vienna, March 2
Consul F. A. Henry, Barcelona, March 7

Commercial Treaty Effective—Tariff Concessions.

The *modus vivendi* putting into effect on February 16, 1925, the new commercial treaty between Austria and Spain in anticipation of its ratification, contains certain reductions in the Austrian tariff on Spanish products which are of interest to American exporters. The articles on which reductions are granted by Spain were listed in the announcement of this treaty in *COMMERCE REPORTS* for March 9, but information was not available at that time in regard to the reductions granted by Austria to Spanish products, below the duties already conceded by treaties with other countries. These reductions are as follows:

Item No.	Articles	General rate, gold crowns	Spanish conventional rate, gold crowns
		Per 100 kilos	Per 100 kilos
ex 5	Sweet peppers (<i>capsicum dulce</i>).....	125	50
ex 12	Bananas.....	30	8
15	(1) Fresh almonds.....	60	18
36	(a) Dried prunes:		
	(1) In bulk or in packages of 35 gross kilos or over.....	14	10
	(2) In other packages.....	25	12
	(b) Other dried fruits:		
	(ex) 1. Pulp or mash (except from prunes).....	10	6
	2. All others.....	20	12
ex 75	(a) Pure olive oil in casks, leather bottles, bladders, and other containers of 25 kilos and over.....	5	4
	(b) In containers under 25 kilos.....	10	8
	NOTE.—These consignments must be accompanied by a certificate of analysis showing the certification of an officially recognized Spanish public analysis office that the olive oil is pure. In case of doubt of purity the oil can be proved by a reexamination in an officially recognized Austrian public analysis office at the expense of the person entitled to the goods.		
90	(b) Fish prepared or marinated in oil, in casks.....	35	20
ex 107	(b) Sardines in olive oil in airtight containers.....	85	40
	ex (c) 4. Tomatoes, preserves, in airtight containers.....	100	45
	(g) 4. Olives, in airtight containers.....	100	40
271	(a) Inlaid linoleum, linoleum of more than 2.2 mm. thickness.....	45	40

* Same rate as the conventional rate previously granted on dried almonds.

* Former conventional rate on all fish in oils hermetically sealed, 60 crowns.

* Former conventional rate on these products, 50 crowns.

* Former conventional rate on these products, 65 crowns.

New conventional rates are also provided on certain Spanish cork products which are considerably lower than the rates previously in force.

The only Austrian products granted rates in Spain lower than those already in force by virtue of treaties with other countries are (item 199) bags and trunks, and (item 377) milk cans of tinned iron.

Reciprocal most-favored nation treatment is also provided for the application of customs regulations and import and export restrictions. It is further provided that in so far as the Spanish goods upon which Austria has granted reduced rates of duty may be under the requirement for an import license, the Austrian Government will permit importations until a special agreement is reached, with a stated amount of Spanish liquors, cognacs, and wines permitted to be imported.

Austria reserves from most-favored nation treatment any concessions which may be granted to the various states which formed part of the former Austro-Hungarian Empire, while Spain reserves any concession which may have been or may be granted to imports from Spanish Morocco or the Spanish American Republics.

Austrian products imported into the Canary Islands and the Spanish possessions in North Africa are to be granted most-favored-nation treatment.

The treaty further provides that articles manufactured from imported materials brought in on the basis of temporary free admission will be considered as manufactures of the country concerned.

In order to avoid abuse of the privileges granted by this treaty, either party may demand certificates of origin covering imports from the other country. Parcel post packages are exempt from this requirement.

The treaty will remain in force until its denunciation by one of the contracting parties. In case of denunciation it will expire three months after notice is given.

[At present American products receive benefit of the reductions granted by Austria by treaties with other countries. New Spanish reductions (made since November 5, 1923), are not applicable to American products. See *COMMERCE REPORTS* for March 6, 1925, for a full account of the other provisions of this treaty.]

FRANCE—GREECE

Eugene A. Masuret, Trade Commissioner's office, Paris, March 12

Temporary Extension of Commercial Arrangement.

The commercial arrangement between France and Greece, which was to have expired on March 1, has been extended to June 1, 1925, according to a notice published in the French Journal Official of March 9-10, 1925.

[See COMMERCE REPORTS of November 10, 1924, for notice of general denunciation of commercial treaties by Greece.]

HUNGARY—NORWAY

Board of Trade Journal, London, March 19

Ratifications of Commercial Treaty Exchanged.

Ratifications of the most-favored-nation commercial treaty between Hungary and Norway, signed September 23, 1924, at Oslo (see COMMERCE REPORTS of November 10, 1924), were exchanged on February 14, 1925.

GERMANY—ITALY

Dispatch from Ambassador H. P. Fletcher, Rome, March 31

Modus Vivendi Continued Indefinitely.

The Italo-German modus vivendi which was due to expire on March 31, 1925, has been continued indefinitely pending the conclusion of a commercial treaty between the two countries. The present modus vivendi provides for reciprocal most-favored-nation treatment with exception therefrom on a special list of goods reserved by each country. Germany has now, however, granted most-favored-nation treatment to Italian fresh tomatoes, fresh grapes, and polishing stones, while Italy has granted similar treatment to German bolts, screws, and furniture trimmings of iron and steel.

[Announcement of this modus vivendi was made in COMMERCE REPORTS for January 19, 1925.]

GENERAL TARIFF CHANGES

CANADA

Trade Commissioner Lynn W. Meekins, Ottawa, March 24 and 25

Changes in Import Duties and Sales Tax.

The budget submitted by the Acting Minister of Finance on March 24, to the Canadian Parliament, now in session at Ottawa, includes proposals for changes in import duties, provisionally in force from March 25, affecting grapefruit, coal, farm and logging sleds, rolling mill rolls, engines for fishing boats, well-drilling machinery and rope for use in drilling wells; wicks; and gas for heating, cooking, and lighting; adds a few articles to the list of exemptions from the sales tax, and provides for drawback of duties on materials for specified uses. Following is a summary of the changes reported:

Import duties.—The duty on all kinds of bituminous coal and coal not specially provided for, when imported into Canada from the United States and countries having no commercial treaty with Canada, is changed to 50 cents per ton (2,000 pounds). This results in a small reduction on bituminous coal and coal not specified, which formerly paid 53 cents per ton, and a material increase in the duty on bituminous slack coal that will pass through a three-quarter inch screen from 14 to 50 cents per ton.

Tariff Nos. 101a, 587, 588, 591, 591a, and 774 are repealed, and the new items which are substituted therefor, and other tariff numbers added, are as follows:

Item No.	Article	Duties		
		General	Inter-mediate	Preferential
101a	Shaddocks or grapefruit not specified.	Per 100 pounds \$1.00	Per 100 pounds \$1.00	Per 100 pounds \$0.50
101aa	Shaddocks or grapefruit when imported from a place of growth by ship direct to a Canadian port.	1.00	.50	Free.
453e	Engines to be used exclusively in the propulsion of boats bona fide owned by individual fishermen for their own use in the fisheries under regulations prescribed by the Minister of Customs and Excise.	Ad valorem 15%	Ad valorem 12½%	Ad valorem 10%
469a	Well-drilling machinery and apparatus and parts thereof, and rope 2,100 feet and over in length, capable of drilling wells of 2,000 feet and over in depth, of 4 inches and over in diameter, and of raising and lowering casing over 4 inches in diameter for such wells for drilling for water, natural gas, and oil, and for prospecting for minerals, not to include motive power.	5%	5%	5%
553a	Braided candle wick, with or without wire center, or braided taper wick, with or without wire center, when imported by manufacturers of wax candles or wax tapers for use only in their own factories in the manufacture of wax candles or wax tapers.	Free.	Free.	Free.
588	Coal, bituminous, and coal not specified.	Per ton \$0.50 Per 1,000 cubic feet \$0.06	Per ton \$0.45 Per 1,000 cubic feet \$0.06	Per ton \$0.35 Per 1,000 cubic feet \$0.06
588a	Gas for heating, cooking, or illuminating.	Ad valorem 10%	Ad valorem 10%	Ad valorem 5%
591	Farm wagons, farm sleds, logging wagons, logging sleds, and complete parts thereof.	25%	25%	17½%
591a	Freight wagons, drays, sleighs not specified, and complete parts thereof.			
1463	Rolling-mill rolls, of chilled iron or alloy steel, not further manufactured than the parts that are turned for testing purposes only, with or without machined wabblers attached, when imported by proprietors of rolling mills for use only in producing finished rolls for rolling iron or steel.	27½%	25%	15%

1 Formerly free under 774, from Aug. 5, 1924.

2 General rates apply to imports from the United States.

Drawback Provisions

The following items are added to Schedule B of the tariff:

Item No.	Goods	When subject to drawback	Portion of duty (not including special duty or dumping duty) payable as drawback
1045	Materials.	When used in the manufacture of tubes (item 397) of rolled iron or steel, not joined or welded, not more than 1½ inches in diameter, not specified.	99%
1046	do.	When used in the manufacture of articles (item 663b) which enter into the cost of manufacture of fertilizers, when imported for use exclusively in the manufacture of fertilizers.	99%
1047	do.	When used in the manufacture of articles enumerated in tariff item 469a (quoted above).	99%
1048	Materials, including all parts.	When used in the manufacture of goods enumerated in tariff item 453e (quoted above).	50%
1049	Bituminous coal.	When imported after Mar. 24, 1925, by proprietors of by-product recovery coke ovens and converted into coke at their by-product recovery coke ovens, provided that no drawback shall be paid under this item during any calendar month when the average ratio during that period is less than 1,300 pounds of coke from 2,000 pounds of coal; also provided that drawback payable under this item is in lieu of drawback payable under any other item.	99%

Sales tax changes.—The following products are added to the list of articles exempted from the 5 per cent sales tax: Vegetable plants; lasts for boots and shoes, including rubber footwear, and patterns for boots and shoes, including rubber footwear; engines for the use indicated in tariff No. 453e; well-drilling machinery and the other products specified in tariff No. 469a; and articles and materials to be used in the manufacture—and materials, not to include plant equipment, consumed in process of manufacture or production which enter into the cost—of goods enumerated in tariff Nos. 453e and 469a.

Export Duty Imposed on Hydroelectric Power.

Under an order in council effective from April 1, an export duty of three one-hundredths of 1 cent per kilowatt-hour has been imposed upon hydroelectric power. This is equivalent to \$1.95 per horsepower year.

NEW ZEALAND

Board of Trade Journal, London, February 19

Postponement of New British Preferential Tariff Conditions.

The New Zealand Government has announced its decision to postpone until October 1, 1925, the operation of the proposed new conditions governing the application of the British preferential tariff rates to goods imported into New Zealand from other British areas. April 1 had previously been set as the date for putting the new regulations into force, as announced in *COMMERCE REPORTS* for November 3, 1924.

These new regulations provide, with certain exceptions, for an increase from 25 per cent to 75 per cent in the proportion of the value of goods required to have been added in British areas in order to qualify for entry under the British preferential tariff rates.

PERU

Dispatch from Commercial Attaché H. Bentley MacKenzie, Lima, March 30

New Surtaxes on Imports Levied.

By a Peruvian law signed March 8, 1925, an additional surtax of 2 per cent ad valorem has been imposed on all imports into Peru other than those by parcel post, excepting rice, vermicelli products, flour, lard, tea, and wheat. On imports by parcel post the new surtax is 5 per cent ad valorem. These surtaxes are levied for the purpose of raising funds for public instruction.

[A notice of the proposal for the above-mentioned surtaxes was published in *COMMERCE REPORTS* of February 16, 1925.]

IMPORT AND EXPORT RESTRICTIONS

AUSTRIA

Assistant Trade Commissioner Elbert Baldwin, Vienna, March 9

Relaxation of Import and Export Restrictions.

A decree of the Austrian Ministry of Commerce and Communication, dated February 23, 1925, promulgated a modified list of goods for which export and import licenses are still required, to be effective March 1.

The principal articles of interest to American trade still requiring import licenses are tobacco and tobacco products, chocolate and chocolate substitutes and products, certain kinds of clothing, leather footwear, furniture, firearms, electrical apparatus, automobiles, motors, clocks, and watches.

The principal articles still requiring export permits are magnesite, raw hides and skins, timber and lumber, certain art objects and waste paper.

[The new lists are on file in the Division of Foreign Tariffs and information in regard to particular commodities will be furnished upon request.]

CANADA

Consul Richard E. Boyce, Hamilton, March 12

Temporary Admission of Day-Old Chicks by Parcel Post.

The Canadian post office will allow importations of day-old chicks from the United States by parcel post to Canada, from April 1 to June 15, provided delivery can be effected within 36 hours.

Chicks are admitted free of duty upon the production by the American exporter of a certificate of purity of breed. There is at present a prohibition against the importation into Canada of live poultry, as well as turkeys and geese, from New York, New Jersey, Pennsylvania, Connecticut, and Indiana, unless accompanied by a certificate from an official of the Bureau of Animal Industry, certifying that the fowl covered by the certificate are free from European fowl pest or other similar contagious poultry disease, and have not been exposed to infection from such diseases.

CZECHOSLOVAKIA

Commercial Attaché J. F. Hodgson, Prague, March 9

Restriction on the Importation of Bees, Beeswax, and Honey.

By a recent decree of the Czechoslovak Minister of Agriculture, the importation of bees, beeswax, and honey into Czechoslovakia is prohibited until further notice, on account of the prevalence of a contagious disease among the bees in certain countries.

Where honey is intended for industrial purposes, a special import permit covering the shipment must be obtained through the Ministry of Agriculture.

Consul General C. S. Winans, February 23

Relaxation of Export Restrictions.

The Czechoslovak Minister of Commerce has announced that the following commodities may be exported free of license on and after the specified dates:

(Item 189) asphalt bitumen—January 16, 1925; (item ex 628) ink powders and sealing wax—February 10; (item ex 563) gold leaf—February 1; (item 28) buckwheat; (item 29) millet; (item 34) rice, also split; (item 53) various seed, packed for retail sale; (item 54 a) fresh decorative flowers; (item 55a) decorative foliage leaves, grass, etc., fresh; (item 56-(a) blooming plants, (c) onion plants, (d) grape vines, (e) other plants except hop plants, (item 60) lupulin, (item 62) other fresh plants not specified, (item 72) mules and donkeys, (item 76) sea shell fish, (item 82) horny sponges, (item 115) sago, tapioca and arrowroot, etc., (item 120) smoked herrings, (item 123) caviar and its substitutes; (item ex 123) tannin bark treated with lye, and tannin bricks, (item 149) clay and stones not specified, artificially colored, (item 157) quabacho wood and other dye woods, (item 368) raw glass, enamel, etc., (item ex 563 a and b) genuine silver leaf, (item ex 571) genuine precious stones and semiprecious stones, corals, worked but not mounted, genuine pearls, unmounted, and goods made of semiprecious stones, (item ex 605) soot, coal dust, etc., and (item 655) yeast—all effective February 16.

Removal of Restrictions on Certain Imports.

The Czechoslovak Minister of Commerce has recently announced that the following commodities may be imported into that country without a license, effective January 2 and 30, and February 1, 1925, respectively:

(item ex 121) salt and dried fish, (item 91) fish and seal grease, and (item 372) fine hollow glass, except etched, smooth, figured, emory-ground, or cut.

Changes in License Fees.

The Czechoslovak Minister of Commerce has announced also that, beginning January 2, 1925, license fees will be abolished on imports of (item ex 131) fruit preserves and mustard, (item 132) foodstuffs, not specified, and (item ex 600) carbonate of lime, artificial calcium carbide, strontium nitrate, barium chloride, and barium nitrate. The license fee for the importation of knives to be used in industrial and agricultural machinery (item 479) has also been reduced from 2 per cent to one-half of 1 per cent of the invoice value. The export license tax on malt (item 30) has been reduced from three-fourths of 1 per cent to one-third of 1 per cent of the invoice value.

NEW ZEALAND

Board of Trade Journal, London, February 26

Import Prohibition on Wheat and Flour, Etc., Revoked.

The New Zealand Government has revoked, with effect from March 1, 1925, the orders in council of November 13, 1917, and June 19, 1919, which prohibited the importation into New Zealand of wheat, flour, bran, pollard, wheat meal, and ground wheat.

[For simultaneous change in rate of import duty on wheat flour, see section headed "Tariff change on specific articles."]

TURKEY

Trade Commissioner Julian E. Gillespie, Constantinople, February 28

Tobacco Monopoly Taken Over by Government.

Effective March 1, 1925, the Turkish Government assumed the administration and operation of the tobacco monopoly formerly held by the Societe de la Regie Co-Interessee des Tabacs de l'Empire Ottoman.

TARIFF CHANGES ON SPECIFIC ARTICLES**ARGENTINA**

Cablegram from Commercial Attaché Edward F. Feely, Buenos Aires, April 2

Changes in Export Duties for April.

The following changes have been made in the Argentine export-duty schedule for the month of April:

Oats, from 1.32 pesos per metric ton to 1.25; corn, from 2.22 to 1.96; linseed, from 4.61 to 4.43; barley, from 2.67 to 2.56; wheat, from 2.81 to 2.86; sheepskins, from 47.10 to 43.05; Entre Rios wool, from 71.75 to 67.50; southern wool, from 65.25 to 39.60; Cordoba wool, from 51.05 to 45.35; western wool, from 40.30 to 37.60; quebracho log, 0.70; quebracho extract, 0.9675.

The duties on other commodities subject to Argentine export duties remain unchanged.

[For changes in export duties for March, see COMMERCE REPORTS of March 16, 1925.]

BOLIVIA

Consul Dayle C. McDonough, La Paz, January 24

Additional Export Taxes Established on Minerals.

By a decree of December 18, 1924, the following additional export taxes have been established for the year 1925 on minerals exported from Bolivia:

	Boliviano per Spanish quintal (about 101.6 English pounds)
Tin concentrates.....	0.50
Bismuth concentrates.....	.80
Silver sulphides and silver cements.....	5.00
Mark of silver content in a quintal.....	.20
Lead ore.....	.10
Lead slags, antimony, and zinc.....	.05
	Per 100 kilos (about 220 English pounds)
Copper ore and low-grade silver ore.....	0.10

The above taxes are for the purpose of defraying the expenses of the Bolivian centennial to be held in August, 1925.

Reduction of Wool Export Duty—Suspension of Hide Export Duty.

The export duty on sheep, llama, and alpaca wool has been reduced from 6 to 4 per cent ad valorem by a Bolivian decree of November 27, 1924. By the same decree the 10 per cent ad valorem export duty on hides has been temporarily removed.

BRITISH INDIA

Cable from Assistant Trade Commissioner E. G. Sabine, Bombay, March 25

Import and Export Duties on Various Commodities Modified.

The finance bill has been passed by the British Indian Legislative Assembly. The measure reduces the excise tax on salt from 1 rupee 4 annas to 1 rupee per maund and reduces the import duty on matches, machinery, and railway materials. Import duties are increased on sugar, yarn, textiles, iron and steel, liquors, oils, hardware, and automobiles. The export duties are increased on jute, rice, and tea.

[When the full details of the finance bill are received the Division of Foreign Tariffs will be pleased to furnish the new duties on the above articles upon specific request.]

CHILE

Commercial Attaché Ralph H. Ackerman, Santiago, March 3

Asbestos Roofing Conditionally Exempt from Duty.

Asbestos sheets or shingles for roofing to be used in the construction of workmen's houses by the nitrate companies are admitted into Chile free of import duty, according to a decree of February 25, 1925.

This concession has been made on account of the shortage of living quarters in Terapaca and Antofagasta, Chile.

MARTINIQUE

Eugene A. Masuret, Trade Commissioner's office, Paris, March 12

Removal of Export Duty on Sugar.

The export duty of 21 francs per 100 kilos on sugar from Martinique, established by a decree of March 12, 1921, has been removed, according to a decree of March 10 published in the French Journal Officiel for March 12, 1925.

NEWFOUNDLAND

Consul George H. Barringer, St. Johns, March 7

Duties on Meat and Kerosene Removed.

The import duties on the following articles have been removed by the Newfoundland Legislative Assembly, now in session:

Kerosene oil (in iron or steel packages), previously dutiable at 5 cents per gallon; pork (salted in barrels), previously dutiable at \$1.50 per barrel; beef (salted in barrels), previously dutiable at \$1 per barrel.

These products still remain subject to the 5 per cent sales tax chargeable in Newfoundland on practically all goods, whether subject to import duty or not.

[Previous notices relative to the duties on the above products appeared in COMMERCE REPORTS May 26 and September 1, 1924.]

NEW ZEALAND

Board of Trade Journal, London, February 26

Duty on Wheat-Flour and Similar Preparations Increased.

The duty on wheat flour, including wheat meal and similar preparations of wheat, when imported into

New Zealand from all countries except Australia, has been increased from 2s. 6d. per cental to 3s. per cental, by an order in council effective from March 1, 1925. The duty on the above products from Australia remains at the present rate of 2s. 6d. per cental.

[A primage duty of 1 per cent ad valorem is levied in addition to the regular import duties.]

PERU

Dispatch from Commercial Attaché H. Bentley MacKenzie, Lima, March 30

Potatoes, Jerked Beef, Garden Produce, Coffee, and Sugar Temporarily Admitted Free of Duty and Consular Fees.

A Peruvian decree of March 29, 1925, provides that potatoes, jerked beef, garden produce, and coffee may be imported free of all duty and consular charges for a period of 60 days. The Central Sugar Committee is also authorized to import on its own account from the United States, free of import duties and consular fees, white sugar up to 1,000 tons, in lots required strictly for consumption in the country.

INTERNAL REGULATIONS AFFECTING TRADE

CHINA (SOUTH)

Dispatch from Commercial Attaché Julean Arnold, Peking, March 30
Canton Government Places Sales Tax on Kerosene.

The Canton Government has placed a sales tax of \$0.05 (Mex.) per gallon on kerosene.

CUSTOMS REGULATIONS

PORTUGAL

Diario do Governo, Lisbon, February 13

Presentation of Consular Invoices for Visé.

After April 1 consular invoices for goods shipped to Portugal may be received at Portuguese consulates and vice consulates up to 10 days after the departure of the vessel containing the goods described therein, according to a Portuguese royal decree published in the Diario do Governo February 13, 1925.

The consular invoice should be viséed within 48 hours of its presentation, but if this period is exceeded in exceptional cases the responsible official will make a declaration to that effect on the three copies of the consular invoice.

United States Imports of Leather Gloves

The United States imported 681,827 pairs of leather gloves, valued at \$595,267, during February, 1925, an increase of 35.6 per cent over the quantity of similar goods imported in the corresponding month of the preceding year. The popularity of French gloves still prevails, as statistics show that during the eight months' period ended February 28, 1925, about 51 per cent of the gloves imported into the United States were manufactured in France, as compared with 32 per cent in Germany, 4 per cent in Italy, and approximately 2 per cent in the United Kingdom.

FAR EAST

H. A. Butts, Acting Chief, Far Eastern Division

CHINA'S INVISIBLE IMPORTS

Compiled from material supplied by Commercial Attaché Julean Arnold, Peking

The American consul general at Hongkong is authority for the estimate that a sum equal to 250,000,000 silver dollars (1 silver dollar=\$0.50) is sent annually to that British colony by Chinese living overseas as remittances to relatives, investments, and for the fulfillment of obligations. Another estimate reckons a total of 100,000,000 dollars in remittances from Cantonese communities abroad to Cantonese in China. Swatow is believed to receive annually from its overseas Chinese sums equivalent to about 30,000,000 dollars, and Amoy, 20,000,000.

American contributions to missionary and other philanthropic work in China are said to aggregate at least 25,000,000 silver dollars a year. The maintenance of foreign diplomatic missions, foreign men of war in Chinese waters, foreign expeditionary forces, and foreign shipping in China probably amounts to 20,000,000 dollars a year. Tourists' expenditures annually may be reckoned at about 10,000,000 dollars. The aggregate of these invisible imports would probably net at least 300,000,000 dollars (approximately \$150,000,000) per annum. To this sum must be added the investments of foreign capital in business enterprises in China.

Unfavorable Trade Balance—Interest on Debts.

China's unfavorable trade balance amounts to about 300,000,000 silver dollars a year, and the excess of

China's imports of silver over exports reaches approximately 75,000,000 dollars annually. The country incurs an additional obligation of about 150,000,000 dollars a year in foreign exchange to meet the interest on its debts.

Rise in Netherlands Indian Exchange Favorable to Imports

Consul Charles L. Hoover, Batavia, Java

The recent measure on the part of the Netherlands East Indian government, to place the currency of the country again on a parity with gold, is of importance to American exporters, in that it may be expected to benefit the import trade of the islands. Although nothing in the nature of a boom, or even a large increase in imports, can be looked for in the near future—as the purchasing power of the market will not be affected—the merchants of the country will be able to purchase goods abroad without fear that the value of the articles they buy will be affected by fluctuations in the exchange. In recent years these variations have been particularly harmful to American export trade with Netherlands India. An advance in the exchange value of the country's money which is invested in foreign merchandise, moreover, ultimately should render possible the purchase of more of these goods.

Purchase of Foreign Goods Doubled Since 1913.

Leaving out of consideration the quantity of goods purchased abroad by the Netherlands East Indies, it

is noteworthy that the country is now spending nearly twice as much in foreign markets as it did in 1913. This increase has come about in spite of general depression in the country's import trade since the war and without great increases in population or wages. The restoration of the currency to a gold basis, therefore, should materially assist in enlarging the islands' commercial activities and placing the country on a sound business basis.

Burmese Farmers Cooperate

Consul Charles J. Pisar, Rangoon

In an effort to eliminate the money lender from rural communities the Indian government is doing all it can to encourage the cooperative movement throughout the Empire. Although this activity is only 20 years old in Burma, 18 different classes of cooperative societies are in operation, with 5,563 separate organizations and a total membership of 156,003—including banks, agricultural, producing, trading, and cattle-

insurance societies. Nearly 80 per cent of these and about half of the total membership, are cooperating for the purpose of obtaining agricultural credit. Aside from being beneficial to the country generally, in supplying credit at a reasonable rate of interest, the movement has an educational influence of considerable importance.

Review of China's Export Trade for Nine Months

China's export trade, in native products only, as shown in the Maritime Customs returns for the 45 customs ports, has been summarized and issued by the Far Eastern Division as Special Circular No. 291. Copies may be had upon application to the Bureau of Foreign and Domestic Commerce or to any district or cooperative office.

EUROPE

Samuel H. Cross, Chief, European Division

ITALIAN LABOR LESS TRANQUIL

Prepared in the Romance section, European Division

With the general revival of Italian industry, especially since the middle of 1924, when rising prices began to reduce the purchasing power of Italian wages, the tranquility which marked Italian labor conditions during the latter part of 1922 and the whole year 1923 has begun to break. The situation, however, is still notably favorable as compared with the years 1919 to 1922, inclusive.

The years 1919 and 1920 were particularly marked by labor troubles. In the former year there were 1,062 strikes in Italian industry, causing the loss of 18,887,917 days of labor, in addition to 208 strikes among agricultural laborers, leading to the loss of 3,346,829 working-days. In 1920 the industrial strikes were more numerous, totaling 1,881, but had a shorter average duration and caused the loss of only 16,398,227 working-days; agricultural strikes, on the other hand, although numbering only 189, increased enormously in duration and laborers affected, causing a loss of 14,170,991 working-days. The years 1921 and 1922 showed considerable improvement, the former registering 8,180,263 days lost and the latter 6,916,914 days lost in industry and agriculture combined.

Strikes at Low Ebb in 1923.

The latter part of 1922 showed a notable reduction in number and duration of strikes, in spite of decreasing unemployment and gradually advancing prosperity that was not accompanied by wage increases. A still calmer situation prevailed throughout 1923, when only 201 strikes occurred and only 296,469 days of work was lost from this cause. Not since before 1896 had the number of strikes been so low, and not since 1899 had so few days of labor been lost thereby. The low point was reached in September, when 11 strikes occurred in industry and agriculture and 4,310 days were lost.

Increased Number of Strikes in 1924.

Strikes in 1924, while still infrequent as compared with years before 1923, tended to increase in number and duration. Statistics at present available are provisional and cover only the period through October 31. During this 10-month period, however, the number of strikes was greater than in the whole year 1923, reaching 260 as compared with 201; the number of working-days lost was 523,761, as compared with 296,469. Of the strikes in the 1924 period, four were among agricultural laborers. Strikes in the four months from July 1 to October 31 averaged 36 per month, as against 19 per month in the first semester. According to reports received in recent months, this tendency to increase appears to have continued. The most noteworthy strike for some time was that among the metal workers of Lombardy in March, 1925; this has now been adjusted by the grant of a slight increase in wages. The situation in other Provinces, however, is still unsettled.

Some Tendency to Anticipate Demands.

The cost of living in Italy has been making great advances during recent months, making wages inadequate for the support of laborers and their families. This circumstance, combined with the fact that work is plentiful in northern Italy to the extent of a shortage of skilled labor in some sections, has led to frequent demands for wage increases, culminating in strikes when the demands have been refused. In some industries the employers have anticipated the demand in order to avoid interruptions to production.

Yugoslavia Makes Favorable Showing for 1924

Based on report from Consul K. S. Patton, Belgrade

Government receipts during the first eight months of the budget year beginning July 1, 1924, totaled 7,074,831,000 dinars, and expenditures reached 6,857,765,000 dinars, thus showing an excess of receipts by

717,066,000 dinars. As the budget estimated had placed both receipts and expenditures for the period at 6,936,667,000 dinars, the actual disbursements proved to be 78,902,000 dinars less than estimated, and the receipts 138,165,000 dinars more.

The New York exchange rate of the dinar for February averaged 1.62 cents, standing at 1.6023 cents at the end of the month; this compares with a January average of 1.63 cents and a January 31 rate of 1.6311 cents. The decline in the French franc and the slackening in demand for lumber and livestock are considered responsible for the February decline. Fiduciary circulation was practically unchanged during February, standing at 5,729,028,000 dinars on February 22.

The cost of living rose during January and February in consequence of substantial price increases on basic articles.

Export Surplus Probable—Average Crop Conditions.

The total value of exports during 1924 was 9,538,774,000 dinars, or approximately 1,500,000,000 dinars more than in 1923. While import figures are not yet

available, a favorable trade balance of at least 1,000,000,000 dinars is confidently expected.

Crop conditions are about average, although some damage has been caused by field mice and by lack of snow cover during the unusually warm winter.

Railway Convention with Hungary Will Facilitate Exports.

The convention for railway tariff, now under consideration between Yugoslavia and Hungary, is a most important question. The convention provides that the contracting powers shall grant to each other a considerable reduction in rates on goods shipped to points within the countries and on goods in transit through the territory of the contracting countries. The convention is expected to benefit Yugoslav exports to Hungary and also to Czechoslovakia and Poland, as Hungarian railways offer the most direct routes to the last-named two countries. Likewise, Hungarian exports to Yugoslavia and goods destined for export through Fiume are expected to benefit greatly by the convention.

LATIN AMERICA

Richard F. O'Toole, Chief, Latin American Division

BUSINESS AND ECONOMIC CONDITIONS IN BOLIVIA

Consul Daile C. McDonough, La Paz

General business conditions in Bolivia are showing a slight improvement with a hopeful outlook for the future. Two factors which have contributed to this situation are exchange—now very favorable to the importer—and the rising price of tin—the country's chief product. In reviewing statistics of Bolivian imports for 1924, as indicated by import duties collected, the outstanding feature is their increase in volume. This is further emphasized by the fact that a considerably larger number of drafts were drawn upon Bolivian merchants through the banks to pay for imported goods.

Import Trade Shows Gradual Increase.

The import trade shows a gradual rise from 1920 to 1924. In 1920, imports were valued at 455,736 bolivianos (year's exchange average, 3.15 bolivianos to the dollar); in 1921 at 496,756 bolivianos (average exchange 4.29); in 1922 at 458,603 (exchange average 3.61); in 1923 at 545,358 bolivianos (exchange average 3.23); and for the first 11 months of 1924 at 660,000 bolivianos (average exchange 3.26).

Leading Imports.

A new feature of the trade has been the importation of American apples. Stocks of imported merchandise early in 1924 were rather large, but they were mainly of staple commodities which could soon be consumed. The textile trade has been confined largely to popular lines. German hardware and Belgian window glass have been among the leading items. Corrugated galvanized sheeting from Great Britain has had a good sale.

Among the merchandise included in recent consignments to Bolivia were the following: Cotton goods, iron and steel products, machinery, foodstuffs (consist-

ing of flour, sugar, canned goods, and rolled oats), hardware, oils and greases, paper products, paints and varnishes, and drugs and chemicals from the United States; iron and steel products, cotton goods, hardware, oils and greases, soap, foodstuffs (including canned goods, tea, and confectionary), jute bags and cement from the United Kingdom; large quantities of iron and steel and some paper products from Belgium; explosives, paper products, machinery, iron and steel, cotton goods, chinaware, glassware, foodstuffs, and manufactured novelties from Germany; iron and steel, condensed milk, butter, rice, drugs, and chemicals from the Netherlands; hats, cotton goods, marble, rice, and olive oil from Italy; sugar from Peru, and large quantities of flour from Chile.

Stationery Supplies Inadequate—Minerals—Crops.

A circumstance commented on frequently by Americans in La Paz is the absence of modern stationery supplies, such as loose-leaf devices and manila folders. A few German letter files are on sale, but as press copy books are required by law or custom, very little use is found for files of carbon copies of correspondence.

Exports of minerals have been normal. Some activity was apparent in exports of cinchona bark. The export duty on hides has been suspended.

The mining industry is prosperous, with quite a number of lead mines being opened up, and several small tin properties in process of development with an idea of promoting companies in Chile to operate them.

The prospects for good crops are excellent, seasonal rains having fallen over the Bolivian plateau. In Bolivia, if crops are good, the textile trade is good and the foodstuffs trade is below normal, but when crops are poor the foodstuffs trade is good and the textile trade is slow. The President in order to encourage the cultivation of cotton has offered prizes for the growing of that commodity for export.

Duty on Alcoholic Beverages—Printing Paper.

During 1924 the only important increase in rate of duties upon imports was on alcoholic beverages. The bill which was passed to levy an almost prohibitive tax on importations into Bolivia of printing paper has been vetoed by the President on the basis that the country is not yet in a position to manufacture paper of the quality or in the quantity required by the Bolivian market.

Finance and Banking—Exchange Steady.

Government finances are understood to have improved, and although no definite figures are yet available it is believed that the income and expenditures for 1924 have been balanced.

Negotiations are on foot for the consolidation of two of Bolivia's principal banks, the Banco Nacional de Bolivia and the Banco Mercantil de Bolivia. Under the terms of the proposed consolidation, the new bank would be known as the Banco Nacional de Bolivia, with a capital of approximately \$8,500,000 and would have its head office at Sucre.

A bill has been pending in Congress which would compel exporters of minerals to turn over to the National Treasury 25 per cent of all drafts received by them in payment for exports of minerals. Under the present law the percentage of such drafts which must be so delivered to the Treasury is 10 per cent. The mining interests are very much opposed to the bill.

Exchange continues to be steady, the average value of the boliviano in terms of the dollar having been 2.95 to the dollar since the first of January—an improvement over previous months, and the commission established to stabilize exchange is apparently accomplishing its purpose.

Mines and Mining Activities.

An important tax upon mineral exports was promulgated in December, 1924. The tax is to be in force during the calendar year 1925 and its proceeds devoted to defraying the expenses of Bolivia's centennial celebration in August. The new charge is to be in addition to the taxes already in force. It is as follows, based on the Spanish quintal (about 101.6 English pounds) of mineral ore exported:

	Bolivianos
Tin concentrates, per Spanish quintal.....	0.50
Bismuth concentrates, per Spanish quintal.....	.85
Silver sulphides and cements, per Spanish quintal.....	5.00
Mark of silver contained in a quintal.....	.20
Quintal of lead ore.....	.10
Quintal of antimony and zinc.....	.05

Both copper ore, in general, and low grade silver ore will pay 0.10 boliviano for each 100 kilos. (The boliviano is now worth \$0.338.)

Loan for Construction of Potosi-Sucre Railroad.

A law promulgated December 1, 1924, authorized the contracting of a loan of £600,000, to be applied toward the building of the Potosi-Sucre railroad, which has been under construction for some time. The law contains the very important provision that during a period of five years from the date of issue of the bonds authorized by said law, no increase shall be made in taxes on the mining industry nor on its profits. The only exception permitted under this law was the additional impost on the exportation of minerals established by the law of December 18, 1924. The construction work was awarded to the Bolivia Railway Co.

Tin Production Limited.

Complete export figures for 1924 are not yet available, but it would appear that while tin exports were somewhat greater in 1924 than in 1923, they were not nearly so large as had been expected. Production at the Patino Mines and Enterprises Consolidated's mines—the largest in the country—was less than anticipated. Considerable stocks of tin were held up for lack of llama transportation. Some other mines, however, did increase production in 1924.

Silver Production Varies—Petroleum.

Silver production seems to be increasing at some mines and decreasing at others. The largest silver mine in Bolivia (Cia. Huanchaca de Bolivia), which was producing about 250,000 ounces of silver in the latter months of 1924 fell as low as 35,000 ounces per month in the early part of 1925, but that condition was believed to be only temporary. Other companies have increased their outputs.

Development work by an American petroleum company continues. The oil produced is reported to be of a class best suited for use as fuel.

Cotton Mill to be Established.

A private citizen has been granted 150,000 hectares of land in the Province of Chiquitos, department of Santa Cruz, for the establishment of a cotton mill, to be operated for a period of 10 years. The franchise requires the grantee to invest 300,000 bolivianos (about \$100,000) in the installation of the factory, which must be in operation within four years. The grantee is also required to deposit a guarantee of 5,000 bolivianos (about \$1,600) which will be forfeited to the Government in case of noncompliance with the terms of the concession.

Brazilian Exchange Weak During March

Based on cable from Commercial Attaché W. L. Schurz, Rio de Janeiro, March 31

Milreis exchange in Brazil was uniformly weak during March, with sight rate for dollars ranging from 9.030 to 9.180 milreis. The average for the first 27 days of the month was 9.072 milreis. This uniformity of exchange, though weak, is preferred by business to wide fluctuations.

Notes in Circulation—Loan for City Improvements.

There were 2,222,508,000 milreis of inconvertible notes in circulation on the last day of February, 26,625,000 milreis having been withdrawn in accordance with the contract between the Treasury and the Bank of Brazil. Notes of the Bank of Issue in circulation on the same date amounted to 698,000,000 milreis, giving a total circulation of 2,920,508,000 milreis.

The Prefect of Rio de Janeiro has signed a decree authorizing the issuance of 11,150,000 milreis for city improvements, including the reconstruction of the ocean boulevard and a continuation of the work on the Lagoa Rodrigo Freitas.

The annual messages of the Governors of Pernambuco and Parana show an encouraging financial situation in those states.

Santos Congestion Slightly Improved.

The Santos port situation showed some improvement at the end of the month, with about 30 ships in the stream and 60 berthed. Cargo is being handled more expeditiously, but there is no assurance that the improvement will continue.

A heavy demand for fuel oils and power machinery is increasing the traffic burden of the Sao Paulo Railway.

Rio and Sao Paulo Depressed.

The Rio port situation continues bad, one to three months being required to clear cargo. A large surplus of outbound cargo space is being offered.

The Sao Paulo power situation is increasingly serious, with factories running on one-third time and consumption of electricity cut to the limit. There is no prospect of relief for several months. The dry season is approaching and industries are using substitutes for power, including tractors, Diesel engines, and small steam plants, as far as possible. The large number of unemployed offers a grave problem.

Automotive, Iron and Steel, Machinery, and Implement Markets.

Sales of automotive products were generally good during March, despite an advance in prices.

Iron and steel business was dull during the month, with keen competition in all lines. General lines were being bought on a hand-to-mouth policy. The United States is now meeting British prices for tin plate and galvanized sheets and is securing a fair share of the business. German competition is severe in black sheets, nails, and plain galvanized wire, with quotations from 25 to 35 per cent under American and English prices.

The sale of railway materials is strongly affected by German competition and lack of Government funds for needed purchases.

The machinery market is improved, and large orders for boilers and Diesel engines have been placed in the United States and Germany for Sao Paulo.

Large stocks of agricultural implements have been imported, are being moved rapidly, and a good year is anticipated.

Specialties, Electrical Equipment, Paper, and Coal Sales.

Sales of American specialties such as typewriters, talking machines, and cameras are fair.

The movement of American radio material was good during March but greatly restricted by high duties on batteries. The electrical equipment market generally is slow but improving.

The demand for paper is extremely slow; textile sales were good during February but March sales were smaller with very keen competition.

Coal entries during March were 80,000 tons of which about 25,000 were American. Stocks are 85,000 to 90,000 tons with 35,000 en route. American coal is quoted at \$8.85 and British 39s. Freight for American is \$4.35 and British 25s. 9d. Brazilian Lloyd stocks are low.

Coffee Exports—Hides and Skins.

Shipments of coffee from Santos to the United States during the first 25 days of March totaled 255,000 bags, while the March total is expected to be about 325,000 as against 352,000 bags in February. Shipments from Santos to Europe for the first 25 days of March amounted to 102,000 bags. Total February shipments to Europe were 189,000 bags. Shipments from Rio de Janeiro were negligible. The Santos market is weak and dull and the weakness is partly attributed to the reaction of the American market to high prices. Favorable weather in the interior offers prospects of a better crop than were formerly expected. The Coffee Institute is in full operation.

The movement of hides and skins to the United States was very small during March with prices low.

Prices of all classes of foodstuffs are high and are increasing, due to the shortage of past crops. High prices of lard offer an opportunity to American exporters. The favorable trade balance of £25,583,651 for the first 11 months of 1924 is more than offset by necessary foreign commitments.

EUROPE

(Continued from p. 119)

New Internal Loan in Soviet Russia

Trade and Industry Gazette, Moscow, February 13 and March 9, 1925

The Council of National Economy of the Union of Socialist Soviet Republics has decided to issue a new short-term loan for 10,000,000 rubles, bearing interest at 5 per cent and running for one year from March 1, 1925. Interest will be payable in one amount, by coupon dated September 1, 1925. The loan is to be free of taxes, either State or local, and is acceptable in payment of all Government levies. The price of issue is to be decided later. Loan certificates and interest coupons must be presented for redemption within three years of dates fixed for payment. The bonds of this loan are to be issued, in order of preference: To subscribers to an amount up to 500 rubles, to subscribers to an amount from 500 to 5,000 rubles, and to subscribers to an amount of 5,000 rubles or over. The books are to be opened on April 1. The terms of payment are to be 10 per cent of the purchase price down, with subsequent payments to be decided later. The distribution will be handled through the Government-controlled banks.

Additional information regarding Europe appears in this issue under the following sections:

Tariffs and trade regulations:

Austria-Spain: Commercial treaty effective.

France-Greece temporarily extend commercial arrangement.

Germany-Italy indefinitely continues *modus vivendi*.

Hungary-Norway exchange ratifications of commercial treaty.

German imports heavy during 1924.

Automotive products: 1925 automotive markets begin auspiciously.

List of "Circulars issued by the bureau."

Bolivar Centennial Celebration Taxes Authorized

A law of January 15, 1925, makes effective for the current year the collection of taxes destined for the financing of the centennial celebration of the Republic. These include a tax on salaries in general, on income of professional men, on assessed value of rural and urban property, on loan transactions, on liquors, and on public entertainments. A translation of the decree regulating this law, transmitted to the bureau by W. Roswell Barker, chargé d'affaires, is on file in the Division of Commercial Laws, and may be consulted by referring to No. 164931.

GREAT VARIETY OF CIRCULARS ISSUED BY BUREAU

Many circulars in mimeographed form are issued by the bureau in addition to its various regular and special publications. These circulars are distributed to those interested, including persons and firms whose names are on the Exporters' Index, and copies may be obtained from the bureau or its district offices. The 74 circulars listed below were issued by 22 different divisions during the week ended April 6.

AUTOMOTIVE DIVISION

- No. 34—Automotive Market News Bulletin.
No. 35—Automotive Market News Bulletin.

AGRICULTURAL IMPLEMENTS DIVISION

- No. E-32—Market for Internal Combustion Engines in French Morocco.
No. E-35—Market for Internal Combustion Engines in British So. Africa.
No. E-36—Market for Internal Combustion Engines in Great Britain.
No. E-37—Market for Internal Combustion Engines in Guatemala.
No. T-50—Market for Tractors in China.
No. T-51—Market for Tractors in Australia.
No. T-52—Market for Tractors in Spain.

CHEMICAL DIVISION

- No. 56-B—World Notes on Coal Tar Products.
No. 82—A Brief Review for 1924 of the Nitrate Industry in the Antofagasta Consular district.
No. 86—Perfumery Industry at Grasse, France.

COAL DIVISION

- No. 282—Essen Coal Congress and Swiss International Fair.
No. 294—Egyptian Coal Markets.
No. 296—Coal Versus Fuel Oil in Uruguay.
No. 298—British Quarterly Coal Figures.
No. 301—Canadian Coal Import Duties Increased.

COMMERCIAL LAWS DIVISION

- No. 75—Trading Under the Laws of Mexico—II.

ELECTRICAL DIVISION

- No. 345—Exports of Radio Apparatus from the United States during 1918-1924.

EUROPEAN DIVISION

- No. 35—Economic and Trade Developments.

FAR EASTERN DIVISION

- No. 31—Far Eastern Trade News.

FINANCE AND INVESTMENT DIVISION

- No. 112—The New Bank of Promotion Law of Mexico (Bancos Refaccionarios).
No. 113—Memorandum on Revaluation by the German Finance Ministry.

FOODSTUFFS DIVISION

- Foodstuffs 'Round The World:
Foreign Notes on Meats, Fats, Oils, and Livestock.
World Trade and Crop Notes, Grain & Grain Products.
Canning and Dried Foods.
Fishery News Service.
Tropical Products.
Fresh Fruits.

HIDE AND LEATHER DIVISION

- No. 346—Increase in United States Exports of Case, Bag, and Strap Leather.
No. 416—The Tanning Industry in Palestine.

INDUSTRIAL MACHINERY DIVISION

- No. 522—Catalogues of Cotton Ginning Machinery Requested in Rumania.
No. 523—American Machinery Holding its own in British Market.

IRON AND STEEL DIVISION

- No. H-6—Foreign Hardware Bulletin.
No. 345—Canadian Iron and Steel Trade Notes.

LATIN AMERICAN DIVISION

- No. 46—"Latin America At A Glance."

LUMBER DIVISION

- No. 356—Tie Preservation in India.
No. 364—United States Exports of Western Pine and white pine Lumber, 1924.
No. 366—Lumber from the Dominican Republic.
No. 397—Handling of Foreign Official and Semiofficial Tenders.
No. 408—Exports from Western Australia of ties treated by Forest and Town sawmills, 1923.

MINERALS DIVISION

- No. 31—Foreign Trade Notes.
No. 191b—Market for Candles and Paraffin in Finland.
No. 193—Unpublished Statistics of Greek Imports of Mineral Oil, November and December, 1924.
No. 194—Coal Versus Fuel Oil in Uruguay.

PAPER DIVISION

- No. 55—Austrian Paper Production and Exports, 1924.
No. 56—Conditions in the German Pulp and Paper Industries.
No. 57—Foreign Paper Trade of the United States during February, 1925.
No. 58—Competition in the Chinese Paper Market.

RUBBER DIVISION

- No. 831—Tire Exporters' Weekly News Letter.
No. 833—1924 Canadian Exports of Tires and Tubes.
No. 834—German Prices for Friction Tape.
No. 836—Export Trade Notes on Rubber Footwear.
No. 837—Retail Tire Prices in Greece.
No. 839—Retail Tire Prices in New Zealand.
No. 840—Retail Tire Prices in Australia.

SHOE DIVISION

- No. 466—Increase in Exports of Leather Boots and Shoes from the United Kingdom.
No. 468—Conditions in the Swedish Shoe Industry during 1924.
No. 470—United States Imports of Leather Footwear.
No. 471—Increase in Quantity of Leather Belting exported from the United States.
No. 472—Unsatisfactory conditions in Belgian Shoe Industry.

STATISTICAL PRESS NOTICES

- Imports of Wheat from Canada into the Principal Northern Border ports during the week ending March 28, 1925.
Exports of Pork Products from principal ports of the United States during the week ending March 28, 1925.
Exports of Grains and Flour from the principal ports of the United States to foreign countries during the week ending March 28, 1925.
Total Values of Imports and Exports of merchandise by Grand Divisions and Principal countries.
Imports of Wheat from Canada into the Principal Northern Border ports during the week ending March 28, 1925.
Imports of Raw Wool at Boston, New York, and Philadelphia during week ending March 28, 1925.

TEXTILE DIVISION

- No. 19-H—Dry Goods Merchants' World News Letter.
No. 100-B—What the World's Cotton Goods Markets are Doing.
No. 369—Mexican Market for Knitted Outerwear.
No. 372—Review of Wool-Pulling and Scouring Industry in France During 1924.
No. 373—Hungarian Wool Production.

TRANSPORTATION DIVISION

- No. 18—Foreign Shipping News.
No. 18—Foreign Railway News.

SURVEY OF CURRENT BUSINESS

Prepared in the Bureau of the Census

The Department of Commerce announces the following further figures covering basic industrial and commercial movements in February:

Manufacturing production in February increased 8 per cent over January when allowance is made for the shorter number of working days, according to the index number of the Department of Commerce, and was 2 per cent higher than in February, 1924. The principal increase over January occurred in the output of automobiles, with a gain of almost 20 per cent, while slight increases were shown, when reduced to an average daily basis, in the output of textiles, nonferrous metals, lumber, leather, and stone and clay products. Increases over a year ago were made in the textile, lumber, chemical and oils, and tobacco groups.

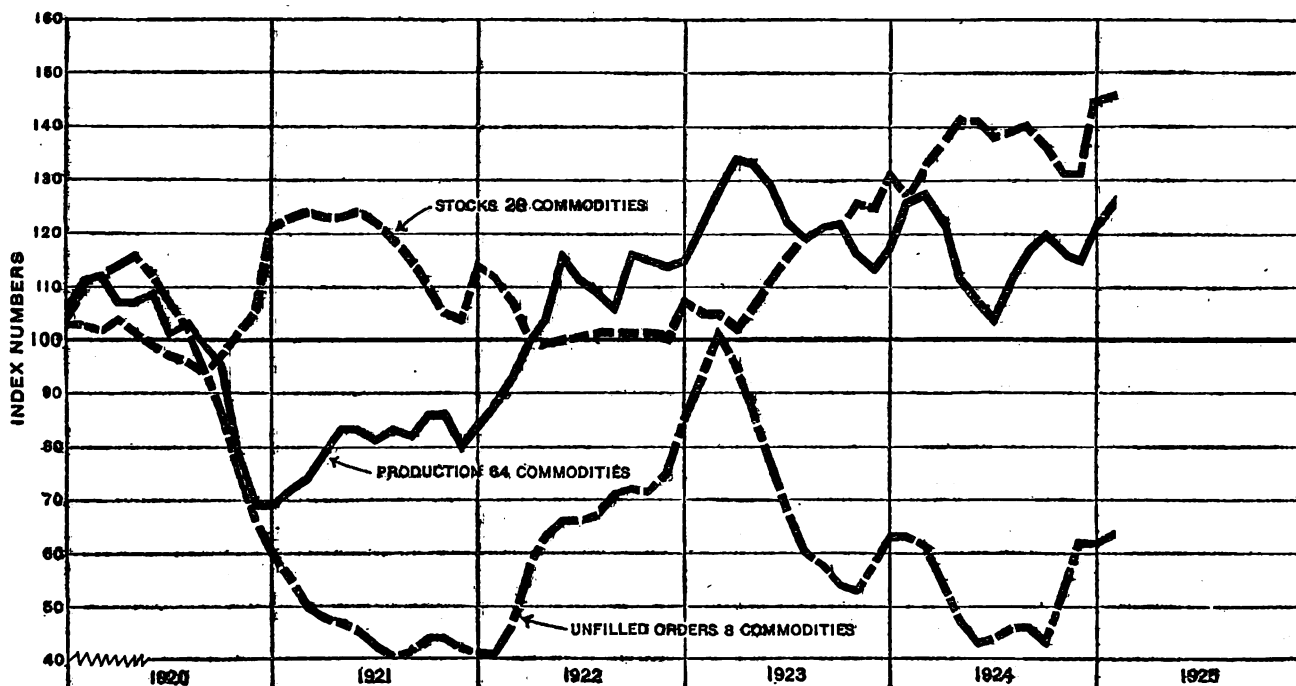

The output of raw materials was 5 per cent less in February than a year ago, minerals declining 7 per cent, forestry products 2 per cent, the marketings of animal products 3 per cent, and crop marketings 7 per cent, as compared by the Department of Commerce index numbers.

The index of unfilled orders on February 28 increased fractionally over January and was the same as a year ago, iron and steel unfilled orders having increased over a year ago while orders for building materials declined.

Stocks of commodities held at the end of February showed a decline from January of 4 per cent when allowance is made for seasonal tendencies, but increased 10 per cent over a year ago. Stocks declined during February in all groups except manufactured foodstuffs while, compared with a year ago, all groups showed increased stocks except raw foodstuffs, which remained unchanged.

RELATIVE PRODUCTION, STOCKS, AND UNFILLED ORDERS FOR MANUFACTURED COMMODITIES

(1920 monthly average=100. This chart shows stocks of manufactured commodities only, while adjustment has been made for both stocks and production for their respective seasonal movements. Unfilled orders are principally those for iron, steel, and building materials. February, 1925, is latest month plotted.)

Data from Survey of Current Business.

The following table gives such data from the April Issue (No. 44) of the Survey of Current Business as have been received up to April 2, 1925.

All items given in the following table correspond with similar information in the issue of the Survey of Current Business. These figures should always be read in connection with the detailed tables in the Survey, where specific descriptions of the data and their sources are given. In addition to figures given from Government sources, there are also incorporated for completeness of service the figures from other sources generally accepted by the trades, the authority and responsibility for which are noted in the monthly Survey of Current Business, which may be obtained from the Superintendent of Documents, Washington, D. C., for \$1.50 per year.

---	-------------

American Consulate at Dunkirk, France, Closed

The State Department advises that it has decided to close the American Consulate at Dunkirk, France, and that the records and archives are being stored at the American Consulate at Lille.

Copy of Argentine Bankruptcy Decision Received

The Division of Commercial Laws has received from Commercial Attaché Edward F. Feely, Buenos Aires, a copy of a decision of the Argentine Rosario court, in which it is held that a petition for involuntary bankruptcy must be accepted by the courts, even though the firm is not registered in the Public Register of Commerce. Refer to No. 83032.

FOREIGN TRADE OPPORTUNITIES

Reserved information may be obtained from the Bureau and its district and cooperative offices by duly registered firms and individuals upon written request by opportunity number. The Bureau does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Symbols: * Reported by American consular officers; † Reported by commercial attaches and trade commissioners; ‡ Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

Investigation No. 37 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Men's Sewed Straw Hats

Notice is hereby given, pursuant to section 315 of the tariff act of 1922, that a public hearing in the foregoing investigation will be held at the office of the United States Tariff Commission in Washington, D. C., at 10 o'clock a. m. on the 4th day of May, 1925, at which all parties interested will be given an opportunity to be present, to produce evidence, and to be heard with regard to the differences in cost of production, and of all other facts and conditions enumerated in section 315 of the tariff act of 1922 with respect to the following articles described in paragraph 1406 of Title I of said tariff act, namely:

Men's hats, sewed, wholly or in chief value of straw or other material or materials mentioned in said paragraph, namely, straw, chip, grass, palm leaf, willow, osier, rattan, real horse hair, cuba bark, and manila hemp being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

This notice shall be published by posting a copy thereof for 30 days prior to said 4th day of May, 1925, at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy thereof prior to said date once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in COMMERCE REPORTS, published by the Department of Commerce.

By order of the United States Tariff Commission this 31st day of March, 1925.

JOHN F. BETHUNE, *Secretary.*

Gold Leaf

Notice is hereby given, pursuant to section 315 of the tariff act of 1922, that a public hearing in the foregoing investigation will be held at the office of the United States Tariff Commission in Washington, D. C., at 10 o'clock a. m. on the 18th day of May, 1925, at which all parties interested will be given an opportunity to be present, to produce evidence, and to be heard with regard to the differences in cost of production and of all other facts and conditions enumerated in section 315 of the tariff act of 1922 with respect to the following article described in paragraph 383 of Title I of said tariff act; namely, gold leaf.

This notice shall be published by posting a copy thereof for 30 days prior to said 18th day of May, 1925, at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy thereof prior to said date once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in COMMERCE REPORTS, published by the Department of Commerce.

By order of the United States Tariff Commission this 14th day of April, 1925.

JOHN F. BETHUNE, *Secretary.*

COMMERCE REPORTS

A Weekly Survey of Foreign Trade

JULIUS KLEIN, Director Bureau of Foreign and Domestic Commerce

Editorial Board: Griffith Evans, Grosvenor M. Jones, E. Dana Durand, Eugene S. Gregg, and Archibald J. Wolfe

Keep Your Dealer Posted

A letter recently received by the Bureau of Foreign and Domestic Commerce from a well-known machinery manufacturer tells of the part that **COMMERCE REPORTS** played in maintaining the morale of his dealer in a certain South American market in the face of vigorous German competition.

The American firm was confronted with a situation common to many exporters during the last few years—that of having his foreign representative grow indifferent to the American line and lukewarm in his sales efforts when German products were being offered at lower prices, apparently equal value, and at long terms of payment. The manufacturer, however, had become convinced by reading articles in **COMMERCE REPORTS** on the machinery export situation that German competition was lessening and that conditions in the industry would make it impossible for prices of German machinery to maintain their low level in world markets. The problem was to make his dealer see this.

For several weeks the manufacturer sent his dealer clippings of articles from **COMMERCE REPORTS** which gave information on the trend of Germany's foreign trade in machinery. The dealer decided to "play a waiting game" in favor of his American line and declined an offer from a German manufacturer asking him to act as agent. Soon the dealer saw evidences of a decided swing toward the use of American equipment on the basis of higher quality and, conversely, a drop in the market for inferior German products. He recently wrote his American principal that the clippings sent him gave him just the encouragement he needed and that German prices had gone up, as the Bureau had given him reason to expect. Incidentally the American house received a large machinery order from the dealer and gives a large share of the credit to the Bureau for its timely and accurate information on the decline in the competing ability of German machinery.

The American manufacturer has access to sources of information on export opportunities not available to his foreign representative. Keep your dealer posted on world market conditions as you see them from your wider perspective.

[J. H. BARKER, JR.]

Exclusive Sales Arrangements

An interesting problem has been submitted to the Division of Commercial Laws by a manufacturer of hosiery. This firm had granted to a concern in a foreign country the exclusive right to sell its hosiery and the exclusive use of its brand in that country. Thereafter the American firm, in the ordinary course of its export business, sold a large quantity of its product to a New York exporter, ostensibly for shipment to a country in which no exclusive sales arrangement had been made by the manufacturer.

In some manner, however, the goods were diverted to the country in which the protected exclusive sales arrangement was in force and reached a competitor of the firm enjoying the privilege. On the eve of an extensive advertising campaign, the competitor offered this hosiery at prices considerably lower than cost price plus a legitimate profit. Of course, a basis was established for a lawsuit to be brought by the injured party against those responsible for the injury.

Some lessons may properly be drawn from this incident. If a manufacturer or exporter has granted exclusive selling rights in a given territory to a certain firm, the contract should contain some provision for dealing with violations of this arrangement through unforeseen acts of third parties beyond the control of the manufacturer.

Furthermore, in sales to exporters for shipment to foreign markets, the manufacturer should not only point out to the exporters the fact that a certain territory is excluded, but should also exact an undertaking from the exporters to observe the restrictions. The exporters can readily protect themselves by exacting a similar undertaking from their customers.

[A. J. WOLFE.]

New Bulletin on Little-Known Region

The commercial importance of West Africa has increased tremendously with the additional and highly improved transportation facilities of recent years. It is to the interest of American exporters to become acquainted with this field, as it is a growing market, and American agricultural and mining interests should study it as a potential competitor.

Trade Information Bulletin No. 331, "British West Africa," deals with Gambia, Sierra Leone, Gold Coast, and Nigeria. The total area is about equal to the great plains included in the States of Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas, but with almost twice the population of these States. The portions of German Cameroon and German Togoland, given by the treaty of Versailles to Great Britain under mandate, are treated under the Gold Coast and Sierra Leone, respectively.

The eyes of the world have been turned in recent years to British West Africa as a source of cacao, other agricultural products indigenous to the Tropics, and many minerals, including gold, bauxite, and manganese.

The foreign trade of British West Africa has grown rapidly, and the share of the United States in that trade has likewise shown favorable expansion. The American imports from all British West Africa were valued at \$5,614,667 in 1921, increasing to \$11,556,719 in 1922, and still further increasing to \$17,497,461 in 1923, but they dropped to \$12,196,029 in 1924. Exports to that country also increased, although not to the same degree, growing in value from \$5,363,502 in 1921 to \$6,816,284 in 1922 and advancing to \$8,126,657 in 1923, with a small decrease to \$8,008,851 in 1924.

[JULIUS KLEIN.]

Population Versus Purchasing Power

The export manager, in looking about the world for new markets, often passes by small countries with scant populations, giving them little thought or consideration. New Zealand, with a population of only 1,300,000, may appear quite unimportant as compared with China, for example, with 486,000,000 inhabitants, yet it has a per capita trade one hundred times greater than that of China.

During 1924 New Zealand's imports and exports together amounted to more than £101,000,000, or about \$390 for each inhabitant, as compared with about \$4 for China. Of the total trade, £48,528,000 consisted of imports, an increase of about 14 per cent over the preceding year, giving a favorable trade balance of \$4,085,000. About half of the 1924 imports originated in the United Kingdom and one-sixth in the United States, the greater part of the remainder coming from Australia, Canada, and Germany.

The part coming from the United States totaled \$7,788,000, a 12 per cent increase over the preceding year, and consisted of a wide variety of items, the most important of which were refined petroleum, automobiles, machinery, rubber manufactures, fruits (dried and canned), chemicals, cotton manufactures, and musical instruments.

Conditions in New Zealand—social and economic, as well as climatic and topographical—are such that practically every item manufactured in the United States finds a ready market throughout the area. Aggressive distributors are always on the lookout for live American lines, and the field is not overcrowded with American agencies. The language and customs being the same as our own, the placing of agencies in New Zealand is relatively simple.

Export managers should lose no time in looking into this promising field.

[ENNETT A. CHAPMAN.]

Commercial Services Rendered by Bureau and District Offices

Correspondence Division, R. H. Brasel, Chief

The following table shows the number of commercial services rendered by the Bureau of Foreign and Domestic Commerce in Washington and its 10 district offices in the United States during the period July 1, 1924, to March 28, 1925, and the week ended April 4, 1925:

Class	Period July 1, 1924, to Mar. 28, 1925	Week ended Apr. 4, 1925

¹ Does not include services rendered by foreign service of the bureau (32 posts, 80 representatives) and by the cooperative offices maintained by the bureau in 62 chambers of commerce and boards of trade in the United States.

² Including petroleum.
³ Information reserved from "Foreign trade opportunity" announcements printed in each issue of the COMMERCE REPORTS. (Name and address of foreign inquirers interested in the purchase of American goods, including references, cable addresses, and other details.)

World's Commercial News in Brief

The following are brief items compiled from data cabled by Government representatives stationed abroad, from official foreign publications, and from other sources. Countries included in the "Monthly Cable Reviews" are omitted from this section.

European Economic and Trade Developments

For reasons of Bureau administration, this heading includes also Canada

CANADA

Export demand for wheat shows marked improvement. Business generally is showing somewhat greater activity, and steel plants continue well engaged on rail orders. Demand for agricultural implements, boots and shoes, wearing apparel, and rubber goods is better. The lumber trade in eastern Canada is quiet, but is relatively active in the west. No settlement of the Nova Scotia coal strike has yet been reached; the situation continues serious for both miners and operators as well as for the Province, and is causing diminishing the Dominion revenues through loss of royalties. On June 19 there is to be held at Ottawa a Canadian-British-West Indies conference for the purpose of effecting more intimate trade relations between Canada and the West Indies, British Guiana, and the British Honduras.

DENMARK

Labor difficulties continue to depress domestic business and the situation is further complicated by price declines. The industries involved in labor conflicts are sustaining serious losses. Agricultural exports, however, remain unaffected by industrial difficulties. Prices in export markets are said to be rising, and English and German demand for Danish bacon is extremely good. Danish currency experienced a further rise during the week of April 6, in part attributable to the transfer of funds from the recent \$5,000,000 loan by the Danish Hypothecary Bank. This bank, it is unofficially reported, may extend a further loan of \$3,000,000. It is also reported that negotiations are proceeding for the conversion of the Danish 8 per cent \$25,000,000 loan of 1920.

GERMANY

A slight improvement in business conditions is indicated in the monthly trade report for March of the Prussian ministry of commerce, most of it occurring in textiles, machinery, paper, machine tools, and agricultural machinery. Textile orders are mainly from United States and Russia, and machinery orders are principally from Russia and Latin America. The president of the Reichsbank has recently estimated present German operating capital at from one-fifth to one-sixth of that before the war. Labor unrest has been accentuated by the termination of wage agreements in major industries, the renewal or revision of which are presenting difficulties, particularly in the mining or metallurgical industries. The new cost-of-living index established by the Government, as a result of labor-union insistence upon a more accurate basis for wage negotiations, is approximately 10 per cent higher than the previous index and is expected materially to assist the labor demand for wage increases. It is tentatively planned to revive the gold

discount bank, which during 1924 financed the export industries. Should the project of extending through this bank commercial credits on a six-month and nine-month basis be achieved, German exporters would be materially benefited, inasmuch as Reichsbank discounts may not exceed two months. An industrial census for 1925 is planned by the Government for the purpose of ascertaining what results the inflation and stabilization periods have had on German industry and commerce.

GREAT BRITAIN

British coal markets, as reported by Commercial Attaché Butler, London, show a slightly increased activity, but with inquiries still slow and with competition keenly felt from Germany and other quarters in all foreign markets. The London Economist index number for commodity prices at the end of March showed a sharp decline for the month and a decline of 35 $\frac{1}{2}$ per cent from the end of December, and stands now at 82.5 per cent above July, 1914. The present figure is the lowest since last August and has resulted largely from the collapse of wheat prices and from lower prices of other cereals and of wool. Lloyd's report on shipping under construction in the United Kingdom, summarized in this issue under "Transportation," is of interest, in view of the keen competition that has developed between British and continental yards.

GREECE

The drachma continues to fluctuate, occasioning uncertainty in the money market. Commercial Attaché Hall cables that numerous indirect taxes will be increased to 10 per cent in order to retire the floating debt. The cost of living is still rising, the index for March having been the highest yet reached.

ITALY

The rise in prices in Italy, a tendency of some months' duration, was checked during March, according to cable from Commercial Attaché MacLean, Rome. Investments of capital in industrial enterprises during March exceeded those of previous years at that period. The value of Italian foreign trade remained at a strikingly high level during February, with imports at 2,066,000,000 lire, as compared with 1,565,000,000 lire in February, 1924, and exports advanced to 1,403,000,000 lire, as compared with 1,103,000,000 lire last year.

LATVIA

The Government reconstruction plan, projected for realization during the next five years, proposes an expenditure of about \$136,000,000. Most of this money, it is proposed, will be used for construction of railways and roads, for improvement of postal, telegraph, and telephone service, and expansion of harbor facilities.

A considerable quantity of foreign capital will be required for the realization of this plan. Unemployment has been unusually heavy during the winter as a result of curtailed logging operations. Foreign trade for January, according to figures recently obtained, showed an adverse balance of 5,000,000 lats. Lumber shipments have not been heavy, but flax exports are quite satisfactory.

NORWAY

The Government has authorized a number of loans, including one for 100,000,000 crowns, to be applied to the conversion of present floating indebtedness. An-

other 100,000,000-crown loan contracted in 1920 will mature on June 15. The Government desires to convert the so-called food-administration loan of 158,000,000 crowns, which was secured from Norwegian banks. The 8 per cent \$20,000,000 loan obtained in the United States in 1920 and redeemable at 110 per cent will be refunded, and it is reported that \$10,000,000 for this purpose is already on deposit in this country. Norwegian currency has steadily appreciated during recent weeks and is now at approximately 60 per cent of par. This recovery follows expanded industrial output, increased exports, and a more aggressive policy affecting deflation and financial readjustments.

Latin America at a Glance

ARGENTINA

The slowing up of Argentine exports during March affected exchange, shipping, and general business somewhat, but a reaction is expected after the holidays. The wool and hide markets are firmer and more active. Imports are in excess of last year. The Federal budget for 1926 will be submitted at the opening of Congress in May. (Commercial Attaché E. F. Feely, Buenos Aires, April 11.)

PARAGUAY

The general situation in Paraguay is good, although the army worm has adversely affected production in certain areas. Money is plentiful, but it is believed that there are too many cotton brokers for the present estimated yield of about 14,000 metric tons. Labor conditions are good at present, but undoubtedly there will be an insufficient supply during the May and June harvest period. (Consul Digby A. Willson, Asuncion, February 28.)

BRAZIL

The Santos, Brazil, port situation is somewhat improved. Orders for imports in many lines are being reduced by weak exchange. (Commercial Attaché W. L. Schurz, Rio de Janeiro, April 13.)

PERU

Trade continues to be dull in all lines in Peru, a condition accentuated recently by the closing down of all business houses from April 9 to 12, inclusive, in observance of religious holidays. (Commercial Attaché H. B. MacKenzie, Lima.)

ECUADOR

Exchange is fairly steady in Ecuador, but business is only fair, due to serious washouts on the Guayaquil-Quito line previously reported.

COLOMBIA

Exchange is steady in Colombia, and general conditions are good.

HONDURAS

General economic conditions in Honduras have shown some slight improvement during the past few weeks, with increased buying during the Easter holidays. Exchange was steady throughout March at 2.06 pesos to the dollar. During March 963,648 bunches of bananas were exported to the United States and 83,000 to Great Britain. The drought is affecting the bananas in the Puerto Castillo district. (Consul George P. Shaw, Tegucigalpa, April 8.)

MEXICO

Some increased activity in trade in Mexico is reported with a reaction from the pessimism prevailing during the past weeks. There is increased activity in mining, and the automobile trade shows improvement, although the market for accessories, wholesale and retail, is unchanged. The textile market is dull and the grocery trade about normal. The one centavo postage stamp on all domestic postage in Mexico as a tax to raise funds for fighting the locust pest is now in full effect, and plans are being made for fighting this pest. (Commercial Attaché Alexander V. Dye, Mexico City, April 4.)

PORTO RICO

The general commercial situation in Porto Rico is unchanged. Credit precautions are still advisable, although collections have improved slightly. The weather has continued favorable for crops. (E. P. Keeler, trade commissioner's office, San Juan, April 11.)

CUBA

The labor situation in Cuba continues unsettled. The threatened strike on the Cuba Railroad has not materialized and the strike at Centrals Chaparra and Delicias is reported closed. The weather has continued favorable to harvesting operations and the rains that have fallen have benefited the growing cane. There has been no change in the commercial situation.

Far Eastern Trade News

AUSTRALIA

While present prices for wool in Australia are from 10 to 15 per cent below those of the peak period reached in November, 1924, they are, nevertheless, high enough to yield a fair return to producers. The demand for Geelong was satisfactory during the week ended April 11, and greasy merino was bringing around 33.5d. per pound. The wheat situation continues inactive and

unchanged from week to week, according to cable advices from Trade Commissioner E. G. Babbitt, Melbourne.

An immigration agreement involving the expenditure of £34,000,000 was reached between Great Britain and the Commonwealth Government during the week. By the terms of this agreement the British Commonwealth governments are to participate in loans aggre-

gating £34,000,000, Great Britain to pay half of the interest for the second five-year period. According to estimates this undertaking represents a British liability of £7,000,000 in addition to participation in transportation and other costs involved in settling the immigrant in Australia. Originally it was proposed that Great Britain should raise the loan, but the British Government maintained that as the loan was for Australia it should be raised by the Commonwealth.

INDIA

The general situation in India showed improvement during the week ended April 11, according to a cable from Trade Commissioner C. B. Spofford, Bombay. The exchange market was easier and prices were steady. The cotton market was firm. Bombay is still upset over the failure of the budget to reduce its share of the provincial contributions to the central government, and the continuance of the cotton excise tax. Mill owners contend that without relief they will be forced to reduce wages 20 per cent or close down two days a

week, as they have been losing money steadily since the beginning of 1924 and can not carry on any longer. Labor organizations threaten a general strike in the event of any reductions, and at least one walkout has occurred at Ahmedabad, where a reduction in wages was announced.

JAPAN

The official report of Japan's gold holdings at the end of March, 1925, places the total at 1,467,000,000 yen, of which 388,000,000 yen were held by the Government and 1,079,000,000 by the Bank of Japan, according to a weekly cable from Acting Commercial Attaché Frank Rhea, Tokyo. The total shows a decline of 137,000,000 yen in comparison with the corresponding period in 1924, there having been a falling off of 146,000,000 yen in Government holdings and an increase of 9,000,000 in the holdings of the Bank of Japan. It is reported that a governmental investigation commission has been organized for the purpose of recommending readjustments to the local national taxation system.

MONTHLY CABLE REVIEWS

EUROPE

Samuel H. Cross, Chief, European Division

French Production at Satisfactory Level

Based on cable from Commercial Attaché Chester Lloyd Jones, Paris, April 13

Budget discussions continue in the Senate without any definite report on progress. The statement of the Bank of France for April 9 shows a note issue amounting to 43,000,000,000 francs, an excess of 2,000,000,000 francs over the legal limit and an increase of 2,200,000,000 francs over that reported on February 26. Advances by the bank to the State have increased to 22,200,000,000 francs, as compared with 22,100,000,000 francs on the earlier date. The metallic reserve is shown as slightly increased to 5,860,000,000 francs from the 5,850,000,000 francs on February 26. Discounts on the Paris Bank and the provincial branches are now reported as a single item, amounting on April 9 to 6,180,000,000 francs.

Clearing-House Transactions—Unemployment Negligible.

Total debits and credits in the Paris clearing house during February amounted to 49,000,000,000 francs, as compared with 48,000,000,000 francs in January. The daily draft to cover also increased, reaching an average of 1,027,000,000 francs, as compared with 919,000,000 francs in the earlier month.

No change is recorded in the unemployment situation. The number of unemployed on March 28 is reported as 15,000, compared with 14,700 on February 26. Unemployment may therefore still be regarded as negligible.

Textile Industries Slightly Stronger.

Cotton manufacturing continues active, with good forward orders and satisfactory deliveries. Buying of raw wool is strong, and prices are firm at a somewhat higher level; manufacturing, however, is still dull. Silk production is at a high level, but buyers are hesi-

tant. Linen manufactures are dull and laces weak; tulle is active on old orders.

Prices on calfskins and cowhides are firm, and prices on other raw hides are advancing as a result of limited offers. Tanners are consequently purchasing in small amounts, and partial inactivity exists. A slight increase in retail prices of shoes has retarded the customary Easter sales.

Decline in Metallurgical Activity.

The iron and steel market is less active, following nervous forward buying during March. Price increases have been influential in this reduction of activity. The number of blast furnaces in operation was slightly greater on March 1 than a month earlier, but pig iron and crude steel production during February showed a decline from the previous month. Exports of pig iron, Lorraine ores, and finished and semifinished products showed practically no change; exports of scrap iron increased.

February production of coal was somewhat lower than the January figure, though still at a high level. Coke and briquettes showed a similar tendency. Orca coke deliveries advanced during March.

Imports of petroleum and petroleum products during February were considerably improved as compared with January, and receipts from the United States showed a corresponding advance.

Agricultural Machinery Strong—Other Machinery Depressed.

Sales of agricultural implements continue strong, excepting wine presses and viticultural equipment in southwestern France. Imports of harvesting machinery are lower than at this time last year.

Sales of industrial machinery are decreasing, particularly in metal-working lathes, drills, and wood-working machinery. Domestic and foreign sales of

electrical equipment and apparatus are active, and factories have good forward orders.

Sales of Automobiles Depressed.

Domestic sales of automobiles are below the level reached at this time last year, and factories are operating at approximately 75 per cent of capacity. January and February exports of passenger automobiles totaled 8,750, while exports of commercial vehicles numbered 795.

Agricultural Situation Good.

The general situation of crops is good, owing to excellent weather conditions. Sowings are estimated at 10 per cent lower than last year. The cereal market is unsteady, as a result of cost uncertainties, and heavy orders are withheld. The price of bread in Paris has been reduced slightly during the past fortnight. Sugar stocks are normal and consumption is satisfactory.

Railway Situation Improved.

The receipts of the principal French railways through March 18 of this year totaled 1,923,000,000 francs, as compared with 1,573,000,000 francs in the corresponding period of 1924. Average daily car loadings in the first four weeks of March numbered 62,976, as compared with 63,000 in the corresponding period of February. The ministry of finance has announced a \$15,000,000 loan in bonds of \$500 and \$1,000 denominations by the Nord Railway, repayable through annual drawings and bearing 6½ per cent interest; issue will be in the United States. The city of Paris has been authorized to float a bond issue of 500,000,000 francs, funds from which are to be devoted to the extension of the subway system.

Spanish Situation Uneven

Based on cable from Commercial Attaché Charles H. Cunningham, Madrid, April 13, with cooperation of the consul general at Barcelona, Spain

Private financial activity in the Madrid clearing-house district was reduced during March, as shown by clearing-house debits and credits amounting to 949,000,000 pesetas, an average of 39,000,000 pesetas per business day, or 6,000,000 less than in February. Clearings at Barcelona totaled 1,118,000,000 pesetas, practically the same as in February, while Bilbao clearings amounted to 135,000,000 pesetas, as against 127,000,000 pesetas in the previous month.

Although the general business situation, except at Madrid, is slightly improved, this trend is too recent to be manifested in financial statistics. The past month has been characterized by extensive sales of Government securities at a declining price, indicating a general need of ready cash.

Activities of the Bank of Spain.

The situation of the Bank of Spain does not yet reflect the improved business conditions. Note circulation of the bank at the beginning of April showed a reduction of 41,000,000 pesetas in comparison with the beginning of March, current accounts an increase of 81,000,000 pesetas, guaranteed credits a decline of 38,000,000 pesetas, and discounts a decline of 10,000,000 pesetas.

The Government credit balance with the Bank of Spain has reached a new low figure of 15,000,000 pesetas. No announcement has been issued regarding the flotation of the new loan, as anticipated a month ago, and it is evident that the Government has decided

to utilize the 350,000,000-peseta advance it is authorized to receive from the Bank of Spain. According to the law on this subject, the first 200,000,000 pesetas of this loan may be obtained without interest.

Industrial Financing.

By the end of May industrial financing to the extent of approximately 700,000,000 pesetas will be effected by the railroads and by metallurgical, hydroelectrical and electrification, irrigation, and telephone enterprises, in amounts varying from 15,000,000 to 80,000,000 pesetas each; 300,000,000 pesetas of the total will be floated by the two leading Spanish railroads, the Norte, and the M. Z. A.

Railroad Extension Approved—Securities Depressed.

The Government has just approved a plan calling for the expenditure of 3,000,000,000 pesetas on railroad extensions and improvements during the next five years. The original proposal of the Spanish Superior Railroad Council recommended the construction of nearly 6,000 miles of road, involving the expenditure of 5,000,000,000 pesetas during a period of 20 years. Some of the construction is already under way.

Security markets in general continue depressed; rails and steels, however, have risen as a result of the favorable announcement regarding their earnings. Railroad earnings in the first 10 weeks of the current year exceeded those of the corresponding period of last year by some 3,000,000 pesetas.

Bank Improvement Slight.

The general banking situation is still depressed, but there is a slight tendency toward recuperation. Earnings of the leading banks of 1924 averaged better than in 1923. Plans have been announced for the organization of the defunct Banco de Castilla and the Banco de la Plata. The latter is to be separated from Buenos Aires control. The Banco Central is regarded as in an unfavorable condition despite assistance from the Bank of Spain; this situation has not been affected by the recent publication of an embargo on the resources of the directors of the Credito de la Union Minera, amounting to 175,000,000 pesetas.

Industrial Financial Situation Uncertain.

The earnings of industrial enterprises during 1924, as well as those of Spanish banks, showed a better average than in the previous year. The Altos Hornos of Bilbao increased the dividend from 40 pesetas to 50 pesetas per share, while the Duro Felguera paid a dividend of 4 per cent. Earnings of the Madrid Electric Co. showed an increase of 500,000 pesetas.

Collections continue slow in Spanish business and buying in general is restricted. A large number of failures have occurred among moderate-sized business concerns and the credit situation requires caution.

Industrial and Agricultural Trend Slightly Firmer.

The Spanish metallurgical plants continue active at their full capacity. This favorable feature is to some extent counterbalanced by the dullness of the iron-mining industry, occasioned by reduced export demand for ore. Higher prices are causing renewed activity in lead, copper, and mercury mining.

The cotton textile situation is slightly improved, with production at 70 per cent of capacity, as compared with 60 per cent a month ago. The woolen industry is working at 90 per cent of capacity.

Export demand for olive oil and oranges has recently become slightly better. Raisin stocks are reported as low, with buying mostly from European

markets. Recent cold weather has caused a slight amount of damage to the almond crop, but rains have brought improved prospects for grain crops.

Government Aid to Industries.

The Spanish Government will put into operation during the current month the new agricultural credit bank, capitalized at 100,000,000 pesetas. The purpose of this bank is to facilitate credits to the farmers for the purchase of machinery and fertilizers. The Government offer to subsidize the exportation of Spanish textile products has been rejected by the Barcelona Textile Association on the ground that it is insufficient to aid the industry.

Living Costs Mount—Considerable Unemployment at Madrid.

The cost-of-living index for February (based on 1914 prices) was 197 in the case of foodstuffs, as against 195 for January; the index for industrial materials was 192, as against 186 in the earlier month.

Building is active in the Barcelona suburbs, at localities served by the new subway. The Spanish labor situation is quiet, but 35,000 workers are reported as unemployed at Madrid, with employment in the building trades at only 60 per cent of normal.

Sales of American Automobiles Good—Imports of Wheat.

The American automotive prospects continue favorable. Spring sales have been good, and March was reported as the best light-truck month on record. March registrations at Madrid totaled 144, of which 59 were of American cars, and 12 out of 15 registrations at Valencia were American. The only unfavorable feature for American automotive sales was the weakness of the French franc, which is favoring the importation of French cars at the expense of machines from the United States.

The Government recently authorized the importation of 60,000 to 90,000 metric tons of wheat, offering an opportunity to American exporters. The situation with regard to sales of southern pine is normal and unchanged from a month ago. The stave business is slack. The arrival of a cargo of Douglas fir on April 5 aroused considerable interest.

Subsidy to Trasatlantica Extended.

The Spanish Government has extended its contract with the Trasatlantica Steamship Co. to the year 1950, with an annual subsidy of 28,300,000 pesetas. The floating of additional obligations amounting to 15,000,000 pesetas has been authorized to meet the deficit in operating expenses last year, and the Government guarantees a 6 per cent dividend to stockholders. Additional construction has also been authorized, with preference to national industries. Ships may be acquired abroad, however, under certain conditions.

Continued Business Depression in Rumania

Based on cable from Commercial Attaché Louis E. Van Norman, Bucharest, April 6

General business depression continues, with no indications of improvement. The chief obstacle in the way seems to be the failure to attract foreign capital to Rumania for the development of enterprises. Credit remains scarce, and banking accommodations are exceedingly difficult to obtain. Interest rates are abnormally high, averaging from 2 to 4 per cent per month on first-class mortgages and well-secured loans. Such rates constitute a serious obstacle to economic advancement, and there seems to be a growing conviction that

Rumania's hope lies principally in the development and encouragement of agricultural production.

Debt Consolidation Progresses.

The work of consolidating outstanding obligations, both governmental and private, made considerable headway during 1924. The Finance Minister claims that, exclusive of the funding of war debts and some private trade debts now under negotiation, the public debt has now been consolidated and the service thereof made a definite and regular part of the budget. Agreements for the funding of pre-war and postwar commercial credits have been consummated with creditors in England, France, Switzerland, Italy, and Belgium, but not with Holland, Czechoslovakia, and the United States. Figures given by the Minister of Finance indicate that the budget is being balanced and that current expenditures are being met with current revenues.

Leu Exchange and Note Circulation Decline.

The sharp decline in leu exchange that has occurred during the past month is attributed to inability to meet the competition of Argentine corn on foreign markets and to the export prohibition for all other grain. Note circulation on March 7 stood at 19,150,000,000, as compared with 19,240,000,000 on February 7 and 19,360,000,000 on December 31. To meet the lowered valued of the leu the import tariff coefficient has been raised from a rate of 30 paper lei to 1 gold leu to a rate of 40 paper lei to 1 gold leu, and a substantial raise in railway rates is to become effective May 1. It is reported that the Government has concluded some kind of an agreement with a London firm for the construction of a metallurgical plant to be erected in Bessarabia.

Petroleum Production Back to Pre-War Figures—Exports of Foodstuffs.

February petroleum production showed a decline to 168,000 tons, as against 172,000 in December and 170,473 in January. The total petroleum production for 1924 of 1,853,133 tons was equal to the best pre-war figures. Petroleum exports for December reached 54,000 tons, as compared with 46,000 tons for October and 46,000 tons for November. During December only 6,000 tons of wheat flour and 7,000 tons of oats were exported, while during November 8,000 tons of wheat flour and 9,000 tons of oats were exported. December exports of corn amounted to 86,000 tons, as compared with 58,000 tons in November. Substantial gains were made also in exports of barley, beans, lumber, and firewood. At the end of March the Argus cost-of-living index stood at 4384, as compared with 4364 at the end of February.

Fall Grain Sowings Show Reduced Acreage.

The fall sowings of 1924 are estimated at 2,556,539 hectares, a decline from 1923 of approximately one-half million hectares.

Improved Credit Conditions in Poland

Based on cable from Commercial Attaché Leighton W. Rogers, Warsaw, April 10

Due to the application of the recent American loan to construction projects and Government credits for industry and agriculture, there was a decided improvement in the credit situation. Interest rates are being kept high in order to encourage industry to seek all possible foreign credits. The present small per capita circulation of only about 23 zlotys constitutes another

reason for their high levels. The March circulation was 563,200,000 zlotys, as compared with 549,600,000 zlotys for February.

February Budget Shows a Small Deficit.

The February budget shows a small deficit for the first time since September. A revision of the tax program is foreseen, especially as to the property tax, which calls for the raising of 1,000,000,000 zlotys during a term of three years. This time limit may, under the proposed revision, be extended.

One of the very important problems facing Poland is the need for assistance to agriculture. Treasury assistance hitherto has been substantial when compared with treasury resources, but small when compared with needs, and organized action is being contemplated. Marked opposition is manifested to the proposal of landowners to lower agricultural wages 30 per cent. This reduction, thought by many to be entirely justified by existing conditions, will be difficult to effect, and agricultural strikes are threatened.

Adverse Trade Balance Causing Uneasiness.

The very pronounced increase in the adverse trade balance for January, amounting to 60,000,000 zlotys as compared with a deficit of 215,000,000 zlotys during the entire year 1924, is causing uneasiness. Efforts are being made to discourage the importation of luxury articles. Living costs for March showed very slight change, the index figure standing at 189 as against 188 in February. The wholesale-price index for March was 141, as against 139 for February. The average

daily car loadings during March were 10,248, showing a slight increase over the February figure of 9,672.

Heavy Russian Purchases of Textiles.

The cotton textile mills continue their 48-hour week operations, although a falling off in demand at the end of March was noticeable. Buyers seem to be avoiding overstocking. Russian purchases during March and the statement by Russian interests of their intention to make additional heavy purchases have had a stimulating effect. Under the stimulus of Government orders and Russian sales, activity has been resumed in the woolen industry. Slight industrial improvement is reported, particularly in the building trade, which has been favored by weather conditions. However, the high interest rates, workman's insurance, and short working-day are deterrent factors.

Machinery Industry Meeting Foreign Competition.

The machinery industry is operating on a 4-day week schedule and is experiencing difficulty in meeting Czechoslovak and Austrian competition. In addition, competition arising from the credit terms offered by German manufacturers of electrical machinery is being felt. A fair demand exists for agricultural implements and machinery. Markedly increased activity is reported in the automobile trade, especially in light trucks and taxicabs. A new taxicab line, which is to be established in Warsaw, is negotiating for an initial order of 25 American taxies.

The condition of winter sowing is average. Flour imports continue at the rate of 5,000 tons per month.

UNITED STATES RATIFIES SANTIAGO TRADE-MARK CONVENTION

Greater Security to Trade-Mark Rights and Simplicity of Registration the Aims of the Convention

Bernard A. Kosicki, Division of Commercial Laws

The Inter-American Trade-Mark Convention, signed at Santiago on April 28, 1923, represents the second definite step toward making secure the rights to trade-marks used in trade between the American republics. Being the most modern arrangement for the international registration of trade-marks, it may be said to embody the most advanced principles of international trade-mark protection.

Aims to Reduce Possibility of Abuses.

The convention of 1923 is, properly speaking, a revision of the Buenos Aires convention of 1910 for the inter-American registration of trade-marks. Like its predecessor, the Santiago convention aims to reduce the possibility of abuses to which the fundamental difference between Anglo-American trade-mark law and the trade-mark law of Latin American countries has given rise. "This system," remarked an eminent Argentine trade-mark authority, while speaking of the principles prevailing in Latin American trade-mark law, in connection with the convention of 1910, "undoubtedly lends itself to acts of piracy on the part of unscrupulous persons, and one of the principal purposes in adopting this convention (1910) has been to establish the fundamental principle that the right to a trade-mark is acquired by prior user and not by simple priority in perfecting registration."

While this statement is a broad enunciation of the objects contemplated by both the convention of 1910 and the convention of 1923, it expresses concisely the

reasons which led to the formulation of an inter-American trade-mark arrangement and the ends sought to be accomplished.

Arrangement Initiated by Convention of 1910.

The convention of 1910 provided for the creation of two registration bureaus—one at Habana and the other at Rio de Janeiro—for the purpose of executing the provisions of the convention relating to international registration of trade-marks. The countries ratifying the convention were divided into two groups, of which the northern was to be served by the Habana office and the southern by the Rio de Janeiro office. In order to obtain the benefits of the convention any person possessing a trade-mark registered in one of the signatory countries could register it in the other signatory countries by filing a single application through the trade-mark registration office of his country. This international registration was subject to the payment of a single fee of \$50. With the exchange of the necessary number of ratifications the Habana bureau for the international registration of trade-marks was established in September, 1919.

The United States, Costa Rica, Cuba, Honduras, Ecuador, Guatemala, Haiti, Dominican Republic, Panama, Uruguay, Brazil, Nicaragua, Paraguay, Peru, and Bolivia originally ratified the convention of 1910. Of these countries, Guatemala, Nicaragua, Costa Rica, and Honduras subsequently withdrew, but the convention is still effective as to the other countries.

Objections Removed by Revision of Convention of 1910.

Certain inadequacies in the text and conflict in principle are accountable for the failure of a greater number of countries to respond to the proposal. The chief objection to the arrangement was the obligation imposed on the signatory countries to accept for registration trade-marks transmitted by the central bureau without a corresponding return in revenue. Another objection of compelling force was the superiority given to certain rules of law established by the convention over municipal law.

To remove these fundamental objections and achieve greater unanimity with regard to an arrangement for inter-American protection of trade-marks it became necessary to revise the convention of 1910. The revision was accomplished at the fifth Pan American conference, and the convention of Santiago was signed on April 26, 1923. The countries subscribing to the articles of the convention are Venezuela, Panama, United States of America, Uruguay, Ecuador, Chile, Guatemala, Nicaragua, Costa Rica, Brazil, Salvador, Colombia, Cuba, Paraguay, Dominican Republic, Honduras, Argentine Republic, and Haiti.

The convention of 1923 alters the convention of 1910 by the introduction of three new fundamental propositions: First, the rejection of the principle of single registration; second, the recognition of the municipal law of each State as supreme in judicial and administrative matters; and, third, a more detailed definition of the nature of rights existing prior to the registration of the trade-mark.

Selective Registration a Feature of the 1923 Convention.

One of the novel features introduced in the Santiago convention, and which does not correspond to any provision in the Madrid arrangement of 1891 or the Buenos Aires convention of 1910, is that of selective registration. The convention provides that an applicant for international registration of his trade-mark must state in his application the countries in which he desires to have his trade-mark registered. The application then is forwarded by the registration bureau to each of the countries designated. Upon acceptance of the trade-mark for registration the applicant must pay the fees exacted by the law of each country in addition to the fee of \$50 which he paid to the central bureau upon filing his international application. Trade-marks so registered are considered equivalent to trade-marks registered under the municipal law and are entitled to equal protection for the term provided in the law.

The assimilation of trade-marks registered under the convention with those registered under the law of the country in all important respects is a wide departure from the principles announced in the convention of 1910. Under that convention international trade-marks occupied a position distinct from national trade-marks, and the term of registration was unlimited.

Convention Adopts Equitable Theory—Legal Principles Unimpaired.

The important difference in doctrine between the two conventions is found in the declaration of the effect that is to be given to trade-mark rights acquired in one country when these rights are claimed in the other countries. The convention of 1910 laid down the rule that a trade-mark registered in one country was to be regarded as registered in the other countries after compliance with the requirements of the convention, and provided that the rights of third parties were not impaired or the law of the country violated.

The convention of 1923 distinguishes between the right of ownership of a trade-mark and the right to acquire ownership. It leaves unimpaired the principles of the municipal law of each country upon which the right of trade-mark ownership rests. Thus, the common-law principle of user in the United States is preserved and the civil-law principle of registration in the Latin American countries is kept intact. The determination of the right of property in a trade-mark depends exclusively upon the law of the country.

While, on the one hand, municipal law is supreme with respect to the substantive right of trade-mark ownership, the convention, by giving effect to the theory of international respect for rights acquired in one country, establishes certain rules, through the operation of which greater security is given to a trade-mark right acquired in one country and claimed in another country of the union by relating the application back to the country of origin for the purpose of determining priorities of respective applicants.

The operation of this principle would follow logically from a reasonable construction of article 2 and article 5, sections 1 to 4, of the convention of 1923. Article 2 declares that the date upon which an application for registration through the inter-American bureau is filed in the country of origin shall establish a priority in favor of the applicant in the absence of other proof of ownership. This priority date is not of great practical importance because, in order to take advantage of it, it would be necessary to file an international application in anticipation of future inter-American trade. Through the selective method recognized by the Santiago convention, it would not only be necessary to make an application to the proper bureau but also designate countries in which registration is to be made. It is submitted that the only effect of an inter-American application in relation to priority is to determine the award of priority in the countries where registration is to be made and not in all the States of the union.

Provisions for Cancellation of Wrongful Registrations.

The rules laid down in article 5, section 2, of the convention are of more far-reaching importance, since they concern the final adjudication of controversies over the right of ownership of a trade-mark claimed by two or more parties. This article provides that whenever the owner of a trade-mark in one country is denied protection in another signatory country because of prior registration or application by another, he may have recourse to the judicial or administrative tribunals in that country and establish his right of ownership by proving any one of the following propositions: "(1) That he had legal protection for his mark in any of the contracting States before the date of application for the registration which he seeks to cancel; (2) that the registrant had no right to the ownership, use, or employment of the registered mark at the date of its deposit; or (3) that the mark covered by the registration which he seeks to cancel has been abandoned."

The language of article 5 is obviously intended against fraudulent appropriation of trade-marks. This article could not consistently apply where the trade-mark thus sought to be canceled has been registered or owned in good faith in the country, although the same or similar trade-mark was owned and used by another in another signatory country at a prior date. Such a construction would be in conflict with the spirit and declared principles of the convention, for it is stated

in express terms that the ownership of a trade-mark is recognized upon three conditions—the requirements of the convention must be fulfilled, the rights of third parties must be preserved, and the trade-mark must be a lawful character.

Period of Limitations in Contested Proceedings.

The administration of each country may refuse to register the trade-mark if it is unlawful in character or not susceptible of registration (common designation), or if it resembles a trade-mark already registered in favor of another person for the same class of goods. The proper inter-American bureau must be notified of the rejection, and within 90 days following this notification the applicant may answer the objection. If registration is denied because of prior conflicting registration, the applicant may sue for the cancellation of the registered trade-mark, should he have a better right thereto on any of the grounds enumerated above. This action for cancellation must be brought within one year following refusal of registration, or within two years after the Convention of 1923 enters into effect.

A limitation on this action is placed in section 4 of article 5. This section states that the right to have a trade-mark canceled does not apply in the case of trade-marks "the registration or deposit of which is already beyond question under national legislation." No doubt this refers to such registrations as have become conclusive because of the running of the statutory period (for example, five years in Brazil) or because the right of ownership of the trade-mark can not be disputed according to the principles of municipal law. The latter view creates an apparent inconsistency between sections 4 and 2 of article 5.

Construction of Fundamental Provisions to Meet Apparent Inconsistencies.

This inconsistency, however, is more apparent than real. The convention must be read as a whole in order to arrive at a proper construction of what appear to be contradictory statements.

Looking, therefore, to the other parts of the convention, two fundamental principles are to be observed: First, the supremacy of municipal law in judicial and administrative matters; and second, the preservation of the rights of third parties. Viewing sections 2 and 4 of article 5 in the light of these principles, the logical construction to be reached is that a trade-mark may be canceled, either through the application of municipal law or through the application of section 2 of article 5 of the convention, provided this does not operate in derogation of rights honestly and legitimately acquired under the municipal law.

The last clause of section 4, making the provisions of section 2 applicable to renewals, is of rather doubtful efficacy. Public policy demands that the period within which an adverse claim to property may be presented must be limited. By the municipal law of some Latin American Republics not only the remedy but also the right of disputing trade-mark ownership is cut off after a certain term, varying from one to five years. It would follow, then, a fortiori that if a trade-mark had been on the register for 10 or 20 years the rights should be concluded in favor of the registrant. For this reason it would appear that the last clause of section 4, if invoked at all, will have a limited application, perhaps only in those countries where a renewal is regarded in effect as a new registration.

Administrative Plans in General—Ratification.

Many of the provisions of the convention of 1910, particularly with reference to administrative measures, have been carried over into the convention of 1923. The plan of two international registration bureaus, to be located at Habana and Rio de Janeiro, is retained. These bureaus are intended merely to transmit applications for international registrations, distribute the fees, and carry on the work of maintaining the union.

The Santiago convention of 1923 will not become effective until 30 days following receipt of ratification of the necessary one-third of the 18 signatory countries. Until that time the convention of 1910 remains in force. The rights acquired under the convention of 1910 will not be disturbed upon its displacement by the convention of 1923, and no further obligations will be imposed on persons who had registered their trade-marks under that convention.

Six countries already have ratified the convention of 1923; Brazil, January 12, 1924; Guatemala, May 8, 1924; Paraguay, June 5, 1924; Cuba, August 2, 1924; Costa Rica, October 28, 1924; and the United States, February 24, 1925. All of the ratifications have not yet been deposited with the Government of Chile. The convention will enter into force after 30 days have elapsed following the last deposit. Ratification has been recommended to the Colombian Legislature by the President of Colombia and early action is expected.

[The ratification of the convention of 1923 by the United States has not yet been proclaimed. Official copies of the articles of the convention, therefore, are not available. A limited number of unofficial copies are on file in the Division of Commercial Laws, which will be sent to interested parties on request.]

Foreign Trade of Nyasaland Increases

The foreign trade of Nyasaland during 1924 was marked by a large increase, imports gaining 19 per cent and exports 37 per cent. The improved condition of agriculture has increased the purchasing power of both Europeans and natives. Imports accordingly have gained in all classifications, but the most notable increases were made in cotton piece goods, clothing, vehicles, agricultural and other machinery, iron and steel manufactures, and petroleum. The principal exports from Nyasaland were tobacco, cotton, fibers, corn and corn meal, and tea. Total imports into Nyasaland in 1924 were valued at £548,156 and total exports at £583,555, as compared with imports in 1923 of £462,283 and exports of £425,181.

Cotton Manufactures Chief Item of Import.

Nearly one-half of the imports into Nyasaland consist of manufactures of cotton, chiefly piece goods, blankets, shawls and shawling, and hosiery. Imports of cotton manufactures in 1924 were valued at £255,735, a gain of £56,836 over 1923. Other important items of import into Nyasaland during 1924, in order of value, were: Vehicles, £38,988; apparel, haberdashery, and millinery, £33,804; iron and steel manufactures, £24,397; petroleum, £17,059; machinery, £14,214; groceries and provisions, £13,036; and agricultural machinery and implements, £11,419. Great Britain is the chief source of imports, 55 per cent coming from that country.

SOUTH AFRICAN GOVERNMENT TO FAVOR LOCAL MARKETS

All Tenders to be Issued in South Africa—American Firms Have Opportunity to Bid for Business—Supplies Ordered Largely for Railway, Harbor, Postal, and Other Services.

Fred A. Christoph, European Division

Recently the South African Government announced that, so far as practicable, all of its purchases would be ordered locally. This change in policy will be of benefit to American exporters who are represented in South Africa, as heretofore it has been the policy of the Government to make all purchases through the office of the high commissioner for the Union of South Africa, located in London. South African business men for some time have been agitating to secure this change, as in many instances supplies that were obtainable in South Africa and could have been procured there without delay were instead purchased overseas.

Local industry in the Union also will be benefited by the change, inasmuch as its products will be given preference when Government supplies are purchased. However, as the industrial development of South Africa is still more or less limited, the Union will continue to import a large share of its necessities. Under the new policy, therefore, it is expected that American manufacturers will be able to share in Government business to a much greater extent than was possible in the past.

Method of Tendering.

Prior to this change in policy the Union Government had forwarded all calls for bids to the high commissioner's office in London. This office maintained a select list of bidders, and only firms so listed were given the opportunity to tender. An exception was made in the case of firms represented in South Africa, which were not required to be listed, but so many difficulties were encountered that American firms thus represented made little attempt to compete for Union Government business.

Under the new policy all calls for bids in South Africa are made through the office of the Government buyer at Pretoria. Representatives of American firms will be permitted to bid on behalf of their principals, and it is understood that ample time will be allowed for them to communicate with their principals overseas. Only in those cases where local supplies are unsuitable or unobtainable will the calls for bids be sent to the office of the high commissioner in London. The new plan is already in effect, and the first contract to be awarded through the South African representative of a foreign firm has been let.

Preparing New Regulations to Govern Purchases.

At the present time a departmental committee is studying regulations covering Government purchases, with a view to recommending necessary changes. Indications are that in the case of goods purchased in South Africa or usually carried in stock by South African merchants and importers, bids will be called for only in South Africa; but in the case of bids for larger and more important lines, such as locomotives and material for electrification projects, bids will be called for simultaneously in London and in South Africa. The South African Railway Administration has already adopted this policy in making its purchases.

Sources of Imports of Government Stores.

As South African industry is still in the developmental stage, the larger portion of manufactured goods required by the Government must be imported. During the calendar year 1923 total imports of Government stores into South Africa were valued at £3,270,050, of which Great Britain supplied four-fifths valued at £2,667,643. Australia was the second largest source of supply, with a value of £369,204. The United States stood third, supplying a value of £140,357. The total value of Government stores bought from the entire British Empire was £3,063,684, and the total value of such stores from other countries was £206,366.

Value of Government Stores Imported.

Stores imported for the use of the South African Government range from supplies for the army to materials required for the electrification of railways. Railway material, consisting of rails, sleepers, locomotives, and rolling stock, constitutes more than a quarter of the total Government purchases. The second-largest items of purchase fall under the head of machinery. Another important item covers electrical material and machinery, chiefly for the railways and the national telephone and telegraph system. These three groups comprise 60 per cent of the total purchases of Government stores.

In the list given below only the principal items are shown:

PRINCIPAL ARTICLES PURCHASED BY THE SOUTH AFRICAN GOVERNMENT, 1923

	Value
Airplanes, airships, balloons, and parts.....	£8, 100
Apparel (including weatherproof).....	17, 683
Arms and ammunition.....	276, 665
Books, printed.....	11, 753
Paper, printing.....	29, 811
Creosote.....	7, 842
Drugs, chemicals, and apothecary wares.....	16, 155
Linseed oil.....	8, 484
Paints and painters' goods.....	11, 962
Motor spirit, including benzine and naphtha.....	7, 161
Earthenware and stoneware.....	8, 865
Electrical material and machinery:	
Cable and wire.....	173, 877
Insulators, porcelain.....	5, 570
Material and machinery, n. e. s.....	259, 519
Telegraph and telephone material.....	122, 201
Mathematical and scientific instruments.....	7, 521
Surgical and dental appliances.....	13, 279
Metal goods:	
Brass.....	7, 791
Copper.....	32, 116
Tin and tinware.....	41, 432
Iron and steel, semimanufactured—	
Bar, bolt, and rod.....	7, 034
Girders, beams, joists, columns, and structural shapes.....	113, 126
Pig and ingot.....	10, 051
Wrought iron and steel.....	18, 620
Plate and sheet.....	11, 041
Hardware and cutlery.....	87, 142
Mechanics' tools.....	5, 276
Machinery—	
Boilers.....	17, 871
Boiler tubes.....	24, 304
Cranes.....	10, 252
All other machinery, n. e. s.....	464, 573
Rails, light (for industrial purposes).....	12, 428

Railway materials:	Value
Rails.....	£203,815
Sleepers, wood.....	326,162
Locomotives.....	77,717
Rolling stock.....	121,819
All other, n. e. s.....	179,924
Textile goods:	
Canvas and duck.....	91,076
Cordage and rope (not wire rope).....	5,141
Cotton manufactures—	
Piece goods.....	38,827
Hosiery and underclothing.....	8,402
Waste.....	7,797
Other manufactures.....	12,416
Tents and tarpaulins.....	14,579
Woolen cloth and piece goods.....	34,816
Leather and leather manufactures:	
Leather in the piece.....	11,365
Saddlery and harness.....	7,404
Saddlers' and shoemakers' material (not leather).....	7,364
Trunks, suit cases (not leather).....	13,826
Wood and timber, unmanufactured:	
Jarrah.....	42,024
Pitch pine.....	11,422

Government Railways Largest Purchasers.

The requirements of the Government for its railways and harbors, posts and telegraphs, hospitals, and education departments are all purchased through the Government buyer. From one-third to one-half of these purchases each year are for the account of the State-owned South African railways. According to the South African Railways and Harbors Report for 1923-24 the value of such stores was £7,163,646, of

which 60 per cent, or £4,370,403 worth, was bought in South Africa, and the remainder, or £2,793,243 worth, was purchased through the high commissioner's office in London. Of the purchases supplied in South Africa £1,589,279 was spent for goods produced locally; the rest represented goods imported into the country.

Increased Business for American Firms.

Under the changed policy for making Government purchases, the prospects of business for American firms represented in South Africa are increased greatly. In connection with indents dispatched to the high commissioner's office in London, it was not the custom of South African representatives to tender on behalf of their principals; instead, they notified their principals as to the materials being called for, and the principals did the tendering. With the joint publication in both London and South Africa of calls for bids in the case of large and important lines, American firms will have an option of tendering through London or of having their representatives in South Africa tender locally on their behalf.

However, American firms that are not represented in the South African market will be unable to take advantage of the new policy until they have secured a local agent. The Bureau of Foreign and Domestic Commerce is in a position to assist such firms in securing a proper agency representation in that country, so that they may be able to tender either for Government work generally or for a particular contract.

COMMERCIAL ARBITRATION UNDER DIFFERENT SYSTEMS OF LAW

Extrajudicial Arbitration Not Restricted to United States—Two Forms Inherent in Latin American Systems

Guerra Everett, Division of Commercial Laws

The passage of the United States Federal Arbitration Act adds a final note of prestige to the new principle of commercial arbitration judicially enforced, as embodied originally in the New York and New Jersey State arbitration statutes. This principle is a typical American contribution to the science of jurisprudence, and, stated in the simplest terms, it enacts that when two merchants have made a contract in which there is a clause providing for the arbitration of disputes arising therefrom, the court may, upon the application of either party, order the arbitration to be held, and may enforce the award as any judgment at law.

Arbitration in the Latin American Systems of Procedure.

In most of the countries of Latin America, the codes of civil procedure have always expressly recognized the principle that awards are enforceable when they comply with certain prerequisite conditions. The fact that arbitration is not commonly resorted to by merchants in Latin America is due largely to the character of these conditions. It should be observed that the codes of procedure do not provide for the enforcement of mere agreements to arbitrate, but only for the enforcement of awards made pursuant to a formal submission of the case in the manner specified by law. The judge may assign arbitrators upon the application of both parties only, and not *ex parte*.

Two Varieties of Arbitration Under the Codes.

The codes distinguished between arbitrators, properly speaking, and "amigables componedores" or friendly adjusters. The former are appointed by the judge from among good men, learned in the law, and

their duty is to judge the matter according to the forms of law. The arbitrator is, in fact, merely a substitute for the ordinary judge. His findings are reviewable and subject to reversal by the higher courts. There is nothing to be gained by employing an arbitrator except in the one instance where the ordinary judge does not enjoy the confidence of either party.

The friendly adjusters, on the other hand, are not trammelled with any forms of procedure. Their findings may be reached with much more dispatch. They need not be lawyers. They need not follow the law, and only the application of equity and justice to the facts is enjoined upon them. Their award is not subject to appeal to any court, except upon an allegation of fraud or the like. It is here that the codes might be amended so as to bring into them the spirit of the new American laws.

Form of Submission Is Principal Obstacle.

Arbitration under the codes is compulsory only when the parties to the controversy appear together before a notary and execute a "public instrument," which is a document almost as solemn and impressive as a deed to real estate, covering several pages of stamped paper, and written in the handwriting of the notary. In this instrument the parties bind themselves to submit the particular controversy, which has already arisen, to arbitration either by arbitrators or by friendly adjusters. The form and content of the instrument are prescribed with great detail in the codes of procedure.

This type of arbitration differs widely, of course, from the principle of the new American laws, which sanction compulsory arbitration whenever the original contract contains a clause to that effect, *ante litem motam*. Such a clause in the original contract would, in Latin America, not be more compulsory than any other item in the contract; it might give rise to an action for specific performance or some other form of suit, but lawsuits are exactly what it is desired to avoid.

Other Obstacles Present.

There is no doubt that the effect of modern commercial arbitration laws could be largely attained in Latin America merely by the simplification of the procedure prescribed in the familiar institution of *amigables componedores* or friendly adjusters, and, indeed, this might be preferable to the hasty adoption of a

uniform arbitration law. The precipitate introduction of a strange principle of jurisprudence upon the statute books of a country might have the effect of multiplying, rather than reducing, the mass of pending litigation.

As a matter of fact, however, the greatest difficulty to be surmounted is not the acquisition of suitable arbitration laws in Latin America, but the installation of adequate and efficient facilities for arbitration, and the destruction of many existing psychological barriers which militate against the common recognition of the principles involved. The American merchant, who has carefully educated himself to an appreciation of the value of the principle of commercial arbitration, must not forget that merchants of other countries must undergo the same course of basic training, if commercial arbitration is to be firmly and permanently established there also.

PAPER

O. M. Butler, Acting Chief, Paper Division

THE FRENCH PAPER INDUSTRY

Output Estimated at 700,000 Tons Annually and Imports at 155,000 Tons

Consul Raymond Davis, Paris, March 6

Definite information concerning the production of paper in France is very limited, inasmuch as production statistics are not collected by the organization of the paper industry nor by the Government. An estimate places French production of paper of all kinds at 700,000 metric tons a year, divided as follows: Cardboard, between 250,000 and 300,000 tons; cigarette paper, 20,000 to 25,000 tons; and newsprint, 75,000 to 90,000 tons.

Output of Newsprint.

The estimate of newsprint is based on an output of 300 tons daily prior to the war, giving an annual production of 90,000 tons. Many manufacturers at present, however, are devoting their attention to other grades and the production of newsprint has undoubtedly decreased considerably. Estimates of the present output of newsprint paper are 200 tons daily, or 75,000 tons per year—and the exact figure lies between these two extremes. Paris journals are supplied almost exclusively with imported newsprint in rolls, while the provincial papers use the domestic output which is sold in sheets cut ready for printing.

With production placed at 700,000 tons, imports at 155,000 tons, and exports at 61,000 tons, the requirements of France in paper and paper products may be calculated at approximately 794,000 tons annually. Although production is in excess of imports, the French paper industry depends largely upon the importation of raw materials; production of newsprint is only about one-third of total requirements.

Imports of Paper and Paper Products.

Imports of newsprint and a number of other papers fall under the classification "plain, machine-made paper of more than 30 grams weight per square meter," which item represents approximately 90 per cent of the total paper and board imports. Allowance being made for kraft and other wrapping papers, receipts of newsprint during 1924 are estimated at 118,000 metric tons,

or 80 per cent of this item. Norway, Germany, and Sweden were the principal sources of supply of this class of imports, the Scandinavian countries being also the chief supplies during 1924 of other machine-made papers (under 30 grams per square meter). Belgium furnished approximately one-third of the fancy papers; the Netherlands one-half of the hand-made papers; Great Britain nearly one-half of the photographic paper; and Norway, Sweden, and Belgium the bulk of vegetable parchment and similar papers. The following table shows the total quantity of the various classes of paper and paper products imported during 1913, 1923, and 1924 and the value of the imports during the latter year:

Imports of paper and board into France

Classes	1913	1923	1924	1924

¹ Metric ton of 2,204.6 pounds.

² 4 quintals (882 pounds) imported in 1913 and 1923.

Sales of American Paper in France.

American manufacturers of paper board have been most successful in finding a market for their products

in France, having furnished over 25 per cent of the total imports of cardboard and cardboard manufactures during 1924. The largest imports from this source were of fancy and vulcanized cardboard, both in sheets and cut or stamped in various shapes, the former amounting to 924,168 pounds and the latter to 2,153,233 pounds. Other imports from the United States, in pounds, were: Plain cardboard in sheets, 284,173; paper boxes, 638,893; fancy papers, 79,586; cigarette paper, 15,658; wall paper, 12,346; photographic paper, 67,461; and fancy cardboard articles, 28,439. The most notable increases during the year were in receipts of plain cardboard in sheets, which were 80 per cent greater than during 1923, and in fancy cardboard, cut and stamped in figures, which increased from 41,226 pounds in 1923 to 2,153,233 pounds in 1924.

French Paper Industry Dependent on Foreign Raw Materials.

The paper industry is largely dependent upon foreign sources for its supplies of wood pulp—a condition which is a cause of increasing concern in view of the decline in imports of this kind and greatly augmented imports of finished paper and board. The French forests supply the mills with spruce and soft woods as far as possible, but estimates place the output of the 30 pulp mills, which are run largely as annexes to the paper mills, at only 100,000 metric tons per year, while imports of wood pulp during the past three years have averaged 386,000 tons. In other words, exports being negligible, imports of wood pulp represent between 75 and 80 per cent of the total consumption. Unfortunately, the French possessions in northern Africa can not be turned to as a source for wood pulp, for while there is an abundance of vegetable fibers found in this region that can be utilized in the manufacture of paper, these fibers, with the exception of alfa or esparto, are fit only for secondary pulp or fillers, none of them uniting the qualities of strength and durability. The manufacture of esparto pulp has increased in France since the war, one large company in particular having increased its production to a point where it expects to enter the export field in the near future. Approximately 90 per cent of the alfa crop, however, is still purchased by Great Britain for the production of writing papers.

Imports of Paper Base Stocks.

The leading sources of both mechanical and chemical pulp are Sweden, Norway, and Finland, which together furnished 75 per cent of the 1924 imports. Considerable quantities of chemical pulp were also obtained from Germany and Austria, receipts from both of these countries showing an increase over 1923. Canada was at one time looked to as a source of supply, and it was hoped that imports of wood pulp from that country would liberate France from its dependence on the former enemy countries, but unfavorable exchange conditions, together with the fact that Canadian mechanical pulp was found to be too heavy for the French market and called for a considerable admixture of Scandinavian pulp when used in the manufacture of newsprint, has caused a sharp reduction in imports from that source during recent years.

The commerce in waste papers, rags, and other paper-making waste, ordinarily included under the general term "drills," is an item of considerable importance among the raw materials on the market in France. In 1924, imports of this class of material were 100,853

metric tons, compared with exports amounting to 101,660 metric tons. The imports, however, consisted mainly of old papers from England, while exports were chiefly rags, other than woolen, to the United States and Belgium-Luxemburg.

Imports of paper base stocks, and also of finished paper and paper products, during 1913, 1923, and 1924, as compared with exports during the same periods, are shown in the following table:

French imports and exports of paper base stocks, finished paper, and paper products

Class	1913	1923	1924	1924

¹ Metric tons of 2,204.6 pounds.

Increased Exports of Paper and Paper Products.

The bulk of the French shipments of paper, cardboard, and manufactures falls under the classification "other paper and cardboard," this item representing 75 per cent of the volume and 65 per cent of the value of the total shipments in 1924. The chief buyer of this class of products, apart from the French colonies and Egypt, which received approximately 50 per cent during the past three years, was the United States, with purchases amounting to 7,335 metric tons in 1924 and 6,374 tons in the previous year. Other important customers were Great Britain and Belgium, which took 3,423 tons and 3,102 tons, respectively, in 1924.

Approximately 56 per cent of the exports of fancy paper and board, totaling 2,388 tons, valued at \$915,969, also went to these three countries, while the bulk of shipments of cardboard in sheets, amounting to 5,048 tons, valued at \$992,426, went to Turkey and French possessions.

Increases during the past three years have been chiefly in the field of finer papers and boards rather than in the cheaper grades. Exports of boxes during 1924, amounting to 1,141 tons, valued at \$225,654, were twice as great, and exports of photographic paper amounting to 392 tons, valued at \$934,821, and of decorated cardboard, amounting to 1,635 tons, valued at \$1,205,144, were four and five times as great, respectively, as in 1913. Another important export during 1924 was wall paper, which totaled 2,591 tons, valued at \$921,834, an increase in volume of 40 per cent over the previous year's shipments and of 52 per cent over those during 1913.

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

EXPORTS OF FLOUR FROM UNITED STATES PORTS DURING 1923 AND 1924

Total exports of flour in 1924 show loss of 320,000 barrels—Decided shift from Asiatic to European markets—South American purchases show gain of 200,000 barrels

J. A. LeClerc, Foodstuffs Division

During 1924 flour exports from the United States were less by 320,000 barrels than in 1923. Practically 98 per cent of all the flour exported went out from 10 customs districts, as shown in the following table. While in the aggregate several hundred thousand barrels of flour are shipped from ports other than those shown as "all other" in the table (mostly Mexican border ports), the relative amount is really very small. The ports of Baltimore, Virginia, New Orleans, and Galveston are the only ones through which more flour was exported during 1924 than in 1923.

Shift of Trade from Asia to Europe.

Of the 16,310,000 barrels of flour exported during 1923 and of the 15,990,000 barrels shipped during 1924 the relative amounts going to the various subdivisions during 1923 and 1924 were as follows: Europe, 41.9 and 48.6 per cent; Asia, 30.2 and 22.6 per cent; Africa, 3.3 and 2.3 per cent; South America, 5.4 and 6.8 per cent; Mexico and Central America, 6.1 and 6.5 per cent; West Indies, 12.2 and 12.9 per cent. No account has been taken of the small shipments to Canada and Labrador.

Thus a relatively larger amount of our surplus flour was shipped to Europe last year than the year before, and a much smaller amount to Asia. Gains of considerable magnitude were made in the quantities exported to the United Kingdom and to the countries of central and western Europe. During 1924 the United States shipped 1,940,000 barrels of flour to the United Kingdom (a gain of 298,000 barrels over that of the previous year), and 4,171,000 to central and western Europe (a gain of 1,473,000 barrels). The exports to all Europe were 7,781,000 barrels, or 950,000 barrels more than for the previous year. Our exports to the Baltic countries suffered a setback of 726,000 barrels, and a small loss of some 96,000 barrels was encountered in the markets of the Mediterranean countries of Europe.

Exports of flour from United States by principal ports

1 Less than 500.

2 Includes small amounts to Canada and Newfoundland.

3 Practically all from Florida.

4 Of this amount, 1,090,000 barrels went to Cuba.

5 Of this amount 1,187,000 barrels went to Cuba.

General Increase in Shipments to Europe.

Through every port of the United States, except that of New York, more flour was exported to the United Kingdom in 1924 than in 1923. The bulk of the increase, which amounted to 298,000 barrels, was made by the Washington, Baltimore, and Portland customs districts.

Every district except Washington and San Francisco showed larger shipments of flour to central and western Europe in 1924 than in 1923, the gain of 1,473,000 barrels being made chiefly by New Orleans (611,000 barrels), New York (377,000 barrels), Galveston (231,000 barrels), and Portland (96,000 barrels). There was an increase in the amount of flour shipped to all Europe in 1924 over 1923 by every port of the United States except New York and Philadelphia. The amount of this increase was 950,000 barrels, apportioned as follows: New Orleans, 642,000; Galveston, 236,000; Portland,

170,000; Washington, 159,000; Baltimore, 126,000; and Mobile, 103,000 barrels. New York suffered a loss of 273,000 barrels and Philadelphia 139,000 barrels.

New Orleans and Galveston were the only two ports which made larger shipments of flour to the Mediterranean countries of Europe in 1924 than in 1923. The gains, however, were very small, totaling only 13,000 barrels. The total exports to the Mediterranean countries amounted to 650,000 barrels in 1924, or a loss of 96,000 when compared with shipments in 1923, Philadelphia having shipped 40,000 barrels less than during the previous year, and New York 75,000 less.

Increased shipments of flour to the Baltic countries were made by Portland and Washington. In 1923 these two districts shipped about 1,000 barrels to that part of Europe, while in 1924 their exports had increased to 47,000 barrels. Shipments from New York, however, show a decrease of 582,000 barrels in 1924 as compared with 1923 shipments, and Philadelphia a loss of 130,000 barrels.

Decreased Shipments to Asia—Small Gains to Africa.

No port of the United States increased its exports of flour to Asia during 1924 over 1923. The loss of 1,305,000 barrels was made up mostly of decreased shipments from the Pacific ports, as follows: Portland, 136,000 barrels; San Francisco, 393,000 barrels; and Washington, 707,000 barrels.

San Francisco is practically the only port of the United States which ships flour to Oceania, and in 1924 such exports amounted to 24,000 barrels, or 3,000 barrels more than in 1923.

New Orleans was the only port of the United States which made larger shipments of flour to northern Africa in 1924 than in 1923, but the gain in this case was only 8,000 barrels. The exports from the New York customs district to northern Africa during 1924 were only 153,000 barrels, or 91,000 less than during the previous year. New York was the only port to increase its exports of flour to West and South Africa, shipments amounting to 165,000 barrels in 1923 and 170,000 in 1924.

Distribution of Latin-American Trade.

Only 2 of the 10 customs districts increased their exports to Mexico and Central America, namely, Galveston and San Francisco, and three of them—Philadelphia, Virginia, and New Orleans—made larger shipments to the West Indies. New Orleans supplies nearly 50 per cent of the million barrels of flour shipped annually to Mexico and Central America, while San Francisco is the next port in importance in that trade. During 1924 exports of flour to Mexico and Central America from San Francisco amounted to 251,000 barrels, or a gain of 80,000 barrels over 1923.

The West Indies imported approximately 2,000,000 barrels of flour from the United States during the past two years, over 40 per cent of it coming from New York, 30 to 40 per cent from New Orleans, and 13 to 21 per cent from Mobile. The exports from New Orleans during 1924 were 847,000 barrels, or 241,000 barrels more than during 1923, and from New York 835,000 barrels, or 21,000 barrels less than in 1923. The increase in exports to the West Indies in 1924 over 1923 amounted to 71,000 barrels.

Shipments of flour from the United States to the South American countries bordering on the Atlantic totaled 810,000 barrels in 1924, which was 189,000 more than for the previous year. Fully 90 per cent of this

flour goes from the port of New York. During 1924 approximately 282,000 barrels were exported to the countries of South America bordering on the Pacific, as against 262,000 barrels in 1923. New York supplied only 8 per cent of this amount, Washington furnished 50 to 60 per cent, Portland 20 per cent, and New Orleans 10 to 15 per cent.

Relative Gains and Losses by Ports.

Of the total exports from the various ports of the United States, the shipments from Baltimore, Virginia, New Orleans, and Galveston during 1924 exceeded those of 1923. The gains were 865,000 barrels from the New Orleans customs district, 219,000 from Galveston, 76,000 from Baltimore, and 35,000 from Virginia. The exports from Washington were 542,000 barrels less in 1924 than in 1923, from New York 367,000 barrels less, from San Francisco 324,000 barrels less, and from Philadelphia 256,000 barrels less.

Tariffs and trade regulations:

Austria—Increased duty on grain-mill products in small packages.

Canada—Regulations governing imports of nursery stock amended.

Czechoslovakia—

Regulations for imports of grapevines.

Requirement for sanitary certificate on imports of potatoes.

Dutch East Indies—Restriction in imports of coffee.

Greece—Reduction of maximum acidity permitted in flour.

Mexico—Removal of quarantine restrictions on livestock.

Spain—Removal of import prohibition on wheat.

Elbe Navigation in 1924

Navigation on the upper Elbe in 1924 showed a substantial increase over the unprecedented slump of the previous year, according to figures compiled by the customs office at Schandau, near the German-Czechoslovak border. Upstream traffic amounted to 763,000 tons in 1924, compared with 287,000 tons in 1923, and downstream to 1,106,000 tons compared with 700,000 tons.

Traffic on the Elbe at Hamburg also increased in 1924, although that moving upstream was but little heavier than the traffic downstream to Czechoslovakia. As almost the entire Czechoslovak traffic upstream is in direct transit through Germany from Hamburg, it must be presumed that German transports upstream in 1924 were not heavier than in 1923. This is explained by the fact that Germany's coal supply from England, via Hamburg-Elbe, was considerably smaller than at the time of the Ruhr occupation in 1923. Traffic upstream totaled 3,080,000 tons in 1924, an increase of 507,000 tons over the 2,573,000 carried in that direction in 1923. Downstream traffic amounted to 2,998,000 tons, or 783,000 tons more than in 1923, when 2,215,000 tons were transported. (Vice Consul Paul Bowerman, Berlin, March 12.)

NEW MARKETING METHODS BRING RESULTS IN CHINESE CIGARETTE TRADE

China a Growing Consumer and Producer of Cigarettes—Modern Marketing Methods Replacing Old System—Motion Pictures Form Effective Branch of Advertising

Based on report from Trade Commissioner G. C. Howard, Shanghai, China

That an increasing business for American-made cigarettes may be expected would seem to be a reasonable deduction in view of the phenomenal growth which has characterized the cigarette industry in China since the war and in view of a recent estimate that China is at present consuming only about one-sixth of its capacity as a cigarette user.

Expansion of Chinese Cigarette Industry.

In COMMERCE REPORTS of April 6, 1925, the American share in the past expansion of the industry in China was illustrated by a table showing imports of cigarettes into China from the United States compared with imports from all countries. It will be noted from the following table, which compares the exports of cigarettes from the United States to China with exports from the United States to all countries, that China is at present our most worth-while foreign market. Further evidence of expansion is reflected in the exports from China, which increased from 411,582,000 cigarettes before the war (1910-1914) to 3,995,679,000 in 1923. Inasmuch as the growth of China's export trade is coincident with American expansion in the Chinese field, it is not impossible that much of the Chinese output is attributable to American factories operating in China.

Chinese trade in cigarettes, 1910-1924

(1) Not available

Modern Marketing Methods Adopted.

Among the factors contributing to the expansion of business in cigarettes, first place should be given to existing marketing methods as compared with those of 1900. Formerly cigarettes were sold through the compradores of foreign houses established in treaty ports. The importer had no knowledge of the nature or extent of the market's requirements or the conditions under which his goods were sold to the consumer. The

transaction was ended, so far as he was concerned, when the goods were delivered to buyers through his compradores. Since then trade has been developed by intensive working of markets in the interior, through advertising and sales effort, and through the appointing of local agents and distributors.

The largest foreign company selling in China has broken away from the old, established method of conducting business through import houses and compradores. They have established their own elaborate dealer and distributor system throughout the interior, supervised directly by foreigners in branch offices located at strategic points.

Distribution Through Chinese Dealers.

The most effective method of distribution consists of selling through Chinese dealers, known as division dealers, who cover a certain allotted territory—usually a whole provincial district. The goods are actually brought to the consumer by subdealers. Division dealers put up cash security for goods supplied on consignment. Should the value of the goods exceed the security, the remainder is secured by written guaranty bond or "shop guaranty." Division dealers are also held responsible for subdealers.

At the end of the Chinese year a rebate ranging from 5 to 10 per cent of the purchase price is issued to division dealers. On retail sales the subdealers receive a profit of 10 to 20 per cent and are also made allowances on the return of cases.

Marketing Specific Brands—Advertising.

In certain instances the sale of specific brands has been assigned to Chinese agents, who have complete responsibility for the sale and distribution of the brand throughout China. By this method one brand has made a conspicuous success and is now one of the five showing the largest sales.

The largest foreign cigarette company operates an extensive advertising department, where foreign advertising experts work in collaboration with a corps of Chinese advisers. The work of this department covers newspaper display, posters, and the distribution of cigarette cases and other novelties. A motion-picture plant produces educational and travel pictures in conjunction with advertising for certain brands of cigarettes. The cigarette trade promises steady increase as the use of cigarettes becomes more general in territories already worked and as new districts are worked intensively.

Peru—Sales tax established on cigarettes.

ELECTRICAL EQUIPMENT

D. S. Wegg, Acting Chief, Electrical Equipment Division

ELECTRICAL PROGRESS IN FRANCE

Assistant Trade Commissioner Wilson K. Ray, Paris

France is coming to realize the importance of electric power in economic and social life. The public is being rapidly educated to the value of electricity for lighting, heating, and other purposes. The greatest emphasis, however, is laid on the possibility which electrical development presents in assisting both the manufacturing and agricultural sections of the country in overcoming the serious question of labor shortage. Fuel deposits are relatively small and France is becoming increasingly dependent on its large resources of undeveloped water power. About one-third of the coal consumed annually is imported—approximately 23,000,000 of the 72,000,000 tons used.

Capacity of Power Resources.

A recently completed governmental survey indicates that 9,000,000 horsepower can be furnished by the water resources of this country. The French Commission of Hydraulic Power estimates the available horsepower in the various regions of France as follows: Southeast, 4,000,000; southwest, 1,500,000; center, 1,100,000; east 200,000; Rhone, 900,000; Rhin, 800,000; Loire, 300,000; Garonne, 200,000.

Plants developing a total of 2,500,000 horsepower are now water driven.

As an instance of the use of power it is estimated that the electrochemical and electrometallurgical industries use 850,000 horsepower of hydroelectric energy.

Sources of Hydroelectric Power.

The nature of the sources of electric power varies greatly in the different regions.

In the French Alps the rivers furnishing power have large volumes of water, but the gradients are relatively low, as the fall on the French side of the Alps is much more gradual than on the Italian side. Most of the plants installed in the French Alpine region have been constructed by individual companies. Cooperative plant construction and operation in that section is not far advanced.

In the other important mountain region of France, that of the Pyrenees, heavier gradients are encountered on the French side of the mountain range than on the Spanish side. The flows of the rivers in that section are entirely variable, and in many cases it is necessary to use lakes as storage reservoirs. Such conditions have added to the difficulty and cost of installation of power plants in that region, and have necessitated the cooperation of various companies.

In the Massif Central section of the country water-power development is not so far advanced as in the Alps and Pyrenees regions. The water supply is of considerable volume, but the slopes are very gradual. Such plants as have been constructed have been installed at great expense. It is frequently suggested that, as the whole country would benefit greatly by a further development of water power in the Massif Central, governmental subsidies should be available for construction.

Fuel-Burning Generating Plants.

As the water-power resources are in the central and southern sections, it is felt that French industry located in the Parisian and northern sections will continue to be largely dependent upon fuel-burning power plants. The principal coal mines are located in the north, and freight costs to plants in that region are therefore relatively low. As a result of mechanical improvements made in fuel-burning plants during recent years, fuel consumption per kilowatt hour has been greatly reduced. Low-grade coal which can not stand the freight costs entailed in shipping to distant points is now economically used in the latest types of power plants. Fuel-burning plants will doubtless also continue to be used as auxiliaries to hydroelectric plants in these localities where the consumption of electrical power is especially great.

Large Unit Construction in Vicinity of Paris.

French power companies realize that both construction and operating costs of fuel-burning plants can be greatly reduced by centralizing their expenditures on a few large plants, thereby eliminating many of the uneconomic features which attend construction and operation of small plants.

The fuel-burning electrical plant at Gennevilliers is an example of the tendency to employ large units. This plant, owned by L'Union d'Electricite, has a capacity of 240,000 kilowatts. Six groups of turbines of 40,000 kilowatts capacity each furnish the power. Two additional units, each of 50,000 kilowatts capacity, are expected to be put in operation before the end of 1925. This plant furnishes most of the power to the distributing companies which supply electricity to the suburbs of Paris. The fuel-burning plant at Vitry (near Paris) with 90,000 kilowatts capacity also belongs to the Union d'Electricite.

La Compagnie Parisienne de Distribution d'Electricite has two very large plants, one at St. Ouen and another at Issey-les-Moulineaux. These plants will have a total capacity of 530,000 kilowatts when their additions, now being made, are completed. La Societe d'Electricite de Paris operates a fuel-burning plant of 80,000 kilowatts capacity at St. Denis (near Paris).

The power consumed during the year 1924 by the city of Paris and its suburbs is estimated at approximately 1,100,000,000 kilowatt hours, an increase of about 30 per cent over 1923. At this rate of increased consumption the present plants of L'Union d'Electricite and of La Compagnie Parisienne de Distribution d'Electricite will in a very few years be unable to supply the amount of electricity required by the Paris section.

High-Tension Systems—Railway Electrification.

One of the most important questions in connection with the electrical development in France is that of interconnecting existing generating stations by means of large capacity high voltage lines.

The railways of France have extensive programs for electrification of their lines which, if completed, will

provide a use for a considerable amount of electric power. At present railways in this country consume approximately 12,000,000 tons of coal annually and it is known that this amount can be greatly reduced by electrification of the lines. The programs of the three railroads principally interested in electrification call for a total of about 9,000 kilometers of electrified railway lines. The Midi Railway plans to have 3,200 kilometers electrified and the Compagnie d'Orleans and the Paris-Lyons-Mediterranean, 3,400 kilometers and 2,400 kilometers, respectively.

Nation-Wide Interest Felt in Developments.

As a direct result of the national interest in the development of electric power generating plants, France has become a very important producer of electrical machinery and equipment.

The capitalization of the concerns engaged in the manufacture of electrical machinery in France is estimated at 1,500,000,000 francs. Fourteen of the largest companies have a capital in excess of 30,000,000 francs and five others are capitalized at 100,000,000 francs or more. It is estimated that the value of the annual productive capacity of electrical machinery plants is 1,500,000,000 francs, and that there are 60,000 workmen engaged in the industry.

So widely has the question of the development of electrical power been discussed that both industrial and agricultural sections of the nation appear to be unanimous in the belief that the national, departmental, and communal budgets should contain appropriations to assist developments which might be too large for private enterprise. The feeling is very general that electrical power is of vital interest to the French nation and that every effort should be extended to assure the full use of the electrical resources which France possesses.

February Electrical Exports Show Decrease

Exports of electrical goods from the United States for February, 1925, amounted to \$5,039,436, according to preliminary figures. This is about \$1,750,000 less than in the same month of 1924, although higher than February of both 1923 and 1922. Large declines are noted, when comparing with February, 1924, in alternating current generators, batteries, transformers, power switchboards, meters, fuses and fuse blocks, protective apparatus, motors, fans, lamps (other than metal filament), railway signals, insulating material, fixtures, line material, porcelain, and insulated wire and cable, both iron and copper. Considerable increases were shown in metal filament lamps, flash lights, motor-driven household devices, domestic heating and cooking devices, therapeutic equipment, radio apparatus, globes and shades, and bare copper wire.

Proposed Electric Plant for Sydney

Consul E. M. Lawton, Sydney, Australia, February 17

Among other important developments in Sydney, Australia, is the proposal to discontinue at its expiration date the existing city-lighting contract with the New South Wales Railway Commission and to take immediate steps for the erection of a city council power house, to be ready for operation in 1930, the expiration date of the present lighting contract.

It is admitted that not all the municipal subdivisions of the "greater Sydney" would be obliged to make

contracts from the new source of supply, but the argument is advanced that the railway commission will require the capacity of its present plant for its railway electrification scheme and an extension of its present plant, costing £1,500,000, would have to be built if the railway commission continued supplying city lighting. The proposed new plant would be a basis for a source of electric supply which would be state-wide. The proposal calls for a bond issue of £3,000,000. Many electrical companies are watching for possible chances to obtain important contracts.

Construction of New Austrian Hydroelectric Power Plant

Assistant Trade Commissioner Elbert Baldwin, Vienna, March 21

The Steirische Wasserkraft- & Elektrizitaets-A. B. (Arnstein) is about to undertake the construction of the Bruck-Mixnitz Hydroelectric power plant, utilizing a fall of 60 feet in the River Mur between Bruck and Kirchdorf. The preliminary work is already under way and the entire program will probably be completed by the end of 1927.

The plant will have three 8,000-kilovolt-ampere Francis turbine units. The new station connects up with the central power station on the Teigitsch River.

Contracts for construction work and equipment have not yet been let, but it may be presumed that they will be confined exclusively to domestic industries, as has been the case in previous developments of this kind. The preliminary work is being performed under the company's supervision and management.

The power produced is intended primarily for the Upper Styrian industries and to a less extent for lower Austria and Vienna, while the Teigitsch power plant, recently completed, furnishes electric power for the city of Graz and the district of central Styria.

Duty Imposed on Energy Exported from Canada

Under an order in council effective April 1 an export duty of three one-hundredths of 1 cent per kilowatt-hour has been imposed upon hydroelectric power exported from Canada. This is equivalent to \$1.95 per horsepower year. (Cable from Trade Commissioner Lynn W. Meekins, Ottawa, March 24.)

Electrical Trade Notes

Catalogues Desired in Manchuria.

Catalogues from manufacturers of electrical goods and appliances and radio equipment are wanted in the office of Vice Consul Leo D. Sturgeon, Dairen.

Radio Activities in Hamilton, Ontario.

It is unofficially estimated that there are 6,000 radio receiving sets in Hamilton at present. Each owner of a receiver must procure, at a cost of \$1, a license from the Government authorizing him to operate his set. (Consul Richard F. Boyce, Hamilton.)

Work Discontinued on Bluefields Electric Light Plant.

Construction work on the electric light and ice manufacturing plant in Bluefields, Nicaragua, has been discontinued by the administrator of the estate of the principal member of the financing company. (See *COMMERCE REPORTS*, August 6, 1923, p. 373.) Unless the concession is purchased and the necessary capital

advanced, it is not likely that the work will be completed. (Consul A. J. McConnico, Bluefields, March 4.)

Cooperation Between Swedish and British Electric Companies.

The annual report of Allmanna Svenska Elektriska Aktiebolaget (Asea) states that this company is to deliver the complete electrical equipment for the electric power plant being constructed by Armstrong Withy & Co. at Arapuni in New Zealand. It is reported that an agreement has been entered into between Asea and Armstrong for future cooperation of this nature, whereby electrical equipment will be furnished by Asea, while Armstrong does the construction work. (Trade Commissioner T. O. Klath, Stockholm.)

Kovno Radio Station Construction Suspended.

The construction work on the radio station at Kovno, Lithuania, which is in the hands of a French company, has been suspended owing to a lack of capital for financing the undertaking. The chief of the radio station has requested the Government to appropriate a sufficient sum to complete the station but it is doubted that the desired appropriation will be made in the near

future. (Vice Consul C. M. Gerrity, Kovno, Lithuania.)

Bombay Railway Electrification Scheme.

The first electric railroad in India, the Harbor Branch, extending from Bombay to Kurla, was opened February 3, 1925. The second step in the development of the general scheme to improve transportation facilities in and around Bombay is to extend the electric system to Thana—4 miles north of Kurla. Work on this extension is under way. The third and last improvement under the present scheme is to electrify the lines to Kalyan, 30 miles distant from Bombay. It is estimated that this extension, which will be the limit of the Bombay suburban train system, will cost 23,000,000 rupees. (Vice Consul William H. Beach; Bombay, India.)

Additional information regarding electrical equipment appears in this issue under the following sections:

South African Government to satisfy needs locally.

COAL

Charles P. White, Chief, Coal Division

OUTLOOK FOR THE FRENCH COAL AND COKE INDUSTRIES

Production Approaching Pre-War Totals—Record Coke Imports Required—Program to Reduce Production Costs and Better Utilize By-Products

Trade Commissioner Daniel J. Reagan, Paris, March 13

Despite the progress made by the French coal and coke industries in recent years, production is still far below the country's requirements. This situation is looked upon by the industries as a favorable factor for the future, both as regards the position of prices and the development of production.

Production and Consumption in Recent Years.

Since 1919, production of coal in France has increased steadily and in 1924 reached a new level, though still inferior to the output of France and Lorraine, combined, in 1913. The total of 44,955,000 metric tons in 1924 was an increase over 1923 of 17 per cent and was 10 per cent above the 1913 output of France before the return of Lorraine. This increase in output for 1924 was made possible largely by the further reconstruction in the devastated mining area. In the Nord and Pas-de-Calais districts the output was 25,647,000 tons, an increase of 4,750,000 tons over 1923 and only 1,750,000 tons below the 1913 output. The Lorraine production rose also from 4,166,000 tons in 1923 to 5,269,000 tons in 1924. In the other basins in 1924 the output amounted to 14,039,000 tons, over 500,000 tons above 1923. Although, with the return of Lorraine, the production in France has now been increased by approximately 4,000,000 tons per year, this return has aggravated the fuel problem in France, since Lorraine requires annually from three to four times the amount of coal it produces.

Saar Production—Heavy Lorraine Consumption.

Production in the Saar, which is, of course, an intimate source of supply for France, is now above the

pre-war level, the output in 1924 reaching 14,032,000 tons, as compared with 9,192,000 tons in 1923. French control over this territory has still about 10 years to run and it is very likely that production during this period will be further stimulated.

The apparent consumption of coal in France during 1924 was approximately 68,000,000 tons, an increase of 8 per cent over 1923 and 16 per cent over 1913, at which time, however, the Alsace-Lorraine consumption of approximately 10,000,000 tons was included in that of Germany. The consumption in the present national area of France is, therefore, still below the total in France and Alsace-Lorraine immediately before the war.

Coke Production Insufficient—Coal Imports Increase over 1913.

While coke production rose from 1,986,000 tons in 1923 to 2,639,000 tons in 1924, the apparent consumption reached 7,500,000 tons in the latter year and required record imports.

Although France, through greater production in 1924, was able to reduce its imports, the imports of 25,108,000 tons of coal and lignite were only 1,161,000 tons below the record imports of 1923, and exceeded by 34 per cent those for 1913, when, however, the tonnage consumed was equivalent to only 86 per cent of that in 1924.

Program for Improving Industries Condition.

With the domestic market still served by large importations, the French coal and coke industry is apparently determined to improve its position in three

ways: By increasing production; by reducing the cost price; and by the better utilization of coal and its by-products.

It is probable that the production of coal in France during the present year can be brought to a level above that of 1924. It is expected that reconstruction in the devastated areas of the north will be practically completed this year and that, with the more modern equipment and new workings, production can be made to exceed even the pre-war figure. Because of the strong local demand it is believed that Lorraine production will go above the high level of last year and that there will be a further increase in the other basins.

Noticeable Production Increase.

Production increases have been especially noticeable in the cases of the large mines damaged by the war. Several of these large mines, however, have not yet caught up with their pre-war production. Reconstruction of these mines, which should be concluded this year, will permit most of them to exceed their pre-war production, despite the changes which have taken place in the working conditions, and particularly the application of the 8-hour day.

Even now the daily average in several mines is greater than a year ago. Thus, from January to December, 1924, the daily production average at La Clarence was from 530 to 600 tons; at Lens, from 7,500 to 9,000 tons; at Lievin, from 2,000 to 3,100 tons; at Thivencelles, from 528 to 685 tons; at Courrieres, from 8,500 to 11,500 tons. It is expected that this trend will continue in many of these mines during the present year. At Courrieres, for example, the production schedule calls for 3,800,000 tons, as compared with the production of 3,050,000 tons in 1924.

The Problem of Production Costs—Use of Mechanical Appliances.

Despite the expressed determination of the mines to reduce production costs during 1925, wage increases have already been granted in the more important centers as an inevitable sequel of higher living costs. With the living cost index still higher than the 1924 level, it is unlikely that French operators will be able to persuade the miners to follow the course recently pursued by the Belgian workers in accepting a reduction in wages because of the slackness in the industry of that country. Rather, it is expected that a further increase in prices will be followed by agitation for wage adjustments.

One other way is open to the operators to reduce production costs, namely, increasing the output per man per day by extending the use of mechanical mining appliances. Although the daily average production per man increased steadily from 1920 through 1923, provisional figures indicate that the 1924 average was about the same, or perhaps less than that of 1923, and still far below the 1913 average, when, however, the 8-hour day was not in operation. During 1924 new interest was shown in the use of pneumatic tools and automatic washing machinery and it is believed that there will be an extension of these installations during 1925 unless the present monetary tightness should restrict further capital investments.

Increasing Coke and By-Product Production.

The present tendency of the French coal industry is to extend its interest in the manufacture of by-prod-

ucts, as well as improving the use of coal as a fuel. The construction of more coke ovens at the mines is an indication of this tendency and besides its economical advantages for the producers, this increase in coke production will relieve somewhat the French metallurgical industry of its heavy dependence upon foreign coke supplies. These ovens are being installed in the Nord and Pas-de-Calais districts, rather than in the Centre and Saar districts, where the coal is not as well suited for coking purposes. The increase in coke manufacture has brought about as a natural corollary the distillation and transformation of by-products. As a result, the production of coal tar and pitch in 1924 in France has increased largely and has brought about a reduction in price for these products.

Efforts to Offset Rising Labor Costs.

Several of the large companies have also made important installations recently, whether individually or in groups, for the utilization of either the Georges Claude process or Casale process, or others, for the manufacture of synthetic ammonia by utilizing the gas from the coke ovens. Several sulphur factories are also in process of construction.

These developments, through the better utilization of the coal mined, will effect economies and incomes which will tend to offset the rising labor costs, and it is hoped will reduce production costs, while justifying the expense of the additional equipment required.

Efforts to Market Alberta Coal in Ontario

Traffic Commissioner L. W. Meekins, Ottawa

The provincial government of Ontario has renewed its efforts to bring Alberta coal into the Ontario market at a competitive price. Plans are under way for a trial shipment of 100,000 tons on May 1. All costs in connection with this shipment will be carefully computed in order to determine the possibility of developing the trade. The railways are being asked to carry this coal at cost and it seems unlikely that they will accede to the low rate which is necessary to place the transportation of this coal on a permanent basis.

Investigation of Alberta Deposits—Survey by Dominion Fuel Board.

The report of an expert engaged by the Dominion Fuel Board to investigate the coal deposits of the Sheep River and Smoky River areas in Alberta was submitted early in March. He found no anthracite in either district, but a fairly extensive deposit of semi-bituminous, suitable for industrial uses, and another variety, suitable for domestic use.

The Dominion Fuel Board has made a commercial survey of Ottawa to determine the feasibility of erecting by-product coke ovens in that city to supply a high-grade domestic fuel at moderate cost. Regarding this an independent observer has pointed out that Canadian bituminous, suitable for coking, is not available for several months in each year in Quebec and Ontario. This would force the plant, if established, to depend upon American bituminous to a considerable extent.

AGRICULTURAL IMPLEMENTS

George B. Bell, Chief, Agricultural Implements Division

FACTORS AFFECTING SALE OF IMPLEMENTS IN PALESTINE

Agricultural Developments Opening Market for Many New Types of Implements—Government Assistance

Consul Oscar S. Helzer, Jerusalem

The market for agricultural implements in Palestine is affected by the two systems of agriculture which prevail in the country. One is that followed by the Arab peasants and nomadic Bedouin, who are extremely conservative and still practice the methods of farming which were used in Biblical times. The other is the modern agricultural system, which prevails chiefly among the Jewish and German colonies, of which over 100 exist in Palestine.

Modern Implements in Use.

All classes of modern implements, including the most specialized types, are used in these colonies, which are run on up-to-date lines and are, consequently, undergoing changes leading to more intensive production. This policy, added to the enlargement of existing colonies and the creation of new ones, is the main feature of the present day colonization work of the Zionists in Palestine. Studies of the agricultural possibilities of Palestine and work leading to the modernization of agriculture are being carried on by the agricultural department of the Government of Palestine and also by the Zionists and other organizations. These efforts are not confined strictly to the Jewish element of the population, but attempts are being made to introduce modern methods among Arabs, with some success.

Some Favorable Factors Exist.

A favorable factor tending to the growing use of modern farming implements is the rapid increase in the number of young farmers with skilled knowledge of modern agriculture and the large number of skilled mechanics employed in the colonies. In addition, many of the farmers in these colonies, although they have no knowledge of mechanics, are yet able to master the intricacies of new machinery in a short time. There is also a number of agricultural engineers with American training in the institutions controlling and financing the Jewish colonies, as well as in the agricultural department of the Government, and this, of course, tends to favor the use of American implements.

Primitive Implements Used by Arabs.

A primitive plow, consisting of a small share and a roughly cut wooden pole with a handle, is used by most Arabs. Cows, heifers, donkeys, and camels are hitched to this plow, which is well adapted to the rocky soil of the hilly districts, but in the plains or plateaus an implement is needed that will turn over the soil to a reasonable depth and cover firmly established weed growth. Comparative tests have shown that the yield of wheat crops is much greater after deep plowing than when the primitive Arab methods are followed. In some districts Arab methods have been abandoned in favor of more advanced practices following the lead of the various colonies and the department of agriculture. Since the establishment of the agricultural de-

partment in 1920 it has devoted considerable time to the encouragement of improved cultivation methods among the Arabs.

Price an Important Factor.

The introduction of light iron plows in Arab villages depends largely on price. Some light steel plows were recently sent to the department of agriculture by a British firm which were considered suitable for local use. The prices ranged from \$12 to \$17 and weights from 64 to 85 pounds. This does not indicate any marked preference for British implements on the part of the Government, but merely brings out the fact that the Government is anxious to introduce new implements, regardless of their origin.

Many Types of Modern Implements Employed.

The modern implements used in Palestine include many diversified types, because colonists are drawn from many different countries and their preferences are varied. Generally, local farmers prefer less expensive implements among the simpler types, while quality is the most important factor among the more complicated implements.

Windmills Not Much Used—Incubators Increasing.

Windmills are not used to a great extent in Palestine and, generally, the winds are uncertain. The number of incubators and brooders is increasing and at present most of the agricultural settlers are well supplied. Some incubators were recently introduced in certain Arab villages, at the instigation of the local department of agriculture.

The number of tractors used in the country is relatively small, but an opportunity exists for a limited sale of them. The primitive plows used by the Arabs are made by local workshops, the metallic parts being imported chiefly from Germany.

Sources of Supply—Germany in the Lead.

All other implements are imported. Germany is the chief source of supply, followed by the United States, the United Kingdom, France, and Czechoslovakia. The total annual imports of implements from all countries do not generally exceed \$150,000. Germany is the leading source of supply for animal plows, and the Rud. Sack and Rudolf Bacher steel beam, one and two steel handle plows, with fore truck, are especially popular. Germany also leads in supplying mowers, reapers and binders, planters and seeders, threshers, farm pumps, and some small implements, and ranks second in tractors, tractor plows, and cultivators. The United Kingdom ranks first in supplying motor plows, and second in furnishing threshers, farm engines, and dairy equipment. France leads in supplying dairy implements and grain-milling machinery, and is third and fourth in supplying motor plows, animal plows, farm engines, and other implements.

American Tractors Predominate.

The United States has practically a monopoly in the sale of tractor plows and incubators and brooders. American harvesting and haying implements are well liked, but they do not compare in price with German or Czechoslovak makes and, therefore, have smaller sales. American mowers retail in Palestine at approximately \$110, and the somewhat similar German make sells at \$76; an American harvester sells at \$163, and a German make at \$120; an American binder is \$336, and a German make \$192.

Local dealers keep in stock only the smaller and less complicated implements, while the more complicated

types are usually ordered by one of the cooperatives, financed by the Palestine Zionist Executive, or by the Palestine Jewish Colonization Association. Very little credit is granted to dealers in agricultural implements.

Additional information regarding agricultural implements appears in this issue under the following sections:

INDUSTRIAL MACHINERY

W. H. Rastall, Chief, Industrial Machinery Division

BRITISH FOREIGN TRADE IN MACHINERY IN 1924

Alfred Nutting, office of consul general, London

With few exceptions, British imports of machinery were somewhat greater in quantity in 1924 as contrasted with 1923 or 1922 and even in the few cases where the volume was less than in 1923, the value was higher. For example, imports of metal-working machine tools decreased from 3,821 tons in 1923 to 3,355 tons in 1924, but the value of this equipment imported rose from £499,622 in 1923 to £553,428 last year.

Increased Imports of Textile Machinery—Other Gains.

Great Britain, itself an important producer of textile machinery, imported about 50 per cent more of this type of machinery in 1924 than in 1923—3,762 tons valued at £931,656 in 1924 compared with 2,582 tons valued at £596,277 in 1923. British imports of prime movers increased from 4,097 tons in 1923 to 6,747 tons in 1924, values from £429,981 to £673,346. Total machinery imports into Great Britain last year amounted to £10,521,323 in value and 60,124 tons by weight—an increase of about 11 per cent in value and approximately 14 per cent by weight.

British Machinery Exports Generally Larger.

Except for machine tools and textile machinery, British machinery exports in 1924 showed an increase by weight in all classes as contrasted with either 1922 or 1923. Exports of British textile machinery declined 35,000 tons in comparison with 1923, or about 25 per cent, and about £5,000,000 in value, or 33 per cent. Exports of prime movers were 29,060 tons in 1922, 41,812 in 1923 and 48,950 tons in 1924, increased foreign shipments of internal-combustion engines being the principal factor in this increase.

Machinery Exhibits at the Leipzig Spring Fair

Trade Commissioner Theodore Pilger, Berlin

Practically all the space available at the Leipzig Fair, held during the first 10 days of March, was occupied and many exhibitors were forced to show their machinery in tents out in the open. Nearly all types of machinery were shown, from the smallest precision apparatus up to the largest metal-boring mills and shearing presses. The display was thoroughly

diversified so that a prospective buyer had no difficulty in finding almost any type of machine.

Few Sales of Machinery at Fair—High Prices.

In the matter of sales, however, the fair was not very successful. In most machinery lines the sales made were for domestic installations but even they were considered unsatisfactory by exhibitors, and export sales were extremely scarce. Prices of German standard machines are above world market levels. The machinery export trade is depressed and domestic business survives as well as it does only because of the protection afforded by restrictions prohibiting the importation of foreign machinery.

Diesel Engine Sales Fair.

Certain machinery of a specialized type did a fair business both in domestic and foreign orders. Most prominent in this group were medium-sized compressorless Diesel engines, on which orders for a fair number were obtained in spite of consistently high prices.

Working Model of New Steam Boiler on Display.

A novel apparatus displayed for the first time was the Becker high-pressure quick-steam boiler. The small model shown was used to drive a 15-horsepower steam engine. It got up 120 pounds of steam and furnished sufficient pressure to operate the engine in exactly four minutes. This boiler is fired by an automatically regulated crude-oil burner which heats the tubes red-hot before the atomized water is injected. The flow of both oil and water is automatically regulated by a governor.

The apparatus was the center of much interest and it is said that a number of installations were sold for domestic use. The principal advantages claimed are speed of getting up steam, cheapness of first cost (about 40 per cent of standard boiler), freedom from damage due to explosion, and economy of fuel. The safety feature is due to the absence of water in the boiler and its economy is caused by the automatic regulation of the fuel consumed in proportion to the amount of steam used.

The future of this new boiler is of course problematic. It can compete with Diesel engines in a limited field only. The life of the tubes is questionable and the difficulties resulting from boiler scale will be determined by time. But it is possible that the

principle may find limited use particularly where the matter of getting up steam quickly is important.

High Prices Make Sales Difficult.

The attendance at the fair during the first three days was very satisfactory, but after that the crowd dwindled rapidly, buyers going home without placing any business and only a few curious persons remaining in the unfulfilled hope that there might be a general cutting of prices toward the end of the week.

Indications are that German prices will have to be considerably reduced if Germany is to obtain any considerable part of the world's machinery trade or even to maintain a fair volume of domestic trade. Even the local trade, it is widely believed, would amount to virtually nothing if it were not for the inflationary results which foreign loans are causing by providing some liquid capital for German industry.

Depressed Foreign Market for British Pumps

Acting Commercial Attaché Hugh D. Butler, London

The British machinery industry generally has been through severe depression in the last three years. Manufacturers of pumps have been more successful than others on account of the home demand for pumps in connection with new electric generating stations, a demand which increased toward the end of 1923 and developed a fairly satisfactory volume in 1924. The increased sales of pumps for electric installations just about balances with reduced demand for steam-plant equipment. However, intensified competition among British pump manufacturers in supplying domestic

requirements has been a direct result of the lack of foreign orders. In pre-war years, it is estimated that export orders amounted to 30 to 40 per cent of total pump sales.

Price Cutting Among Pump Manufacturers—Imports Negligible.

The effort to keep plants open has led to extraordinary prices. In a recent order from the municipality of Bristol, two or three bids were in the neighborhood of £40,000, but another bid cut the price down by some £10,000. Price cutting and other effects of strong domestic competition has resulted in failures of several British pump manufacturers.

Imports of foreign pumps into Great Britain amount to only 5 per cent of the domestic consumption, and even this quantity is being gradually reduced. In spite of this fact there is some talk of protection, but it is unlikely that the agitation will amount to anything.

Additional information regarding industrial machinery appears in this issue under the following sections:

Cable review, Europe:

Polish industry operating on four-day week schedule.

French sales of industrial machinery depressed.

South African Government to satisfy needs locally.

Tariffs and trade regulations:

Canada—Special certificate for imports of engines for fishing boats.

Czechoslovakia—Tariff reductions granted on imported industrial machinery.

Persia—Duty-free imports for 10 years permitted.

CONSTRUCTION NEWS

Compiled in the Industrial Machinery Division

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce or its district and cooperative offices by mentioning the country and reference number given. Where no reference number is given further information is not available.]

Work Planned on Indian Irrigation Project.

The budget of the Bombay Government provides for an expenditure of 33,200,000 rupees on the Lloyd Barrage during 1925-26. Previous work has been largely of a preliminary nature and everything is now ready to enable actual construction to proceed at a rapid pace. It is planned to complete in 1925-26 the following portions of the work: (1) Head regulators of canals and the cofferdams, wharf, and alignment towers in the river; (2) remaining portion of the railways; (3) bridge over Rohri Canal No. 1 and railway bridges at Ruk and Arain to admit of excavators completing excavation near them; (4) construction of a road bridge at Arain, so that a light railway line can be laid over it to carry supplies to excavators. In connection with the activities of the Agricultural Department in boring wells an amount of 363,000 rupees has been appropriated for carrying out exploratory borings in famine districts and for sinking ordinary irrigation wells. For this purpose it is reported that 15 exploratory machines, 16 power machines, and 2 water finders will be used. (Assistant Trade Commissioner Don C. Bliss, jr., Bombay, India.)

Mexico Aids Roads by Special Tax.

Effective April 1 a tax of 3 centavos per liter was levied on the domestic consumption of gasoline in Mexico. The proceeds, which it is said will amount to about 4,000,000 pesos yearly, are to be devoted to road building. (Commercial Attaché A. V. Dye, Mexico City.)

New Buildings to be Added to University of Birmingham.

The council of the University of Birmingham has decided to proceed with its scheme for erecting further buildings to accommodate the three biological departments—botany, zoology, and brewing—with the fermentation industries. The approximate estimate of these extensions is from £90,000 to £100,000. (Consul John F. Jewell, Birmingham, England.)

New Schools Voted in Madrid.

The city council of Madrid, which is now considering the municipal budget for the next fiscal year, yesterday (March 6) unanimously approved an appropriation of pesetas 400,000 for the construction of new school buildings. (Consul Augustin William Ferrin, Madrid, Spain.)

English City to Improve Sanitation.

The town council of Wolverhampton has decided on a new sewerage purification plant which, it is estimated, will cost £50,000. The plant will be capable of

dealing with 2,500,000 gallons per day. The system to be installed is known as the activated sludge system, which is in use at Manchester and Sheffield. (Consul John F. Jewell, Birmingham.)

Floods in Ecuador Cause Railroads Serious Loss.

Torrential rains and floods have destroyed about 150 kilometers of railroad tracks with bridges between Alausi and Guayaquil, completely paralyzing service. It is estimated that it will cost in the neighborhood of 2,000,000 sucres, and will require from four to six months to complete the necessary rebuilding and repairs. (American Minister Gerhard A. Bading, Quito.)

England Takes Measures to Reduce City Crowding.

The rural District Council of Staffordshire has decided upon the construction of a garden city outside the boundaries of the municipality of Stafford at Silkmore. This action may be considered part of a general movement which has gained wide support in England, whose object is to decentralize the overcrowded cities by transferring the population. Contracts have already been awarded for the erection of a first installment of 60 houses. Negotiations are in progress with the city of Stafford for the extension of the municipal sewerage system to the site of the new housing scheme. The complete plan calls for the construction of a garden city composed of 650 model dwellings, two places of worship, an institute, schools with playing fields, bowl-

ing greens, and tennis courts. It is estimated that the total cost of carrying the program into execution will cost \$650,000. (Vice Consul Oscar F. Brown, Birmingham.)

Water and Sewerage System in Argentina to be Extended.

The National Sanitary Works have agreed with the provincial authorities for the construction of a central power plant and extensions to the Mar del Plata water and sewerage systems. The contract provides for the installation of the following equipment, bids for which will be called later: Four units consisting of one steam turbine and 600-kilowatt generator, each with exciter, surface condensers, and auxiliary pumps; one switchboard for central and distribution of current; four tubular boilers, one for each unit; economizers for the utilization of gas; ventilators for forced draft, pipe, valves, cable, etc. (Commercial Attaché Edward F. Feely, Buenos Aires.)

Irrigation to be Undertaken in Peru.

A concession has been granted for the irrigation and development of 375,000 acres of pampa land in the Department of Arequipa. It is stipulated in the concession that 50 per cent of the land be colonized, not over 25 acres to be acquired by one person. The plan is to encourage small farmers. Thirty-five hundred acres of land in the Department of Pisco is to receive irrigation for cotton growing, part of the water of the Pisco River being diverted for this project. (Vice Consul Nelson Park, Callao Lima.)

LUMBER

Axel H. Oxholm, Chief, Lumber Division

EXTRAVAGANT METHODS IN PURCHASING AMERICAN LUMBER ABROAD

"Your market possibilities in most foreign countries are hampered by the importers' insistence on high-grade material where lower grades would do equally well" said one of Europe's leading importers visiting the Lumber Division the other day, and continued: "People abroad do not realize as a rule that the supply of virgin timber in the United States is diminishing. Photographs of giant timber are still being sent out by your exporters and many of them talk in such a manner as to lead European importers to believe that short lengths and narrow stock can not be produced except with difficulty."

Price Now Considered an Important Factor.

The Lumber Division thoroughly indorses these views. The price element was not so important before the war when the difference in value between various grades of American lumber was not great. To-day the question is quite different; the same grade of American lumber, which before the war was selling in Europe at \$12 to \$14 per standard, is now commanding \$40 or more.

Assorted Shipments Should Be Encouraged.

It is of great importance for our exporters to induce their foreign connections to take a greater assortment of grades and sizes of our lumber. Otherwise, we will be left with low-grade lumber for which there is a limited market at home. Exporters in other countries long ago changed their policy and now quote at a

premium when the bulk of an order calls for any particular quality or dimension. One thing is certain; our lumber export prices will not materially decline in the future and, if we desire to maintain the present volume of our export trade, we must assist foreign buyers in drawing specifications for such qualities as to make it possible for them to purchase American lumber.

Polish Timber Exports Decline

L. J. Cochrane, office of trade commissioner, Warsaw, Poland, March 11

Total exports of rough timber and wood products from Poland during 1924 fell off about 504,000 tons, or 21.3 per cent, as compared with 1923. This is largely due to increased production costs following the currency stabilization in Poland. At various times the Government has sought to aid by lowering export taxes and railway tariffs on lumber for export, but these measures, while of some assistance, have not fundamentally changed the situation. Exports of pulp wood and mine timber have each declined by about 70 per cent as compared with 1923. On the other hand, lumber shows a substantial increase owing to the encouragement given to the sawmill industry.

Russian and Czechoslovak Competition Felt.

Considerable anxiety is felt in Polish lumber circles over the increasingly effective competition offered by Russia and Czechoslovakia in foreign markets. Thus, for instance, Russian exports to England, one of Poland's best markets, are said to have attained 90 per

cent of pre-war level during 1924, a threefold increase over 1921. Similarly, Czechoslovakian exports during 1924 were 50 per cent greater than Polish shipments, partly because of exemptions from railway tariffs which Czechoslovakia introduced to stimulate its trade.

Proposals to Increase Exports.

Lately the Polish lumber trade has approached the Government with proposals for extensive reductions in export taxes and railway rates, and it is thought that, with the declining interest rates following the growing influx of foreign capital into Poland and with cheaper raw material charges, Polish timber exports can be materially increased during 1925.

Exports of Polish lumber and wood products in 1924 as compared with 1923 are shown in the following table:

Exports of Polish lumber and wood products

Items	1923	1924	Items	1923	1924
	<i>Metric tons</i>	<i>Metric tons</i>		<i>Metric tons</i>	<i>Metric tons</i>
Raw timber, total.....	1,280,169	579,803	Wood products, total.....	43,197	59,847

Portugal an Important Stave Market

Cofisul Samuel Hamilton Wiley, Oporto

Oporto has for many years been an important market for staves, which are used in the manufacture of containers for the storage and exportation of the large quantities of port and table wines produced in the surrounding country. The average annual consumption of staves in this territory amounts to approximately 3,000,000, of which about 850,000 are of American oak. During 1924 American tight staves valued at \$454,028 were imported into Portugal, being the fourth largest foreign market for that United States product.

North European Staves Also Used.

In addition to the oak staves imported from the United States, there was, before the war, a large importation from Memel, Riga, and other Baltic ports. This trade ceased entirely during the war, but it is being gradually resumed. The price of these staves, however, is considerably higher than that of the American, and their use is restricted to the highest grade of port wines.

Efforts to Use Domestic Woods.

Owing to the high price of oak staves, due to depreciation of the Portuguese currency, every effort has been made during the past few years to use domestic woods, or those imported from countries whose currencies are also depreciated. Considerable domestic chestnut is used for staves, and a large number of chestnut staves are being imported from Italy.

Brazilian Woods Not Wholly Satisfactory.

A Brazilian wood known as "Freijo" is also imported for the manufacture of staves, though its importation has declined owing to the poor quality received and to the fact that it imparts a flavor to the

wines. Another Brazilian wood, known as "Itahuba," is also imported for the manufacture of "Balseiros," which are large casks used for storage purposes. Casks made from this wood are said to last as long as those made from oak if they remain stationary, but they can not be used for shipping purposes, as the wood is of such an oily nature that the hoops will not hold the staves together if the cask is subjected to jarring or vibration.

Sizes—Former Demand for Southern Pine.

The principal demand at present is for 60-inch oak staves, and to a limited extent for 48, 44, 40, 33, and 24 inch sizes.

There was formerly a considerable consumption of American southern pine in Portugal, but importation practically ceased during the war and, owing to the depreciation of the currency, has never been resumed. According to preliminary figures only 138,000 feet were imported during 1924. Domestic pine and Brazilian softwoods have taken its place.

Cette Stave Market Active

Consul Wesley Frost, Marseille, France

Marseille and Cette together account for nearly one-half of the French imports of staves, which totaled 51,000 tons in 1924. Imports of staves at Cette are active and amounted to 17,000 tons in 1924 while receipts at Marseille were only about 4,400 tons. It is probably that Port Vendres, Port-du-Bouc, Toulon, and San Raphael also received some.

Russian Competition Entering Market.

The majority of the staves purchased in this region are rough American oak 42 inches long to be used in manufacturing the large casks or hogsheads known as "demimuids," holding about 165 gallons. At the end of 1924 the c. i. f. price at Cette or Marseille was \$460 per thousand. This price was considered excessive, and the arrival of Russian staves from Soviet sources has tended to weaken the American hold upon the market.

Smaller Sizes Come in Through Atlantic Ports.

The 36-inch staves used for ordinary wine casks are little needed in this region, as the wine produced is of the common variety, and is not stored for maturing. Consequently most of the 36-inch staves are imported at Bordeaux and other Atlantic ports. Marseille stave dealers are selling considerable Yugoslavia white-oak staves for wine casks in the valley of the Garonne River.

Rumanian Wood Exports

Rumanian wood exports during December included 103,000 metric tons of sawn lumber and 140,000 tons of firewood. (One metric ton equals 2,204 pounds.) (Commercial Attaché Louis E. Van Norman, Bucharest, cable dated April 7.)

Additional information regarding lumber appears in this issue under the following sections:

Cable review, Europe: Barcelona building active.
South African Government to satisfy its needs locally.
Tariffs and trade regulations: Bolivia—Reduction of duties on barrels and barrel shooks.

TEXTILES

Edward T. Pickard, Chief, Textile Division

WORLD TEXTILE NEWS IN BRIEF

Wool Manufacturing Industry in Canada.

Wool textile establishments in Canada now number 141, of which 66 manufacture wool cloth, 19 yarns, and 23 carpets, mats, and rugs. There are 153 devoted to hosiery and knit goods, and 8 to the dyeing and finishing of textiles. (Consul General Albert Halstead, Montreal.)

Chinese Firm Desires to Export Feathers.

A firm in Shanghai desires to export duck feathers to the United States, according to a report from Assistant Trade Commissioner A. Viola Smith. Further information regarding this firm will be made available upon application to the Textile Division, Bureau of Foreign and Domestic Commerce, Washington. Refer to file No. 25699.

Chinese Firm Desires to Export Embroideries.

A firm in Shanghai desires to export to America Chinese curios, especially old Chinese embroideries, mandarin coats and skirts, and lamp shades, according to a report from Assistant Trade Commissioner A. Viola Smith. Further information will be made available upon application to the Textile Division, Bureau of Foreign and Domestic Commerce, Washington. Refer to file No. 26085.

Persian Carpet Weavers Busy.

Carpet weaving is the principal industry of the Ker-man district, Persia, and during 1924 so many foreign purchasers arrived that very few carpets remained in the bazaars. Numerous orders from American firms furnished employment for all available weavers. The wool production was good, although there was a shortage at the end of the year, caused by the increase in carpet manufacturing. (Vice Consul George Gregg Fuller, Teheran, February 25.)

Cotton Cloth Produced in Canada.

Canada has 54 cotton mills which in 1923 employed 20,316 operatives and produced goods to the value of \$86,500,000, according to a report of the Dominion Bureau of Statistics. Included in this output were \$27,211,451 worth of unbleached or gray cloth; \$6,330,917 of bleached fabrics; \$13,860,093 of prints, ducks, etc.; \$10,761,418 of cotton yarn; and about \$10,000,000 of hosiery and knit underwear. The mills consumed 100,000,000 pounds of cotton with a value of \$28,000,000. (Consul General Albert Halstead, Montreal, March 9.)

Argentine Cotton Growers Consider Cooperative Marketing.

The cotton marketing division of the Argentina Department of Agriculture has recently submitted to the producers a plan for the cooperative marketing of cotton. The plan calls for a national association and local subsidiaries. It is proposed that the local associations deliver all their cotton to the national organization for selling, and that the latter purchase for the local associations articles which are required in large quantities,

such as seed, fertilizers, and tools. (Trade Commissioner Brice M. Mace, jr., Buenos Aires, March 13.)

Mexican Firm Desires to Export Palma Fiber.

A firm in Mexico desires to sell palma fiber direct to American firms according to a report from Vice Consul Thomas S. Horn, Salina Cruz, Oaxaca. This company reports that it has a production of 88,000 to 123,000 pounds (representing two to three carloads) of baled and cleaned palma fiber available for shipment each month. Further information will be made available upon application to the Textile Division, Bureau of Foreign and Domestic Commerce, Washington. Refer to file No. 165949.

French Ribbon Industry Using More Rayon.

The French ribbon industry experienced a very satisfactory year during 1924. The total value of the ribbons manufactured is estimated at about \$90,000,000—a higher level than any recorded since the end of the war. More than one-half of the total production, or approximately \$55,000,000 worth, was for domestic consumption. One of the notable features of this industry during the last year was the substitution of rayon for silk. Ribbons manufactured at least in part of rayon were valued at about \$22,000,000. (Consul William H. Hunt, Saint Etienne, France, March 11.)

Australian Railways Commission Desires Bids on Compressed Felt Dust Shields.

The Textile Division has received a circular proposal from the Secretary for Railways, Melbourne, Australia, giving conditions under which bids may be submitted for 1,000 compressed-felt dust shields. Bids will be received until 11 a. m. April 29, 1925. Copies of this tender will be made available upon application to the Boston, New York, or Philadelphia district offices of the Bureau of Foreign and Domestic Commerce. Refer to file No. 166710.

Wool Exported from South Africa.

Wool exports from South Africa during 1924 amounted to 174,595,153 pounds, valued at £15,763,953. Of this total 166,041,376 pounds, worth £14,229,192, consisted of wool in the grease, distributed as follows: 82,841,300 pounds, with a value of £7,136,829, to England; 26,106,686 pounds, £2,302,850, to Germany; 21,185,211 pounds, £1,785,077, to France; 17,360,906 pounds, £1,259,601, to Belgium; 8,992,619 pounds, £812,717, to Netherlands; 2,940,542 pounds, £335,207, to the United States; and the remainder to Italy, Spain, Japan, and Russia. The exports of scoured wool amounted to 8,553,777 pounds, valued at £1,534,761, sent to the following countries: 5,650,997 pounds, worth £1,032,203, to England; 980,489 pounds, £204,442, to the United States; 973,269 pounds, £181,759, to Germany; 445,572 pounds, £64,100, to Belgium; 388,230 pounds, £39,845, to France; and the remainder to Canada, the Netherlands, Italy, India, and Japan. (Trade Commissioner Perry J. Stevenson, Johannesburg, February 27.)

TEXTILE MANUFACTURING INDUSTRY IN HUNGARY

Consul Walter S. Reineck, Budapest, March 3

Textile manufacturing is an important activity in Hungary. Approximately 32,000 operatives were employed at the close of 1924, a number exceeded only by the iron and machine industries, and the total value of all varieties of merchandise produced by the textile industry during the year reached approximately \$57,400,000, according to estimates of the secretary of the Hungarian National Association of Textile Manufacturers.

Ready-Made Clothing Demands Met Locally—Cotton Manufacturing.

Development during 1924 was particularly noticeable in the ready-made clothing industry, which is now able to supply the requirements of the country. A few years ago nearly the entire domestic demand was met by importations from Austria and Czechoslovakia. Imports of ready-made clothing in 1921 amounted to 513 metric tons (metric ton=2,204.6 pounds). In 1924 receipts were reduced to 85 metric tons.

The cotton manufacturing branch of the industry has also shown substantial expansion during recent years. Practically all of the raw cotton used during 1924 was imported from the United States. Of the total of 2,960 metric tons received, 1,392 were furnished by the United States, 484 came through Germany, 401 through Czechoslovakia, and the remainder from other countries. There is little doubt, however, that most of the cotton imported through Germany, Austria, Czechoslovakia, and other countries is really of American origin.

Cotton spindles in operation at the close of 1923 totaled 58,000, according to reliable estimates, and by the end of 1924 this number had increased to 95,000. Of the 1924 total, 58,000 are said to have been in operation throughout the entire year, and of these 35,000 were operated day and night.

Yarn and thread production is estimated at 2,600,000 kilos (kilo=2.2046 pounds) for 1924. This is considerably below the domestic requirements, however, and during last year 7,194,000 kilos of cotton yarn, valued at \$6,740,000, were imported, principally from Austria, Czechoslovakia, Switzerland, Italy, and Germany. During 1923 no yarns finer than No. 32 were spun, but in 1924 as fine as 42's were produced.

Cotton-Weaving Industry at Full Capacity for 11 Months.

The Hungarian cotton-weaving industry was employed to its full capacity during the first 11 months of 1924, the depression in this branch of the textile industry not beginning until December. The total 1924 production of cotton cloth is estimated at 70,000,000 meters (meter=1.094 yards), valued at \$11,200,000. The domestic industry supplies approximately 70 per cent of the local requirements of cotton goods, which are estimated at 100,000,000 meters annually, exclusive of printed and dyed materials. The quality of the goods manufactured improved during 1924. Only staple lines were produced during 1923, while in 1924 the mills began weaving high-grade zephyr shirtings. The industry at present lacks facilities for the manufacture of cloth from yarns finer than 50's. Imports of cotton goods in 1924 amounted to 11,904 metric tons, according to the Hungarian Statistical Bureau. These imports came from Czechoslovakia, Austria, Switzerland, and Germany, the countries ranking in importance in the order named.

slovakia, Austria, Switzerland, and Germany, the countries ranking in importance in the order named.

Wool Manufacturing Industry Expanded.

There was likewise considerable development in the wool-cloth branch of the textile industry. The total annual production is estimated at approximately 2,500,000 meters, valued at \$6,500,000—sufficient to supply about one-third of the domestic demand. The wool-weaving mills were busy during the first half of the year. After July 1 a period of stagnation began—attributable, in part, to the reduction in the consuming power of the public, occasioned by high prices.

Raw wool to the amount of 535 metric tons was imported during the year, but the exports reached a total of 3,616 metric tons. The importations of all kinds of wool cloth amounted to 4,312 metric tons and were made principally from Austria, Czechoslovakia, Germany, and Italy, in the order named. Exports during the year amounted to only 101 metric tons.

Knit Goods Show Improved Quality—Printing and Dyeing.

The knit-goods industry during 1924 achieved considerable success in its efforts to raise the standard of its products. The medium and large sized factories extended their plants and several new mills were established. Business in this industry is reported to have been dull from May to September but otherwise satisfactory. Knit goods produced during the year were valued at approximately \$2,400,000.

The printing and dyeing industries were particularly prosperous on account of the protection by import restrictions. After the removal of these restrictions the industry suffered a slight setback, but the factories are said to be producing a good quality of merchandise and they hope to be able to compete with similar goods not only in the domestic market but also abroad. The Hungarian National Association of Textile Manufacturers estimates the production of this branch of the textile industry as valued at \$12,000,000.

Activity in Flax and Hemp Weaving—Jute and Other Branches

The number of looms employed in flax and hemp weaving during 1924 increased to 900. This industry was well occupied throughout the entire year, its production being estimated at 2,500,000 meters, valued at \$1,500,000. Imports of flax and hemp products reached a total of 2,078 metric tons, while exports amounted to 1,003 metric tons.

Manufactures of jute during the year amounted to approximately 7,500,000 kilos, worth \$2,200,000. An abundant supply of secondhand bags appeared on the market during 1924 and were preferred to new ones on account of the lower price. Serious difficulties were also encountered in exporting bags to neighboring agrarian countries. In consequence of these adverse conditions the industry was employed to only 50 per cent of its capacity during 1924.

A number of smaller branches of the textile industry are also represented in Hungary, among them the silk weaving, ribbon, passementerie, upholstery cloth, and felt. Manufacturing and marketing conditions in all of these branches were satisfactory.

The silk industry is reported to have produced 1,500,000 meters of goods woven from silk, half-silk, and

rayon. The total value of these goods is estimated at \$2,400,000.

Importance of Textiles in Hungarian Trade.

Although developments in the textile industry during the past few years, and especially during 1924, were very marked, Hungary is still a large importer of textile products. During 1924 importations were valued at approximately \$55,000,000. About one-half of this value represented semimanufactures, the importation of which was greatly stimulated by the development of the textile industry in Hungary. The importations of finished textiles, however, still comprise a very large item in Hungary's foreign trade, and it is doubtful whether they will show any perceptible decrease in the future.

Textile Industry Now Well Employed.

The textile industry showed steady improvement during the first two months of 1925, and on March 1 textile mills were said, on the whole, to be working full time. Since the restriction on the import of textile goods was removed on January 1 the domestic mills have experienced keen competition from foreign goods which, despite the high tariff, are sold almost as cheaply as the domestic products. The industry, however, at present seems to be in a very good condition and able to meet the competition offered by foreign firms. Manufacturers are endeavoring to establish an export market, and shipments have been sent to western Europe, chiefly Sweden, England, and Belgium. It is also reported that some goods have gone to South America.

Silk-Manufacturing Industry in Poland

Consul General T. J. Jaeckel, Warsaw, March 2

Silk-manufacturing plants are located in various parts of Poland with the most important center of the industry in Lodz. The number of employees approximates 3,000—about half of the prewar force. All supplies must be imported and only 10 to 15 per cent of Poland's requirements for silk goods are now covered by domestic production. The development of the industry is hindered by high import duties on yarn, inadequate preventive measures against smuggling, and insufficient tariff protection of the local weaving industry. No silk spinning or dyeing factories are in operation in Poland. The existing import duties on yarn, therefore, do not protect any local industry. The yarn is dyed principally in Switzerland, where it is also weighted, augmenting thereby the amount of duty that must be paid on its importation.

Industry Divided into Three Groups.

The Polish silk industry may be divided into three groups, distinguished by the kinds of goods manufactured. Fine silks for women and men's furnishings, church robes, umbrellas, and similar articles are made from the best grades of yarns. Of the six mills weaving such silks, four are now in operation, all located in Lodz. To this group should be added seven ribbon factories. Waste silk or rayon is used for making plush and velours for dresses, coats, hats, upholstery purposes, and other uses, six factories being devoted to this branch of the industry. The third class includes knitted materials made from rayon, and is represented by 10 or 12 large mills and about 30 smaller establishments.

Raw and Intermediate Products Produced.

A distinct group of the silk industry is formed by the plants making raw and intermediate products, such as rayon and waste silk yarn. There are three factories for the production of rayon—one in operation, one closed down, and one, a new establishment, is expected to begin activities in the near future. Silk yarn from waste natural silk until recently was made by one firm in Warsaw. The plant, however, was forced to close in October, 1924. Before the war this factory produced about 200,000 kilos (kilo=2.2046 pounds) of spun silk yarn and 25,000 kilos of sewing and embroidery silks. About 20 per cent was consumed in Poland and the rest exported to Russia. At present the Russian market is served to a certain extent by Western European countries, although New York, Calcutta, and Bombay have a share in the imports. This factory employed 750 workmen before the war, was closed from 1915 to 1923, and from September, 1923, to October, 1924, was again in operation, employing 250 workers, engaged in the manufacture of waste-silk yarns for Italian firms.

Additional information regarding textiles appears in this issue under the following sections:

South African Government to satisfy needs locally.

Cable review, Europe:

Polish industry stimulated by heavy Russian purchases.

Spanish textile situation slightly improved; Government offer of export subsidy rejected.

French industry slightly stronger.

Tariffs and trade regulations:

British India—Cotton excise duties to be retained.

Egypt—Excise duty on cotton piece goods abolished.

Turkey—Consumption taxes established on cotton and woolen goods.

Venezuela—Imports of used sacks prohibited.

Hamilton, Ontario, Has Modern Fireproof Warehouse

Vice Consul David Donaldson, Hamilton, March 18

The Hamilton Harbor Commission has recently completed construction of a modern fireproof warehouse on the Hamilton Bay water front. The building, which was constructed for the handling of freight, is 250 feet long and 80 feet wide, is of brick, steel, and concrete construction, and is considered one of the finest on the Great Lakes. The dock on which the warehouse is built is 1,000 feet long, and the depth of water alongside is 17 feet. A railroad siding, with 700 feet of dockage, will shortly be constructed along the face of the dock; arrangements are being made to deepen the water alongside so that by 1928, when the new Welland Canal is expected to be completed, a depth of 25 feet will be attained and the largest steamers using the canal may be accommodated. Adjoining the warehouse and dock, the Hamilton Harbor Commission has about 16 acres of land available for lumber, coal, and other heavy storage.

French Inland Waterway Traffic in 1924

The total traffic borne on rivers and canals of France during 1924 amounted to 36,257,910 metric tons, an increase of 8½ per cent over the 33,883,843 metric tons handled in 1923. (Assistant Trade Commissioner David S. Green, Paris.)

CHEMICALS

Charles C. Concannon, Chief, Chemical Division

DYESTUFFS INDUSTRY IN SPAIN

Assistant Trade Commissioner James F. Burke, Madrid

During the World War, when German and English supplies of dyestuffs were not available in Spain, a domestic production of aniline colors was developed and made fortunes for its promoters. Before the war the only Spanish firm of any importance was Vero Vidal, Barcelona, which found a good market for sulphur black. This concern, however, was severely handicapped by the German competition in colors, because at that time the Spanish tariff did not afford any degree of protection to this small national industry. Under these conditions the Spanish firm mentioned could make but little headway. It refused, however, to affiliate itself with the German sulphur black convention, and was used by the Spanish textile manufacturers as a means of bringing down the prices demanded by the German firms.

Spanish Dyestuffs Industry and Tariff Protection.

Due to a shortage of raw materials during the war, Vidal and three other small dye manufacturers were only able to produce sulphur black, acid black, orange II, and chrysoidine; nevertheless, they made headway and after the war continued to expand their business. They obtained from the Spanish Government an increase in the duties on aniline colors, amounting to 1.20 gold pesetas per kilo. This duty, however, proved insufficient to prevent German and British manufacturers from selling their products in this market. The national dye manufacturers of Spain went to the Government and asked for further protection. The result of this petition was a new duty of 4 gold pesetas per kilo on aniline powders and 2 gold pesetas per kilo on pastes, representing, together with the gold surcharge in force at present, a duty of 6 and 3 paper pesetas per kilo, respectively, on aniline powders and pastes. This heavy duty makes the customs charges greater than the cost of producing concentrated sulphur black. As a result of this complete tariff protection, and that similarly afforded by duties on all aniline oils, indigos, and other colors, the four Spanish dye manufacturers now have the sulphur black business exclusively, without the least fear of foreign competition.

Fabricacion Nacional Finishes Colors from Raw Materials.

Two years ago the Spanish dye makers combined to form a company known as "Fabricacion Nacional de Colorantes y Explosivos," in order to obtain further Government protection and aid. The combine, however, only finishes colors from raw materials derived from many sources and does not make any other materials which form the basis of explosives.

The importance of the Spanish Fabricacion Nacional in the Spanish dye market is confined only to that part of the business using sulphur black, aniline oil, and some acid black. The specific colors made in Spain at present are sulphur black, acid black, orange II, Benzo 4 B, direct blue 2 B, chrome black (F type only), chrysoidine, Bismarck brown, acid red, and one or two other direct acid colors. In addition, aniline oils are

produced. This company is also reported to have bought considerable quantities of reparations colors, and it is difficult to ascertain which it produces.

Raw Materials Consumed by Spanish Industry.

Although foreign dye makers have lost a part of the Spanish dye business, raw materials which can always be sold to the Spanish combine include Dinitrochlorbenzol, H acid, Paranitraniline, and Betanaphthol. The last two are used to a large extent by the textile trade. Raw materials are sold c. i. f., cash against documents in Barcelona. In one or two cases the contracts for Dinitrochlorobenzol already have been obtained by American concerns, but this is the only important part of the Spanish dyestuffs business in which American manufacturers are now interested. The H acid business is entirely in the hands of a Spanish firm producing aniline.

The German dye manufacturers are reported not anxious to sell any raw materials to Spain at present. The reason for this is that they do not wish to have Spanish manufacturers competing in finished dyes.

Marketing Methods Customary.

Colors in Spain are sold ex-warehouse of each individual agent, as are also indigo, Betanaphthol or Paranitraniline, when intended for textile use. Orders are very seldom given in writing, but have to be solicited by the importer or his traveling agents who call on their customers. Owing to the specific duty, foreign exporters of colors should ship only the highest concentrations. While some textile men buy these high concentrations, many want only ordinary strength colors, so that it is practically necessary for the importer to be equipped to reduce imported colors to the required standard, and manufacturers in the United States who wish to successfully compete in this market should be prepared to give this service.

German Agencies and Selling Organizations Consolidated.

Until the first of this year all the different German firms carrying on business in Spain were represented separately. As a result of the organization going on within the German Interessengemeinschaft, however, the Germans have been reducing the number of their Spanish agents. In that way the Barcelona agencies of both Badische and Bayer have absorbed the remainder, and are now representing certain other dye interests. In the Spanish textile district in Catalonia at present there are really only two German agencies. The Union Quimica Commercial is representing Bayer, Cassella, and other concerns, whereas the firm known as "Sociedad Anonima Lluch" has the exclusive Spanish agency for Badische, Griesheim, Weiler-ter Meer, and a few other establishments. The surprising factor is that each group has taken on all of the staff of the former individual agencies, and, in the case of Lluch, for example, there are about 10 managers and 20 travelers. Each salesman is selling the types of dyes which he sold before the reorganization in Germany took place.

The presence of Swiss manufacturers and the British Dyestuffs Corporation in this market has prevented the Germans from making any considerable increase in prices, except in a few really noncompetitive lines. It is doubtful, furthermore—unless these other competitors are eliminated by agreements or other combinations with the German syndicate—that any considerable monopoly or price control will be possible. With the exception of a few colors, the German dyestuffs manufacturers have not as yet secured any special advantage by their amalgamation, while the duplication of sales effort has created a very advantageous opportunity for any new firms seeking an outlet in this market.

Dye Competition in Spain.

There are competing in Spain at present, in addition to the German groups mentioned above, three Swiss firms—Ciba, Sandoz, and Geigy. The British Dyestuffs Corporation has a warehouse and agent, as has also the English firm of Holliday of Huddersfield. There are also a number of small importers of reparations dyes from France, but they do not get any great amount of business, as their deliveries are very irregular, and many dye consumers do not care to risk deal-

ing with them. As to reparations dyes, however, it should be stated that the prices are so very low that the market has been spoiled for other competitors in various lines.

American Colors and the Spanish Market.

If Spanish dye salesmen could see some of the color cards of American firms, with details of the approximate cost c. i. f. Barcelona, they at once could select the lines in which the chances of doing a good business will be quite evident. As a general rule, however, the color index does not give proper information because it is not possible to tell whether the colors listed are in paste or in powder form. The average Spanish dyer prefers to use powdered dyes and, except for calico printing, paste products have been practically eliminated.

[Qualified firms and individuals may obtain from the Chemical Division further information relative to the prices of dyes and intermediates most in demand by Spanish dyers.]

MINERALS

Guy C. Riddell, Chief, Minerals Division

PETROLEUM TRADE OF CANARY ISLANDS

Consul Julian C. Greenup, Las Palmas, February 28

Sales of gasoline and lubricating oils and greases in Las Palmas, the importing and distributing center for the district comprising the islands of Grand Canary, Lanzarote, and Fuerteventura, having a total population of 206,088, are increasing year by year with the expansion of the automobile trade. The number of motor vehicles in use on December 31, 1924, totaled 1,294. Farm machinery, such as windmills, pumps, and internal-combustion engines, ship-repairing plants, machine shops, garages, and steamships require considerable amounts of lubricants, as well as crude oils, Diesel oil, and gasoline, according to the type of machinery.

Fuel and Diesel Oil Consumed—Kerosene.

Considerable quantities of fuel oil are used by the vessels (237 in 1924) bunkering in Las Palmas. The Asiatic Co.'s plant carries from 12,000 to 16,000 tons constantly in stock. The 1924 sales were 9,000 tons less than those for 1923, due to the fact that fuel oil became available in Dakar, Senegal, and St. Vincent, Cape Verde Islands. Fuel oil, locally called "mazout," of about 0.90 density, is consumed mostly by the 400 to 500 stationary engines which are used principally in irrigation works. Diesel oil is required for many of these engines and for a number of auxiliary sailing vessels, but the bunkering of motor vessels promises the best future for this business. The Asiatic Co. carries 4,000 tons of Diesel oil in stock. Sales to vessels have been small, but undoubtedly they will increase.

Kerosene is widely used for lighting and cooking purposes. Coal and wood are expensive and a high percentage of the population is without electric light. Candles are sold in large quantities for lighting, but there is no American participation in this trade. There

is no market for asphalt, road oil, petroleum coke, and other products.

Imports Summarized—Containers and Storage.

The figures given in the following summary are the averages of various estimates and semiofficial statistics on imports:

Petroleum Imports of Las Palmas District

Years	Gasoline	Kerosene	Diesel and gas oil	Lubricants	Fuel oil for bunkers
	Gallons	Gallons	Long tons	Barrels	Long tons
1919	-----	-----	-----	-----	1,000
1920	310, 200	164, 200	-----	-----	17, 000
1921	420, 628	93, 000	-----	-----	60, 000
1922	666, 540	300, 370	-----	-----	100, 000
1923	768, 610	427, 000	350	3, 263	148, 000
1924	1, 088, 385	464, 760	6, 000	3, 200	139, 000

The largest part of the gasoline, kerosene, and lubricating oils and greases used is imported from the United States, and Diesel and fuel oil come principally from Mexico and Curacao. Small quantities of all the products are furnished by England and Germany.

Gasoline is imported principally, and kerosene exclusively, in cases, lubricating oils in cans and 50-gallon barrels, and Diesel and fuel oil in bulk. The two latter are received in and delivered from the Asiatic Petroleum Co.'s tanks through pipe lines laid along the pier where vessels tie up. Most of the other products are stored in warehouses owned by agents of the manufacturers, some of whom sell on a commission basis, while others purchase from the manufacturers. One important company manufacturing refined products owns its own warehouses. There are subagents throughout the district who receive commissions from the Las Palmas distributing agencies.

Retail Prices on December 31, 1924.

On December 31, 1924, retail prices for cash purchases made in Las Palmas were: \$0.36 to \$0.43 per gallon of gasoline for motor cars, according to grade; \$0.28 per gallon of kerosene; \$20.81 to \$53.74 per barrel (374 pounds) of lubricants, according to grade; \$23.07 per ton of Diesel oil; and \$18.34 per ton of fuel oil. Prices by contract are reported to be much lower.

Argentine Petroleum Imports Last Quarter of 1924

Based upon data from Commercial Attaché Edward F. Feely, Buenos Aires

During October and November, 1924, Argentina imported 59,916 tons of crude oil, 42,293,775 liters of gasoline, 10,240,747 liters of kerosene, and 90,770 tons of fuel oil, according to the Boletín de Informaciones Petrolíferas. No importation of gas oil is reported for either month. Almost twice as much kerosene was received in November as in October. The variation in the imports of the other products was slight.

Containers Used—Countries of Origin—Ports.

The greater part of the gasoline (22,977,226 liters) was imported in bulk; 18,609,552 liters came in cases, and the remainder in drums. Of the kerosene, 9,890,072 liters were in cases and the remainder in bulk. The United States supplied 16,311,658 liters of the gasoline and Peru 15,796,874 liters. The remainder came from Mexico and Chile. The United States also furnished the major part (6,886,470 liters) of the kerosene, Mexico and Peru supplying the balance. In fuel oil Mexico led with 62,719 tons, the United States completing the total. The United States again took first place in crude—44,517 tons—and Peru supplied the remaining requirements.

All of the crude was imported through Campana. This port also led in receipts of gasoline, with Bahía Blanca, Buenos Aires, Rosario, and four other ports following. The fuel oil, with the exception of 5,994 tons brought into La Plata, came through Buenos Aires. Six ports participated in the importation of kerosene. While Rosario was slightly in the lead, the trade was fairly well balanced among the six.

[This information supplements that of Petroleum Industry in Argentina in 1924 (first eight months), COMMERCE REPORTS, February 9, 1925, and Special Circular No. 185, Minerals Division, covering September.]

Mineral Production of Rhodesia in 1924

Vice Consul A. H. Cawston, Johannesburg, South Africa, February 13

The most important mineral produced in northern Rhodesia continues to be lead. The output in 1924 amounted to 6,621 tons, valued at approximately £100,000—representing three-quarters of the value of the total mineral production of northern Rhodesia. Small quantities of gold, silver, and copper were produced during 1924, but so far the output of these minerals has not been of much importance.

Copper Outlook Promising.

The outlook for the future production of copper, however, appears to be very promising. Three large companies—the Bwana M'Kuba Copper Mining Co., the Rhodesia Congo Border Concessions (Ltd.), and the Rhodesia Minerals Concessions (Ltd.)—are doing considerable exploration work, and very important discoveries of copper ore have been made on their properties. Very large mining concessions have been

obtained by these companies, and it seems probable that they will be producing a considerable amount of copper and some gold by the end of 1925.

Minerals Produced in Southern Rhodesia.

The total value of the mineral production in southern Rhodesia during 1924 amounted to £4,478,000, compared with £4,300,000 in 1923 and £4,474,000 in 1922. Gold was the leading mineral, as usual, 627,729 ounces, valued at £2,939,562, having been produced. Silver production amounted to 166,472 ounces, valued at £22,488. Base metals and precious stones accounted for £1,516,000. Of the base metals, chrome ore shows the greatest increase over 1923, amounting to 172,000 tons in 1924. The asbestos production increased to 26,000 tons in 1924, but copper declined to 2,826 tons.

While no great records were established in Southern Rhodesia during 1924, the position of mining in the colony is satisfactory. A number of new deposits of gold and copper ore were discovered and plans are being formulated for their development. In view of the interest in gold and copper mining companies it seems likely that the production of these commodities will be considerably increased in 1925. The development of asbestos and chrome-ore deposits is also commanding more attention, and it is expected that their production will continue to increase.

Expansion of the Kupfer- und Messingwerke Co.

Consul A. W. Killefoth, Berlin, Germany, March 17

The balance sheet for December 31, 1924, presented at the annual meeting of the Kupfer- und Messingwerke A. G., Elberfeld, Germany, indicates a loss of 327,664 gold marks. It was voted unanimously that the original capital of 2,000,000 marks be increased to 3,000,000, in order to provide for the necessary funds for the new buildings at Langenberg, now almost completed, and to increase the operation fund required by the larger turnover. Furthermore, 120,000 gold marks out of this increase in capital are for the outstanding expenses involved in the purchase of the Rheinütte A. G. für Metallindustrie, Duisburg-Ruhrort.

The administration, in reporting on this fusion, said that the purchase was made on very favorable terms, with the object of making the Kupfer- und Messingwerke independent of the open market for lead. To take advantage of the new supply it has been decided to transfer the lead-rolling mill of the purchasing company from Langenberg to Duisburg, where there is not only good transportation but also space for contemplated new buildings.

The report was approved unanimously by the Kupfer- und Messingwerke. The Rheinütte A. G., which has a loss of 48,961 gold marks in its 1924 balance sheet, also sanctioned the contract.

Additional information regarding minerals appears in this issue under the following sections:

Cable review, Europe:

Spanish metallurgical plants active.

Rumanian production back to pre-war amounts.

French February imports greater than January.

South African Government to satisfy needs locally.

Tariffs and trade regulations:

Bolivia—Reduction of duties on crude sulphur and iron pyrites.

SHOES AND LEATHER MANUFACTURES

A. B. Butman, Chief, Boot and Shoe Division

GENERAL DECLINE IN GERMAN SHOE EXPORTS

Vice Consul Paul Bowerman, Berlin

A marked decrease in the export trade of the German shoe industry is recorded for 1924. Compared with the previous year, the export of shoes fell from 5,907,148 pairs to 3,920,795 pairs; shoes with wooden soles dropped from 73,150 to 53,434 pairs; while slippers decreased from 1,386,328 to 652,851 pairs.

High Price Levels Chiefly Responsible.

Three contributing factors to the decline in the export activity of the shoe industry are the present high price levels in Germany, resulting from the accumulative turnover tax, high freight rates, and the over-expansion of the industry during the inflation period; increased competition on foreign markets by Great Britain and Czechoslovakia; and increased local production in many countries which hitherto had depended upon imports. The first and most important of these adverse factors, the high price levels, is the bugbear which confronts German industry in general, and no solution of the problem, in so far as the shoe industry is concerned, may be expected until an improvement in the whole national economic structure can be effected.

Pessimism Not Justifiable.

Although the shoe industry points with some pessimism to the fact that the production during 1924 amounted to only 20 to 30 per cent of the capacity, the statement is somewhat misleading, inasmuch as a considerable fraction of the industry at present is the remnant of a mushroom growth during the inflation period. An illustration of this fact is the situation at Pirmasens, one of the centers of the shoe industry, where the number of concerns rose from about 300 in 1913 to almost 800 during the inflation, only to fall to 350 in 1924.

Most of Export Trade with Other European Countries.

The detailed figures of the export of shoes in 1924 indicate that Germany's markets were limited to Europe, except in the case of slippers, which were exported to the United States and Canada. The principal countries of destination and the volume of the exports to each for 1924 are as follows:

SHOES	
	Pairs
Denmark.....	586,517
Norway.....	425,099
Danzig.....	394,497
Austria.....	357,585

East African Market for Footwear

Vice Consul Oscar Thomason, Nairobi, Colony of Kenya

Imports of footwear into Kenya Colony and Zanzibar for the first six months of 1924 numbered 2,789 dozen pairs, valued at £9,322, and if importation continued at the same rate during the remainder of the year there was a decline from the trade in 1923, or 7,588 dozen pairs, valued at £23,230. India has the greater portion of this trade, supplying 56 per cent of the imports. The United Kingdom is second with 34 per cent, while the remainder is supplied by France, Belgium, Germany, and the United States.

Natives Adopt European Modes—Retail Prices.

The French, English, and American shoes are worn by the Europeans, while the German and Indian goods are sold principally to the African natives and Asiatics. The natives are rapidly adopting European modes of dress. Especially do they enjoy wearing the white-man's style of shoe, and their demands are going to have an appreciable effect on the trade.

French shoes, all of which are women's are not on sale in the stores, but are imported direct by the wearers and come in by parcel post. English men's shoes are priced retail from 40s. to 60s., and women's shoes from 30s. to 50s. Nearly all of the American shoes are for men's wear and consist of work shoes, hunting shoes, and moccasins. The work shoes vary in price from 40s. to 50s., the hunting boots from 70s. to 80s., and the moccasins from 60s. to 75s. Sports shoes are in increasing demand, especially tennis shoes. The leather-soled shoes are being displaced by the crêpe rubber and the composition rubber-soled styles. The average retail price of tennis and football shoes is 35s. per pair.

Local Production by Indian Bootmakers.

There is a growing patronage enjoyed by the large number of Indian bootmakers, who are establishing themselves in all the important towns in this consular district. These Asiatics import their leather mostly from South Africa, copy American and European styles, and make a good shoe for 50 per cent less than the price of the imported article. Their expenses are the absolute minimum as they rent a portion of a room or a corner of a front veranda for a small monthly sum and work from daylight until dark seven days in the week. They carry no stocks as only custom work is undertaken.

Shoe Industry and Trade of United States

The United States manufactured 53,182,368 pairs of footwear other than rubber during the first two months of 1925, as compared with 49,671,164 pairs during the corresponding 1922 period, 61,044,346 pairs in the first two months of 1923, and 53,329,064 pairs during January and February of 1924. It is interesting to note that since the peak production of 1923 the output seems to be following a more normal trend, as the first two months of 1924 and 1925 show a variation of less than 150,000 pairs. The production for February, 1925, amounted to 26,906,438 pairs and comprised the following number of pairs: Men's, 7,372,922; boys' and youths', 1,776,308; women's, 8,676,191; misses' and children's, 2,707,349; infants', 1,917,558; athletic and sporting (leather), 1,533,536; canvas, satin, and other fabric, 585,001; slippers for house wear, 1,559,885; and all other, 777,688.

Consumption in the United States Relatively Constant.

The shoe manufacturers of the United States, during the first two months of 1925, exported 1,256,590 pairs of leather footwear (1,006,099 pairs to foreign countries and 250,491 pairs to noncontiguous territories), leaving a remainder of the domestic production for home consumption of 51,925,778 pairs. To this might be added the 274,621 pairs of free and dutiable footwear imported during the same period, giving a grand total of 52,200,399 pairs of domestic and foreign shoes available for domestic consumption. During the corresponding period of 1924, deducting from the production the 1,099,194 pairs supplied foreign countries and noncontiguous territories and to the remainder (52,229,870 pairs) adding the imports of that period 302,771 pairs, the available supply was 52,532,641 pairs.

HIDES AND LEATHER

Wilbur J. Page, Chief, Hide and Leather Division

SLACKENING IN GERMAN LEATHER MARKET

Assistant Commercial Attaché Douglas Miller, Berlin, March 16

The German leather industry reported a falling market during January and February, and in the middle of March was still pessimistic. The demand for shoes has been slack and other leather-using industries are cutting down their purchases of leather. The manufacture of leather belting continues, but a good deal of foreign leather has recently been imported to compete with the local product at low prices. The sales of practically all kinds of leather goods, except trunks and suitcases, have declined considerably, depressing prices; there is no demand from manufacturers and slight concessions are granted for quick sales.

General Price Decline.

The strike in North German tanneries has been continuing, a situation which is not altogether unwelcome to the trade. In general prices have declined from 5 to 15 per cent as compared with the beginning of the year. One favorable feature for the leather dealers is the recent decline in the prices for hides and skins, which have had a very poor market owing to the exorbitant prices demanded by the Hide Dealers' Association.

Differing Views on New Tariff—American Competition.

There is considerable controversy concerning the attitude which the leather trade should take toward the new tariff. Leather dealers desire to import certain qualities of cheap foreign leather and the shoe industry wants certain kinds of leather for the manufacture of low-priced women's shoes. It is pointed out by the local tanners that neighboring countries, such as Poland and Czechoslovakia, are able to produce leather cheaper than Germany, and a protective tariff is accordingly demanded.

Little has been said about the competition of American leather in the German market, because this tends to confine itself to a certain number of special varieties, such as highly finished kid upper leather, patent sides, and similar quality productions.

DULLNESS PREVAILS ON CZECHOSLOVAK LEATHER MARKET

Ernest E. Power, office of commercial attaché, Prague, March 18

The leather market during the first half of March has been very dull, principally because of the continued scarcity of funds. The buyers' attitude has been very reserved of late, but in view of the fact that their stocks are nearing exhaustion dealers confidently expect that there will be an increase in activity in the near future. The early demand for spring goods gives additional cause for this expectation. Prices have remained practically stationary, with a slight downward tendency.

Limited Demand Because of High Prices.

Sole leather is still being bought as actually required, no stocks being accumulated by the dealers. The market is also dull in upper leathers, with a small demand for upper leather for sandals. The price of imported sheep leather is too high to be sold in this market and various substitutes are being bought. Harness leather and leather for fancy goods are in little demand owing to the high prices asked. Collections are slow, with an unusually large number of insolvencies reported in the leather trade.

Persian Firm Desires to Export Skins

A firm of wholesalers in Shiraz, Persia, wishes to get in touch with American firms importing skins. Further information concerning this firm may be obtained from the Hide and Leather Division by referring to Import Trade Request No. 30.

SPECIALTIES

Warren L. Hoagland, Chief, Specialties Division

MUSICAL INSTRUMENTS IN GERMANY

Assistant Commercial Attaché Douglas Miller, Berlin

The manufacture and sale of German musical instruments increased during 1924, according to reports in the German press. Export sales on account of the increased prices quoted were not as large as during the inflation period, but there has been considerable recovery over the depression of a year ago. According to statistics prepared by the trade, exports were approximately 100,000,000 marks in 1924, which were divided as follows:

	Marks
Pianos	53, 000, 000
Accordions	22, 000, 000
Talking machines	7, 000, 000
Piano parts	4, 500, 000
Strings	4, 000, 000
Stringed instruments	3, 000, 000
Harmoniums and parts	2, 500, 000
Instruments played with the fingers	1, 300, 000
Mechanical music boxes	1, 000, 000
Wind instruments	1, 000, 000
Organs	500, 000
Drums, cymbals	250, 000

Exports by weight were 17,689 tons for the first nine months of the year, while imports amounted to only 156 tons, valued at 1,250,000 marks. Of this amount most came from near-by countries—Czechoslovakia and Austria—with very small amounts from the United States.

The piano industry, phonograph, and violin manufacturers are operating at about two-thirds of their pre-war volumes. The stringed-instrument industry is now producing less than one-half of the former figure.

Domestic Market Dull.

The domestic market is somewhat slack because sales of pianos, phonographs, and other articles were artificially expanded during the inflation, since these articles were considered investments superior to depreciating currency. It is said even now that many of the farmers in Germany have two or more pianos in their homes, relics of their attempts to save somewhat of their former paper-mark holdings.

The export of German pianos still remains considerably lower than before the war. However, an increasing market for player pianos is being built up in South America, Australia, and other parts of the world. Good player pianos are quoted for export as low as \$200 cash.

Sales in the United States.

The only branch of the German musical instrument industry which maintains a high volume of sales in the United States is that of mouth organs, exports of which increased from 2,448 tons in 1923 to 3,488 tons in 1924—enough to supply one instrument to every American child. The average value of German musical instruments brought into the United States is very low on this account. In 1922, even including several hundred pianos, it was only about \$0.075.

Germany Imports Its Materials for Making Instruments.

Raw materials are largely imported now; the gut for making violin strings comes from the Far East

and from eastern Europe; silk comes from Italy and Switzerland; ebony, mahogany, rosewood, and other tropical woods are furnished by Latin America and the Far East; maple and beech, which are used for making sounding boards for pianos, come from the Balkans and from eastern Europe.

The stringed-instrument industry is situated largely in Saxony around Leipzig and Dresden. Berlin is the center of piano, phonograph, and radio manufacturing.

It is claimed that considerable export sales of phonographs were made at the recent Leipzig fair on account of price cuts, which have recently been made effective.

The Spanish Piano Market

Commercial Attaché Charles H. Cunningham, Madrid

The Spanish market, except for a limited number of high-grade pianos, is one of price. Nearly 50 per cent of the pianos sold annually in Spain are produced by manufacturers or cabinetmakers using German actions of low quality for a low-priced market. They are manufacturers on a very small scale, employing four or five workmen only and turning out from 15 to 50 pianos a year. There is but little possibility of marketing the American accessories and parts usually in demand in this industry. Piano dealers say that in view of the very high prices quoted by American manufacturers they are not interested in American pianos at present. However, when prices are actually compared, frequently the disadvantages are not so great as represented.

[It is suggested that manufacturers interested in the Spanish market send their price lists, including packing costs and freight to a Spanish port, to the Specialties Division of the bureau for transmittal to Spain so that some idea of the actual cost of American pianos may be determined there.]

German Watchmakers Employed on Domestic Orders

Assistant Commercial Attaché Douglas Miller, Berlin

The only good export market for German watches at present is Great Britain. Prices were raised in January on almost all lines of watches on an average of about 8½ per cent. It is claimed that rising wages and raw material costs have forced this action and that further increases may be expected unless taxes are reduced in the near future.

Watches Imported from Switzerland.

The importation into Germany of watches from Switzerland is steady and has been going on for some months, or since the stabilization of the currency. This has had a significant effect upon prices and has tended to break the monopoly of the domestic market which has been enjoyed by German producers for the past 10 years. In particular, Swiss competition is hitting wrist watches, which are very largely made in Pforzheim. The trade in fine watches has been so poor that a large proportion of the skilled workmen has been

released. Plants are rather heavily mortgaged and are having difficulty in earning enough to pay the interest of their obligations. The average German is not at present in a position to buy high-quality watches.

German Watchmakers Meet Competition in Many Markets.

German watchmakers are complaining about foreign competition in export markets. French and Italian watchmakers are working for lower wages. The Swiss industry is better organized and the American market is practically closed on account of the tariff. The future does not hold much hope for the German exporter, who will have to depend largely upon Great Britain, South America, and the Far East for his markets. Japanese watches will be taking up a large part of the Far Eastern trade in cheaper lines, but there still remains a field in which the German article can compete on a price basis throughout Asia.

Musical Instrument Catalogues Wanted in Manchuria

Catalogues or trade journals relative to musical instruments for the commercial reference files of the consulate are requested by American Vice Consul Leo D. Sturgeon, of Dairen, Manchuria, in order that he will be in the best possible position to answer inquiries regarding musical instruments, which seem to have a potential market in that territory.

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

FOREIGN SECURITIES OFFERED IN THE UNITED STATES

Theodore R. Goldsmith, Finance and Investment Division

The par value of foreign securities publicly offered in the United States during the first three months of 1925 amounted to \$279,000,000, as compared with about \$238,000,000 for the corresponding period of last year. If refunding issues are excluded, the increase in the amounts of new financing is even more pronounced. Of the \$237,000,000 foreign loans for the first quarter of last year only about \$96,000,000 represented new financing while \$142,000,000 were for refunding purposes, whereas during the first quarter of 1925 about \$238,000,000 were for new investments, while only about \$41,000,000 are believed to represent refunding operations. It is possible, however, that the last-named figure will be increased somewhat when more information has been obtained regarding these loans. Foreign flotations during March amounted to \$68,000,000 as compared with \$152,500,000 in February and \$59,060,000 in January.

Shift from Government-Guaranteed Loans to Private Enterprises.

Only about one-ninth of the total loans offered in the first quarter of 1924, or \$25,000,000, went to private foreign enterprises as compared with issues amounting to \$237,000,000 guaranteed by governmental agencies; whereas, during the first quarter of this year issues totaling \$95,000,000, approximately one-third of the total, represented private enterprises and \$184,000,000 were lent to enterprises enjoying a governmental guaranty. The 1925 loans consisted of 31 separate issues—an increase from 22 in the corresponding period of 1924.

It must be remembered, however, that a comparison of quarterly periods of two years does not always reflect the lasting trends. Although contrasts with the first quarter of last year are very interesting, it is quite possible that a comparison of the whole year 1925 with 1924 will show entirely different results.

European Loans Form Large Proportion of Total.

During the first quarter of 1925, European governments and corporate enterprises borrowed \$139,000,000 in the United States as compared with only \$10,000,000 for the first quarter of last year. German industry took a large share, approximately \$65,000,000. Other large European loans were the Republic of Poland, \$35,000,000; the Est Railroad Co. of France, \$20,000,000; and the Republic of Finland, \$10,000,000.

Decline in Latin American—Asiatic—Canadian.

The amount lent to Latin America was \$10,000,000 less than in the first quarter of last year. The total of \$56,000,000 for the first quarter of 1925 included \$25,000,000 in six-month notes of the Government of the Argentine; a \$10,000,000 issue for the Cuba Co.; and a \$15,000,000 loan to the State of Sao Paulo, Brazil.

The only Asiatic issue offered during the first quarter of last year was the Japanese Government loan, of which about \$125,000,000 was placed in the United States. The total of such loans for the first quarter of 1925 amounted to only \$16,000,000, consisting of the \$15,000,000 loan of the Toho Electric Power Co. (Ltd.) of Japan, and a Philippine government issue of \$1,000,000.

Canadian loans for the first quarter of 1925 amounted to about \$67,000,000—an increase from \$36,000,000 in the corresponding period of 1924.

Private Credits Not Included.

The preceding figures do not include a number of credits granted privately, such as the \$4,500,000 two-year banking credit to the Chilean Government; the credit to the Leonhard Tietz Aktien-Gesellschaft, operators of a chain of department stores in Germany; \$5,000,000 one-year notes of the State of Bremen, Germany; \$40,000,000 banking credit to the Danish Government; and a \$15,587,000 6 per cent International Paper Co. issue, part of the proceeds of which will be applied to the purchase of timberlands in Canada, according to press reports.

Offerings Summarized by Months—March Flotations.

The following table shows the amounts of foreign securities publicly offered in the United States, by months, for the first quarters of 1924 and 1925:

Totals of foreign securities publicly offered in the United States

Months	1924	1925
January.....	\$68,788,000	\$59,080,000
February.....	161,490,000	152,500,000
March.....	7,648,984	68,000,000
Total.....	237,926,984	279,580,000

Detailed lists of the foreign securities publicly offered in the United States during January and February, 1925, appeared in *COMMERCE REPORTS*, February 16 and March 16, respectively. A summary of the loans issued during March follows:

March flotations of foreign securities in the United States

Issues	Total nominal capital	Interest	Term (years)	Yield	Price	Due
Europe:						
Republic of Finland.....	\$10,000,000	7	25	7.50	94	1950

4 \$2,975,000 refunding.

5 Partly sold in the Netherlands.

Tax Checks Sold in France

Based on report from second secretary, American Embassy, Paris

On March 20, 1925, the French treasury placed on sale for one month tax checks, in accordance with the decree of March 11, 1925. This is an ingenious scheme to realize cash for the immediate requirements of the treasury without resorting to borrowing. Under normal conditions, the treasury issues its own obligations when in need of money, but the comparative failure of the last issue in December, 1924, renders this method unsatisfactory at the present time, as financial conditions do not appear to have changed since then.

The tax checks are in denominations of 100, 500, 5,000, and 10,000 francs. They may be made out to bearer, to order, or to a specified individual. The rate of discount, considering the time they have to run, is between 7 and 8 per cent.

Advantages and Disadvantages of Checks.

Through the sale of these tax checks the treasury will benefit by the immediate payment of the taxes; on the other hand, it must count on lean months next fall, when this revenue would normally be paid. Furthermore, the tax checks are so easily negotiable that they can certainly be considered a form of money in

addition to the bank notes, if placed in circulation. This inflation, however, is expected to be of such small proportions that its consequences will not be felt. Finally, since the unused tax checks are redeemable after July 1, 1926, the treasury may be called upon at that time for payments amounting to as much as 1,000,000,000 francs.

Interest Rates in Austria Reduced

Commercial Attaché H. Lawrence Groves, Vienna

The reduction in the official discount rate of the Austrian National Bank, which it was generally believed would be put into effect toward the end of March, did not materialize. The decision was postponed until the latter part of April. On March 23, however, the national bank announced that an agreement had been reached with the syndicate of private banks whereby a reduction of approximately 2 per cent in the rates charged by the banks on private loans will be effected—which may be considered as a forerunner to a probable reduction of 2 per cent in the official discount rate a month hence—from 13 to 11 per cent. As a result of this rate reduction, short-term bank loans to first-class firms would cost a minimum rate of approximately 16.5 per cent per year, representing a reduction of more than 2 per cent in the rates hitherto prevailing.

Interest Rates Lower.

Pending a decision in reference to reduction of the official discount rate, the syndicate banks have made a temporary agreement to pay interest on deposits at the following rates of interest, representing a reduction of approximately 1 per cent from previous rates: Interest on current deposits will be paid at a rate of 9 per cent per annum; one-month deposits, 10 per cent per annum; and for longer periods, 11 per cent per annum.

The changes, both in the interest rates paid and the rates charged, became effective on April 1, according to the agreement. It is indicated that no further change will be made in the rate charged by the private banks in case the official discount rate is actually reduced from 13 to 11 per cent at the end of April.

Siamese Budget for 1925-26

Based upon reports from Consul Charles H. Albrecht, Bangkok

The expenses of the Government of Siam for the fiscal year beginning April 1, 1925, are estimated at 93,125,688 ticals (1 tical=\$0.4475), and revenues at 84,000,000 ticals, leaving a deficit of 9,125,188 to be covered by unexpended funds in the treasury reserve, according to estimates recently published. The deficit represents an increase of nearly 3,000,000 ticals over that for the current year, but it is hoped that the deficits for both years will be considerably reduced by unforeseen increases in revenues. Anticipated deficits have been characteristic of the Siamese budget estimates since 1920-21, but in actual practice they have usually been greatly reduced, and, in some cases, converted into surpluses by the time the year closed. For example, the estimated deficit of 8,400,000 ticals for the 1922-23 fiscal year has been reduced to an actual deficit of only 2,300,000 ticals.

Distribution of Public Debt.

The public debt on March 31, 1925, amounted to £12,520,187, distributed as follows:

Outstanding balance of old British loans of £1,000,000 and £3,000,000	£3, 113, 340
Outstanding balance of Federated Malay States loan of £4,630,000	4, 418, 847
Loan of £2,000,000	2, 000, 000
Loan of £3,000,000	3, 000, 000
Total	12, 530, 187

The public debt was increased by £30,000,000 during the year, by a flotation in London for the purpose of building up the treasury reserve. The debt amounts to approximately \$5 per head.

Indian Customs Revenue Increase

Consul William L. Jenkins, Calcutta

The grand total of gross Indian sea and land customs revenue (excluding salt revenue) realized in the 10 months, April, 1924, to January, 1925, reached 405,400,000 rupees, as compared with 337,300,000 in the corresponding period of the previous year, according to returns received in the Commercial Intelligence Department. Import duties contributed 323,000,000 rupees; export duties, 46,200,000; excise duties on cotton manufactures, 18,200,000; on kerosene, 8,200,000; and on motor spirit, 6,700,000 rupees; and land customs and miscellaneous, 3,100,000. Increases were noticeable in import duties on sugar, cotton yarn and piece goods, iron and steel and other metals, yarn and textile fabrics other than cotton and silk, liquors, silk piece goods, cutlery and hardware, and motor cars and cycles; in export duties on raw and manufactured jute, rice, and tea; and in excise duties on cotton manufactures and motor spirit and kerosene. Import

duties on matches, machinery, railway plant, and tobacco, on the other hand, showed important decreases. The protective special duties collected under the steel industry (protection) act of 1924 from June 13, 1924, to January 31, 1925, amounted to 18,150,000 rupees, which are included with the figures of import duty.

New Chinese Domestic Loan

Commercial Attaché Julean Arnold, Peking

Arrangements have been completed in China for a domestic 8 per cent loan of 15,000,000 silver dollars (1 silver dollar=\$0.735), secured by the customs returns formerly held for the German Boxer indemnity. The loan has been underwritten by the banks at 84, and will be marketed at 90. Amortization will not begin until the fourth year. The revenues on which this issue will be secured are at present assigned to the service of the thirteenth year treasury bills, which will be redeemed by the end of three years. Great Britain, France, the United States, and Japan have protested against the flotation of this loan on the ground that the customs revenue is hypothecated for a special charge, and should, when this charge no longer exists, become part of the ordinary customs surplus, and not be used as a security for fresh obligations. The proceeds of the loan are intended for administrative expenses and for the use of the Chinese legations and consulates abroad, and 3,000,000 dollars will be withheld by the inspector general of customs to meet the first five interest coupons.

IRON=STEEL=HARDWARE

Luther Becker, Chief, Iron and Steel Division

PROPOSED EXTENSION OF CZECHOSLOVAK IRON AND STEEL CARTEL

Commercial Attaché James F. Hodgson, Prague, March 23

Representatives of the Czechoslovak iron and steel cartel will shortly open negotiations with the iron and steel industries of Polish Upper Silesia, Hungary, and Yugoslavia in order to eliminate competition in the export trade, both in mutual relations and in exporting to other countries, such as Russia and the border States, according to recent reports in the newspapers, which have been corroborated by competent persons.

Proposed Cartel Will Not Regulate Prices.

The competition between the Czechoslovak and Polish iron and steel industries, which is very keen at present, has been detrimental to both countries in selling their products against other foreign competition. Likewise, the profitable exportation of iron and steel to the Balkan States is greatly handicapped by the competition between the Czechoslovak, Hungarian, and Yugoslav works. The proposed cartel agreement will regulate the export trade and distribute the possible markets, but it will not fix prices.

The Czechoslovak iron and steel cartel was established in May, 1922, by the leading iron and steel

works of the country. In course of time it was extended to include the smaller plants of the industry and at present it represents 99 per cent of the entire iron and steel production of Czechoslovakia.

Present Cartel Allocates Orders and Fixes Prices.

The chief purpose of this cartel is the maintenance of a central sales office in Prague for all members of the combination, through which orders are received and distributed among them according to the capacity and locality of the individual plants. Special attention is given to the technical equipment and specialization of production of the various mills in allotting orders. Furthermore, iron and steel prices both for the domestic market in Czechoslovakia and for the export trade are fixed by the central sales office.

Agreement Reached with Austrian Firm.

An agreement somewhat similar to that proposed between the Czechoslovak cartel and the iron and steel industries of Hungary, Polish Upper Silesia, and Yugoslavia, was entered into on February 8, 1924, between the Czechoslovak iron and steel cartel and the Alpine Montangesellschaft in Vienna, the largest iron and steel concern in Austria. By the terms of this agreement, the exports of rolled steel from Czechoslovakia into Austria and the exports of pig iron from

Austria into Czechoslovakia were proportioned on the pre-war basis of the trade in these products between the two territories. It was also agreed that the parties to the contract would not indulge in price cutting when in competition for business in foreign markets.

French Iron and Steel Industry Dull

Trade Commissioner Daniel J. Reagan, Paris, March 26

Although iron and steel conditions in France during the last of March were calm, they were without stability. Domestic inquiries continued numerous, but purchases were only for immediate needs. Export business was more limited, and with world prices generally lower, the French prospects in this field were not bright, according to the local press. French prices were unchanged.

Price Increase in Phosphorus Pig Becomes Effective.

The production of phosphorus pig iron was running practically at full capacity toward the end of March to meet orders placed in anticipation of the 10-franc increase which became effective on April 1. Apparently these orders exceeded immediate needs, and a decrease in orders for April was expected. From the fact that furnaces were quoting immediate deliveries during March, it would be inferred that they had been accumulating important stocks. This interpretation was supported also by their efforts, so far unsuccessful, to extend their credits with the Banque de France, and later with certain American banks.

Hematite Pig Market—Cut in Domestic Delivery Quotations.

The hematite pig market lacked uniformity, and producers were still seeking a price agreement. The "Aciers de Firminy" reported that their plant at Duns, near Dunkerque, was ready to begin the production of refined and foundry hematite pig.

The domestic market for semifinished products was fair, production at the end of March exceeding the current demand as indicated by cuts in deliveries quotations from three months to six weeks. The export market was soft as a result of lower English and Luxemburg quotations. Rolled products were firm with inquiries increasing, however plates were irregular.

Heating Methods in France

Consul Raymond Davis, Paris, February 27

Nearly all of the modern, up-to-date apartment and private houses in France are heated by central heating devices, the great majority of which are either steam or hot-water systems, burning soft coal or anthracite. Up to the present, little use appears to have been made of oil in connection with central heating, because France is dependent on far distant countries for its supply of petroleum, which makes it difficult to compete, as far as price is concerned, with the local fuel supply of coal. Approximately 90 per cent of the furnaces and central heating installations used in this country are made by a French corporation.

High Construction Costs Hinder Building—Most Equipped with Stoves.

The number of modern apartment and private houses is somewhat limited, owing to the fact that during the war practically no building operations took

place, and that since 1918 the high cost of construction has caused investors in house property to hesitate and put off their operations in the hope, which has so far proved vain, that building costs would decrease.

There are more of the old-style apartment houses than of the modern buildings, and with the exception of a few hot-air installations, all the heating is accomplished by means of open fireplaces, or in the majority of cases, by a closed stove burning continuously and requiring attention only every 12 hours. These stoves are placed against the open hearth, the entrance to which is blocked by a square of sheet iron through which a hole is made to admit the piping from the stove to carry the smoke up the chimney. Such stoves consume about 20 pounds of anthracite every 24 hours as a maximum, and will give sufficient warmth to maintain a reasonable temperature in two adjacent rooms provided they communicate. At the present cost of anthracite the operating expense of such a stove is approximately 20 cents per day.

Partial Heating by Hot-Air Furnaces.

In apartments and small houses, where such stoves are used, the only other form of heating is usually the coal-burning kitchen stove. French housewives generally prefer to use the latter for cooking during the winter months rather than the gas-oven because there is considerable heat generated and this economizes on other forms of heating. Among these older apartment houses there are a few installations of partial heating by hot air distributed through a limited number of registers in each apartment which are insufficient to completely warm the apartment but which are supplemented by individual stoves or open fires.

Considerable Market for Central Heating Systems Remaining.

The heating of country village dwellings is usually confined to the warmth given out by the coal or wood burning kitchen stove, or in the remoter districts to the open-hearth burning logs. It is doubtful if central heating would ever be installed in this type of home. It is estimated that 65 per cent of the dwellings in France fall into this classification and that about 10 per cent of all houses and apartments have central heating, leaving approximately 25 per cent in which central heating may yet be installed.

Drop in French Iron and Steel Production

Cable from Commercial Attaché Chester Lloyd Jones, Paris, April 13

The French iron and steel market was less active early in April owing to the forward buying during March because of the increases in price scheduled for April. Quotations on phosphorous pig iron rose 10 francs on April 1, some sales being made above the entente price. On the 1st of March there were 135 blast furnaces active, 38 ready to operate, and 47 furnaces under construction and repair, as compared with 133 blast furnaces operating, 41 furnaces ready to operate, and 46 furnaces under construction and repair on February 1.

Estimated Production Slightly Increased.

March production is estimated to have been slightly above the February output, which included 636,934 metric tons of pig iron and 569,000 tons of steel ingots and castings. Production should continue at about the same level during April in order to fill the numerous orders placed on the March price basis.

The net exports during February remained practically unchanged for ores, semifinished iron and steel, and finished products, but they were lower for pig iron and higher for scrap iron.

Iron, Steel, and Hardware Notes

Decline in French Output of Iron and Steel.

The February production of iron and steel in France comprised 636,934 metric tons of pig iron and 569,007 tons of steel ingots and castings, as compared with 669,352 tons of pig iron and 608,146 tons of steel ingots and castings for January. This was due to the shorter working month and also to a decrease of approximately 1,000 tons in the daily average output for both iron and steel. (Trade Commissioner Daniel J. Reagan, Paris, April 2.)

Rise in French Price of Plates is Anticipated.

The French producers of plates and sheets have at last joined the entente, and an increase in demand is expected to anticipate the higher domestic prices which will probably result. While the proposed price agreement has not yet been published, it is believed that there will be a general increase of approximately 10 per cent, plates probably rising from the current quotation of 64 francs to 70 francs. (Trade Commissioner Daniel J. Reagan, Paris, April 2.)

American Tools Well Received in Bristol, England.

American tools, both wood-working and metal-working, are well known in the Bristol district of England, and their sale in this territory is believed to be increasing. Makers of standard American hand tools, particularly saws, hammers, planes, bits and braces, and machine tools, have been able to compete satisfactorily in this market with British-made articles, mainly on account of superior finish and merits, although American prices are usually somewhat higher. (Consul S. Reid Thompson, Bristol, March 23.)

India Importing Less Iron and Steel.

Imports into British India of certain iron and steel products fell off considerably during February, as compared with the receipts at the close of 1924. Altogether 726 long tons of iron bars and channels, 9,655 tons of steel bars, not cast, 3,747 tons of structural steel, and 3,343 tons of tubes, pipes, and fittings were received from foreign countries in February. Exports of pig iron totaled 49,066 tons, 34 per cent of which went to America. (Dispatch from Trade Commissioner Spofford, Bombay, April 1.)

Report on Sheffield Iron and Steel Industry Available.

A comprehensive report on the Sheffield, England, iron and steel industry during 1924 has been received from Consul William J. Grace. Statistics of production, imports and exports, and prices are contained therein. Not only do these figures cover the Sheffield district, but include the whole of Great Britain in some instances. Interested concerns may obtain a loan copy of this report upon application to the Iron and Steel Division, Bureau of Foreign and Domestic Commerce, Washington. Mention should be made of File No. 164812—United Kingdom—12.

Temporary Tariff Agreement between Germany and Italy Affects Hardware.

The modus vivendi between Germany and Italy which expired March 31 was renewed for the dura-

tion of the treaty negotiations. In return for most favored nation treatment extended to certain Italian exports by Germany, Italy is granting Germany most favored nation treatment with regard to bolts, screws, and furniture trimmings of iron and steel. (Dispatch from Commercial Attaché H. C. MacLean, Rome, April 8.)

German Industrialists Form Seven-Year Tube Syndicate.

The assembly of tube works in Duesseldorf on March 14 decided upon an irrevocable seven-year tube syndicate, which was to begin sales through its sales bureau on April 1, under the name of the Firma Roehrenverband G. m. b. H. in Duesseldorf. August Thyssen was nominated honorary chairman and General Director Pastor of the Mannesmann-Roehrenwerken was elected chairman. Julius Lamarche of Phoenix A. G. and Hans Thyssen were made assistant directors. The administration was placed in the hands of Director Rothmann of the Oberschlesische Eisenbahnbedarfs A. G., and Directors Leonhardt and Koecke of the Mannesmann-Roehrenwerken. A special agreement has been concluded between the German tube syndicate and the Czechoslovak tube works. (Boersen Courier of March 17.)

Additional information regarding iron—steel—hardware appears in this issue under the following sections:

Cable review, Europe:

Spanish metallurgical plants active, but iron mining dull.

French metallurgical industry less active, following price advances.

South African Government to satisfy needs locally.

"Foreign trade opportunities."

Poland's 1924 Trade Balance Adverse

Based on report from Consul Donald R. Heath, Warsaw

Polish exports during 1924 were valued at 1,262,574,000 zlotys and imports at 1,479,916,000 zlotys, resulting in an unfavorable trade balance of 217,342,000 zlotys as compared with a favorable balance of 79,105,000 zlotys in 1923 (the zloty equals 19.3 cents). This change to an adverse balance is accounted for by a 32 per cent increase in imports over 1923, although exports also increased somewhat. The larger imports are ascribed to the increased buying power of the country and to the comparative failure of the 1924 grain crop. Imports of wheat flour alone showed an increase of 27,000,000 zlotys.

Poland's most important American import is cotton. Although this showed marked decline in tonnage in 1924, the increased price brought its total value above that of 1923. Owing to the modus vivendi recently signed between Poland and the United States, a decided increase in the importation of American products is expected during 1925.

Uruguay March Lumber Imports

March lumber imports into Uruguay consisted of 200,000 pieces from America and 48,000 pieces from other countries. (Trade Commissioner Lew B. Clark, Montevideo, cable dated April 4.)

COMMERCIAL LAW

A. J. Wolfe, Chief, Division of Commercial Laws

NEW MEXICAN INCOME-TAX DEVELOPMENTS

Guerra Everett, Division of Commercial Laws

When the Mexican income-tax law was promulgated, in the closing days of the Obregon administration, much opposition was manifested by taxpayers affected, especially owners of commercial and industrial enterprises. Several objections were urged, the most important of which were: That the regulations permitted undue inspection of private books and papers; that the law was an executive instead of a legislative measure, having been issued by the President without the sanction of the Congress; and that no provision was made to discontinue other "nuisance taxes" which should have been displaced by the new measure, especially the stamp taxes. The dissent was widespread and tended to find expression in petitions and protests issued by chambers of commerce in several cities of the Republic. The executive made a number of concessions in compliance with the protests voiced, such as reforms in the manner of making returns or declarations, but insisted firmly on the application of the law, and even threatened extreme action against taxpayers who failed to conform.

New Administration Continues Income Tax.

As the time for the inauguration of the new administration approached the Government reached an agreement with the organized opposition represented by the trade bodies, who consented to discontinue opposing the enforcement of the law until after this event, in the expectation of obtaining reconsideration of the measure from the Government of President Calles. The new administration, however, continued the policy of the old in this matter, making but a few minor reforms designed to facilitate the preparation of returns; nevertheless Consul General Alexander W. Weddell, Mexico City, was able to report on March 13 that opposition to the new tax appeared to have died out completely.

In the same report Consul General Weddell observes that Minister of Hacienda Paní is quoted as stating that slowly, as the income tax became more effective, the stamp tax would be reduced until it was abolished altogether, thus eliminating one of the three primary grievances of the taxpayers. On April 1 the stamp tax on checks and drafts was removed and other nuisance taxes are expected to be eliminated shortly. Of the two remaining complaints, there is little real doubt as to the constitutionality of the law as decreed by the executive, who has been invested by the Congress with extraordinary power in matters of finance, so that the only outstanding objection would be on the subject of invasion of the right of privacy and the inspection of the books and papers of taxpayers.

A New Law Substituted for the First Measure.

In this condition of affairs a new decree was issued by the President on March 23, to go into effect April 1, 1925. This decree, according to its terms, "abrogates the law of February 21, 1924 (the original law), the decrees reforming and amending it, and all the dispositions opposed to the execution of the present law." It differs in many respects from the law already in

force, especially in regard to the rates, which are materially increased. Under the new decree all Mexicans, wherever resident, must pay on their income from whatever source, and all foreigners, wherever resident, must pay on incomes or earnings which "proceed from sources of wealth situated or business transacted within the national territory." Partnerships and corporations of all kinds are included.

Income includes all receipts in cash, values, or credit that alter the wealth of the taxpayer and of which he may dispose without obligation of restitution. New investments of capital, unless made from earnings of the current year, are not regarded as taxable income.

The persons or firms subject to the tax are divided into seven categories, of which the first two relate to commercial and industrial enterprises, respectively. On the profits earned in these categories the exempt minimum is 2,500 pesos. From this amount to 500,000 pesos the rate is graduated from 2 per cent to 7.5 per cent.

Other Categories Affect American Investments.

Steamship companies and foreign insurance companies are classed in the first category, subject to special provisions. The third refers to farmers, and the fourth to income received from capitalistic operations, such as loans, discounts, bonding for security, dividends from bonds, and the like. The rate is 6 per cent, without deductions of any kind. The fifth relates to exploitation of concessions of subsoil rights, upon which the rate is 10 per cent. The sixth concerns income from salaries and emoluments, which are exempt up to 2,000 pesos, from which sum to 45,000 pesos the rate is graduated from 1 per cent to 4 per cent, with additional exemptions on account of dependents. In this category the exempted minimum is placed at 2,500 pesos for residents of the Federal District, cities on the American border, and certain seaports, including Vera Cruz and Tampico. The seventh category covers professionals and artists, and the rates are approximately the same as those for salaried persons.

General rules relating to returns, collections, and penal sanctions are provided in the law, but for the details of these it will be necessary to await the publication of new regulations by the Department of Finance. Although the rates are raised and other features may deserve criticism, the new law is scientific and will help to put Mexico's new income-tax policy on a surer foundation.

New Insurance by State Insurance Bank of Uruguay

The Banco del Seguros del Estado (State Insurance Bank) of Uruguay, which is a Government institution with a monopoly of the insurance business in the Republic of Uruguay, has begun to offer insurance policies at a low premium against damages arising from strikes and other public disturbances. This form of insurance, although known in the United States and Europe, is new to Uruguay. Up to this time the operations of the State Insurance Bank have been developed to include principally insurance

against fire, labor accidents, injury to and death of persons and animals, accidents to automobiles and other vehicles, damage by hailstorms, injuries to plate glass, and marine risks. (Consul O. Gaylord Marsh, Montevideo.)

Commercial Law Briefs

Italy Restricts Income Tax.

The Italian Government has just recently decided that the income tax shall be levied only on distributed profits, and shall not touch new issues of stock. (Commercial Attaché Henry C. MacClean, Rome.)

Costa Rican Land Tax Law Amendment Available.

A law of February 18, 1925, amending the Costa Rican land-tax law, with translation into English, has been transmitted to the Division of Commercial Laws by the office of the American Legation, San Jose, and may be consulted by referring to No. 164847.

Germany Reduces Interest on Delayed Tax Payments.

Interest on delayed tax payments was reduced from 18 to 12 per cent and on those suspended or postponed from 12 to 9 per cent by a decree effective on February 1, 1925, and which was promulgated by the German Minister of Finance on February 4, 1925. (Consul A. W. Kliefoth, Berlin.)

Japanese Export Combination Bills Translated.

Copies of bills introduced in the Japanese Diet legalizing combinations for export trade, translated into English, have been transmitted to the Division of Commercial Laws by Acting Commercial Attaché Frank Rhea, Tokyo, and may be consulted by referring to No. 94617.

Copy of Costa Rican Workmen's Compensation Law Available.

A copy of a Law Concerning Indemnities for Labor Accidents, or Workmen's Compensation Act, which was passed by the Costa Rican Congress of January 26, 1925, and approved by the President on January 31, has been received in the Division of Commercial Laws and will be loaned to any inquirer interested. Refer to file No. 162265—Costa Rica.

German Tax Reduction Proposed.

As a result of the renewed agitation for tax revision in Germany, which followed the record-breaking Government receipts for January, the Government proposes lowering the higher income taxes with a maximum rate of 33 per cent, abolishing some nuisance taxes, and increasing the excise duties on beer and tobacco. In addition, it makes the very important proposal of abolishing the Federal tax monopoly by allowing provincial and municipal governments to levy supplementary property and income taxes. (Commercial Attaché Charles E. Herring, Berlin.)

New Polish Law of Bills and Notes Translated.

A translation of the new Polish law of bills and notes has been received by the Division of Commercial Laws from Acting Commercial Attaché Leighton W. Rogers, Warsaw. This law was promulgated by decree on November 14, 1924, and went into effect on January 1, 1925, replacing the Austrian, French, German, and Russian provisions then existing. So many requests have been received for copies of the new Polish check law, which was announced in *COMMERCE REPORTS* March 9, that a study is being made of both

the law on bills and notes and that on checks, which will be published as soon as possible.

Publication of Articles of Incorporation in Argentina.

Commercial Attaché Edward F. Feely, Buenos Aires, reports that it has recently been adjudged that the articles of incorporation of a foreign company in Argentina must be published before they may be inserted or inscribed in the Public Register of Commerce. This decision overrules a previous one to the effect that the provision in question applied only to local companies. The case involved a Delaware corporation. The commercial attaché transmits a copy of an opinion of the Argentine State's Attorney approving this holding. The opinion is in Spanish, and is available for loan. Refer to No. 72389.

New Decree Governs Operation of Insurance Companies in Peru.

A Peruvian Presidential decree of February 21, 1925, requires that the financial statements which insurance companies are required to publish periodically must cover only Peruvian operations. Branches of foreign companies must publish profit and loss statements covering business in Peru alone and not that of the main company in all its branches. In effect this requires foreign companies to incorporate locally in order to carry on insurance business, although actually it is but a concrete statement of a policy which has been in effect for some time past. (Commercial Attaché H. Bentley McKenzie, Lima.)

See also list of "Many special circulars issued by the bureau" in this issue.

Austrian Export Industries Improved in 1924

Although the adverse trade balance of Austria for the entire year 1924 was much larger than for 1923, the figures covering last quarter of the year indicate that the adverse balance for that quarter was less by \$6,400,000 than in the corresponding quarter of 1923. The increase in imports was only 5 per cent, while the increase in exports was 20 per cent.

In spite of the prevailing large unemployment, Austrian industries have bettered their condition, according to a recent report of the Vienna Bank Verein. It is stated that in 1924 Russia bought over 80 per cent of the increased Austrian production of agricultural machines and that exports of women's clothing during the first six months of that year increased by 25 per cent in quantity and by 118 per cent in value over the corresponding period in 1923, with Great Britain and Yugoslavia the chief purchasers. The exports of hats to England were double those in 1923, and those to Germany were treble. Shoe factories increased their exports by 33 per cent, the principal purchasers being Poland, Denmark, and Yugoslavia.

Hide Production in Uruguay

The production of hides in Uruguay during March included 32,000 frigidoficos, 25,000 mataderos, and 5,000 saladeros, according to a dispatch dated April 3 from Acting Commercial Attaché Lew B. Clark, Montevideo. Stocks were normal. The price of frigidoficos was 47 pesos Argentine gold.

TRANSPORTATION

P. E. D. Nagle, Acting Chief, Transportation Division

SHIPPING

SHIPBUILDING DECLINE CONTINUES

The present total of orders for new ships throughout the world is almost down to the lowest postwar mark, reached in the third quarter of 1923, according to Lloyd's Register of Shipping. Orders now aggregate only 2,396,000 gross tons, compared with 2,470,000 tons at the close of 1924, 2,516,000 tons a year ago, and 2,377,000 tons on September 30, 1923.

The rank of the principal maritime countries in point of order at the close of the first quarter of 1924 and of 1925 follows:

Vessels building in principal maritime countries at end of first quarter

[In gross tons]

Countries	1924	1925
Great Britain and Ireland.....	1,473,629	1,165,468
Germany and Danzig.....	229,021	420,860
France.....	111,610	187,437
Italy.....	130,743	164,023
Netherlands.....	106,505	119,908
United States.....	119,767	81,728
Japan.....	72,655	41,755
British Dominions.....	27,790	28,378

Denmark, which was not given in the 1924 returns, now has 83,794 gross tons of shipping contracted for, and therefore ranks higher than the United States, Japan, or the British Dominions.

New work during the quarter just ended was about 200,000 tons less than launchings, while in the previous quarter it was only 60,000 tons less. British yards suffered most; replacements there aggregated 198,152 gross tons, or 140,000 tons less than launchings. In all other countries replacements totaled 196,818 gross tons, or only about 70,000 tons less than launchings.

Motor-Ship Building Grows.

While a year ago only 28 per cent of the world's shipping under construction consisted of motor ships, the percentage by the end of 1924 had advanced to 37, and by the close of the past quarter to 42, the highest yet reached. The growth has been greatest in the smaller shipbuilding countries, for while the proportion of motor ships in Great Britain and Ireland's total construction increased from 22 to 30 per cent in the last year, the proportion for other maritime countries advanced from 35 to 54 per cent.

Motor ships under order in shipyards of the world at the close of the first quarter of 1924 and 1925 aggregated 694,712 and 1,021,631 gross tons, respectively. Of the first aggregate, the share of Great Britain and Ireland amounted to 325,190 tons, and of the second, 359,920 tons.

Cargo Warehoused at Canal Zone "For Orders"

The Panama Railroad Co. will warehouse nonperishable and nondangerous merchandise "for orders" at its piers and warehouses at Cristobal and Balboa, Canal

Zone, beginning April 1, 1925, according to a statement in the Panama Canal Record for March 18. The company is a corporation of New York State. Its stock is owned by the United States Government, but it has the rights and liabilities of a corporation. No special statutes relating to warehousing are in effect in the Canal Zone, and virtual freedom of contract is permitted.

Warehouseman's Liabilities.

The liabilities of the warehouseman are indicated by the following "Conditions" appearing on each warehouse receipt.

1. The warehouseman is not an insurer of goods in his custody, but only a bailee. Insurance against fire or other loss is not carried by the warehouseman on goods in his custody; but if customers especially request him to do so, he will endeavor to arrange for such insurance, making a charge for the service rendered. Depositors will have access to their goods only for purposes of inspection and when accompanied by a representative of the warehouseman. Any work done on, or on behalf of, goods in warehouse will be done by the warehouseman and charged for extra.

2. Unless otherwise stated upon this receipt, goods received for deposit will be kept in warehouses built of concrete, steel, and brick, affording protection from rain, sun, and wind, and well ventilated. The warehouseman assumes no responsibility for loss or deterioration of goods due to unforeseen defects in the warehouses, or due to inadequate provision in the warehouses for protection against fire, climatic conditions or changes, or to effects of salt air. Watchmen are employed at all warehouses, but the warehouseman assumes no liability on account of pilferage.

3. Unless special conditions are agreed upon, goods taken into warehouses will be stored at the discretion of the warehouseman, and will be given ordinary storage and care. The warehouseman is relieved from responsibility for loss or damage because of (a) storage of any class of goods in proximity to other classes; (b) chemical or physical reactions due to storage of various classes of commodities in the same warehouse; (c) deterioration of commodities due to climatic or weather conditions; (d) lack of shifting, changing, or rearranging packages or containers; (e) attacks by or presence of insects, vermin, rodents, flies, beetles, or other animal life; (f) vices inherent in the goods, even if these develop in storage, whether due or not to the storage conditions; (g) action by the civil or military authorities, insurrection, riots, strikes, labor disputes, acts of God, or fortuitous events.

4. Charges will be made in accordance with the warehouseman's published tariffs, and on a month-to-month basis, with due date 30 days after receipt of goods unless that date be a Sunday or holiday, in which event the following day will be due date. An extra charge will be made for any work of any nature done at the instance of the depositor and not provided for in the published tariffs. A lien upon goods deposited is hereby given to cover charges of any nature. In case charges go unpaid for a period of three months, the warehouseman is authorized, without giving notice, to sell enough of the goods to cover accrued charges. Notwithstanding this authority, however, the warehouseman will make reasonable effort to give notice before such sale.

5. Perishable and hazardous goods are received at the depositor's risk, and may be disposed of by the warehouseman without previous notice to the depositor, whether or not charges are made.

6. Delivery of goods from warehouse will be made only upon written order from the person signing the warehouse receipt or from his agent; and negotiable receipts must be surrendered properly indorsed. A reasonable time shall be given the warehouseman to effect delivery, and a prorata charge will be made for goods ordered out before expiration of the due date, but

which are not delivered until after that date. The warehouseman, however, will use his best efforts to expedite delivery.

7. The liability of the warehouseman in any event will not exceed \$8 per cubic foot or 25 cents per pound, according as space or weight determines the rate, unless excess value is declared by the depositor, in which event the receipt will state the terms of the special contract as to liability and charges.

Tariff of Charges.

The charges for warehousing are as follows:

Beginning April 1, 1925, the Panama Railroad Co., through its receiving and forwarding agent, will receive and store cargo "for orders" on its wharves at Cristobal and Balboa under practically the same condition, rules, and regulations covering the transfer of other cargo, embodied in this tariff.

Cargo so received and stored may be delivered and reforwarded by the consignee, agent, or owner, in any quantity desired as he directs, subject to the rules of the warehouse receipt.

There will be three distinct charges for handling cargo for orders:

(a) A charge for handling the cargo from ship's side to storage place at the rate of \$1 per ton on general merchandise and one-half of the transfer rates on other commodities, as provided in paragraph 3, item 34, page 34 of Tariff No. 7.

(b) A charge for delivering or reforwarding the cargo at the same rates as for receiving and storing it; that is, \$1 per ton for general cargo and one-half of the transfer rates on other commodities.

(c) A storage charge of 3 cents per ton per day for all time the cargo remains on the wharves of the Panama Railroad Co. in excess of 35 days, no storage charges being made for the first 35 days as provided in paragraph 1 of item 35 of this tariff. The provision that a higher rate be charged per ton per day for storage after 65 days does not apply to this class of cargo.

The charge for receiving the cargo will be made against the delivery vessel; the charge for taking cargo from storage and delivering to vessel will be made against the receiving vessel. The charge for delivering cargo for orders through the local

freight house will be collected from the owner or consignee before the cargo will be delivered. The charge for storage will be made against the owner of the cargo and will be collected monthly.

The minimum charge for handling any shipment taken out of storage will be \$1.

Special rates on special commodities in large quantities may be obtained on request.

Any rehandling of merchandise for fumigation or other purposes, or labor for repairing packages, will be charged for in accordance with the rules and rates for rehandling, repairing, etc., provided in this tariff.

The prohibition amendment applies to the Canal Zone, and therefore no liquors may be stored under this heading.

No explosives or other dangerous cargo will be stored "for orders."

The receiving and forwarding agent will use his discretion as to what classes of cargo may or may not be received and stored under the heading of "Canal Zone for orders."

The Panama Railroad will not insure cargo so stored. Arrangements for insurance will have to be made by the consignor, consignee, or owner of the cargo.

Cargo "for orders" stored on the wharves of the Panama Railroad for delivery or reshipment into the Republic of Panama is subject to the customs rules and laws of the Republic of Panama and payment of duty.

Method of Shipping.

Shipments to be warehoused "for orders" should be consigned to "Cristobal for orders" or to "Balboa for orders." In case a consignee resident on the Isthmus is not named, the Panama Railroad Co. will receipt for goods delivered at its piers and will transfer such goods to its warehouses; but it will not assume any liability except as warehouseman unless especially authorized thereto.

Inquiries should be directed to the Panama Railroad Co., at 24 State Street, New York, or at Balboa Heights, Canal Zone.

RAILWAYS

Railway Unification in Australia

Vice Consul Haskell E. Coates, Melbourne, February 12

The construction of the Kyogle-South Brisbane (Queensland) Railway marks the commencement of railway unification in Australia, according to the Premier of Queensland. This section represents the first phase of the scheme recommended by the royal commission of railway experts, the Kyogle-South Brisbane line becoming a part of the grand-trunk standard railway from Queensland to western Australia.

Austria Reduces Rates on German Transit Shipments

Consul Robert W. Helngartner, Vienna, March 2

The management of the Austrian Federal Railways now grants tariff reductions on German transit shipments from Passau via the Hungarian frontier to the East in order to prevent the freighting of German goods via Czechoslovakia and the Danube route and to prevent transit through Austria from being more expensive than other routes to the East.

Cooperation between Danish Railways and Bus Lines

Commercial Attaché Harry Sorensen, Copenhagen

Since the development of automobile bus traffic in Denmark in the last ten years, the competition between bus routes and private railroads has grown keener and keener, and in many cases has resulted in destroying

the carrying business for both parties. At a conference held about March 1 between representatives of the bus routes, the private railroads, and the State railroads, it was revealed that there are at present in Denmark about 500 busses in operation, with a combined road service considerably in excess of twice the length of all Danish railroads. It is expected that the conference will result in an arrangement whereby the bus routes will serve as feeder lines to the railroads.

Exhibits Available

Persons interested in the following reports may obtain them from the Transportation Division or through the district and cooperative offices of the Bureau of Foreign and Domestic Commerce, by requesting the specific exhibit number:

221—*Vienna*. Revised Austrian railway tariffs, effective January 1, 1925. (Transmitted by Commercial Attaché H. Lawrence Groves, Vienna.)

223—*London*. Canals in the United Kingdom; detailed report, with numerous inclosures, on facilities, railway connections, toll charges, etc., of the principal canals. (Transmitted by Harold A. Burch, office of the commercial attaché, London, March 24.)

25985—*London*. Official railway statistics in Great Britain; detailed report giving railway statistics for 1921-1924. (Transmitted by Harold A. Burch, office of commercial attaché, London.)

165019—*Belgrade*. Translation of "Convention for railway tariffs between Hungary and Yugoslavia." (Transmitted by H. Percival Dodge, American Minister, Belgrade, February 21.)

166408—*Newcastle-on-Tyne*. Official handbook of the Tyne River; issued under the auspices of the Tyne Improvement

Commission, the London and North Eastern Railway Co., and the Corporations of Newcastle-on-Tyne, Gateshead, Jarrow, South Shields, and Tynemouth. (Transmitted by Consul C. R. Nasmith, Newcastle-on-Tyne, March 12.)

165034—Vienna. Reorganization of Austrian Federal railways; translation of article appearing in Neue Freie Presse, February 10. (Transmitted by W. McK. Wilson, second secretary, American Legation, Vienna.)

COMMUNICATIONS

Aviation

New Aerial Transportation Company in the Ruhr District.

An important step toward connecting the Rhenish-Westphalian industrial district with the world's air routes was taken on February 25, when the Aerial Transportation Stock Co. of the Ruhr district was established at Essen at a meeting attended by representatives of the cities of Essen, Bochum, Mulheim-Ruhr, and Oberhausen, as well as by representatives of the Ruhr industrials, the "Settlement organization of the Ruhr district," and the Junker Air Traffic Stock Co. The seat of the new company is at Essen. Its aims are to connect the Rhenish-Westphalian industrial district with German and international air lines, to transport freight and passengers, and to participate in other undertakings of a similar kind. The stock capital is 2,050,000 Reichmarks (\$492,000 at rate of April 1). The members of the company are the above-named cities, the Chamber of Commerce at Essen-Ruhr, the Settlement Organization of the Ruhr coal district, and the Junker Co. (Consul Leland B. Morris, Cologne, February 27.)

Danish Air Services Consolidated.

The Danish Government has arranged a merger of the two air transport companies of that country, the Danske Luftfartselskab A. S., and a new company recently formed with the aid of German airplane manufacturing interests. The consolidated company is to be known as the Danske Luftfartselskab, with a capital of 500,000 crowns (\$90,000 at rate of April 1). The company will receive a four years' State subvention of 250,000 crowns (\$45,000). As a result of the consolidation, it is expected that a definite program for contact with other Scandinavian and European air lines will be realized. (Commercial Attaché H. Sorensen, Copenhagen, March 17.)

Mails

Use of Persian Parcel Post Should Be Limited.

As the additional cost of inland transportation on parcel-post packages to Persia makes this service prohibitive for many articles, it should be used only under certain conditions. Postal regulations provide that parcel post for the interior must not exceed 5 kilos in weight and that it must be addressed "Post Restant" to one of the following ports: Bandarabbas, Bushire, Mohammerah, Linga, or Duzdab. On receipt of a package at the port notice is sent to the addressee, who has to pay all charges, plus the inland transportation, which ranges from about 1 cent a pound for each 20 miles up to 80 miles to about 35 cents a pound for distances over 1,000 miles. The cost of transportation is often exceeded by the cost of storage, and a package of quite worthless matter may cost the consignee a considerable amount for the privilege of opening. Some classes of mail are not so handled; books are received promptly and without expense when the proper postage has been prepaid in America. (Vice Consul George Gregg Fuller, Teheran, February 25.)

Modification of Chilean Postal Rates.

A law modifying postal rates in Chile became effective February 18. The rate throughout the country for letters has been fixed at 10 centavos for 20 grams or fractions thereof; for post cards, 5 centavos (if reply paid, 10 centavos); for circulars, 5 centavos; for books or periodicals, 5 centavos for every 50 grams or fraction thereof; for samples of no commercial value, 30 centavos for 50 grams up to 500 grams; for parcel post, 1 peso 50 centavos per kilo and fractions up to 5 kilos and 3 pesos per kilo from 5 kilos up to a limit of 10 kilos. Newspapers or periodicals mailed by publishers within the country are entitled to free postal service. In future letters are to be delivered to houses free of charge. (Commercial Attaché Ralph H. Ackerman, Santiago.)

British Display Exceptional Interest in Ply Woods

Trade Commissioner Mowatt M. Mitchell, London, March 23

With the exception of Manchester district, a better tone is reflected in the British lumber market, and stocks are moving at a good rate. Since a large part of the consumption is in house building woods, this being the contracting season for north European softwoods for delivery during the coming year, attention tends to concentrate on these rather than on American species. The Southern Railway is doing extensive reconstruction work, and their requirements for both southern pine and Douglas fir are heavy. Liverpool, the Clyde, and Northern Ireland, in spite of lethargy in the shipbuilding trades, report a good consumption of structural woods, particularly of Douglas fir and southern pine.

Douglas Fir Ply Wood Much Appreciated.

There is an extraordinary interest in ply woods, and for the week ended March 16 arrivals were valued at over \$250,000. Unfortunately only a small portion came from the United States, although the trade is most enthusiastic about the American product, particularly Douglas fir. A large importer of ply wood is recently quoted as saying "Merchants who have hitherto disregarded Douglas fir plys are now realizing the necessity for including this species among their stocks."

A later dispatch, dated April 3, from Acting Commercial Attaché H. D. Butler, London, states that there is a continued heavy demand for ply wood, and that the leading north European producing countries are oversold for some time to come. Douglas fir ply wood has been rapidly gaining in favor in Great Britain on account of its "figure" and large dimensions, and only its higher price in comparison with north European varieties has restricted its use.

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

COMMERCIAL TREATIES AND AGREEMENTS

AUSTRIA-GERMANY

Consul A. W. Kliefoth, Berlin, February 28

Commercial Agreement Ratified.

The Reichstag has ratified the supplementary commercial agreement between Austria and Germany, signed on July 12, 1924, as slightly modified by exchange of notes of December 27, 1924, according to an announcement dated February 24, 1925, and published in the Reichsgesetzblatt February 27.

[For an analysis of the agreement, see COMMERCE REPORTS for September 1, 1924, page 568. The modification of December 27 related only to privileges enjoyed by the Austrian lace-making industry. The agreement has been provisionally effective since January 1, 1925, as indicated in COMMERCE REPORTS for January 26, 1925, page 220.]

BELGIUM-FRANCE

Dispatch from Commercial Attaché Chester Lloyd Jones, Paris, April 6

Conclusion of Supplementary Commercial Accord.

A commercial accord between Belgium and France, supplementing the *modus vivendi* of October 24, 1924, was signed at Paris on April 4. It has been unofficially reported that, by this accord, France is to receive concessions on a number of articles including cut flowers, wines, furniture, certain paper products, certain tools, shoes, dressed skins, and fashion publications. In return, Belgium is to receive tariff reductions on a few articles including horses, bulbs, chemical cellulose paste, and hunting arms.

[The United States gets the benefit of Belgian concessions by virtue of a most-favored-nation agreement, but does not benefit by any French reductions. See COMMERCE REPORTS of December 15, 1924, for notice regarding the Belgian-French *modus vivendi* of 1924.]

ESTHONIA-LATVIA

Dispatch from Acting Commercial Attaché C. J. Mayer, Riga, April 4

Postponement of Customs Union.

The customs union of Latvia and Esthonia, which has been under consideration and negotiation for some time, has now been indefinitely postponed.

UNITED STATES-POLAND

Dispatch from Minister A. J. Pearson, Warsaw, April 7

Provisional Arrangement for Customs Treatment of American Products.

Pending the ratification by the Polish Diet of the commercial agreement between the United States and Poland, a special arrangement has been made for the customs treatment of American products on which there exist Polish conventional rates of duty. These products should be directed to the customs at Warsaw. From February 10, 1925, the date of the conclusion of the commercial agreement, duties are to be calculated on the basis of the conventional tariff, but the importer will be required to deposit an additional sum sufficient to cover the difference between the conventional and the general tariff, which will be returned after the ratification of the commercial agreement by the Polish Diet. The Diet is expected to resume its sessions about

April 20, and ratification will probably take place shortly after that date.

[See COMMERCE REPORTS for February 16, 1925, for notice of the conclusion of the United States-Poland agreement and also for a list of articles subject to conventional rates of duty.]

GENERAL TARIFF CHANGES

UNION OF SOUTH AFRICA

Cable from Trade Commissioner Perry J. Stevenson, Johannesburg, April 13

Tariff Revision Curtails British Preference.

Very important changes in the customs duties and tariff system of the Union of South Africa were made upon the introduction of the new budget into the South African Parliament on April 8.

The revision is based on the general principle of protection for local industries, both direct and through the duty-free admission of materials for use in domestic manufacturing processes.

The whole tariff schedule is elaborated, with a general upward revision of rates. Preference to British Empire goods is greatly curtailed and placed on a liberal reciprocity basis. Maximum and minimum rates are established for the purpose of bargaining and obtaining reciprocal concessions from other countries by treaty.

Changes in duties.—Many new duties for the protection of infant industries are established, with their operation suspended temporarily but to be made applicable by administrative action at such times as the Government thinks advisable.

The tariff schedule is expanded from 193 to 372 items, with the number of specific rates greatly increased.

The difference between the maximum and minimum ad valorem duties ranges from 3 to 5 per cent ad valorem; many are identical, however.

Changes most important to American trade are:

Agricultural implements and machinery are placed on the free list.

Motor spirit in bulk is made dutiable at the same rate as in tins, that is, increased from 2 pence to 3 pence per Imperial gallon.

The old duty of 20 per cent ad valorem general and 17 per cent ad valorem British preferential on automobiles (not including trucks) has been changed as follows: Automobiles of a f. o. b. value not exceeding 400 pounds sterling remain dutiable at the old rate of 20 per cent ad valorem; those of a value from 400 pounds sterling to 600 pounds sterling are made dutiable at 22 per cent ad valorem; those valued above 600 pounds sterling become dutiable at 25 per cent ad valorem.

The British preferential advantage on automobiles is entirely abolished.

The duties on mechanics' tools are reduced from 20 per cent ad valorem general and 17 per cent British preferential rates, to 3 per cent maximum and free minimum rates.

Changes in British preference.—The tariff preference to goods from the United Kingdom, Canada, Australia, and New Zealand, amounting to about 8 per cent ad valorem on practically all imports, has been radically altered.

Preference to the United Kingdom is now limited to 22 items under the new minimum tariff rates. This

preference partially ranges from 3 per cent to 5 per cent ad valorem and is partially specific. The most important items on which the preference is accorded are hosiery and certain cotton piece goods, the preferential amounting to 5 per cent ad valorem.

The preference to Canada is limited to 8 items, mainly specific, the most important of which are rubber tires and newsprint paper.

The preference to Australia is limited to 3 items, and that to New Zealand to 6 items.

[Full details regarding the South African tariff revision have not been received, but are being sent by mail.]

YUGOSLAVIA

American Minister H. P. Dodge, Belgrade, February 27

Minimum Tariff Rates Extended to Rumanian Goods.

The Yugoslav Council of Ministers decided on February 20, 1925, to accede to the reciprocal application of the minimum customs tariff in trade relations between Yugoslavia and Rumania.

This agreement was made possible by the enforcement on August 1, 1924, of the new Rumanian customs tariff, which provides, in case of reciprocity, for the application of minimum customs duties on goods originating in foreign countries.

IMPORT AND EXPORT RESTRICTIONS

CANADA

Canada Gazette, Ottawa, March 28

Regulations Governing Importations of Nursery Stock Amended.

An amendment of March 18, 1925, to the regulations issued under the destructive insect and pest act, regarding the fumigation and inspection of nursery stock imported into Canada, prohibits entirely the importation of conifers, such as spruce, fir, pine, hemlock, etc., from Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut; prohibits all species and varieties of currants and gooseberries (not including the fruits) from all foreign countries; and requires certificates of inspection and fumigation for specified plants, bulbs, nursery stock, forest and quarry products, and straw and hay for packing, from certain districts.

[A copy of the complete regulations is on file in the Division of Foreign Tariffs, Washington, and information regarding the conditions of admission of specified plants, bulbs, etc., will be furnished upon request to that division.]

DUTCH EAST INDIES

Assistant Trade Commissioner C. P. Goodhue, Batavia, February 19

Restriction on Importation of Coffee.

It has been announced that the importation of coffee from foreign countries into the Netherlands East Indies is prohibited except under permit from the Director of Agriculture, Industry, and Commerce. It is understood that this restriction is prescribed in order to prevent the bringing in of disease which might affect the native Java coffee bushes.

GREECE

Cablegram from American Legation, Athens, March 31

Reduction of Maximum Acidity Permitted in Flour.

An order issued on March 4, 1925, by the Greek Ministry of Hygiene contains the following regulations

for the importation of wheat flour into Greece, to become effective June 1, 1925:

Maximum sulphuric-acid content, high-grade flour, 0.12 per cent, low-grade flour, 0.15 per cent; maximum ash content, high-grade flour, 0.60 per cent, low-grade flour, 1 per cent; maximum water content, high-grade flour, 13.50 per cent, low-grade flour, 13.50 per cent; and minimum humid gluten, high-grade flour, 26 per cent, low-grade flour, 28 per cent.

The importation of all flour of bitter taste is prohibited.

[The maximum acidity for low-grade flour is now 0.25 per cent.]

MEXICO

Consul John W. Dye, Ciudad Juarez, March 11

Removal of Quarantine Restrictions on Livestock.

The quarantine restrictions against American livestock and animal products, placed in effect in October, 1924, have now been removed by the Mexican Government, according to information received from the Mexican consul general at El Paso, Tex.

[A detailed analysis of these restrictions appeared in COMMERCE REPORTS for October 20, 1924.]

SPAIN

Cable from Commercial Attaché Chas. H. Cunningham, Madrid, April 8

Removal of Import Prohibition on Wheat.

The Spanish prohibition on the importation of wheat, established June 10, 1922, was removed by a royal decree, published April 8, and effective April 25, 1925.

[Wheat from the United States under the new regulations is dutiable at 10 pesetas (gold) per 100 kilos net.]

VENEZUELA

Vice Consul Arthur R. Williams, Caracas, March 10

Importation of Used Sacks Prohibited.

The importation of used sacks or bags of burlap, hemp, unbleached cloth or similar material is prohibited in Venezuela by a decree of March 9, 1925.

TARIFF CHANGES ON SPECIFIC ARTICLES

AUSTRIA

Commercial Attaché H. Lawrence Groves, Vienna, March 15

Increased Duty on Grain Mill Products in Small Packages.

An administrative order of the Austrian Minister of Commerce has imposed an import duty of 120 gold crowns per kilo on all grain mill products imported in small packages for retail sale, instead of the regular duty of 3.75 gold crowns per kilo, provided in the general tariff, and now applying on such goods imported in bulk.

BOLIVIA

Chargé d'Affaires W. Roswell Barker, La Paz, February 12

Reduction of Duties on Crude Sulphur, Iron Pyrites, Barrels, and Barrel Shooks.

Import duties on commodities for use in Bolivia for extracting copper from ores have been reduced as follows by a decree of February 7, 1925: (Item 227) coarse sulphur from 5 bolivianos to 0.30 boliviano per 100 kilos; (item 269) iron pyrites from 20 bolivianos to 0.30 boliviano per 100 kilos; (item 1826) barrels and barrel shooks of common wood from 0.12 to 0.02 boliviano per gross kilo.

CZECHOSLOVAKIA

Cablegram from Commercial Attaché James F. Hodgson, Prague, April 8

Tariff Reductions on Imported Industrial Machinery.

A new Czechoslovak law provides substantial tariff reductions on imported industrial machinery. The full text has been mailed and information concerning the specific reductions on different kinds of machinery will be available upon application to the Division of Foreign Tariffs as soon as the text is received.

[Notice of the proposed reductions appeared in *COMMERCE REPORTS* for January 5, 1925.]

GERMANY

Assistant Trade Commissioner M. L. Goldsmith, Berlin, March 16

Increase in Tobacco Duties Proposed.

The German Government has presented to the Federal Council (Reichsrat) through the ministry of agriculture a bill proposing to increase the import duty on tobacco leaves from 30 to 80 gold marks per 100 kilos, for the protection of the domestic tobacco production.

As practically no domestic tobacco is used for the manufacture of cigarettes, the cigarette industry is very strenuously objecting to this bill, and it is quite possible that the proposal will be so changed as to affect only smoking tobacco. If the bill is passed by the Reichsrat, it will be submitted to the Reichstag for final decision. It is reported that the increase is not at all unlikely to take place.

[The import duty on tobacco leaves into Germany was reduced from 130 to 60 gold marks per 100 kilos in February, 1922, and again to 30 gold marks per 100 kilos in May, 1923.]

PERSIA

W. Smith Murray, secretary to legation, February 8

Duty-Free Importation of Certain Machinery and Motor Vehicles.

The proposal to exempt agricultural and industrial machinery and parts thereof, with certain exceptions, from import duties for 10 years, and motor trucks and motor busses for 5 years, was approved by the Persian Parliament on January 27, 1925.

[See *COMMERCE REPORTS* for March 2, 1925, for earlier notification of the proposal and the types of machinery not exempted.]

SWEDEN

Consul General Claud I. Dawson, Stockholm, March 13

Increased Import Duty on Bottles for Thermos Flasks.

"Loose bottles for so-called thermos flasks" have been embodied in item 696 of the Swedish tariff, dutiable at 0.60 crown per kilo, by a recent act of the Riksdag, effective on a date to be determined by the King. (Complete thermos flasks were formerly dutiable at 0.60 crown per kilo, while loose bottles were dutiable at only 0.06 crown per kilo, and metal casings at from 0.20 to 0.50 crown per kilo.)

Artificial Tanning Material Duty Free.

"Artificial tanning materials, not specially mentioned, wholly or partly organic," have been embodied in item 1242 of the Swedish tariff, and will therefore be free of duty, by an act of March 8, 1925, effective on a date to be determined by the King.

[Artificial tanning materials were formerly dutiable at 15 per cent ad valorem as "chemical products not specially provided for."]

CUSTOMS REGULATIONS

CANADA

Customs Memorandum No. 50, Ottawa, March 24

Conditions of Duty Reduction on Engines for Fishing Boats.

A special certificate in the following form is required on the face of the customs entry, in order to secure the admission into Canada of engines for fishing boats at the rates provided for in tariff No. 458e (15 per cent ad valorem, general, to United States products; 12½ per cent under the intermediate tariff, and 10 per cent under the preferential tariff):

The engine covered by this entry is imported for _____, of _____, a fisherman, and will be used exclusively in the propulsion of a fishing boat owned and used for his personal use in the fisheries.

Engines imported under the above conditions are also exempted from the sales tax of 5 per cent. This also includes gasoline engines.

[Without the above certificate, duty on such engines will be imposed at the rates of 27½ per cent, general; 25 per cent, intermediate, and 15 per cent, preferential (item 453), subject to refund of excess duty when the engine is used as indicated in the certificate, upon the production of a certificate by the fisherman with the refund claim.]

CZECHOSLOVAKIA

Consul C. S. Winans, Prague, February 28

Regulations for Importation of Grapevines.

The Czechoslovak Ministries of Agriculture and Finance have issued regulations requiring a special license, in addition to the regular import license, to be obtained from the Minister of Agriculture, for the importation of grapevines into Czechoslovakia. Applications for these special licenses will be considered only when they have been submitted through the office of the State vine inspector.

Czechoslovak minister, Washington, March 21

Requirement for Sanitary Certificate on Imports of Potatoes.

The Czechoslovak Government has issued a regulation prescribing that all imports of potatoes into Czechoslovakia shall be accompanied by a phytopathological certificate in an official form. These certificates must be in the language of the country from which the potatoes are imported and in the Czechoslovak language, and must be attested by a Government or other public experiment station to the effect that potato cancer (*Chrysophlyctis endobiotica*, *Synchytrium endobioticum*) has not occurred in the soil in which the potatoes were grown, nor within a radius of 6.2 miles from their place of origin.

[Copies of these certificates, both in the Czechoslovak language and in English, are on file in the Division of Foreign Tariffs and may be obtained upon request.]

DENMARK

American Minister C. Brun, Copenhagen, March 25

Extension of Time for Reexportation of Commercial Travelers' Samples.

The term within which commercial travelers' samples must be reexported in order that custom duties may be refunded has been extended from four to six months.

SPAIN

Commercial Attaché Charles H. Cunningham, Madrid, March 10

Declaration for Automobile with Extra Tire.

When one or more extra tires are imported with an automobile into Spain, the shipment should be declared on the certificate of origin as "an automobile with five (or more) wheels with tires," or "an automobile with five (or more) tires," as the case may be, according to a ruling recently enforced by the Spanish customs authorities.

[Failure on the part of American exporters to observe this regulation has resulted in the levying of a fine, and first column rate on the extra tire.]

INTERNAL REGULATIONS AFFECTING TRADE**ARGENTINA**

Commercial Attaché Edward F. Feely, Buenos Aires, February 6

Weights and Measures Laws Modified.

The two basic weights and measures laws of Argentina were modified and brought up to date by a decree of January 30, 1925.

[Information concerning the application of the revised laws to specific situations may be obtained upon application to the Division of Foreign Tariffs.]

AUSTRIA

American Legation, Vienna, March 2

Sales Tax on Goods Temporarily Imported.

An ordinance of December 28, 1924, which came into operation in Austria on January 1, 1925, provides that goods which are imported temporarily for further refining or manufacture and exportation (except embroideries of this class) shall be subject to the sales tax applying on such goods, and that this tax must be paid in full at the time of importation. In special cases this tax may be refunded when exported after refining or further manufacturing. Goods brought in for the purpose of laundering, cleaning, or mending are exempt from the application of this tax.

BRITISH INDIA

Cable from Trade Commissioner C. B. Spofford, Jr., Bombay, April 3

Cotton Excise Duties to be Retained.

Although the Legislative Assembly, as announced in **COMMERCE REPORTS** for October 6, 1924, voted for the abolition of the excise duty of 3½ per cent ad valorem on cotton goods woven in Indian mills, the Government of India has announced that this duty will be continued.

EGYPT

Trade Commissioner Richard A. May, Alexandria, February 24

Excise Duty on Cotton Piece Goods Abolished.

The decree of April 13, 1901, under which an excise duty of 4 per cent ad valorem was imposed on cotton piece goods manufactured in Egypt, has been abrogated, effective February 19, 1925.

ICELAND

Commercial Attaché Harry Sorensen, Copenhagen, March 17

Proposal to Abolish Tobacco Monopoly.

A bill recently presented in the Icelandic Parliament proposes the abolition of the Government tobacco monopoly, which has been in effect since January 1, 1922, and the substitution of the following increased import

duties: Raw tobacco, 4 crowns per kilo; prepared snuff, chewing, and smoking tobacco, 4.80 crowns per kilo; cigarettes and cigars, 12.80 crowns per kilo.

MEXICO

Cablegram from Commercial Attaché A. V. Dye, Mexico

New Tax on Gasoline.

A tax of 3 centavos per liter is levied on gasoline for domestic consumption by a Mexican decree, effective April 1, 1925. The revenue from this tax is to be used for building roads.

PERU

Dispatch from Commercial Attaché H. Bentley MacKenzie, Lima, March 30

Sales Tax Established on Cigarettes.

A sales tax of one-half centavo apiece on cigarettes has been imposed in Peru by a law recently promulgated. The proceeds of the tax are to be used for a road-building fund.

POLAND**Regulations Governing Weights and Measures.**

A translation of the regulations governing the importation and sale of scales and the use of weights and measures in Poland has been received from Consul General T. Jaeckel at Warsaw. A copy of this translation is available for lending and will be sent to interested American firms by the Division of Foreign Tariffs in the order in which requests are received.

TURKEY

Dispatch from Trade Commissioner Julian Gillespie, Constantinople, March 31

Consumption Taxes Placed on Cotton and Woolen Goods.

Retroactively effective March 1, 1925, a consumption tax in an amount equivalent to the import duty has been imposed by the Turkish Government on all cotton and woolen goods classified under tariff numbers 270 and 323 of the Turkish customs tariff. The consumption tax, which is in addition to the import duty, affects all bleached and unbleached cotton cloth, hand towels, napkins, bed covers, bath towels and the like, tinted or printed cotton cloth, woolen cloth or woolen cloth mixed with textiles except silk, milled or unmilled, for clothing, furniture, or other uses.

FOREIGN MAILS AND PARCEL POST**CANADA****Customs Stamps for Prepaying Duty on Advertising Matter on Sale in the United States.**

Arrangements have been made through the cooperation of the Canadian Department of Customs and Excise, Mr. Lynn W. Meekins, Trade Commissioner of the Bureau of Foreign and Domestic Commerce, at Ottawa, the bureau's Washington office, and branch offices in the United States, whereby supplies of stamps for the prepayment of import duty on advertising matter, price lists, and catalogues forwarded by mail to Canada will be maintained at the following organizations in the United States: Chamber of Commerce, foreign trade secretary, 80 Federal Street, Boston, Mass.; American Manufacturers' Export Association, secretary, 160 Broadway, New York City; Chamber of Commerce, director of foreign trade, San Francisco, Calif.; and Chamber of Commerce, foreign trade secretary, Cleveland, Ohio.

This arrangement will offer a convenient service to American exporters, who will thus be relieved of the necessity of applying to the Department of Customs and Excise at Ottawa for such stamps. When duty on advertising matter is prepaid in this manner there will be a saving of the 5 per cent sales tax, based on the duty-paid value, which would otherwise apply.

Duty stamps can be obtained in denominations of 1, 2, 5, and 10 cents each upon application to any of the above organizations, as well as to the Commissioner of Customs and Excise at Ottawa, and it is suggested that American exporters interested in this class of material take advantage of the service. The regulations require that stamps covering the amount payable be affixed to the reverse side of each package, the duties ranging from 1 cent on the weight up to and including 1 ounce,

to 15 cents on the weight over 15 ounces, and not exceeding 16 ounces, as follows:

	Duty, cents
Up to and including 1 ounce.....	1
Over 1 ounce and not exceeding 2¼ ounces.....	2
Over 2¼ ounces and not exceeding 3¼ ounces.....	3
Over 3¼ ounces and not exceeding 4¼ ounces.....	4
Over 4¼ ounces and not exceeding 5¼ ounces.....	5
Over 5¼ ounces and not exceeding 6½ ounces.....	6
Over 6½ ounces and not exceeding 7½ ounces.....	7
Over 7½ ounces and not exceeding 8½ ounces.....	8
Over 8½ ounces and not exceeding 9½ ounces.....	9
Over 9½ ounces and not exceeding 10½ ounces.....	10
Over 10½ ounces and not exceeding 11½ ounces.....	11
Over 11½ ounces and not exceeding 12½ ounces.....	12
Over 12½ ounces and not exceeding 14 ounces.....	13
Over 14 ounces and not exceeding 15 ounces.....	14
Over 15 ounces and not exceeding 16 ounces.....	15

EUROPE

Samuel H. Cross, Chief, European Division

GEOGRAPHIC DISTRIBUTION OF RUSSIA'S FOREIGN TRADE

Foreign Trade, Moscow, January 17 and February 14

For the first time since the Soviet Government began the publication of statistics of the foreign trade of the Union of Socialist Soviet Republics, as Russia is now called, there are made available figures showing the geographic distribution of all imports into and exports from Russia, across both European and Asiatic frontiers, for the fiscal year ended September 30, 1924.

The following table lists the 35 named countries and their respective value totals.

Geographic distribution of the foreign trade of the Union of Socialist Soviet Republics, for the fiscal year ended September 30, 1924

[In gold rubles, at 1913 prices; the ruble equals \$0.5146]

Country of destination or origin	Russian exports	Russian imports
Austria.....	883,000	2,532,000
Australia.....		1,826,000
England.....	80,725,000	53,903,000
Afghanistan.....	69,000	1,314,000
Belgium.....	9,484,000	281,000
Argentina.....		1,819,000
Bulgaria.....	472,000	27,000
Germany.....	66,440,000	51,307,000
Holland.....	21,563,000	2,667,000
Greece.....	535,000	1,000
Denmark.....	10,680,000	202,000
Egypt.....	2,045,000	408,000
Canada.....		120,000
Spain.....	267,000	150,000
Italy.....	15,263,000	1,057,000
China.....	5,195,000	11,127,000
Latvia.....	37,312,000	1,727,000
Mongolia.....	1,506,000	1,970,000
Norway.....	2,306,000	4,052,000
India.....		533,000
Persia.....	7,685,000	22,367,000

Portugal.....	1,000	
Rumania.....	1,973,000	
United States.....	7,183,000	46,172,000
Turkey.....	24,176,000	903,000
Yurankhai.....	192,000	142,000
Finland.....	9,417,000	7,851,000
France.....	14,610,000	2,105,000
Czechoslovakia.....	189,000	2,586,000
Sweden.....	2,484,000	10,267,000
Estonia.....	14,791,000	5,266,000
Japan.....	13,731,000	1,900,000
Brazil.....		71,000
Ceylon.....		67,000
All others.....	15,846,000	414,000
Total.....	369,942,000	240,685,000

With regard to imports, Great Britain stands at the head, followed by Germany and the United States. These three countries together account for 63.8 per cent of Russia's total imports. Persia, China, and Sweden form the next group, supplying 18.2 per cent of the total, and all other countries account for the remaining 18 per cent.

In respect of exports, Great Britain and Germany again lead, with 40.2 per cent of total. These two, with Latvia and Holland as transit destinations, and Turkey account for 62.6 per cent of total exports.

The increase of Russian trade with the Near and Far East—a development of the past year—is of interest, and although complete statistics of commodity distribution by countries are not available it is possible to ascertain the chief kinds of goods entering into this trade.

Imports from Persia are particularly large, and consist mainly of cotton, wool, and dried fruits. Wool is also the chief item received from Afghanistan and China, with some wheat flour from the latter country. Imports through Vladivostok were chiefly hemp and flax goods, wheat flour, and animal fats.

Exports were practically confined to raw and semi-manufactured products of agriculture and mining. China purchased lumber, coal, and kerosene, and Mongolia wheat flour. Persia took considerable quantities of sugar and kerosene. Exports through Vladivostok consisted of oats, beans, oil cake, fish, lumber, flaxseed, and zinc ore.

Germany as a Factor in Swiss Trade Recovery

Consul James R. Wilkinson, Zurich

The prosperity of Swiss foreign trade depends primarily on the ability of exporters to maintain the value of goods sold to England, Germany, France, and the United States. In view of the general depression, Swiss exports to these countries since the war have been considered satisfactory. The trade with France also has been regarded as good under the circumstances. Hopes have been entertained for an increase in the value of exports to the United States, where extensive markets and (from the European point of

view) great prosperity exist. Although this advance has not occurred, exports to the United States nevertheless have maintained a fairly large volume. The postwar trade with Germany through 1923 was extremely disappointing. Although the value of exports to Germany has not gone below \$23,000,000 in any postwar year, a considerably greater amount is necessary for the maintenance of Swiss economic well-being.

British and American Markets Uncertain.

The chief Swiss exports to the United States consist of watches and cheese, of which production in the United States is increasing. Moreover, Great Britain is giving attention to the problem of encouraging the local manufacture of goods now imported from such countries as Switzerland, notably artificial silk. If the recent discussion as to its manufacture in England should result in the establishment of extensive factories in that country, not only would the British market for Swiss textiles be impaired but Switzerland would have to meet British competition in other markets.

As the markets for Swiss goods in England and the United States show little tendency to expand, it is now essential to the welfare of Swiss foreign commerce, therefore, that Germany become an important market for its wares.

Importance of Swiss Trade with Germany.

Outside of the fact that about 70 per cent of the Swiss population speaks German or a German dialect, Switzerland possesses a number of other advantages for trade with Germany. For example, not only do Switzerland and Germany have a considerable length of common boundary, as well as excellent railway facilities between important points in the two countries, but the habits and needs of their neighboring sections are very similar. Each year thousands of Germans come to Switzerland for pleasure and business; for

instance, during the winter season of 1923-24 more than 29 per cent of all visitors to Swiss winter resorts were of German nationality, even exceeding the Swiss visitors, and increasing over the previous seasons.

Favorable Trend of Trade in 1924.

The increase in Swiss exports to Germany in 1924 over 1923 was approximately \$47,000,000, while the total advance in Swiss export trade was only \$59,000,000. The improvement in Switzerland's foreign commerce in 1924 was thus largely accounted for by its increased exports to Germany. Exports to the United States showed an advance of less than \$3,000,000, and exports to all other countries an increase of only \$10,000,000.

Character of German Purchases.

In 1923, when the value of Swiss goods shipped to Germany sank to \$23,000,000, the textile exports comprised \$14,500,000 of this amount, and other individual classes were only of negligible value. In 1924, however, there were material increases in the value of all classes of goods. Exports of textiles were valued at \$33,500,000, foodstuffs of the luxury class at \$11,500,000, and watches at \$3,500,000. A careful examination of the trade shows a rapid recovery in German buying power.

Additional information regarding Europe appears in this issue under the following sections:

Transportation—Shipping:

Shipbuilding decline continues.

Elbe navigation in 1924.

Tariffs and trade regulations:

Austria-Germany ratify additional commercial agreement.

Belgium-France conclude supplementary commercial accord.

Estonia-Latvia—Postponement of customs union.

United States-Poland—Temporary provisional arrangement for customs treatment of American products.

FAR EAST

H. A. Butts, Acting Chief, Far Eastern Division

TRADING POSITION OF HAWAII AND ALASKA

Emmett A. Chapman, Far Eastern Division

Development in Hawaii and Alaska has been remarkable during the last decade in view of disturbed conditions throughout the world. Most frontier areas have suffered keenly from lack of capital supply, the revamping of trade channels, and the loss of markets for their primary products—resulting in unfavorable trade balances and the necessity for oversea borrowings. America's Pacific territories, on the other hand, have escaped most of these difficulties. They have been able to maintain favorable balances of comfortable proportions, and their trade, largely with continental United States, has, with the exception of a few lines, prospered.

Diversification in Industry Needed.

Both areas experienced temporary reverses following the war, but recovery in each case was quickly accomplished. The one weak spot in the economic structure of each Territory is the lack of diversification in

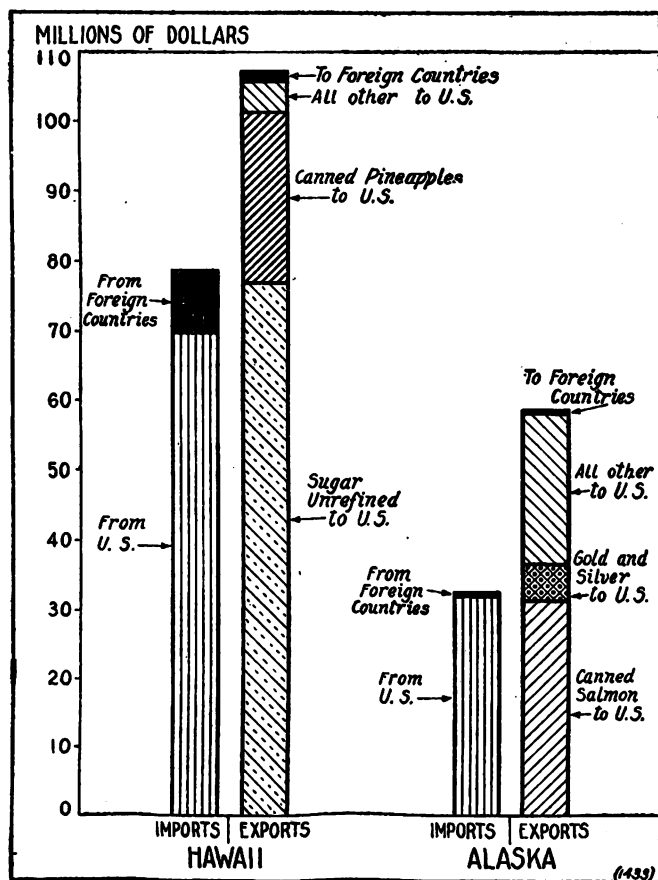

industry. Hawaii's well-being depends very largely upon the success of its two principal commodities, sugar and pineapples, while Alaska is almost wholly dependent upon the demand for its fish products, copper, furs, and precious metals. Realizing this weakness, both are making great efforts to spread their interests and to attract industries which will work hand in hand with agriculturalists and develop natural resources. Both countries are attracting more tourists each year, and a movement is already under way in Hawaii for the building of hotels to accommodate the increasing tourist trade.

Trade with Continental United States Increased.

Trade between Hawaii and continental United States has increased steadily during the past three years. Receipts from the continent have advanced in value from \$53,586,000 in 1922 to \$69,800,000 in 1924, while Hawaiian produce shipped to the United States has

increased from \$71,100,000 to \$105,900,000 over same period. Practically every item in the list of commodities sent to the United States, as well as all principal commodities received from the continent, registered increases in value as well as in volume. Coffee, bananas, raw sugar, raw and canned pineapples, hides and skins, honey, and molasses were sent to the continent in exchange for foodstuffs, textiles, wood and paper, metals and manufactures, automobiles, trucks, and chemicals.

Alaska's imports from the United States increased from \$26,778,000 in 1922 to \$32,050,000 for 1924, while outgoing shipments, exclusive of gold and silver, advanced from \$48,597,000 to \$53,208,000 during the same period. Shipments of silver and gold, however, declined from \$6,569,000 in 1923 to \$5,138,600 for 1924, offsetting much of the increase in other items, and leaving the export trade unchanged during this period. About three-fifths of Alaska's exports consist of canned salmon, but large quantities both of fresh and preserved fish, shellfish, furs, copper and treasure are shipped to the United States in exchange for foodstuffs, textiles, wood and paper, nonmetallic minerals, metals and manufactures of metals, machinery, vehicles—including automobiles and trucks, and chemicals.

Trade of Hawaii and Alaska during 1924 with Continental United States and foreign countries

Foreign Trade Figures Practically the Same—Outlook Good.

The foreign trade of Hawaii and Alaska (goods shipped to and received from countries other than continental United States and its possessions) has changed very little during the past two years. Hawaii's exports

to foreign countries during 1924 amounted in value to \$1,581,164 and imports reached \$8,884,223, while Alaska's imports and exports aggregated \$529,618 and \$1,351,380, respectively. The trade outlook for both areas is very good, especially in the case of Hawaii, and it is quite likely that the upward trend will continue during the present year.

Hongkong's Foreign Trade During 1924

Based on report from Consul A. E. Carleton, Hongkong

Hongkong's 1924 foreign trade, amounting to £136,900,000, was £13,573,371 in excess of the 1923 total. This increase is all the more remarkable since it was accomplished in the face of such adverse factors as a strike by the Chinese employees on the Shameen (Canton); trouble between the government and volunteers in Canton, and the generally disturbed political conditions throughout China.

The imports in 1924 amounted to £71,600,000 while the exports totaled £65,300,000. In a normal year the imports and exports vary little but, due to the inability of the Chinese in the interior to take clearances—necessitating carrying heavily in Hongkong godowns—the imports were more than £6,000,000 larger than the exports.

Summary of Imports and Exports by Countries Compiled.

The following table shows the principal countries entering into the foreign trade of Hongkong during 1923 and 1924, and the amount of trade with each country, including treasure:

Foreign trade of Hongkong

Countries	1923	1924	Countries	1923	1924
IMPORTS			EXPORTS		
United Kingdom	£6,974,513	£9,451,151	United Kingdom	£797,778	£745,200
Australia	677,276	1,042,297	Australia	353,588	428,463
Canada	452,054	733,939	Canada	365,141	410,971
India	2,221,834	1,998,663	India	1,200,062	837,992
Burma	764,388	1,051,308	Burma	304,683	331,696
Straits Settlements	1,791,988	1,728,965	Straits Settlements	4,364,500	3,846,981
North China	9,612,632	10,584,404	North China	11,812,563	11,545,121
Japan, Korea, and Formosa	6,674,896	9,127,732	Middle China	4,752,631	5,059,213
Netherlands	7,757,494	9,460,131	South China	28,249,232	26,893,246
French Indo-China	9,585,262	11,008,677	Japan, Korea, and Formosa	3,592,627	3,623,793
Siam	7,725,661	6,264,606	Netherlands	1,183,738	1,071,788
Philippine Islands	580,444	827,813	French Indo-China	4,630,388	5,603,483
United States	6,663,430	7,063,206	Siam	2,891,503	3,193,991
France	213,430	319,739	Philippine Islands	1,841,064	2,150,923
Germany	1,131,666	1,835,884	United States	2,775,283	3,068,518
Belgium	508,756	696,822	France	69,420	79,008
Italy	167,692	259,021	Germany	113,339	132,756

1923 and 1924 Returns Compared.

Comparing the Hongkong official returns for 1923 and 1924, important increases are recorded for imports from the United Kingdom, Australia, Canada, Burma, China, Japan, Netherlands East Indies, French Indo-China, the United States, France, Germany, the Netherlands, Cuba, and the Philippine Islands, while receipts from India, the Straits Settlements, British East Africa, and Siam showed decreases. Substantial increases are revealed for exports from Hongkong to Australia, Canada, Burma, Ceylon, China, French Indo-China, Siam, Philippine Islands, the United States, Central America, South America, France, Ger-

many, and the Netherlands. Considerable export decreases were evident for shipments to the United Kingdom, India, Straits Settlements, Japan, and Netherlands East Indies.

In 1923 the United States was represented by 10 per cent of the total import trade; the United Kingdom, 11 per cent; British dominions and possessions, 10 per cent; China, 15 per cent; Japan, Korea, and Formosa, 10 per cent; and all other countries, 44 per cent. During 1924 the United States contributed 9 per cent; the United Kingdom, 13 per cent; British dominions and possessions, 9 per cent; China, 14 per cent; Japan, Korea, and Formosa, 12 per cent; and all other countries, 43 per cent. The 1923 export trade of Hongkong was distributed as follows: The United States, 4 per cent; the United Kingdom, 2 per cent; British dominions and possessions, 10 per cent; China, 63 per cent; Japan, Korea, and Formosa, 5 per cent; and all other, 16 per cent. In 1924 the United States participated in 4 per cent of the export trade of Hongkong; the United Kingdom, 2 per cent; British dominions and possessions, 9 per cent; China, 61 per cent; Japan, Korea, and Formosa, 5 per cent; and all other countries, 19 per cent.

Declared Exports to the United States.

The declared exports to the United States during 1924 were valued at \$14,444,199, as against \$13,664,233 in 1923. In the following table this trade is shown by principal commodities:

Declared exports from Hongkong to the United States

Articles	1923	1924	Articles	1923	1924
Bristles.....	\$107,617	\$149,837	Sea-grass furniture.	\$247,638	\$222,099

Rice, clean.....	900,130	1,016,657			

Nine-Month Survey of China's Import Trade

Notwithstanding the dull commercial conditions which prevailed in China during the first nine months of 1924, there was considerable activity in the import trade. Stocks of many staple lines were especially low. Imports of American kerosene oil were heavy and new construction work in some of the principal ports required increased amounts of iron and steel and lumber. Imports of rice decreased, but those of flour more than doubled.

A careful preliminary survey of the nine months' trade, as compared with the corresponding period in 1923, has been made by the Far Eastern Division and published as Special Circular No. 292. Copies of the circular may be had upon application to the Bureau of Foreign and Domestic Commerce, Washington, or any district or cooperative office.

LATIN AMERICA

Richard F. O'Toole, Chief, Latin American Division

A COMPARISON OF BRITISH AND AMERICAN TRADE WITH BRAZIL

Richard C. Long, Latin American Division

Prior to 1914 Great Britain was the chief exporter to Brazil, but British purchases of Brazilian products were considerably lower in value. The United States took the greater part of the Brazilian coffee and was the leading consumer of Brazilian exports, but American exports to Brazil fell short of imports from that country. Germany's exports to and imports from Brazil nearly balanced.

The war eliminated Germany as a factor in the Brazilian trade. Great Britain was forced to curtail exports in many lines, while Brazilian industries, which had been growing in importance, received a great impetus. At the same time, the United States was placed in the position of being the chief supplier to Brazil and much of the import trade which hitherto had been carried on with Great Britain and Germany was transferred to the United States.

Comparative Figures of Trade.

The following statistics show the trade of Brazil with the United States and Great Britain from 1913 to 1924, inclusive, as well as the percentage of the total Brazilian trade maintained by each of the countries. (These are Brazilian statistics except for 1924, which are United States and British figures, respectively.)

Brazilian trade with United States and Great Britain

Year	United States				Great Britain			
	Exports to	Per cent of total	Imports from	Per cent of total	Exports to	Per cent of total	Imports from	Per cent of total
1913.....	\$102,436,302	32.6	\$51,226,362	15.7	\$41,650,331	18.3	\$79,782,369	24.5
1914.....	92,059,944	41.5	30,075,029	18.2	31,853,200	14.3	39,693,493	23.9
1915.....	106,965,884	41.8	46,968,238	32.2	30,908,703	12.1	31,886,695	21.9

* Figures showing total trade for Brazil for 1924 are not available.

United States Chief Brazilian Customer.

The chief purchaser of Brazilian merchandise is the United States, whose share of Brazilian exports in 1913 was 33 per cent of the total and in 1923 it was 43

per cent, or \$102,436,302 in 1913, \$138,764,502 in 1923, and \$179,234,668 in 1924. Only twice during the period from 1913 to 1924 have the purchases of the United States fallen below the \$100,000,000 figure, and in these two years, 1914 and 1921, the amounts were \$92,000,000 and \$80,000,000, respectively.

The chief export of Brazil to the United States is coffee, which in 1924 amounted to \$157,998,788, or 88 per cent of the total Brazilian exports to the United States. In 1923 such exports were valued at \$116,086,041 as against only \$76,016,463 in the fiscal year ended June 30, 1914. The other products of importance in the export trade of Brazil with the United States are rubber, cacao, manganese, and hides and skins.

The average percentage of the United States share of Brazilian exports during the 11-year period from 1913 to 1923, inclusive, was 44.3 and the United States purchases from Brazil, not only of coffee but of products, such as Brazil nuts, Babassu nuts, Carnauba wax, and other forest products of use to industries of our country, have shown a tendency to increase throughout that entire period.

Great Britain Purchases Less than the United States from Brazil.

Compared with the United States, Great Britain has been a very poor customer of Brazil, and its purchases of Brazilian merchandise have shown a tendency to decrease, rather than increase, despite the fact that Brazil has continued as one of England's best customers. Brazil's exports to Great Britain were valued at \$41,650,331 in 1913, or 13.3 per cent of its total exports during that year, and in 1923 they had decreased to \$23,339,100, or about 6 per cent. The average percentage of England's purchases of Brazilian goods during the period from 1913 to 1923 amounted to 10 per cent of the total. The chief products purchased by England are cotton, sugar, coffee, meats, cacao, and Brazil nuts. The prospects of an improvement in sales of Brazilian merchandise to Great Britain are small, the greatest possibility being in raw cotton, cottonseed oil, etc., which have been increasing during the past few years, and with English capital entering the cotton industry in Brazil, sales of this product will no doubt grow larger.

Great Britain Competes with America in Shipments to Brazil.

Despite the overwhelming share of Brazil's exports taken by the United States, its purchases from the United States have never exceeded those from European countries, especially Great Britain, except for a period following the World War. The United States took Great Britain's place as the chief supplier of Brazil in 1915 and held that lead until 1922, when Great Britain returned to its former position. The latter country led the United States in the Brazilian market by \$7,000,000 in 1922 and \$10,000,000 in 1923, but in 1924 the United States again forged to the front. Sales of the United States to Brazil in 1924 were greater by \$14,300,000 than in the previous year, reaching a total of \$65,930,944, while Great Britain only improved its sales by \$1,500,000, to the total of \$62,652,987. The average percentage of the share held by American goods of total Brazilian imports during the period from 1913 to 1923 was 32.7, while that of Great Britain amounted to 21.5.

The Growth of America's Trade with Brazil.

Prior to the World War, Brazil's import trade with the United States was confined largely to export houses

in New York, which sold such American staples as flour, kerosene, gasoline, lubricating oils, ammunition, and automatic machinery. London and Hamburg commission merchants in Brazil accepted orders for American locomotives, cars, iron and steel products, sugar mill, and other American equipment when their customers actually demanded the American product. All of these sales were invoiced and paid for by sterling drafts on London. The American importers of coffee and other Brazilian products paid for their purchases in sterling; the dollar was practically unknown in Brazil.

This was more or less the situation in 1914 when the European war broke out, and Brazil was unable to obtain goods formerly supplied by European manufacturers. Naturally, Brazil turned to the United States and American manufacturers received orders from Brazil for large quantities of goods. Following the entry of the United States into the war the volume of trade was somewhat checked. With the armistice, the flow of unfilled orders was resumed which flooded the Brazilian market. Brazilian exchange had depreciated, the customhouses and ports became congested, and Brazilian merchants faced bankruptcy, if they attempted to meet the drafts covering these shipments, and cancellations came in from all sides.

Rehabilitation of European Trade but Temporary.

However, prices continued to increase in the United States, and home demands again absorbed the surplus. Representatives of European firms made attractive quotations and promised a quick resumption of their excellent pre-war service. It was during this postwar period that many American firms and export houses withdrew from the Brazilian market.

The British, French, Belgian, Italian, and later the Central European exporters, seemed to come back strongly, and were greatly aided by the fall in all European exchanges. Quotations from Europe worked out much cheaper in milreis and deliveries were fairly prompt so long as the goods could be made up or manufactured from raw or semiprocessed raw stock acquired for war purposes. But when these gave out and the raw materials had to be purchased with depreciated European currencies, the quotations became less attractive, deliveries were not so prompt as promised or expected. The uniform quality and the superior service Brazilian importers thought they would receive again from their former European suppliers did not materialize.

American Products Well Established in Brazil.

Despite the handicaps imposed by the dissatisfaction left over from the uncertain service of the war period and the constantly increasing cost of the dollar in milreis, Brazilian importers, merchants, and consumers are coming to appreciate the distinctive American style, finish, and quality of many articles peculiar to the United States, which were unknown in Brazil before the war, and on competitive articles in most instances are showing a willingness to pay more for the American product.

Belgium, Great Britain, France, and Germany have all profited at times during recent years from their depreciated currencies, but certain American products have become well established in Brazilian markets, and will hardly be replaced by European manufactures. Among the favored items are automobiles, automobile

accessories, typewriters, sewing machines, tractors, tools, stationery and office supplies, and rubber goods.

The demand for American automatic machinery, phonographs, tires, hardware, shoemaking machinery, adding and calculating machines, guns, rifles, ammunition, clocks, beds, safes, agricultural machinery, and pharmaceutical products, long accepted as standard in the Brazilian market, is increasing, and that demand will continue to grow with the increasing number of potential consumers who are enabled to become actual purchasers through better wages and more equitable distribution of the profits of industry and the agricultural development of Brazil.

United States Exports to Brazil.

The following table shows the principal classes of United States exports to Brazil in the years 1923 and 1924, according to United States statistics:

Principal United States exports to Brazil, 1923 and 1924

Articles	1923		1924	
	Quantity	Value	Quantity	Value
Total.....		\$45,583,620		\$65,930,944
Flour.....barrels..	464,139	2,683,019	634,023	3,893,204
Naval stores.....		1,339,457		1,141,448
Coal.....tons..	310,724	1,867,587	759,138	3,629,353
Gasoline.....gallons..	15,360,086	3,665,967	30,443,335	5,915,651
Kerosene.....do..	22,026,619	3,535,120	26,420,264	4,142,052
Lubricating oils.....do..	6,824,778	1,866,615	7,065,389	1,984,381
Barbed wire.....pounds..	26,220,950	1,013,479	66,516,996	2,212,068
Typewriters.....number..	5,593	363,151	9,190	591,349

Trucks and busses.....do..	27	7,021	1,773	491,104
Auto parts and accessories.....pounds..	20,024,361	2,807,561	33,213,706	5,719,834

The leading products exported from the United States to Brazil in 1924 were automobiles and accessories, these, together with trucks and busses, totaling \$10,310,423 in 1924, as compared with \$4,711,998 in 1923. The figure for exports of auto parts and accessories is largely made up of unit assemblies which are shipped to Brazil and there set up, and are consequently shown in Brazilian statistics as imported automobiles.

Gasoline exports in 1924 were greater by \$2,500,000, while other petroleum products show sharp increases over the preceding year.

An increase of over \$1,500,000 occurred in sales of coal to Brazil in 1924, while British exports of that product to Brazil dropped from \$11,856,756 to \$4,391,331.

Exports of flour in 1924 were greater by \$1,210,185—a significant increase in view of the fact that on January 1, 1923, the preferential formerly granted to the American product was withdrawn.

British Exports to Brazil.

The channels by which British exports enter Brazil may be classed as follows: The British merchant houses established in Brazil, some of which are branches of houses in Great Britain and others formed locally by British residents; British enterprises in Brazil, public and private, which purchase their supplies, as far as possible, from England; non-British agents representing British firms; and direct business on order based on circulars, advertising, etc., although comparatively little business is done along these lines.

The chief exports from Great Britain to Brazil are cotton textiles, industrial machinery, especially textile,

iron and steel products, coal, woolen textiles, and hardware and tools.

British interests located in Brazil are not so prone to purchase British materials as are those in Argentina and other countries of South America. This is especially true of railway materials, which despite the large British railway interests in Brazil are purchased chiefly from the United States, Belgium, and Germany.

Great Britain furnishes little electrical machinery and supplies to Brazil, the United States leading in that, as it does in agricultural implements and machinery.

Great Britain is the leading source of Brazil's imports of textiles and textile machinery and in other machinery lines, excepting shoe machinery.

International Industrial Exposition in Bolivia

The Legation of Bolivia at Washington has notified the Bureau of Foreign and Domestic Commerce that an international industrial exposition will be opened in La Paz on August 6 next, in connection with the celebration of the Bolivian Centennial of Independence.

The Bolivian Government through its legation in Washington extends an invitation to the manufacturers of the United States to take part in the exposition, with the assurance that their products will be well received. To further interest and participation in this, the Bolivian Government will grant entrance free of duty and reduced freight rates to samples sent to the exposition, and also land for the erection of pavilions. A reduction of 50 per cent in the railroad rates for freight via the Mollendo, Arica, and Chilean sections of the Bolivia Railroad Co. will be given, and no freight rates will be charged on the Bolivian section of that railway. All exhibits must be in La Paz by the middle of July.

Bolivia an Important Purchaser of American Products.

Bolivia has no seaport of its own, and it is impossible to arrive at an accurate statement of its foreign trade, which must pass through Chilean, Peruvian, and Argentine ports. Exports from the United States to Bolivia during the fiscal year ended June 30, 1914, were valued at \$1,445,555, while in 1924 shipments had increased to \$4,122,417. Shipments of rice, iron and steel, freight cars and explosives decreased, while woolen goods disappeared entirely from the list of exports to Bolivia. The losses on these items were more than offset by gains in flour, agricultural implements, and lumber. Other important exports were cotton cloth, automobiles and trucks, paraffin wax, and canned milk.

United States import statistics show a decline in imports from Bolivia from a value of \$2,353,664 in 1923 to \$84,372 in 1924, the decrease being largely in the one item of tin ore.

Resources of the Country.

The resources of Bolivia and its developing industries and commerce are referred to in a communication from the Legation of Bolivia, which says:

Bolivia has much natural wealth. Valuable treasures are still hidden in her mountains, her industries are developing by gigantic strides, her means of communication, especially in

recent years, have not only extended throughout the Republic but have connected her with her neighbors. It is believed that these factors are sufficient to promise a great future, and it is for this reason that the Bolivian Government has thought it important to hold an international industrial exposition in connection with the centennial celebration to strengthen the ties with the United States and other countries of the world.

Additional information regarding Latin America appears in this issue under the following sections:

Transportation—Shipping: Cargo warehoused at Canal Zone "for orders."

Commercial law: New Mexican income-tax developments. List of "Many special circulars issued by the bureau."

COMMERCIAL INTELLIGENCE

A. S. Hillyer, Chief, Commercial Intelligence Division

TRADE LISTS AVAILABLE

The Commercial Intelligence Division has recently compiled the following trade lists, of which mimeographed copies may be obtained from the Bureau of Foreign and Domestic Commerce or its district or co-operative offices by referring to the titles and file numbers:

DRUG STORES

Wholesalers and retailers:

Canada	BE-1055.
China	FE-13083.
Costa Rica	LA-23037.
Guatemala	LA-24043.
Hawaii	FE-26024.
Manchuria	FE-14018.
Panama	LA-28034.
Porto Rico	LA-38027.
Salvador	LA-29031.

PHYSICIANS

Australia	FE-23059.
Brazil	LA-12115.
China	FE-13082.
Mexico	LA-30108.
Nicaragua	LA-27028.
Panama	LA-28035.
Paraguay	LA-19029.
Peru	LA-20056.
Salvador	LA-29032.
South Africa	BE-6070.
Uruguay	LA-21039.

TOILET ARTICLES AND PREPARATIONS

Importers and dealers:

Haiti	LA-33017.
Italy	EUR-6047.
Latvia	RD-80020.
Nicaragua	LA-27027.

PAINTS AND VARNISHES

Importers and dealers:

Ecuador (revision)	LA-15016-B.
France (revision)	EUR-3051-A.
Guadeloupe	LA-35200.
British Guiana (revision)	LA-16014-A.
Italy (revision)	EUR-6027-B.

PREPARED MEDICINES

Manufacturers, Argentina LA-10127.

Importers and dealers:

Italy (revision)	EUR-6033-A.
Netherlands	EUR-8031.

PROFESSIONAL AND SCIENTIFIC INSTRUMENTS

Importers and dealers:

France (revision)	EUR-3073-A.
Italy (revision)	EUR-6039-A.
Netherlands (revision)	EUR-8024-A.

INDUSTRIAL CHEMICALS

Importers and dealers:

France (revision)	EUR-3072-A.
Italy (revision)	EUR-6034-A.
Netherlands (revision)	EUR-8013-A.

Hospitals:

France	EUR-3098.
Porto Rico	LA-38026.

Drugs and chemicals:

Importers and dealers, Nicaragua (revision). LA-27003-C.

Veterinary supplies:

Importers, Argentina (revision) LA-10092-B.

Insecticides and fungicides:

Importers and dealers, Italy EUR-6046.

Little Demand for American Timber in South Africa

Timber prices in South Africa remain steady with only a moderate demand, stocks being ample for the time being, according to a cable dated April 4, from Trade Commissioner P. J. Stevenson, Johannesburg. Few new shafts are being sunk on the gold fields; consequently there is little call for southern pine timber, which is largely used for this purpose. Although this species was formerly imported in full cargoes, it is now customary to bring it in in parcel lots whenever liner space is available from the Gulf ports, even though the freight is slightly greater.

Cotton Cloth Exported from Japan

Japanese exports of cotton cloth during 1924 totaled 326,547,000 yen, according to monthly reports secured by special arrangement from the Department of Finance. The principal destination of these cloth shipments, and the amounts sent, were as follows: China, 137,684,000 yen; British India, 47,142,000; Netherlands East Indies, 37,145,000; Hongkong, 19,340,000; and Kwantung, 15,708,000. During January, 1925, exports of cotton cloth totaled 29,229,000 yen, compared with 20,150,000 for the corresponding month of last year. Of the January, 1925, total, 12,738,000 yen worth of goods went to China, 4,557,000 to British India, and 3,604,000 to the Netherlands East Indies. (M. Katsumata, office of commercial attaché, Tokyo, March 4.)

MANY SPECIAL CIRCULARS ISSUED BY THE BUREAU

Supplementing its various regular and special publications, the bureau issues numerous mimeographed circulars which are distributed to those interested, including persons and firms whose names are on the Exporters' Index, and copies may be obtained from the bureau or its district offices.

Circulars numbering 79, as listed below, were issued by 24 different divisions during the week ended April 13.

AGRICULTURAL IMPLEMENTS DIVISION

- No. L-29. Market for Lawn Mowers in Italy.
No. T-53. Market for Tractors in Great Britain.

AUTOMOTIVE DIVISION

- No. 36. Automotive Market News Bulletin.

CHEMICAL DIVISION

Imports for consumption through New York and other ports of the United States for March, 1925, of dyes, synthetic aromatic chemicals, medicinals, pharmaceuticals, intermediates, and other coal-tar products in paragraphs 27 and 28 of the tariff act of 1922.

- No. 56-A. World Notes on Industrial Chemicals.
No. 56-C. World Notes on Drugs, Medicinals, and Toilet Preparations.
No. 56-D. World Notes on Paint Pigments and Naval Stores.
No. 56-E. World Notes on Fertilizers.
No. 57-A. World Notes on Industrial Chemicals.
No. 57-C. World Notes on Drugs, Medicinals, and Toilet Preparations.
No. 57-E. World Notes on Fertilizers.
No. 88. The Fertilizing Action of Sulphur.

COAL DIVISION

Overseas Coal Export Situation as of April 1, 1925

- No. 286. Decline in Hessen Brown Coal Output.
No. 288. New Welsh Anthracite Coal Combine.
No. 289. Indian Coal Industry Facing Difficulties.
No. 290. Coal, Coke, and Patent Fuel Production in Northern France during January, 1925.
No. 291. Coal Production of the Saar in 1924.
No. 292. The German Coal Situation.
No. 293. Situation Serious in Scotch Coal Industry.
No. 297. Coal Market in Peru.
No. 299. Drop in February Coal Exports.
No. 300. Unfavorable Situation in the Czechoslovak Coal Industry.
No. 303. Finances of the British Mining Industry in 1924.
No. 305. Coal Situation in the Netherlands in 1924.
No. 317. British Coal Situation.

COMMERCIAL LAWS DIVISION

- No. 77. Taxation of Securities in Europe.

ELECTRICAL DIVISION

- No. 344. Changes in Glossary of Electrical Terms and Instructions to Exporters.

EUROPEAN DIVISION

- No. 32. Further British Government Guarantees to Trade.
No. 36. Economic and Trade Developments.

FAR EASTERN DIVISION

- No. 32. Far Eastern Trade News.
No. 291. Review of China's Export Trade for the First Nine Months of the Calendar Year 1924.
No. 292. Comparison of China's Import Trade for Nine Months, Ended September 30, 1923, and September 30, 1924.

FOODSTUFFS DIVISION

- No. 65. Greek Fig Situation.
No. 66. Smyrna Fig Situation.
Foreign Notes on Meats, Fats, Oils, and Livestock—Foodstuffs 'Round the World.
Fishery News—Foodstuffs 'Round the World.

Canned and Dried Fruits—Foodstuffs 'Round the World.
Grain and Grain Products—Foodstuffs 'Round the World.
World Dairy and Poultry News—Foodstuffs 'Round the World.

FINANCE AND INVESTMENT DIVISION

- No. 1. European Financial Notes.
No. 115. Dollar Exchange Movement in Latin America in January, 1925.

HIDE AND LEATHER DIVISION

- No. 415. British Leather Industry during 1924.
No. 419. Brazil's Trade in Hides and Skins.
No. 422. Production of Sheepskins in Algeria.
No. 423. India Leather Industry during 1924.
No. 427. Consumption of Hides and Skins in the United States, with Percentage Dependent on Imports.

INDUSTRIAL MACHINERY DIVISION

- No. 523. American Machinery Holding its Own in British Market.

IRON AND STEEL DIVISION

- No. H-7. Foreign Hardware Bulletin.
No. 346. Costs and Competition in the English File Trade.
No. 347. Summary of Average Value Per Ton of Items Entering Into British Foreign Steel Trade during November and December, 1924, and January, 1925.
No. 352. Exports of Scrap Metals and Junk from Constantinople and other Anatolian Ports.

LATIN AMERICAN DIVISION

- Latin American at a Glance, No. 47.

LUMBER DIVISION

- No. 2. Veneer and Ply Wood Series—Finland and Russia.
No. 395. British Hardwood Market—Australian Hardwoods in England.
No. 416. The Suitability of Wooden Houses for the United Kingdom.

MINERALS DIVISION

- No. 195. Petroleum Exports of Tampico in January.
No. 32. Foreign Trade Notes.

PAPER DIVISION

- No. 30. Weekly News Letter—"Side Runs" of the Paper Trade.
No. 31. Weekly News Letter—"Side Runs" of the Paper Trade.

RUBBER DIVISION

- No. 842. Tire Exporters' Weekly News Letter.

SHOE DIVISION

- No. 467. The Condition of the Kid-Glove Industry in Czechoslovakia.
No. 469. United States Imports of Leather Gloves.
No. 473. Increase in the Shipments of Footwear to the Non-contiguous Territories.

STATISTICAL RESEARCH DIVISION

- No. 2. Foreign Exchange Rates, 1924-25.

(Continued on p. 192)

SURVEY OF CURRENT BUSINESS

Prepared in the Bureau of the Census

The Department of Commerce announces the following figures covering basic industrial and commercial movements in March:

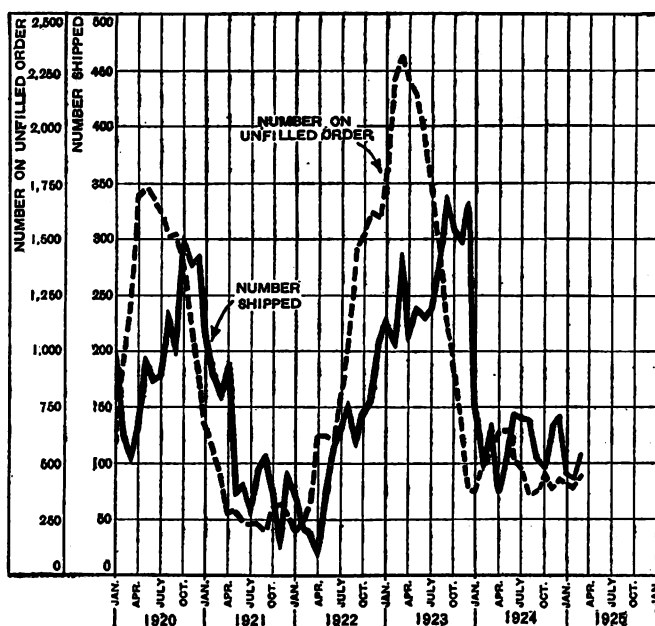

Iron and Steel—Textiles.

Early reports of business statistics in March collected by the Department of Commerce show increases over February in production of pig iron and steel ingots, shipments and unfilled orders for passenger cars, deliveries of raw silk from warehouses, and receipts of both foreign and domestic wool. Allowing for the longer working time in March, production figures for pig iron and steel ingots still exceeded February. Orders for freight cars decreased from February, while slightly fewer blast furnaces were in operation at the end of March than a month ago.

Trade and Finance.

Trade and financial indicators showing increases over February included sales of mail-order houses and 10-cent chains, new incorporations, bank clearings, and interest rates on both call loans and commercial paper, while the issuance of corporate securities declined from February.

LOCOMOTIVE SHIPMENTS AND UNFILED ORDERS

Comparison with Last Year.

Compared with March, 1924, production of steel ingots, shipments and unfilled orders for locomotive, and new orders for all kinds of railway equipment decreased, pig-iron production and silk deliveries increased, while domestic wool receipts declined, as against an increase of over 100 per cent over a year ago for receipts of foreign wool. Stocks of raw silk decreased 23 per cent from February 28, but were 54 per cent higher than a year ago. Sales of mail-order houses, 10-cent chains, and department stores, bank clearings, and new security issues were larger than in March, 1924, while new incorporations fell off slightly.

Data from Survey of Current Business.

The following table gives such data from the April issue (No. 44) of the Survey of Current Business as have been received up to April 19, 1925.

All items given in the following table correspond with similar information in the issue of the Survey of Current Business. These figures should always be read in connection with

the detailed tables in the Survey, where specific descriptions of the data and their sources are given. In addition to figures given from Government sources, there are also incorporated for completeness of service the figures from other sources generally accepted by the trades, the authority and responsibility for which are noted in the Monthly Survey of Current Business, which may be obtained from the Superintendent of Documents, Washington; D. C., for \$1.50 per year.

TOBACCO

(Continued from p. 147)

TOBACCO MARKET IN BELGIUM

Based upon reports of Consul General George S. Messersmith, Antwerp

A trend toward cheap tobacco, a decline in cigar consumption, and a new tariff law which doubles the duty on raw tobacco are the outstanding features of the tobacco situation in Belgium to-day.

The position of Belgium is somewhat analogous to that of the Netherlands in the European tobacco market, except that Belgian colonial possessions do not foster the industry with heavy tobacco production.

Belgium Buying Chiefly Cheaper Grades.

Nevertheless, Belgium buys tobacco in excess of its own demands and sells to near-by Europe, principally to Germany. It will thus be seen that Belgium, in buying low-priced tobacco, is merely reflecting the European demand. Belgium buys the quality it can sell.

In the Kentucky and semibright Virginia tobaccos the movement toward cheaper grades seems particularly evident, and throughout 1924 cheaper qualities of San Domingo came into increasing prominence. Increased shipments from the Near East have also been a competitive factor in recent months. Tobacco entering through the port of Antwerp showed a decline in quantities imported from the United States, while imports from the Near East doubled. Germany is also said to be purchasing Near Eastern tobaccos, and this factor has contributed toward the accumulation of

stocks of Virginia and Kentucky tobaccos in the Antwerp warehouses.

Decline of Belgian Cigar Industry.

The decline in the manufacture and sale of Belgian cigars dates from the war. It dates also from an amendment to the tariff in 1919 which increased the old tariff of 1906 from 600 francs to 1,200 francs per 100 kilos of cigars imported. At the same time an excise duty of 80 francs per 100 kilos was levied on all tobacco imported. The old excise duty was 15 francs.

Since these two probable causes of decline are coincident, it would be difficult to determine at present which is the more responsible. The latest tariff revision, which became effective in November, 1924, does not change the tariff on cigars except to establish the already existing import duty of 1,200 francs per 100 kilos of cigars as a minimum, and to create a maximum duty of 3,600 francs per 100 kilos.

Tariff on Raw Tobacco.

The tariff on raw tobacco (stripped), as established by the new tariff act of November, 1924, is increased from 120 francs per 100 kilos to a minimum of 240 francs and a maximum of 720 francs; on other raw tobacco, including stalks and substitutes, the increase is from 60 francs to a minimum of 120 francs and a maximum of 360 francs.

The effect of the new tariff on smoking tobacco in Belgium is said to be a matter of great concern at present, as the taxes on cigars have for a long time been a subject of loud protest.

FOREIGN TRADE OPPORTUNITIES

Reserved information may be obtained from the Bureau and its district and cooperative offices by duly registered firms and individuals upon written request by opportunity number. The Bureau does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Symbols: * Reported by American consular officers; † Reported and by commercial attachés and trade commissioners; ‡ Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

HEARING BY THE UNITED STATES TARIFF COMMISSION

PUBLIC NOTICE OF HEARING BY THE UNITED STATES TARIFF COMMISSION UNDER THE PROVISIONS OF SECTION 315 OF TITLE III OF THE TARIFF ACT OF 1922

Investigation No. 36 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Gold Leaf

Notice is hereby given, pursuant to section 315 of the tariff act of 1922, that a public hearing in the foregoing investigation will be held at the office of the United States Tariff Commission in Washington, D. C., at 10 o'clock a. m. on the 18th day of May, 1925, at which all parties interested will be given an opportunity to be present, to produce evidence, and to be heard with regard to the differences in cost of production and of all other facts and conditions enumerated in section 315 of the tariff act of 1922 with respect to the following article described in paragraph 383 of Title I of said tariff act; namely, gold leaf.

This notice shall be published by posting a copy thereof for 30 days prior to said 18th day of May, 1925, at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy thereof prior to said date once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in COMMERCE REPORTS, published by the Department of Commerce.

By order of the United States Tariff Commission this 14th day of April, 1925.

JOHN F. BETHUNE, *Secretary.*

COMMERCE REPORTS

A Weekly Survey of Foreign Trade

JULIUS KLEIN, Director Bureau of Foreign and Domestic Commerce

Editorial Board: Griffith Evans, Grosvenor M. Jones, E. Dana Durand, Eugene S. Gregg, and Archibald J. Wolfe

Central American Markets for United States Goods

The Caribbean region, comprising the West Indies, Central America, Venezuela, and the Caribbean section of Colombia, is as much a distinctive trade area for the American manufacturer as Canada or Australia. This region or group of countries, while contiguous to the other countries of Latin America, has very little direct contact with them because of the fact that most of the established lines of water transport treat the Caribbean area as a separate unit. Steamers bound for Brazil and the River Plate do not enter the Caribbean ports, and steamers routed to the Caribbean rarely go farther south than the Venezuelan ports before returning to the United States or Europe. A traveling salesman covering Latin America will, of course, visit the Caribbean territory as well as the rest of South America, but it will mean a break in his journey and a transfer from one transportation system or group of steamship lines to another. Freight shipments from eastern and southern United States to this territory in practically every instance are made by steamers routed only to Caribbean ports. The growing trade of the Caribbean area with the Pacific ports of the United States is by the way of Colon in the Canal Zone as a port of transshipment, no direct routes from the west coast to the Caribbean Sea having yet been established.

The importance of the Caribbean countries is shown by our trade with them during 1924, which amounted to \$875,958,041, of which \$510,212,009 represented imports from and \$365,746,032 exports to them. In order of importance, Cuba ranks first, Porto Rico second, Colombia third, and the Central American group fourth.

Considering Central America as a unit, the usual method for large merchants is to do business directly with the manufacturer or exporter in the United States. This is by no means the sole method, however, as in many cases sales are effected through commission agents with sample displays. Direct dealings are the general rule with the larger merchants in practically all the Central American countries.

The main contact, however, should be made personally and not through printed matter. Central American merchants and importers, in common with so many others, have their mails crowded with papers,

letters, and general advertising material, much of it in defective Spanish, and even though these be hurriedly read through, as a general rule they do not open a market. Such printed matter is, however, valuable as follow-up material. The original contact, and one to be renewed periodically to be most effective, should be a personal sales trip undertaken by the export manager or a competent representative.

In selecting commercial travelers to represent the firm great care should be exercised to choose high-type men, who not only can understand the habits of the people but who have a command of Spanish. It is of great importance that such men be thoroughly posted on customs regulations and transportation conditions, as otherwise losses of time and merchandise may very well result.

The greatest purchasing seasons in Central America—that is, the most appropriate seasons for selling trips through this region—are January to March and July to September. This, of course, applies only to general exports, as there are certain commodities which, because of their very nature, are of value at seasons other than those mentioned above. This would be the case, for example, with sugar-milling machinery, importations of which would take place probably at the conclusion of the grinding season.

These and many other important facts are brought out in Trade Information Bulletin No. 329, "Caribbean Markets for American Goods: I. Central America," just published by the Bureau of Foreign and Domestic Commerce. This pamphlet is the first of a series. For the convenience of the exporter planning a trip for himself or his representative a suggested salesman's route through Central America has been included.

JULIUS KLEIN.

American Exporters Are Discovering India

Until within recent years American manufacturers and exporters have given comparatively little attention to the Indian market, largely (it may be assumed) because so little was known of that trade area. Indeed, practically all trading nations, except Great Britain, somewhat neglected India until quite recently. This seems strange when one considers that India ranks among the first seven countries of the world in the aggregate value of its foreign trade.

American exporters seem to have first discovered the Indian market during the war period, when Indian merchants were cut off from their regular source of supplies and had to look to other areas for their needs. Since then our exports to India have been growing slowly but steadily, and American goods have apparently won a permanent place. From 1914 to 1924 our contribution to India's total imports increased from 2.6 per cent to 5.6 per cent, and from all indications we shall be able at least to hold our own, if not to increase our present share during the next few years. More American agencies are being placed every month, and according to the Bombay and Calcutta offices of the Bureau of Foreign and Domestic Commerce greater numbers of American salesmen are passing through than ever before.

While India's purchasing power is low compared even to that of certain other Oriental countries—Japan, for example—the difference is offset to a certain extent by the large population. It must be remembered also that the country is now awakening to a period of industrial development, in which large quantities of machinery, construction materials, etc., will be required.

The Bureau's representatives in India are in good position to advise and assist American exporters who may be interested in the market, and they will be pleased to put your proposition before Indian firms who might be interested.

[EMMETT A. CHAPMAN.]

Bureau Establishes Office at Sydney, Australia

There are a number of American business houses located in the great commercial center of Sydney, Australia. These firms are performing a most essential function in the furtherance of American trade in that country. With this situation in view, the Bureau of Foreign and Domestic Commerce has deemed it advisable to open an office at Sydney, which, together with the existing office at Melbourne, will be able, it is believed, to cover the territory of Australia and New Zealand thoroughly.

Sydney, which is the capital of New South Wales, has a population of more than 1,000,000, or about one-sixth of that of the whole Commonwealth. It is the terminus of most of the mail steamers from Europe and America and has ample harbor and docking facilities, including repair works able to take care of the largest vessels.

Being centrally located with respect to the east-coast region of Australia, it constitutes an ideal distributing center for American goods. As indicated above, many American manufacturers and exporters are already represented there by branches and agencies, but the field is not overcrowded. Australian firms are always on the lookout for good American lines, and American concerns not already represented in the Commonwealth would do well to investigate the matter.

Because of the unusually good wool clip and wheat crop in the Commonwealth this spring, and the high prices being realized in the overseas markets for these products, it is expected that imports during the present year will set a new record.

Australia's imports consist largely of manufactured goods. Local manufacturing has not developed to a point where it can supply the needs of the country, which must, necessarily, turn to foreign markets for these things.

The Commonwealth imported from the United States during 1924 goods valued at \$125,178,000, as compared with \$119,389,000 during the preceding year. Among the principal items were automobiles and trucks, iron and steel, machinery, motion-picture films, musical instruments, petroleum, paper, rosin, radio equipment, rubber manufactures, tobacco, turpentine, and considerable quantities of timber of all kinds.

With the opening of the new office at Sydney the Bureau of Foreign and Domestic Commerce will be in a better position to serve the interests of American exporters in the Australian-New Zealand area, and it is hoped that American interests will not fail to take fullest advantage of the new facilities offered.

[JULIUS KLEIN.]

Selling Psychology and Creation of Good Will

The intelligent merchandiser is not content merely to exchange goods for money. He seeks to create an intangible tie of mutual satisfaction and of eagerness to continue a beneficial and pleasant relationship.

Goods may be sold in a manner that leaves bitterness, resentment, and dissatisfaction in the heart of the customer. Buying in such cases is done under duress. Sooner or later the customer looks for another source of supply.

Of all the aids to selling good will is the greatest. It can not be bought. It must be deserved. Failure to gain good will may be due to lack of knowledge. Either the seller does not know how to reach a responsive chord in the buyer, or the customer does not know that the seller is well disposed toward him.

American exporting manufacturers who have made successes in export have built up their business on an intelligent effort to create good will. These remarks are not addressed to them, but rather to beginners in foreign trade and to those who are not directly interested in export, but who, none the less, may unintentionally weaken our good will abroad.

In their export policy and in their actions they should make it clear that their goal is trade based on good will. They can well emphasize the service feature, which is a distinctively American achievement in merchandising.

We have carried the slogan "Truth in merchandising" and "Truth in advertising" practically through the entire domestic trade. These slogans have their place in our foreign trade as well. From a policy adhered to by a majority, these slogans must rise to the status of a universal American practice.

[A. J. WOLFE.]

World's Commercial News in Brief

The following are brief items compiled from data cabled by Government representatives stationed abroad, from official foreign publications, and from other sources. Countries included in the "Monthly Cable Reviews" are omitted from this section.

European Economic and Trade Developments

For reasons of Bureau administration, this heading includes also Canada

CANADA

The Government estimate of the quantity of wheat in Canada on March 31, 1925, is 121,084,000 bushels, or about 60 per cent of the stock on hand a year ago. There is now less wheat in the farmers' hands than at any time since 1920. Of the 1924 crop, 95 per cent was of merchantable quality. The trend of the metal market is still downward, with buying on a small scale. The increasing tendency to use reinforced concrete construction is reducing the demand for steel. Belgian competition in sheets and plates is expected to increase with the opening of the St. Lawrence. The steady demand for newsprint continues. Manufacturers of book paper, paper board, paper boxes, and Kraft wrapping paper are fairly busy. The port of Montreal was opened for navigation on April 10. There is less ice in the lower St. Lawrence and the gulf than is usual at this season. The Lachine Canal will be opened for traffic about May 1.

DENMARK

Additional lockouts involving 65,000 employees have been declared, bringing the total thus affected to 125,000, with further lockouts imminent. Public authorities are making every effort toward settlement of the present disputes, but no tangible result has yet been reported. With the present declining price levels, employers are disinclined to meet the demands of labor for increased wages.

FINLAND

Recent reports indicate a continued industrial revival and bettered trade conditions, following the temporary winter lull. Logging operations were considerably accelerated during March and early April, and timber is now being floated. Lumber sales are progressing satisfactorily and are slightly in excess of those a year ago; prices are but slightly changed. Assistant Trade Commissioner Kekich, Helsingfors, cables that of the recent \$10,000,000 loan, \$4,500,000 has been definitely assigned for extending long-term loans to farmers. These funds will be utilized for acquiring modern machinery, for general farm improvements, and for tilling new lands, with a view to increasing the production of grain. These efforts should prove of considerable importance in developing the Finnish dairy industry. It is expected that the dairy output during the current year will exceed pre-war figures.

FRANCE

The prospective fiscal measures of the new ministry include increased taxation and drastic measures for collection of back taxes. There is also some discussion as to consolidating and refunding the internal debt. It is expected that the ministry's plan for rehabilita-

tion of French finance will be laid before Parliament during the current week. French trade continued to show a favorable balance during March, with exports valued at 3,762,000,000 francs (paper) and imports at 3,307,000,000 francs. Values of both imports and exports for the first three months of 1925 were less than during the corresponding period of 1924. The French iron and steel industry is considering an agreement with the German industry and a possible agreement with Great Britain. A further price increase, effective during the second quarter of 1925, has just been announced by the Alsatian sales agency. The Tunisian iron mines report increased production of ore, and increased production of phosphates is also reported. During the past week Parliament authorized the raising of the circulation from 41,000,000,000 to 45,000,000,000 francs and advances to the State of 26,000,000,000 francs.

GREAT BRITAIN

At the end of the first quarter imports are still at a very high figure, while exports remain practically stationary. Largest increases in imports have been in grain, meats, raw cotton, and raw wool, but all classes have shown some enlargements. Iron and steel production during March was the highest since July, 1924. Coal shipments show little prospects of increase; the output is much in excess of inquiry, with German competition still active in all European markets.

NORWAY

The crown has risen during the week to 16.2 cents, marking an aggregate appreciation of approximately 18 per cent during the past year. Declining price levels, successful deflation, and large export volume have contributed to the rise, but there appears to have been also a measure of speculation in anticipation of it. A reduction in the surtax on specific import duties from the former 80 per cent to 70 per cent is announced. This cut will not materially affect imports, but it is an indication of the generally improved conditions.

SOUTH AFRICA

The agricultural output is reported as good, although floods in Natal and eastern Orange Free State have damaged crops and property. A good sugar crop is in prospect and a record maize harvest is assured. Prospecting activity in the new platinum districts continues, but mining in these areas will be difficult and perhaps expensive.

POLAND

Revenue and expenditure figures for February indicate that the budget was nearly balanced for that month, in spite of increased production costs and a

scarcity of money for tax payment. The extensive participation of foreign capital and the American loan have helped to lower interest rates from the former 5 to 7 per cent per month to a present 3 to 4½ per cent.

In an effort to attract foreign capital a measure has been presented to the Diet exempting foreign capital from certain taxes when invested or deposited in Poland.

Latin America at a Glance

ARGENTINA

The export movement of Argentina showed slight recovery during the week ended April 18, but exchange fluctuations hampered the import trade. Money is easier. Ocean freights are the lowest in years. Final official crop-production estimates, in tons, are: Wheat, 5,202,000; linseed, 1,145,000; oats, 776,000; barley, 152,000; rye, 37,000; and birdseed, 10,000. Estimates of the exportable surpluses available April 15 were: Wheat, 1,845,000 tons, and linseed, 802,000 tons. The first official estimate of corn production this year is 4,754,000 tons. Exports of wheat and of oats during the first two months of this year were greater than during any similar period in the last six years, but linseed shipments have been quite disappointing, and the volume of corn exports were less than in any similar period during the five years preceding, with the exception of 1924, when only 108,267 tons were exported during the first two months. (Commercial Attaché E. F. Feely, and Trade Commissioner B. M. Mace, Buenos Aires.)

CHILE

A general strike in the nitrate fields of northern Chile had the effect of retarding business in the commercial centers of that district during the week ended April 18. The strike has now been settled, however. In the central Provinces trade conditions are slightly less favorable than they were during the first half of the month, although farther south they are reported to be good. In Santiago bank credits are generally freer, but collections, despite a steady improvement in exchange, continue to be slow. Sales of nitrate for the week of April 13 to 18 amounted to 4,500,000 quintals, at unfixed prices. Freight moved over the southern lines of the State railroads in March is reported to have totaled 475,000 tons. (Assistant Trade Commissioner C. C. Brooks, Santiago, April 18.)

URUGUAY

Business in Uruguay is fair, and the frigorificos are operating to capacity. The wool market continues inactive. Exchange remains steady at 106. (Acting Commercial Attaché Lew B. Clark, Montevideo, April 18.)

PARAGUAY

No change in the Paraguayan situation has been reported, business conditions being quite favorable.

BRAZIL

The port situation at Santos and the power situation of Sao Paulo city are slightly improved. A retrenchment in import buying has followed the continued weakening of the milreis. Coffee and other Sao Paulo crops are in a good condition. (Commercial Attaché W. L. Schurz, Rio de Janeiro, April 18.)

PERU

No improvement is yet apparent over the abnormally dull condition of trade of recent weeks in Peru, re-

ports Commercial Attaché H. B. MacKenzie from Lima. Collections are slow, and many of the smaller business houses are suffering from financial stringency.

ECUADOR

The general commercial and industrial conditions in Ecuador show little change since the washout on the Guayaquil-Quito Railroad. Conditions will hardly improve within the next four or five months until the railroad can be repaired, as freight will have to be moved by makeshift methods, which are considerably more expensive and slower.

COLOMBIA

Commercial conditions throughout Colombia are still reported as good. Coffee continues to move steadily and at favorable prices. Dollar exchange fluctuates little, reaching 102 on March 3. Industrial conditions are moving slowly. The contract for the opening of the Bocas de Ceniza (mouth of the Magdalena River) with a New York company has been modified in several particulars. (C. R. Hill, commercial attaché's office, Bogota.)

VENEZUELA

General conditions continue good in Venezuela and exchange remains steady. The continued activity of foreign oil companies should gradually improve the business and economic situation of the country.

CENTRAL AMERICA

General conditions are fair in the countries of Central America. No changes have been reported during the week ended April 18.

MEXICO

Business has been rather dull in Mexico during the week ended April 18, but there is a general feeling of optimism. (Commercial Attaché Alexander V. Dye, Mexico City.)

BARBADOS

The yield from sugar cane in Barbados has been satisfactory since the opening of the campaign in February, but prices are low. While prices for molasses are also down, it is believed that they will improve. Bank deposits and savings have been slightly below normal, but this has been due to outside investments rather than to any shortage of funds. (Consul J. J. C. Watson, Bridgetown.)

CUBA

There is little change in the Cuban commercial situation, and the volume of trade is fairly steady. The slackening of business this year as compared with the earlier part of 1924 is reflected in the bank clearings for March, which amounted to \$109,974,109, a decrease of \$5,000,000 from the figures of March, 1924, but higher than those for February, 1925, by some \$12,500,000. The labor situation is still unsettled, but the railroad difficulty bears a more optimistic outlook, as

negotiations are now in progress. The grinding of the sugar crop progresses smoothly and the rainfall, while benefiting the growing cane, has not hampered harvesting operations.

DOMINICAN REPUBLIC

The outlook for record crops in the Dominican Republic continues very favorable. The tobacco crop got a good start and growing conditions have been excellent, according to a report from Consul W. A. Bichers, Puerto Plata. Crop estimates are high, but it is doubtful if a market will be found for the record crop. The sugar crop will be large but prices are low. The export

surplus of all crops is expected to materially exceed that of last year. The mercantile situation has shown some improvement with the crop movement. Importations, as reflected by customs statistics, continue high.

PORTO RICO

Neither trade nor collections in Porto Rico have shown as much improvement as is customary at this time of the year. March customs receipts from foreign imports were the heaviest of any month for 15 years. Credit precautions with new business are still advisable. (Trade Commissioner L. L. James, San Juan, April 18.)

MONTHLY CABLE REVIEWS

EUROPE

Samuel H. Cross, Chief, European Division

General Depression Retards Belgian Industries

Based on cable from Commercial Attaché Fayette W. Allport, Brussels, April 17

The current tone of Belgian industrial and commercial activity is relatively dull, owing to factors of uncertainty in the domestic and foreign political situation. Rising unemployment is resulting from further curtailment of production, but substantial wage reductions in the glass, coal, and steel industries are meeting with great opposition from organized labor.

Commercial Agreements with Germany and France.

Commercial agreements with Germany and France were signed on April 4. The treaty with Germany provides for reciprocal most-favored-nation treatment after the first year of operation, but until that time certain German commodities entering Belgium will be subject to a special tariff régime, with duties somewhere between the maximum and minimum rates of the Belgian tariff schedule.

Security Markets Weak.

Fluctuation of the Belgian franc exchange has been more marked during the past month, with gold exchanges closing slightly higher. Notwithstanding the exchange developments, security markets, including Government bonds, have failed to rally. Glass, textile, and colonial securities have recorded lower quotations. Investments of French capital in Belgium are a complicating factor, and concern regarding the effect on Belgian securities and exchange of a possible sudden withdrawal of French investments has an unfavorable effect on the situation.

The discount market is easy. The volume of commercial paper is small as a result of the existing depression, and consists chiefly of renewals. The rates on discounts are just under the National Bank rediscount rate of $5\frac{1}{2}$ per cent. Industry is protesting over the high cost of bank credits. The reluctance of the public to subscribe to industrial debentures is causing a further aggravation of the difficulties of the financial situation. Demand liabilities of the National Bank have declined 140,000,000 francs in the past month, due to a decrease in rediscounts and in advances against securities.

Operations in Belgian clearing houses amounted to 18,900,000,000 francs, as compared with 17,100,000,000 francs during February and with 22,200,000,000 francs in January.

Tax Collections Below Estimates.

Tax returns during February amounted to 193,800,000 francs. For the two-month period the returns are 151,300,000 francs below estimates.

Inactivity in Metallurgical Industry.

Metallurgical markets are dull, with prices somewhat lower. The present level of production is mainly dependent on the car-building program of the Government, and must decline after its completion unless the present dearth of export orders is broken. No evidence of the expected post-Easter revival has so far appeared. Competition from Luxemburg is being felt in the export trade. The threatened lockout in Hainaut has been avoided by an agreement on the part of the laborers to investigate the steel markets. If results support the employers' contention, wages will be reduced 5 per cent retroactively to April 1.

Coal Situation Fails to Improve.

The situation in the coal-mining industry is still decidedly unfavorable, although reduced production is resulting in a slower accumulation of stocks. Operators are combating further price reductions, claiming that present operation is being conducted at a loss. Miners are opposing the 10 per cent wage cut, scheduled for May 1, with a threat of striking. Reparations deliveries decreased in March, and import licenses for other German coal are being granted sparingly.

Plate-glass production is being maintained at 50 per cent of capacity. The window-glass industry is depressed, with orders on hand amounting to less than a month's production.

Substantial wage reductions in the glass, coal, and steel industries are meeting with great opposition from labor, despite the continued reduction of wholesale and retail commodity prices.

Cotton Industry Stronger Than Linen.

The situation of the Belgian flax spinners is unsatisfactory and the greater part of the mills are operating at part time only. Linen weavers are operating at 40

per cent of capacity, with competition from Belfast weavers and absence of American buyers keenly felt. The cotton-spinning industry is more satisfactory and there is good demand from Germany and the Netherlands. The cotton-fabrics industry is supported by a demand for fancy goods; plain fabrics are being ordered by the Belgian Kongo only.

Swedish Labor Conflicts Settled, with Slight Recovery

Based on cable from Commercial Attaché T. O. Klath, Stockholm, April 17

After only two weeks' conflict, the Swedish labor disputes—discussed in *COMMERCE REPORTS* of March 30—were speedily adjusted following the Government's efforts at arbitration. Although this has resulted in a slight improvement during the first half of April, business is still being done on a somewhat restricted scale. The general hesitancy in demand and the consequent slackened production as a result of downward movement in price levels are responsible for an unemployment that exceeds the normal seasonal figure, and also for a noticeable decline in railway traffic.

Pulp Industries Active.

Official estimates place the loss in output from the labor troubles at 40,000 metric tons as regards chemical pulp, 15,000 metric tons as regards mechanical pulp, and 11,000 metric tons in the case of paper. As the Swedish pulp and paper mills are operating on a 24-hour basis, these losses can not be retrieved. It is reported that some orders were deflected to Norwegian and Finnish mills during the lockout, but this did not influence prices to any extent. Sales so far concluded are estimated at 65 per cent of the annual output in the case of sulphite pulp, 80 per cent in the case of soda pulp, and 65 per cent in the case of mechanical pulp. Orders for delivery during 1926 have also been booked. Of special significance is the growing demand for high-grade chemical pulp for the Italian rayon mills. Paper orders have been placed by the Soviet authorities for 14,000 tons in Esthonia, 12,000 tons in Norway, and 6,500 tons in Sweden. On the whole, Swedish paper and pulp industries show improvement over the corresponding date of last year.

Lumber and Steel Dull.

Advance sales of lumber have progressed at a very satisfactory rate in spite of the many retarding factors. Total sales up to the middle of April for forward delivery are estimated at 475,000 standards (940,500,000 board feet), as against 430,000 standards (851,400,000 board feet) on the corresponding date of last year. Prices are tending downward, primarily on account of increased competition from Russian exporters who are reported as accepting lower prices. Trade estimates place rough lumber exports from Russia during the current year at 250,000 standards (495,000,000 board feet).

The Swedish iron and steel industry shows little or no improvement; demand is rather slack, and prices are low. In order to assist the industry, a reduction in freight rates on raw materials was granted by the Railway Administration, and greater protection against foreign competition is sought by an application for 60 per cent increase in import duties. Machine shops report a falling off in orders as a result of increased German and Czechoslovak competition.

Money Market Shows Slight Expansion.

Total clearings of the Swedish Bank of Issue for March aggregated 1,815,000,000 crowns—an increase over the February figure by 1,581,000,000 crowns. Outstanding notes rose from 477,660,000 crowns on March 14 to 483,987,000 crowns on April 11. The metallic reserve, on the other hand, underwent a fractional reduction from 233,853,000 crowns in March to 233,630,000 crowns on April 11, thus lowering the metallic cover to 48.2 per cent. Outstanding loans of the Bank of Issue expanded from 417,123,000 crowns as of February 28 to 427,182,000 crowns as of March 31, while rediscounts during the same period rose from 279,923,000 to 297,098,000 crowns. Owing to unusually heavy demands for imports and other foreign payments, foreign-exchange reserves of the bank dropped from 105,783,000 crowns as of February 28 to 93,346,000 crowns as of March 31.

Accounts of Swedish private banks during March showed a general downward tendency. Deposits contracted from 3,742,000,000 crowns in February to 3,708,000,000 crowns for March. Similarly, loans and discounts were reduced from 4,373,000,000 crowns to 4,364,000,000 crowns. As with the Bank of Issue, foreign-exchange reserves of private banks also were materially reduced from 58,241,000 crowns in February to 38,847,000 crowns in March.

A slight contraction in the Swedish national debt was registered during March from 1,744,260,000 crowns to 1,737,000,000 crowns. Despite heavy demands of foreign exchange and the effects of the labor troubles, the rate of the Swedish crown was maintained at a stabilized rate of 26.96 cents.

Stock Exchange Active, but Quotations Lower.

Trading on the Stockholm Bourse during March reached a total of 21,098,000 crowns, as compared with 23,771,000 crowns during February. Following the settlement of the labor troubles there has been a slight recovery in quotations, but the tone on the whole remains dull. The stock indexes show changes in industrials from 95.5 on March 17 to 101.5 on April 14, and in banks from 87.6 to 88.1. Accounts of the large shipping companies for 1924 show reduced profits. Capital issues during March totaled 8,317,000 crowns, a considerable reduction from the February figure of 30,642,000 crowns. Practical stability has been maintained in price levels, as indicated by the wholesale index, which has remained static at 164 during the past three months.

Commercial failures during March totaled 308, as against 303 during February, both figures being considerably above the January total of 256. Notes protested during March numbered 5,225 and represented a total of 3,303,000 crowns, as against February notes numbering 4,520 and representing a nominal value of 2,886,000 crowns.

Foreign Trade Heavier, but Balance Unfavorable.

With a considerable increase in imports it is expected that there will be an unfavorable balance during March of about 30,000,000 crowns. Expansion took place in practically all the more important items, as shown by the following figures of metric tons (February amounts in parentheses): Raw phosphates, 11,970 (2,964); sulphur, 1,060 (444); iron and steel, 14,950 (12,140); mineral oils, 14,240 (3,454); sugar, 5,018 (4,737); wheat, 28,240 (25,370). The number of imported automobiles during March was 1,209, as against

1,044 for February. Coal imports and raw cotton imports declined from 210,435 and 2,266 metric tons in February to 139,100 and 1,760 metric tons, respectively, in March.

Exports Remain Very Low.

Increased export volumes were shown only by two of the more important items, namely, iron and steel, which increased from 14,630 metric tons in February to 18,740 in March, and matches, which increased from 2,170 to 2,990 metric tons. The drop in exports during March is indicated by the following figures, in metric tons (February returns in parentheses): Wood pulp, 37,120 (50,900); paper, 22,970 (28,300); and iron ore, 530,500 (636,000). Shipments of rough lumber likewise decreased from 27,136,000 board feet in February to 25,961,520 board feet during March. Exports of ball bearings and cream separators declined in value from 1,713,000 and 2,225,000 crowns for February to 1,184,000 and 1,077,000 crowns, respectively, during March.

Declared Exports to the United States Lower.

Exports to the United States declared through the American consulates dropped from \$2,567,000 in February to \$1,946,000 in March. The chief items (February figures in parentheses) were as follows: Wood pulp, \$700,000 (\$1,090,000); paper, \$299,000 (\$520,000); and iron and steel, \$456,000 (\$358,000).

German Business Hesitant

Based on cable from Commercial Attaché Charles E. Herring, Berlin, April 17

While awaiting final results of the presidential election of April 26 caution is being manifested in business commitments and the money market has notably tightened. The inflow of foreign credits has abated and liquid assets of German banks have decreased approximately 8 per cent.

Export Trade Prospects Uncertain.

Poor prospects are seen for materially increased exports, which at present prices are made largely at a loss, in order to provide liquid capital and readjust the trade balance. German industry is still handicapped as to credit terms for export shipments to Latin America, the Far East, and eastern Europe. Maintenance of present high prices for raw materials and the probability of further wage increases point to the danger of a possible industrial depression.

Cost Reduction Necessary to Export Trade.

The gravest feature of the German export situation is considered to be high production costs. Estimates recently made for one of the most efficient iron and steel plants shows that the cost of finished material has increased 60 per cent above the pre-war level, or 28 per cent above the rise in the wholesale-price index. Wages have increased 10 per cent while per capita production has decreased 32 per cent. Taxes have increased 42 per cent and clerical hire 20 per cent. The turnover tax accounts for 6 to 12 per cent of total costs. A further source of increased labor costs is seen in the increase of rentals from 62 per cent to 72 per cent of pre-war on April 1, with the expectation of a rise to 100 per cent by October. The new cost-of-living index established by the Government, as a result of agitation by labor unions for a more accurate basis for wage negotiations, is approximately 8 per cent higher than

the previous cost-of-living index used and is expected to materially assist wage-increase demands.

Domestic Production Moderate.

The prolongation of the raw-steel cartel until the end of 1926 and the progress in commercial treaty negotiations with France and Belgium have stimulated domestic business. Increased agitation for freight reductions, particularly for short and medium hauls, is being made. Similar agitation for reduction of industrial taxation is expected to result in a further shift of taxes from production to consumption.

Steel production for April is maintained at 15 per cent below maximum. Ruhr coal stocks are on the increase. A reorganization of the coal syndicate, with closing down of marginal mines, is expected. Cotton spinners are fully employed, chiefly on domestic orders, but other branches of the textile industry are working on part time only. The chemical industry continues slack, with the exception of the potash industry, whose production for the first quarter was double that of the previous year.

Money Market Stringent.

The stringency of the money market has caused a further fall of stocks, which on April 8 were 7 per cent below the January average. Shipping and metal shares lead the decline, as a result of their general passing of dividends. Bank and transportation shares, which declared normal dividends, show advances. The level of municipal and industrial bonds is 19 per cent above that of a year ago. The best showing in dividends and in ratings was made by the brewery list, which has apparently been unaffected by prevailing industrial depression.

Time money in Berlin is 10 per cent plus commission charges that are 4 per cent, as a result of the reduction in Reichsbank rediscount rate and the decline in stock-exchange activities. Volume of credits, however, has been restricted by the decline in liquid assets of the credit banks. Loans and discounts of the Reichsbank decreased from 1,737 million marks at the end of February to 1,487 million on April 7, while note circulation increased from 2,100 million to 2,293 million marks—an indication that greater circulation is based on imports of foreign credits and not on enlarged domestic business.

The new bimonthly balance sheets published on February 28, 1925, for the first time since June 30, 1914, show a drop in liquid assets since the end of the year from 61.9 per cent to 53.9 per cent and reflect a notable decrease in foreign credits. They show a fairly satisfactory increase in local deposits and a development of the acceptance and commercial discount business. The progress in revival of the discount market has resulted in the quoting of private discount rates on April 4 for the first time since the war.

Unemployment Shows Seasonal Decrease—1925 Industrial Census.

Unemployed workers receiving Government allowances numbered 467,000 at the end of March, as compared with 515,000 on March 15 and 575,000 on February 15. Labor difficulties in the Ruhr coal, the Middle-German brown coal, potash mines, iron and steel industries, and on the Federal Railways have been turned over to the Government for arbitration. The Berlin metal-workers' strike for wage increases has resulted in a lockout of 7,000 employees.

An industrial census for 1925 is being planned by the Government in order to ascertain the results of the inflation and stabilization periods on German industry, agriculture, and commerce.

Reorganization of Public Funds.

Reorganization in the management of public funds, amounting to approximately 1.5 billion gold marks, is progressing. Control will be vested mainly in the Reichsbank, directly or indirectly, in order that the bank of issue may strengthen its control over the money market. At present the Reichsbank has available 90,000,000 marks from capital account, as well as 400,000,000 marks, approximately half of current deposits, as a basis for credit expansion. Preferential treatment to finishing and export industries has been promised by Doctor Schacht, president of the Reichsbank, who has estimated present German operating capital as one-fifth to one-sixth of the pre-war amount.

Netherlands Industry Maintains Satisfactory Trend

Based on cable from Commercial Attaché F. W. Allport, The Hague, April 17, with cooperation of Consul E. A. Dow, at Rotterdam

Business in the Netherlands, as indicated by the Utrecht fair, is still at a very satisfactory level, especially for textiles and foodstuffs. The easy money conditions prevailing for some time past seem likely not to last much longer, the evidence appearing as rising money rates, reluctance of the investment market to absorb recent private issues, and the fact that for the first time this year a Treasury issue has been undersubscribed.

Tightening Influences in Money Market.

Among the tightening influences in the money market are the change in the discount policy of the Central Bank, the carrying out of quarterly payments, and the refunding of the Indies debt. The private discount rate on 90-day paper advanced to $3\frac{1}{8}$ per cent on April 11. The fact that the March issue of Treasury bills has been undersubscribed is attributed chiefly to the expectation of an early advance in rates. Security issues have been less readily subscribed recently, with the exception of the Netherlands portion of the 8 per cent loan to the State of Sao Paulo, Brazil, amounting to \$15,000,000. The issue was offered simultaneously in New York and The Hague, with \$1,500,000 allotted to the latter market. Trading on the Amsterdam stock exchange has been dull during the past month.

Commercial Failures Unchanged—Government Revenues Decline.

Commercial failures in the Netherlands from January 1 through April 9 numbered 1,233, a decline of 7 as compared with the same period of last year.

Clearings in the Netherlands Bank amounted to 2,200,000,000 guilders during January, 1925, as compared

with 2,100,000,000 guilders last year. The statement of the Netherlands Bank shows few changes from the March situation. Note circulation and reserves showed a slight advance in the statement for April 6.

Government revenues declined to 33,300,000 guilders during February, as compared with 41,000,000 guilders in January, due to lower returns from bicycle, land, and personal taxes.

Advance in Prices Causes Demand for Increased Wages.

The publication of an index figure showing advanced retail prices during February has been followed by a demand for increased wages on the part of laborers. Wages in the clothing industry have recently advanced 5 per cent, and a similar increase is probable in the brick industry. Painters and masons are striking for a wage increase. Miners' wages were cut 5 per cent on April 1 as a result of unsatisfactory conditions in the industry that were attributable in part to competition from German coal. A decline in the wholesale-price index for February suggests the possibility of an early recession in retail prices.

Textile Industries Stronger.

A wool trade-financing company was recently formed at Amsterdam with a capital of 500,000 guilders. Cotton spinners and weavers are aided by steadier quotations on raw materials and are for the most part well supplied with orders. The demand for piece goods is satisfactory, and the export situation has been improved by increasing orders from the Strait Settlements. Grain shipments to Russia are continuing.

Increased Exports to the United States.

Consul Dow at Rotterdam reports that exports from his district to the United States in the first quarter of 1925 were considerably greater than in the corresponding period of 1924, amounting to \$4,700,000 as against \$3,200,000. Leading items in the trade are block tin, valued at \$1,520,000; pig iron, \$227,000; paper rags, \$221,000; fresh herring, \$136,000; and lithopone, \$113,000.

French Exports Continue to Exceed Imports

Based on cable from Trade Commissioner Daniel J. Reagan, Paris, April 18

French exports in the first quarter of 1925 aggregated 7,883,000 metric tons, with a value of 10,920,000,000 francs, and imports totaled 11,440,000 metric tons (of which coal constituted 6,114,000 tons), with a value of 9,826,000,000 francs. The principal classes of exports were foodstuffs, with a value of 875,000,000 francs; raw materials, 3,035,000,000 francs; manufactured articles, 6,535,000,000 francs; and parcel-post packages, 475,000,000 francs. Leading import classes were foodstuffs, valued at 1,780,000,000 francs; raw materials, 6,738,000,000 francs; and manufactured goods, 1,308,000,000 francs.

FAR EAST

H. A. Butts, Acting Chief, Far Eastern Division

Australian Exports Set New Record

Based on cable from Trade Commissioner E. G. Babbitt, Melbourne

The Australian economic outlook is showing steady improvement with the clearing of crops. The financial situation is sounder; savings deposits are increasing with regularity, and farmers are clearing up old indebtedness incurred during the past few years. Local

trade is generally quiet, and there is some tendency toward unemployment, which is largely seasonal. The wheat market remains unchanged, with prices at seaboard averaging about 5s. 9d. per bushel.

Sterling-dollar exchange shows little change from last month—standing at \$4.80 for buying and \$4.77 for selling. Bank clearings from January 1 to March 30 were \$187,511,000 for Melbourne and \$223,454,900 for

Sydney, a considerable increase over clearings for the same period last year.

Import and Export Statistics.

Exports during February set a new record for the Commonwealth. For the eight months ended March 1 exports amounted in value to £109,911,000, as compared with £80,529,500 during the same period of 1923-24, and were about \$28,605,000 greater than for the corresponding period of 1922-23. Imports for the same period of 1924-25 totaled £100,673,000—\$4,974,000 greater than for the same period in 1923-24 and \$11,574,000 more than during the corresponding period in 1922-23. The trade balance for the eight months ended March 1, 1925, was favorable by £9,238,000.

Export Movement of Commodities.

Detailed review of February exports from the Commonwealth in comparison with those of February a year ago shows a large increase in wheat shipments—£6,792,000 in 1925 as against £2,473,000 in 1924. This means a gain of very nearly 200 per cent which was caused by the splendid wheat harvest. Flour exports in February, £661,000, were larger than in 1924 in the corresponding month by £190,000. Butter to the amount of £1,139,000 was exported as against £947,000 for the same product in February, 1924, and shipments of dried and canned fruits were larger by £10,000. Wool shipments, however, were decidedly below those for February, 1924, due largely to the sales curtailment plan, the object of which is stabilization of prices which had been showing a marked tendency to sag. There were no sales in the week April 13 to 18 and prices are unchanged. Exports for the month were valued at £7,098,700 for wool in the grease as compared with £8,224,000 in February, 1924; scoured wool, £510,000 as against £130,500 a year earlier; and wool tops £121,900 as £130,500 February, 1925, and 1924, respectively. Wool exports for the 9-month period July 1 to March 31, 1925, aggregated 1,398,000 bales, while those for the similar period of 1923-24 were 1,409,000 bales. On the basis of receipts in store, wool production for the 1924-25 period, according to the Pastoral Review, was 1,938,000 bales as compared with 1,607,000 bales in the nine months of the preceding year.

Imports Show Gains in Many Lines.

Cable figures on special items show Australia to have imported in February motor chassis to the value of \$651,000 (£869,000 in 1924); motor bodies, \$65,000 (£100,000 in 1924); motor cycles, etc, £75,000 (£63,000 in 1924). Imports of dressed timber, £181,000; cotton and linen piece goods, £715,200; corn and flour sacks, £145,700; and petroleum spirits, £555,000; all show increases, especially the last named, while undressed timber and woollen piece-goods imports were less than in February, 1924.

The February commodity index number was, wholesale, 1625; retail, 1739, a somewhat seesaw movement compared with figures for January—1633 and 1726.

Trend of Japanese Trade and Financial Conditions

Based on cable from Acting Commercial Attaché Frank Rhea, Tokyo

Commercial conditions in Japan during March were characterized by unprecedentedly heavy imports accompanied by declining exports, increased credit stringency, heavier stocks of import and export commodi-

ties, and smaller shipments of raw silk. These unfavorable factors were partially balanced by a steady upward tendency in Japanese exchange, a marked decline in living costs, and continued heavy production of cotton yarns and textiles, the principal manufactured products.

Heavy Imports and Smaller Exports During March.

Owing principally to large arrivals of raw cotton, March recorded the heaviest imports in the past four years, the total for the month having been 313,500,000 yen. The month's exports of 151,400,000 yen were 13,000,000 yen less than in February, there having been a substantial drop in shipments of raw silk, the leading export commodity. The excess of imports, aggregating 162,100,000 yen, brings the total for the first quarter to 362,965,000, against 483,197,000 for the corresponding period of 1924.

Preliminary returns for the first 10 days of April show exports of 53,000,000 yen and imports of 84,000,000. In comparison with the corresponding period of March there was an increase of 20,000,000 in exports, attributable largely to larger shipments of raw silk and cotton textiles. Imports, on the other hand, declined 2,000,000 yen as a result of smaller arrivals of raw cotton, lumber, wool, and iron and steel products.

Shipments to the United States during March, as declared at the five leading American consulates in Japan, were valued at \$25,300,000, according to Consul General Nathaniel B. Stewart, Tokyo. Figures for the port of Nagoya are not included in this total. The most important shipments during the month were: Raw silk, \$20,600,000; chemicals and drugs, \$793,000; waste silk and silk textiles, \$269,000; and cotton piece goods, \$329,000.

Trade with China continued favorable during March. Exports to that country amounted to 47,166,000 yen, while imports reached 24,887,000, bringing the total for the first quarter of the year to 123,374,000 and 91,391,000 yen for exports and imports, respectively. This reverses the unfavorable balance against Japan in the corresponding period of 1924, when exports to China (including Kwangtung Leased Territory) totaled 93,204,000 yen and imports 131,172,000.

National Debt Increases—Note Issue Smaller.

The national debt of Japan at the end of March amounted to 4,328,000,000 yen, of which 2,822,000,000 represented domestic and 1,506,000,000 foreign obligations. In comparison with the previous month there was an increase of 82,000,000 yen in domestic loans and a decline of 8,000,000 in foreign indebtedness. In addition there were outstanding at the end of March 533,000,000 yen in special treasury bills and 31,800,000 in rice notes.

The total note issue at the end of March amounted to 1,430,000,000 yen, of which 1,261,000,000 represented notes of the Bank of Japan and 23,000,000 Government small notes. In comparison with February there were declines of 12,000,000 yen in total notes outstanding, 9,000,000 in Bank of Japan notes, and 1,000,000 in Government small notes. None of the totals includes notes of the Bank of Japan held for the retirement of outstanding notes of the Bank of Chosen, which amounted to 27,500,000 and 27,000,000 yen at the end of February, and March, respectively.

Advance in Exchange—Lower Money Rates Expected.

One of the most important developments of the month was the advance in Japanese exchange, New

York quotations for telegraphic transfers having reached a high of \$0.4180 and an average for the month of \$0.4096, compared with a high point for February of \$0.3973 and an average of \$0.3906. This gain has been maintained through the first part of April, in spite of the continued adverse balance of trade. The uncertainty of a continued advance in quotations is having a tendency to slow up exports and is also affecting imports, since buyers are awaiting further advances.

The failure of one of the largest Japanese firms during the latter part of February has caused banks to restrict credit accommodations, thereby limiting import commitments, particularly in cotton and lumber. This situation has been aggravated by the controversy in regard to responsibility for deliveries made to this country. It is probable that this tightness of credit accounts for the rumors in regard to cancellation of orders for import materials. In order to correct this situation the commercial rediscount rate has been reduced to 7.30 per cent and the Government tax on excess note issue of the Bank of Japan from 7 to 6 per cent. Representative opinion in Toyko is agreed that this will result in lower money rates on the Japan market.

Report of Japan Hypothec Bank—Other Finance.

The report of the Japan Hypothec Bank shows capital expenditures during March of 79,600,000 yen, of which 65,400,000 represented Government loans and 14,200,000 capital-stock issue. There were no municipal loans or industrial and commercial debentures issued during the month. All of the above totals show substantial declines in comparison with the previous month.

Greater commercial activity is apparent from bank clearance, which totaled 6,589,000,000 yen in March, against 5,883,000,000 the previous month. The open-market discount rate ranged from 8.03 to 9.10 per cent in March, compared with 7.70 to 9.10 per cent in February. Postal savings at the end of March aggregated 1,102,000,000 yen, there having been no change in comparison with the previous month.

Living costs continue to decline, the Bank of Japan's index number for March being 270, against 278 for February and 283 for January.

Heavy Cotton-Yarn Production Encouraging—Raw Silk—Raw Cotton.

An encouraging feature of the present situation is the continued heavy production of cotton yarns. The report of the Japan Cotton Spinners' Association showed an output of 196,000 bales in March, a decline of only 1,000 from the high point recorded in February. Consumption, however, is not keeping pace with production, the report of warehoused stocks in Kobe, Osaka, and Yokohama showing a total of 24,000 bales at the end of March, against 19,000 the previous month.

Raw-silk shipments during March aggregated 19,000 bales, of which 13,800 were from Yokohama and 5,200 from Kobe. In comparison with February the total showed a drop of 11,500 bales. Shipments to the United States during March amounted to 18,900 bales, compared with 30,300 in February.

Arrivals of raw cotton in February totaled 1,398,000 piculs (186,353,400 pounds), compared with 915,000 piculs (121,969,500 pounds) during January. March shipments are expected to exceed the February total. In consequence of this remarkably large import

there has been a sharp increase in warehoused stocks in Kobe, Osaka, and Yokohama; the total for the close of March being given as 377,000 bales, against 266,000 at the end of February and a low point of 96,000 at the end of December, 1924. Consumption of raw cotton during February, as reported by the spinners' association, amounted to 10,700,000 kwan (88,456,900 pounds)—an increase of 300,000 kwan (2,480,100 pounds) over the January figure.

Warehouse Stocks Reported by Mitsubishi.

The Mitsubishi report of warehoused stocks in Japan at the close of March shows a total valuation of 613,000,000 yen, against 538,000,000 one month earlier. The most significant changes during March were increases in stocks of cotton textiles, cotton, woolen, and silk yarns, sugar, raw cotton, wool, and wheat, and declines in rice and cocoons.

The following table gives the stocks of principal commodities for the past two months:

Warehoused stocks at end of February and March, 1925, as reported by Mitsubishi

Items	End of—	
	February	March
	Yen	Yen
Rice:		
Domestic.....	15,000,000	16,000,000
Taiwan.....	4,000,000	2,000,000
Chosen.....	15,000,000	12,000,000
Foreign.....	27,000,000	28,000,000
Wheat.....	12,000,000	18,000,000
Beans.....	9,000,000	7,000,000
Other grains.....	2,000,000	1,000,000
Sugar:		
Raw.....	18,000,000	29,000,000
Refined.....	11,000,000	16,000,000
Textiles:		
Silk.....	700,000	600,000
Woolen.....	38,000,000	41,000,000
Cotton.....	22,000,000	32,000,000
Raw cotton:		
American.....	16,000,000	29,000,000
Indian.....	9,000,000	17,000,000
Other.....	10,000,000	11,000,000
Yarns:		
Cotton.....	10,000,000	12,000,000
Woolen.....	17,000,000	20,000,000
Silk.....	85,000,000	46,000,000
Paper:		
Japanese.....	500,000	400,000
Foreign.....	16,000,000	16,000,000

Rubber, raw and manufactured.....	1,300,000	700,000
Dyes, paints, etc.....	16,000,000	17,000,000
Tobacco.....	9,000,000	10,000,000
All other.....	107,500,000	107,300,000
Total.....	538,000,000	613,000,000

China Trade and Markets During March

Based on cable from Commercial Attaché Julean Arnold, Peking

The cautious attitude of both native and foreign buyers is hindering improvement in the important China markets, although there is a hopeful undertone in all lines of business. Poor transportation facilities, and the imposition of new taxes on many of the staple products in the various Provinces, have adversely affected business during the past month. The placing of a tax on kerosene by the Canton government has caused all foreign companies in that district to suspend sales of petroleum products. However, it is generally predicted that the pressure being brought on the local government by the Chinese citizens will cause a repeal of this act within the near future.

Trade in Yangtze River Region.

Exports from the Yangtze River region were slightly less active during March. The declared exports from Hankow to the United States show a gain of 5 per cent compared with the same period last year. Imports into Hankow, however, were dull, consisting of small amounts of machinery, kerosene, metals, indigo, piece goods, and yarn. An indigo price war is in progress between German and American brands, the American indigo meeting all competition.

General Business in Shanghai More Active.

General business in the Shanghai district is more active, in spite of current rumors of impending trouble between the various military factions. Inquiries from the interior are still restricted and import stocks are moving slowly. The silk market is quiet, with no particular features. Machinery inquiries are more numerous, and several fairly large sales have been made during the past month. The automotive market continues to show improvement, with large imports in March. The Shanghai piece-goods market is unsteady, and heavy cargoes await shipment to interior points. Auction sales from March 6 to April 2 amounted to 135,000 pieces. The low native interest rates have resulted in considerable speculation in the Shanghai piece-goods market. The paper market has been steady and heavy orders have been placed for delivery in May and June. Activity in the iron and steel markets has been limited to special jobs.

Arrivals of export commodities show some improvement, although the demand from both Europe and America has been slack. Supplies of bristles are fairly plentiful, with sellers' prices 15 per cent above offers. Strong prices and heavy stocks feature the market for hides and skins. With only necessary building being done the lumber business is quiet. Orders were less than had been anticipated and the attempt to sell small lots at auction failed. The feathers market is dull, with a disparity of 10 to 12 per cent between buyers and sellers. Since the Shanghai price for peanuts is considerably higher than that in Tsingtao, little business is being done. Shanghai stocks of peanuts are approximately 300 tons.

Shanghai Bank Stocks Large—Trade in Tientsin.

Shanghai bank stocks on April 2 amounted to 130,158,000 silver dollars, of which 75,784,000 dollars were held in foreign banks. The stocks are about 43,000,000 dollars above the holdings for the same period last year. The money market is dull, with native interest rates at about 10 per cent.

In Tientsin import receipts of the Maritime Customs for March amounted to 316,000 Haikwan taels, compared with 275,000 for the same month last year. The yarn market is dull and Tientsin mills are now operating at approximately 60 per cent capacity. Flour mills are operating at only about 10 per cent capacity, owing to the shortage of wheat supply and high wheat prices. The prolonged negotiations between the Tientsin municipal council and the Chinese Government Telephone Administration for the extension of the Tientsin telephone plant and lines are apparently nearing conclusion. German firms are offering automatic equipment for this project at a very low price.

Improved Conditions in South Manchuria.

Conditions in South Manchuria are generally favorable. The continued depreciation of paper-note exchange for silver is causing some limitation in trade.

However, official measures are being taken to correct this situation. After careful study of conditions in Mukden the Hongkong-Shanghai Banking Corporation is considering opening a branch there, and it is reported that the Russo-Asiatic Bank may also have a Mukden branch.

The sale of American agricultural implements has been fair the past month. There have been sales of two road tractors with trailers, one farm tractor threshing outfit, and other farm implements in North Manchurian Territory.

Declared Exports to United States Larger—Maritime Customs Revenues.

The total value of declared exports to the United States from China during February amounted to \$15,025,000, while the declared exports from Tientsin, Canton, Hankow, Dairen, and Mukden for March totaled \$9,703,000. The principal exports in March from the above-mentioned ports were: Bristles, \$110,000; carpet rugs, \$382,000; cotton, \$412,000; furs, \$1,403,000; hides and skins, \$764,000; raw silk, \$1,411,000; waste silk, \$291,000; and raw wool, \$2,696,000.

The net maritime customs revenues for all of China during March were approximately 4 per cent larger than they were for the same period in 1924.

Market Conditions in India.

Cable from Assistant Trade Commissioner E. G. Sabine, Bombay

The finance bill, which provides for increasing the limit of currency issue in India from 850,000,000 to 1,000,000,000 rupees, has been passed in its original form. Its passage and the terms of the Indian debt clause are reacting favorably upon government securities. Das, the leading figure of the Swaraji party, is repudiating violence as a means of obtaining self-government, and his recent discussions with Viscount Birkenhead, Lord Chancellor of Great Britain, augur well for the future political situation.

Money Market Steady—Other Finance.

The money market is steady and trade demands have lightened. Improvement in the affairs of the Imperial Bank indicates that the 7 per cent discount rate adopted in January will not be exceeded this year, although the necessity for financing rabi crops eliminates the prospect of any immediate lowering of the rate. The Imperial Bank's percentage of cash to liabilities on April 3 was 17.39. Short-term borrowers are plentiful, and heavy demands are being made for financing large bullion stocks.

Exchange eased off slightly, due to the absence of export bills, but closed with a firmer tone because of support afforded by Rangoon and Calcutta export bills. Government announcement of suspension of the sale of council bills is exercising a steadying effect upon the money market and the general opinion is that this improvement will continue. The gold offtake is gradually reducing the surplus which has characterized this commodity since the first of the year. An eight-week supply is visible and the gold market is firm. The price of silver is advancing sharply and rumors are current that a bull syndicate is endeavoring to corner the supply in anticipation of April settlements.

Total revenue from April, 1924, to March 31, 1925, inclusive, amounted to 490,000,000 rupees, as compared with 410,000,000 for the preceding fiscal period.

The stock market showed strength during the month but closed quiet, with limited business. The February share index indicated enhancement in values, particularly in bank stocks and railway, electrical, and miscellaneous issues.

Cotton Situation Reported—Jute.

Indian cotton has experienced a steady decline, influenced doubtless by favorable American crop reports. Europe and China are buying in small lots, but Japanese buyers are inactive. Local mills are also purchasing in a hand-to-mouth fashion, due to slack demand for yarn and cloth. There is as yet no active demand for cotton piece goods, but a better feeling is anticipated because of increasing rabi crop harvests, which will put more money into circulation. Japanese goods are cheaper, particularly drills and shirtings. Yarn prices are declining and there is very little demand. While three Bombay cotton mills have closed, there is no necessity for alarm, as this is merely indicative of March 31, end-of-the-year conditions, which sometimes result in forcing the weaker companies to the wall. Mills continue to complain of severe Japanese competition.

The market for hessians is quiet, with speculators doing some forward business. There has been good inquiry for loose jute at advancing rates. World stocks of jute in the hands of manufacturers at the end of March were estimated to be equivalent to five months' consumption, as compared with six months at the same time last year. This lowered supply is partly responsible for the present strength of the market. Prospects for the new crop are bright, but rain is needed to assure realization. Jute clearances from Calcutta and Chittagong, July, 1924, to February, 1925, amounted to 30,011 bales, practically the same as those of the corresponding period a year earlier.

Shellac Business Restricted—Hides and Skins.

The shellac business is restricted, pending arrival of the new crop, which is due in another fortnight. Forward sales, usually prevalent at this time of year, are negligible, due to the steady price of the raw article and to unsatisfactory foreign offers, with the result that prices have declined slightly.

Stocks of hides and skins are small and the market dull, with a tendency to weakness, due to decreased demand and unfavorable London auction results. Raw goat skins registered a sharp decline and European-American inquiry is slack. This situation may cause local tanners to buy.

Tea Prospects Favorable—Other Commodities.

Indian tea crop prospects are favorable, with first sales due in June. There is improved demand for Colombo teas of all grades, and prices are advancing, particularly for second-grade broken. There is some agitation against overproduction by coarse picking.

Rangoon paddy arrivals are brisk, stocks heavier, and prices slightly easier. Heavy, clean shipments are anticipated this month. About half the Burma supply of rice has been marketed.

Wool prices are unchanged. Chemicals are quiet and declining. Sugar is steady and improved, with stocks lighter. Wheat is steady, with good business passing. Linseed is moderately quiet.

Iron and steel are in fair demand. The automobile business is seasonably active. Increasing competition with lower-priced British cars is requiring the keen attention of American manufacturers. Petroleum

prices in Bombay, as well as throughout other parts of India, have been reduced.

The outlook for American machinery imports is good, especially for mining, rice milling, electrical, and agricultural machinery. As compared with 1923, last year's total imports of mill engines showed an increase of 50 per cent, and a gain of 14 per cent was recorded for mining-machinery imports.

The Easter and Hindu holidays slowed down business generally and bazaar lines are quiet, but improvement is looked for by the end of April.

Philippine Trade Movement

Cable from Assistant Trade Commissioner E. B. George, Manila, April 20

March import business of the Philippines in general fell slightly below the February level. Leading export prices were still fairly high, but the volume of business was reduced. Collections in the abaca districts were still inclined to lag somewhat and were slower in the copra districts.

Leading Export Crops Favorably Situated.

Sugar grinding proceeded steadily during the month. Expectations of a bumper crop are being realized and prospects for the 1926 crop have improved. Reliable estimates, however, are not yet available.

Abaca prices for United States grades advanced again in early March to almost a record height, grade F reaching 56 pesos per picul. Later in the month prices declined, on account of the unwillingness of New York and London to meet the market, and also because of increased production.

Except for a brief rally in the early part of March, copra prices declined slowly, but steadily. Local mills are believed to have reduced operations to the absolute minimum, pending an additional drop in copra values to a point commensurate with oil prices in the United States. Representatives of American mills are also very cautious. Dried copra is now quoted at 12.5 pesos per picul (of 139 pounds).

Imports of Flour and Canned Goods Heavy.

Imports of flour in March were greatly in excess of those of the previous month. Of the total of 280,000 sacks imported, 240,000 were of American origin. Consumption was still somewhat slack, chiefly on account of high local prices. Stocks of all brands of flour remain in the neighborhood of 500,000 bags. Importers and dealers are doing little or no indenting.

Arrivals of 44,000 cases of sardines probably increased the stock supply to at least 60,000 cases. Consumption, however, remained normal. Imports of canned salmon also advanced considerably in March, arrivals totaling 26,000 cases against 16,000 in February. Local salmon prices were comparatively low and consumption increased, so that stocks are not considered particularly heavy.

Tire dealers reported moderate improvement over February business and early April continues favorable.

Textile business was active the first half of March on account of dealers' preparations for the Easter trade, but thereafter was comparatively quiet. The market is now well stocked in most seasonable lines.

Exchange and Banking.

The banks' selling rate for telegraphic transfers is now 1 1/8 per cent premium, although the treasury con-

tinues to sell at $\frac{7}{8}$ per cent premium. Banks have succeeded in somewhat reducing their peso holdings by buying exchange at cut rates, but the supply is still ample and is partially responsible for the continued strength of the dollar. Over \$500,000 worth of exchange was sold by the Insular Treasury on New York during March.

The insular auditor's statement of March 28, covering all Manila banks, showed total resources of 246,500,000 pesos (\$123,250,000); loans, discounts, and overdrafts, 138,000,000 pesos (\$69,000,000); investments, 24,500,000 pesos (\$12,250,000); deposits, 29,250,000 pesos (\$14,625,000); and working capital of branches of foreign banks in Manila, 15,200,000 pesos (\$7,600,000).

Business and Crops in the Hawaiian Islands

Based on cable from Ernest B. Clark, secretary Honolulu Chamber of Commerce, April 20

Tourist travel is heavy in Honolulu and general business conditions are normally good. Real estate is fairly active, but the stock market lacks animation. The automobile business is flourishing, 531 machines having been sold in Honolulu during the past 30 days.

Sugar Crop Favored by Weather—Pineapples.

Good rains have fallen throughout the Territory during the past 30 days, resulting in great benefit to agricultural interests, particularly sugar-cane growers. Moisture did not interfere seriously with harvesting the 1925 sugar crop. Shipments of sugar this season totaled 273,700 short tons, and about 100,000 tons now await shipment at island ports. Total manufactures of raw sugar to March 31 amounted to 332,600 tons, with 92,100 awaiting shipment. The sugar crop is still expected to approximate 700,000 short tons.

Recent weather has not been as favorable for the pineapple crop as for sugar, and the acre yield of this product is not expected to be so high as it was last year, when the pineapple pack ran about 6,500,000, the largest in the history of the industry.

Dutch East Indian Business Satisfactory

Cable from Assistant Trade Commissioner Charles P. Goodhue, Batavia, April 20

The general situation of Netherlands India remained practically unchanged in March, the import trade continuing its slow improvement, with stocks of most lines well proportioned to demand. Business failures diminished, but credits were slightly tighter, due to one notable failure.

Textile Import Trade Accelerated.

In the leading import markets textile sales of native weaves from importers' stocks were excellent throughout March, though somewhat slower in early April. The retail textile trade was especially stimulated by the native new year celebrations.

Among other imported articles, sales of machinery and estate supplies were seasonally dull; metal stocks were light and business was fair; and the sale of food products, including canned goods, was normal, and stocks were light.

Export Trade Seasonally Dull.

The islands' export trade was seasonally dull, and prices of agricultural products, except rubber, were

generally lower. Rubber prices advanced and the market continued strong. Citronella, tea, coffee, tapioca, and pepper were dull. Kapok and rice market conditions improved. Sugar prices for the 1925 crop were better. Crop predictions for both sugar and rice are now optimistic. Sugar grinding has begun with the operation of three mills.

Activities in the tin market declined in March. February exports of tin totaled 1,292 tons, an increase of nearly 400 tons over January.

Exchange Steady—Banking Statement.

Exchange on the dollar remained steady in March. The current rate (April 20) is \$0.3968 to the Java florin.

Chief features of interest in the Java Bank's report of March 28, compared with that of February 28, were decreases in loans on merchandise of 5,000,000 florins (\$1,984,000); loans on shares of 900,000 florins (\$357,120); and private current accounts of 1,400,000 florins (\$555,520). An increase of 1,600,000 florins (\$634,880) was noted in commercial acceptance bills discounted, and of 300,000 florins (\$119,040) in bills receivable abroad.

Improvement in British Malayan Trade

Cable from Vice Consul Hugh S. Miller, Singapore, April 20

Business conditions of British Malaya in March improved over January and February of this year, and trade was better than any month, with the exception of December, 1924. Increased activity of American manufacturers was manifested by the arrival of larger numbers of representatives seeking new connections.

Total March exports were valued at 73,529,000 Straits dollars and imports of 68,485,000 dollars left a favorable credit excess of 5,044,000 dollars.

Tin Exported—Exchange Tendency Upward.

Total exports of tin in March amounted to 4,035 long tons, 63 per cent of which went to the United States, 22 per cent to the United Kingdom, and 15 per cent to continental Europe. The price of tin averaged for the month 129.75 Straits dollars per picul of 133 $\frac{1}{2}$ pounds.

Exchange value of the Straits dollar showed an upward tendency, with a high rate of \$0.55 $\frac{1}{2}$ and a low rate of \$0.55 $\frac{1}{4}$ on the gold dollar.

New Zealand Situation Favorable

Based on cable from Consul W. L. Lowrie, Wellington, April 18

Considerable improvement has been shown in New Zealand during the past month. Agricultural conditions were favorable, shipping and coal-mining disputes were settled, and the epidemic of infantile paralysis abated considerably. Improvement has taken place in the retail trade and real estate is active. Better railroad services are resulting in increased revenues.

Imports during March reached the value of £4,270,000, against exports amounting to £7,800,000, giving a favorable trade balance of comfortable proportions. Of the imports, £2,400,000 came from the United Kingdom and £600,000 from the United States, while exports to the value of £6,000,000 went to the United Kingdom and £650,000 to the United States.

FOREIGN MARKETS FOR AMERICAN PAPER

Changing Conditions in Competing Countries Offer New Opportunities

O. M. Butler, Acting Chief, Paper Division

The lack of interest in foreign markets on the part of many American paper manufacturers is not easy to understand when considered on a strictly commercial basis. The reason usually advanced, that the American product can not compete with the low prices quoted by foreign manufacturers, is not a wholly accurate statement of fact. Official declarations covering definite merchandise show that \$2,000,000 worth of American paper is sold abroad each month by American manufacturers and their agents.

Effect of 1921 Conditions on American Industry.

Unfortunately, the opinion of many manufacturers concerning foreign markets was formed during the depression of 1921 that immediately followed the inflated prices and abnormal demands of 1920. In addition to the necessity of reducing production costs and domestic prices to a point that seemed ruinous compared with those prevailing in 1920, American manufacturers began to be underquoted abroad by the European mills that were then reentering the market after a period of inactivity caused by the war.

The paper industry throughout the world was affected by a variety of exceptional circumstances in 1921. The wage scales demanded by labor, as well as prices asked for raw materials and other items entering into the cost of the finished sheet, were more guesswork resulting from lack of information than definite values based on well-balanced commercial considerations. In a very few countries production costs were excessively high; in most others they were far lower than actual conditions warranted.

American Production Costs Highest.

The United States was the outstanding example of the former group of countries. Paper production costs during the war had kept pace with advancing prices in general, and the resulting high prices demanded for American paper were still further increased in foreign markets by the high exchange value of the American dollar. Notwithstanding this, little other paper was obtainable, and record shipments at peak prices continued until about the end of 1920.

European Costs Slow to Advance—Condition Temporary.

The continued activities of American industry during the war had enabled it to adjust itself as the occasion arose to changing conditions and prices, but when production was resumed in Europe after several years of idleness it was not likely that all interests concerned would understand immediately just how much the changed conditions would affect their particular commodity or exactly what those changes were. The natural tendency of labor and suppliers of pulp wood and other raw materials, as well as the mill owners themselves, was to consider values in the light of pre-war prices.

The advantage of the low production costs that followed as a result of low-priced labor, raw materials, and other items entering into the cost of the finished sheet was in most instances still further exaggerated by exchange rates when the product was offered for sale in other countries. This extreme situation was only temporary, however, and could not continue, for it was the result of a false understanding of true value

and a failure to realize the practical effects of new price levels.

Upward Trend Evident in 1921 Continues.

An examination of market reports published in the various trade journals abroad and of the special reports that have been received here clearly indicate that the outstanding characteristic of the paper industry of Central Europe and Scandinavia during the past three years has been one of adjustment to new conditions. This adjustment has not been without fluctuations which were to be expected as a result of temporary circumstances, but the general trend has been steadily upward and indications are that it will continue to rise until true values are reached.

German Costs Advance.

The paper industry of Germany may be regarded as an example of the adjustment that has been and still is taking place abroad. During 1921, with little demand at home, a depreciated exchange, low production costs, and the need of ready money, German offers in foreign markets were often in the nature of forced sales, and quotations were in many instances considerably under production costs in the United States. There was, however, no regularity in the prices quoted which varied with the immediate situation and necessities of each mill and all branches of the industry in Germany complained that operations were carried on at a loss.

The last months of 1921 and the year 1922 saw substantial increases in all the more important items that enter into the cost of production. A coal shortage was accompanied by a lack of pulp wood which it became necessary to import from Czechoslovakia and Finland at constantly increasing prices. At the same time, workmen demanded higher wages and somewhat later general freight rates were increased 100 per cent to meet the railway deficit.

These advances continued during 1923 and by June of that year newsprint prices were more than 60 per cent greater than those quoted at the end of 1922. As production costs approached world levels, advances became more gradual but continued. On August 1, 1923, No. 1a unbleached sulphite was quoted in Germany at \$2.82 a hundred pounds. This price with some fluctuations had advanced to \$3 by December, 1924, and to \$3.05 by February, 1925.

German Domestic Demand Increases with Industrial Recovery.

During the earlier years of this period, the depreciation of the mark and unsatisfactory industrial conditions generally throughout Germany limited domestic demand and forced the making of unprofitable sales abroad. A substantial improvement in domestic demand occurred, however, during 1924 and, despite an increase in production of approximately 16 per cent, compared with 1923, exports decreased by slightly less than 50,000 tons. As Germany is not yet consuming its pre-war quotas and reports continue to be received that high wages, freight rates, and prices of raw materials are forcing production costs to a point where it is increasingly difficult to compete abroad, there is reason to believe that still greater proportions of the German output will be absorbed locally.

Costs Increase in Norway and Sweden—Labor Troubles.

In a similar manner, the paper industry throughout Europe has been faced with constantly increasing production costs and manufacturers in all the more important producing countries are often forced to sell at prices that bring little or no profit. Norway and Sweden have been particularly subject to the increasing demands of labor which have resulted in several strikes and lockouts. The most recent of these was the lockout in Sweden which ended on March 28 of this year with a new agreement that adds approximately 4 per cent to the wage scale. The existing wage agreement in Norway, which resulted from the dispute of 1924 and conceded a minimum wage and fixed supplement to workers, was made for a period of one year ending August 1, 1925. It is reported that the situation is regarded with uneasiness as the continued rise in general price levels may lead to a demand for still further increases.

Higher Prices in Czechoslovakia and Austria.

Reports from Austria and Czechoslovakia indicate that the mills in those countries also have been running on an extremely low margin of profit when not operating at an actual loss. Prices in Czechoslovakia during 1924 showed the upward trend observable in the other paper producing countries, and, although a slight reduction occurred on the domestic market following the trade convention with Austria, quotations at the beginning of 1925 were reported to be more than 10 per cent above prices ruling on the Hamburg market.

Favorable Prospects for American Paper Abroad.

For these reasons any estimate of possibilities in foreign markets based on conditions as they have

existed during recent years is not well founded. Among the numerous items produced by the paper industry of the United States some products have better chances than others of competing in foreign countries. A slight general increase at present in foreign production costs puts certain items manufactured abroad on a price level with the American product and brings other items nearer to those levels. During such a period of readjustment, the manufacturer who does not keep informed concerning conditions affecting the sale of his product in other lands is apt to overlook markets that are well worth while.

Foreign Markets That Balance Production Can Be Developed.

An export trade, in addition to the direct profits derived, provides an outlet that tends to balance production during periods of depression in the domestic market. Most paper manufacturers have realized this but questioned the possibility of competing abroad. The changes that have occurred, however, and indications of still further changes in the competitive situation of foreign producing countries, are of such importance that a proper attention to opportunities for greater development of their interests demands that American paper manufacturers give careful consideration to possibilities in foreign markets under conditions as they are at present and that they keep informed concerning other changes that seem likely to take place in the future. In this way, the majority of American manufacturers of paper and paper products should be able to develop an additional market for their products that is both profitable in itself and serves as an aid to uniform production.

THE EXPANSION IN JAPAN'S FOREIGN TRADE DURING 1924

Larger Export and Import of Important Commodities—Marked Fluctuation in Monthly Trade—United States Supplied a Larger Share of Japan's Imports than in 1923

Paul P. Steintorf, Far Eastern Division

The foreign trade of Japan was subjected to a number of abnormal and unusual influences during the greater part of 1924. The consequences of the great earthquake of September, 1923, affected both imports and exports to a marked extent. Imports were favorably influenced by the demand for reconstruction materials, and by the temporary duty exemptions which were in effect during the first three months of the year, while exports were hindered by the temporary dislocation of the country's industrial and commercial structure following the disaster.

Effect of Exchange Changes on Trade.

Another factor of paramount importance was the unprecedented decline in Japanese exchange. New York quotations for telegraphic transfers fell from a high of \$0.461 on January 18 to a low of \$0.3794 on October 10; and the average for the year was \$0.4119, against a par of \$0.4985 and an average for 1923 of \$0.4850. This naturally tended to curb imports and stimulate exports although its influence was largely obviated by the pressure of reconstruction requirements and by the tendency of export buyers to withhold orders pending further declines in exchange. The most important effect of the exchange situation, however, was the inflation of valuations expressed in yen,

which renders comparisons with previous years by values a somewhat inaccurate index of volume.

Marked Fluctuations in Monthly Trade.

During the first quarter of the year, when the country's industries were struggling to replace earthquake damages, there was a sharp decline in exports. During the remainder of the year, however, there was a marked upward tendency, with the exception of a seasonal decline in June and July, owing to the recovery of productive capacity and the stimulating effect of the decline in exchange. Imports, on the other hand, rose to unprecedented levels during the first three months of 1924 but declined sharply during the period from April to September, after which an upward tendency again was apparent.

Chart 1 illustrates the trend of trade during the past two years.

The adverse balance of trade, totaling nearly 646,000,000 yen in 1924, was easily the largest ever recorded. The previous record was established in 1923, when the import excess amounted to 534,000,000 yen.

Commodity Trade Shows Gain in All Important Items.

Exports during 1924 were valued at 1,807,233,000 yen—an increase of 359,482,000, or more than 24 per

cent, in comparison with 1923. Allowing full credit for the effect of depreciated exchange on the 1924 valuation there was still a net increase in shipments dur-

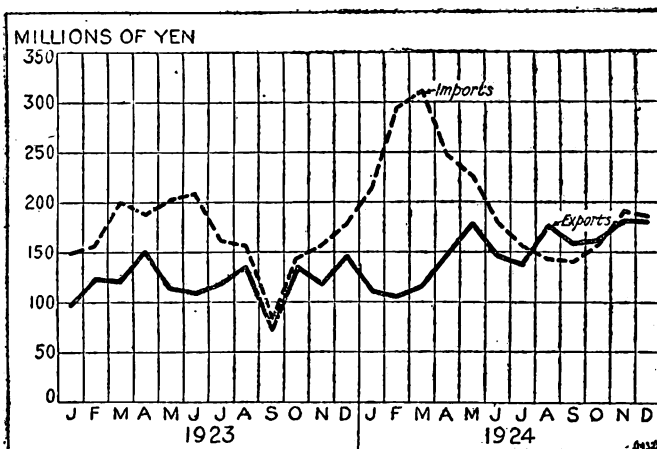

CHART 1—Japan's foreign trade by months, 1923 and 1924

ing the year, since the depreciation in comparison with 1923 amounted to less than 15 per cent and it is impossible that this was fully reflected in the 1924 totals. Analysis by principal commodities shows that raw silk, cotton textiles, silk textiles and cotton yarns made up 69 per cent of the total exports in 1924, and that

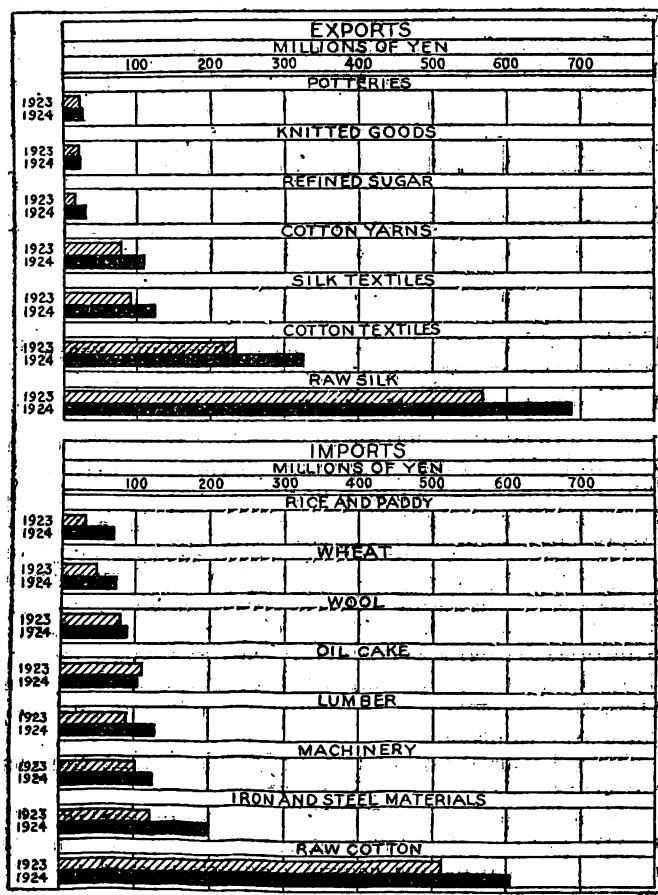

CHART 2—Japan's trade by principal commodities, 1923 and 1924

gains in these four items aggregated slightly more than the total increase in exports. In other words these four commodities account for all of the increase

in trade during the year. This conclusion is supported by an analysis of the other important items which contribute to the 1924 total since, almost without exception, there were declines or very slight gains in comparison with the previous year.

Imports during the past year reached the record total of 2,453,390 yen—an increase of 471,160,000, or slightly less than 24 per cent, in comparison with 1923.

Of the 38 important commodities contributing to the 1924 total, 32 recorded increases, particularly iron and steel products, lumber, machinery, raw cotton, wheat, rice and paddy, raw wool, woolen textiles and automobiles. The only really important declines occurred in woolen yarns and oil cake.

Chart 2 illustrates the trade in principal commodities during 1923 and 1924.

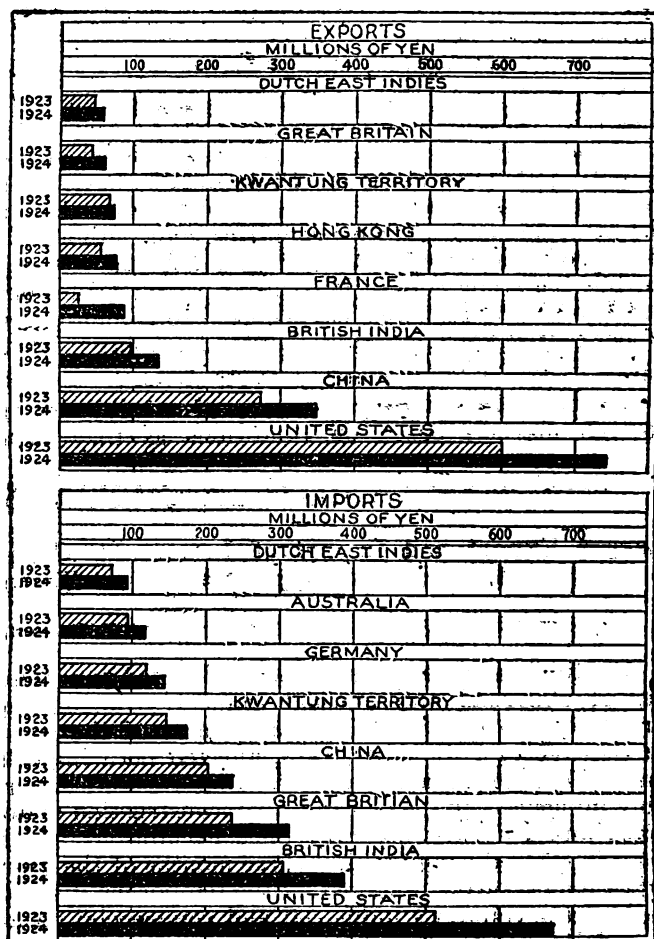

CHART 3—Japan's trade by principal countries, 1923 and 1924

Trade with Leading Countries Larger.

Japan's exports to all important countries during 1924 showed substantial gains in comparison with the previous year. The largest individual increase occurred in shipments to the United States, which aggregated 744,622,000 yen, against 605,619,000 in 1923. The most important relative increase was recorded for France, the 1924 total being 85,790,000 yen, compared with 25,655,000 in the previous year. Shipments to China aggregated 348,399,000 yen and to British India 135,372,000. The remainder of the trade was distributed among a wide number of countries, of which Hongkong, Kwantung Leased Territory, and Great Britain were the most important.

A similar condition prevailed with respect to imports. The United States led as the most important contributor in 1924, being credited with 670,993,913 yen, compared with 511,977,000 during the previous year. The share of British India rose to 387,799,000 yen, against 305,718,000 in 1923, while Great Britain furnished goods valued at 312,751,497 yen, compared with 237,134,000 in the previous year. The increase in the case of China was less marked—from 204,679,000 yen in 1923 to 237,652,000 in 1924. Imports from Germany rose to 144,642,000 yen from 120,242,000 in 1923. Other important sources in 1924, and the values of their contributions were: Kwantung Leased Territory, 175,737,000 yen; Australia, 119,971,000; and Netherlands East Indies, 92,401,000.

Chart 3 shows the trade by principal countries during 1923 and 1924.

Slight Change in Relative Position of Leading Countries.

There were few important changes in the relative participation of the various countries in Japan's trade during 1924, as shown by the table opposite:

The United States continued to hold first place in the export trade although there was a very slight decline in comparison with 1923. The most striking change occurred in the case of France, which, owing to its heavy takings of Japanese raw silk, rose from eighth to fourth place. All of the other leading countries contributed more heavily to the 1924 total, with the exception of Kwantung Leased Territory, which recorded a slight decline. The classification, "all others," with its 1924 decline of almost 6 per cent, furnishes an interesting illustration of the greater centralization of Japan's exports during the year.

The table shows no change in the relative position of the imports from the various countries. There was a considerable increase, however, in the quota contributed by the United States and Great Britain and slight gains were recorded in the shares of British India, Netherlands East Indies, and Australia. China, Kwantung Leased Territory, and Germany, on the other hand, all failed to equal their previous year's records.

The table further illustrates the overwhelming importance of the United States in Japan's foreign commerce, the 1924 figures of 41.2 per cent and 27.35 per cent for exports and imports, respectively, being far above those of all competitors. On the basis of combined exports and imports the showing of the United States is still more impressive, the total of 1,182,970,000 yen, or 33.85 per cent, being greater than the combined totals for the three nearest competitors.

INDUSTRIAL MACHINERY

W. H. Rastall, Chief, Industrial Machinery Division

SELLING AMERICAN MACHINERY IN GERMANY

Germany in pre-war years ranked first in importance among the foreign markets for American metal-working machinery and third when all types of machinery are considered. In 1913, our machinery exports to Germany were in excess of five and a quarter million dollars. The war interrupted this trade and since the armistice it has not been possible to revive it because of certain embargoes.

German Market Opened to American Goods.

However, during 1924 these embargoes were lifted and American machinery is again finding its way into the German market, with the result that many American manufacturers are considering dealer arrangements in that country. The German market may be more clearly understood by referring to a map appearing on the inside back cover of this issue of *COMMERCE REPORTS*. This map, showing the distribution of German industrial plants, was prepared in the Industrial Machinery Division, from the latest German industrial census.

Three important industrial districts should be covered if the whole German market is to be reached, the most important being the Berlin-Saxony area. A machinery dealer in Berlin could be expected to reach industries in Leipzig, Dresden, Chemnitz, etc. The

district next in importance is that which includes Essen, Dusseldorf, and Koln (Cologne). The third district is in the southern part of Germany lying between Frankfort and Munchen (Munich).

Care Should Be Taken in Appointing Agents.

Certain dealers in this south German district are reported to have been asking American manufacturers to sign agency arrangements covering all of Germany. It is suggested that before entering into such an agreement American manufacturers should satisfy themselves that the proposed dealer has a sales organization that will adequately cover all three of these industrial districts, or, alternatively, select three dealers in order that the entire territory may be adequately covered.

A similar difficulty arises in instances where dealers ask for agency agreements covering all of central Europe. It will probably be found on investigation that certain of these dealers have facilities for covering, for example, south Germany and Austria, but are hardly equipped to reach north Germany and Poland, or Czechoslovakia. Experience indicates that care should be exercised in establishing the boundaries represented by agency agreements.

The Bureau of Foreign and Domestic Commerce will be glad to assist manufacturers to secure dependable information regarding the qualifications and limita-

tions of dealers in Europe. The present is an opportune time to consider dealer representation in Germany.

German Foreign Trade in Machinery in 1924

Vice Consul Conger Reynolds, Stuttgart

German foreign trade in machinery in 1924 consisted of imports totaling 13,282 metric tons, valued at 26,765,000 marks (\$6,229,000), and exports amounting to 271,484 metric tons, valued at 466,211,000 marks (\$111,000,000). In 1923 German imports of all types of machinery totaled 5,491 metric tons, valued at 11,283,000 marks (\$2,686,000), and exports amounted to 311,117 tons, valued at 450,148,000 marks (\$107,178,000). Thus, the import trade more than doubled in volume and value in 1924 in comparison with 1923, while the export trade fell off about 40,000, or 13 per cent in volume, but as a result of the higher prices prevailing, the value was actually greater last year by 16,063,000 marks (\$3,837,000). (The tonnage exported in 1924 is only about 47 per cent of that exported in 1913.)

Machinery Imports Exceed Those of 1922.

Owing to the cancellation of the embargoes in 1924, German imports of machinery exceeded those of

1922 by about 2,500 metric tons, although the high peak of the machinery trade was reached in 1922. Exports were 180,000 tons short of the 1922 total, or only a little more than half as great. This decrease is largely because of the stabilization of the mark and the operation of the Dawes plan. A comparison of the import and export values for the last two years can not be made on account of the radical change of the currency between 1922 and 1924.

The following table gives imports and exports of German machinery for 1913, 1920, 1922, 1923, and 1924:

German imports and exports of machinery

[In metric tons]

Year	Imports	Exports	Year	Imports	Exports
1913	82,007	587,732	1923	5,491	311,117
1920	4,364	369,772	1924	13,282	271,484
1922	10,731	491,372

MINERALS

Guy C. Riddell, Chief, Minerals Division

THE DANZIG AMBER INDUSTRY

Consul Edwin C. Kemp, Danzig

Although amber and Danzig have been associated for centuries in popular opinion, the amber industry in the Free City of Danzig, which has developed to one of considerable importance and which is carried on at present by seven concerns, is entirely controlled by east Prussia through a State monopoly of the raw product. This monopoly has been in existence since 1899, when the amber rights were sold to Prussia by a Koenigsberg firm for a sum of approximately \$4,000,000.

East Prussia the Leading Source of Supply.

Amber is found all along the Samland Baltic coast, but the chief source of supply for this region and for the world is Palmnicken, East Prussia, where it is obtained at a depth of 20 to 30 meters from the Prussian State mines. At the State amber works at Koenigsberg it is cleaned and sorted for its various industrial uses and sold to amber goods factories, chiefly in Germany and Danzig.

Raw amber is occasionally found along beaches of Danzig territory, but this is of inferior quality and generally unfit for manufacturing purposes. These beaches, particularly from Weichselmuende to the eastern frontier of Danzig, were recently leased by the Danzig Senate to the Preussische Bergwerke- und Huetten Aktien Gessellschaft, Koenigsberg, for the sum of 9,000 gold marks annually until 1930. Lease rent for the beach from Weichselmuende to Koliebken, the western frontier of Danzig, amounts to 1,000 gold marks annually, although it is said that there have

never been found more than 2 kilos of amber per annum on this beach.

Amber Ornaments and Jewelry Exported.

For a number of years Danzig has been specializing in the manufacture of various types of amber ornaments and jewelry. The value of the output of such articles is estimated at \$250,000 to \$300,000 yearly, and they are exported all over the world. A relatively small amount is sent to the United States, according to the 1924 export return as declared at the Danzig consulate—only 627 pounds, valued at \$30,518. It is exported in larger quantities to India, Turkey, Asia, Japan, China, and Jerusalem, where it is often used for religious purposes in the form of rosary beads. In Africa the natives are partial to necklaces composed of genuine amber beads as large as a man's fist. Ivory and rubber are usually received in exchange for amber ware.

The ground particles, left in the manufacture of genuine amber ornaments, are made into blocks by a special process of heat and pressure. This commodity is produced by the seven Danzig firms who manufacture pure amber articles and sells at much lower prices. These firms employ about 600 workmen.

Increase in French Petroleum Imports

Trade Commissioner D. J. Reagan, Paris, April 2

French petroleum imports, which greatly increased in 1924, showed a similar tendency during the first months of 1925. February receipts of all the principal petroleum products, with the exception of residues, were greater than those of the preceding month, im-

ports of gasoline, the principal item, amounting to 1,133,562 hectoliters and 83,689 metric quintals, as compared with 967,806 hectoliters and 205 quintals in January. Imports from the United States totaled 908,419 hectoliters, against 815,347 in January. Of the other countries which contributed, Russia showed the most marked increase, rising from 8,035 hectoliters in January to 62,456 in February. During these two months the total imports of gasoline from Russia were but slightly below the amount brought in from that country during the whole of 1924.

Kerosene Imported—Residues, Lubricants, and Crude Oil.

Imports of kerosene rose from 340,120 hectoliters in January to 398,325 in February, although there was a sharp decline from 4,711 to 1,614 quintals in the relatively smaller quantities brought in by weight. February receipts of this commodity from the United States amounted to 320,554 hectoliters, only a slight variation from 323,507 in January.

Although imports of residues declined from 112,965 quintals in January to 97,914 in February, the quantity received from the United States increased from 40,523 to 44,158 quintals. February imports of lubricating oils were slightly higher at 218,082 quintals (198,418 in January), of which the United States furnished 196,759, against 182,035 in the preceding month. Imports of lubricants from Russia amounted to 10,000 quintals in February as compared with 9,700 in January, both of which amounts were below the monthly average from Russia during 1924. A receipt of 5,408 hectoliters in February is the only record of importation of crude oil in the two months.

The total petroleum importation in 1924 amounted to 1,653,765 metric tons, as compared with 1,319,579 in 1923, and 697,914 in 1913. The 1924 receipts included 935,586 tons of gasoline, compared with 804,218 in 1923, and 155,694 of residues, against 112,652 in 1923. These figures indicate the continuous increase in the use of automobiles, and the growing needs for fuel oil by the French Navy and merchant marine.

Russian Oil Output in 1924-25

The gross petroleum production of Russia during the first quarter of the economic year 1924-25 (ended January 1, 1925), amounted to 1,655,420 tons—an increase of 17 per cent over the output for the corresponding period of the preceding year—according to statistics published by the All Russian Naphtha Syndicate. During the past economic year the Soviet is reported to have shipped abroad 712,000 tons of oil, compared with 210,000 in 1922-23. The president of the syndicate has stated that up to January of this year the syndicate concluded contracts abroad for the sale of 1,020,000 tons of oil products.

ELECTRICAL EQUIPMENT

D. S. Wegg, Acting Chief, Electrical Equipment Division

RAILWAY ELECTRIFICATION PROJECTS IN CZECHOSLOVAKIA

Ernest E. Power, commercial attaché's office, Prague

The electrification of railways in Czechoslovakia has assumed greater importance since the war, on account of the economy of operation as compared with steam power. The Czechoslovak railways consume approximately 19 per cent of the total coal output of that country, the cost in 1922 being over 300,000,000 Czech crowns. It is estimated that through electrification of the railways, this quantity can be reduced by one-half and that if hydroelectric power is available the saving would be further increased.

The Railway Ministry has established a special bureau to study the question of railway electrification and to draw up plans for the partial electrification of the State railways. It has been decided that direct current at 1,500 volts will be most advantageous.

Scope of Work.

Public bids were requested in July, 1924, on 16 locomotives, one transforming station, and 50 kilometers of conduit. The initial plans contemplate the electrification of the Wilson Railway Station and the partial electrification of the railway stations at Smichov, Nusle, Liben, Visocane, and the interconnecting sections, including two tunnels. It is expected that the acceptance of some of the bids will take place shortly.

As the amount of work required will cost about 50,000,000 Czech crowns, it probably will be divided among several firms.

The electrification of the Prague railway stations is but the first step toward further electrification. The next project will be the Smichov-Zdice section which will require various intermediary stations. Further development is also expected in the railway net surrounding Prague, and in the Zdice-Plzen section. The plans indicate that the hydroelectric station now being constructed at Stechovice will be used to supply the current for the last-named section.

Electric Supply Developments in Western India

Assistant Trade Commissioner Don C. Bliss, jr., Bombay

Small Diesel-driven generating sets have been installed in the interior of India in recent years, and it seems that there is at present a considerable opportunity for further sales. Most of the sets now in operation are equipped with Diesel engines made by Mirrlees. The following installations are indicative of the development which has taken place.

Companies in Operation.

The town of Broach, in the Bombay Presidency, has a small electric power plant consisting of two 150-horsepower Mirrlees-Diesel engines direct coupled

to Mather and Platt alternating current 440-volt generators. This station was put in operation in June, 1923, and has now approximately 15 miles of overhead line supplying 900 consumers. The plant supplies current for electric lighting and for about 30 electric motors which are in use in the locality for various power drives.

The Navsari Electricity Co. started operations in September, 1923, with a generating set consisting of a 150-horsepower Mirrlees-Diesel engine directly connected to a 100-kilowatt 400-volt, 3-phase, 50-cycle alternator, produced by Cromptons (Ltd.), together with a two-generator and a six-feeder panel switchboard. This company supplies 425 lighting consumers and 8 miles of public street lighting, besides furnishing power for motor drive installed in five flour mills and four pumping stations.

The Dabhoi Electric Power Supply Co. commenced operations in July, 1924, with a 90-horsepower Vickers-Petter direct-coupled generating set and a 150-horsepower Mirrlees-Diesel Metropolitan Vickers direct-connected set. The plant supplied 225 lighting consumers and 3 miles of street lighting, as well as current for power in a ginning plant, a flour mill, and rice mill.

Radio Exhibition in Copenhagen

A. E. Fenselau, commercial attaches' office, Copenhagen

The Danish Radio Club held an exhibition in Copenhagen from March 7 to 15, which was the first of its kind attempted in the Scandinavian countries. The exhibition was well attended and has resulted in arousing enthusiasm and interest in radio developments.

Countries Exhibiting.

Practically every Danish radio dealer and manufacturer was represented at the exhibition, the former showing numerous articles of German, French, British, and American manufacture in addition to domestic products. A few complete sets of local manufacture were exhibited, but most of the sets were apparently assembled in Denmark from imported parts. In fact, it appears that the greater share of the business done in Denmark by foreign manufacturers is in radio parts and accessories. Several firms, including a German manufacturer, exhibited combination receiving sets and phonographs.

Complete outfits and parts from a number of well-known American firms were shown by local dealers, and although much interest was aroused it appeared that American prices were above those of European manufacturers.

Loud Speakers of French Make Attract Attention—Tubes.

One of the features which attracted a great deal of attention was a new type of loud speaker shown by Lumiere, of Paris. This amplifier, which is about 12 inches in diameter and made of membrane, appears to be adapted to phonographs as well as to radio receivers. In contrast to the loud speakers now commonly used, the French product has the form of a disk. The French firm of Gaumont also exhibited a loud speaker of this type, but of somewhat smaller dimensions.

Tubes were shown by Radiorohrenfabrik G. m. b. H. Hamburg, as well as by the French firm, A. Grammont, and the Dutch firms of Philips and Pope. The

Philips tubes appear to be the most favored locally, a great many of the outfits on exhibition being equipped with them.

Batteries, Transformers, Insulators, and Tools.

There appears but slight chance for foreign firms to gain a foothold in the market for batteries. Although some German batteries were displayed, the Danish firms such as Helleesen of Copenhagen, and Dansk Akkumulator Industri, Copenhagen, as well as several others, exhibited batteries which are not only used to a great extent locally but are also exported. It appears that the local industry is well able to take care of the demand for honeycomb coils. The entire line shown by the Helleesen factory was accompanied by descriptive material printed in English.

Transformers of Danish, German, and French manufacture were shown. Insulators of Danish make were prominently displayed, and several of German make were in evidence. One American firm showed a very compact kit of radio tools, and a German manufacturer also had on exhibit various sizes of tool kits.

[A list of radio manufacturers and dealers, the apparatus exhibited by each, and descriptive literature (in Danish) is available for loan from the Electrical Equipment Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., and may be obtained by referring to No. 25912.]

Electrical Trade Notes

French Electrical Goods Trade Active.

Exports of electrical generating equipment from France during January and February, 1925, totaled 646 metric tons, while imports reached 483 metric tons. During the same period, exports of other electrical apparatus totaled 981 metric tons and imports 196 metric tons. The domestic market for electrical equipment and apparatus is also very active, and French manufacturers have many orders on hand. (Cable from Commercial Attaché Chester Lloyd Jones, Paris, April 13.)

Electrical Development in Japan.

Possible hydroelectric resources totaling nearly 6,000,000 kilowatts in Japan proper have been about one-half developed, according to latest available data. As the rivers of Japan are short, have small drainage basins, and a variable flow, there is dispute as to the practicability of some of the remaining sites. A recent drought throughout central Japan, threatening a shortage of water power, has alarmed the existing hydroelectric companies, and many electric producing enterprises are constructing or considering auxiliary steam plants. It is unofficially estimated that steam auxiliary plants having a total capacity of 230,000 kilowatts are now being built by various companies in central Japan, and applications have been made for permission to erect plants capable of producing another 216,000 kilowatts of steam-generated electricity. (Consul Charles R. Cameron, Tokyo.)

AUTOMOTIVE PRODUCTS

Percy Owen, Chief, Automotive Division

CURRENT CONDITIONS IN FOREIGN AUTOMOTIVE MARKETS

Further reports from leading automotive markets of the world indicate well-sustained demand for American products. Practically the only unfavorable factor to be seen in the situation during the coming quarter is the approach of winter in the southern hemisphere, but this purely seasonal depression is more than offset by the spring and summer demand in northern countries. The following paragraphs comprise the second set of articles for the first quarter of the year, the first having appeared in the issue of April 13.

CHINA

Automobile sales have held up well during the first quarter of the year, despite interruptions to business occasioned by the Chinese New Year holidays and the fighting which occurred around Shanghai in January. Small European cars are giving American makes stiff competition, and agents are reported to be handling them on an excellent margin of profit that is sufficient in some cases to permit of actual price concessions to buyers. Stocks of passenger cars are about normal. Traffic congestion has reached such a point that a commission appointed by the Shanghai municipal council is now studying the question. Truck business has been very inactive during the quarter, the only sizeable order placed being in Harbin for 20 trucks and won by an English company. (Trade Commissioner G. C. Howard, Shanghai, March 11.)

CZECHOSLOVAKIA

The industrial situation in Czechoslovakia has taken a distinct upward trend since the first of the year. With the general improvement in business there has been a marked increase in the demand for automobiles, and there is every reason to believe that the present level of activity will be maintained throughout the year. The domestic competition in automobiles is even keener than during the previous year, local manufacturers having concentrated their efforts on standardizing their production with a consequent increase in output. There is also a marked improvement in the 1925 body designs and in refinements of Czechoslovak automobiles, as compared with last year. The tendency is toward the use of sedan bodies in smaller cars, where previously open models have been preferred. In large cars, the open touring and cabriolet bodies are most popular.

There has been no change in the customs tariff since the last report, the duty still remaining at 45 per cent ad valorem. Through the supplementary commercial treaty negotiated between France and Czechoslovakia, which went into effect on January 10, 1925, the contingent of automobiles for that country was raised to 500 cars and trucks per year. The United States, through its "modus vivendi," which provides for our receiving most-favored-nation treatment, also receives the same contingent. The contingent of motor cycles remains at 500, as heretofore.

A luxury tax in effect up to January 1, 1925, provided that all cars of more than 4 cylinders and all cars having a cylinder content of more than 2.5 liters per cylinder were to pay a tax of 12 per cent of the retail price of the car in Czechoslovakia. The original decree of the Ministry of Finance introducing this luxury tax provided that, effective January 1, 1925, it would be levied on cars having a cylinder content of more than 1.8 liters, instead of 2.5 liters as before, with the provision regarding number of cylinders remaining the same. This change in competition of the luxury tax, now in effect, will be of great assistance in the sale of American automobiles, for practically every car against which we have been competing in this market is now some 12 per cent nearer than heretofore to the price of American cars, every one of which has been paying this tax previously. (Commercial Attaché J. S. Hodgson, Prague, Czechoslovakia, March 19.)

ITALY

There is little doubt that the steady growth in volume of business and the extension of general prosperity that has taken place in the early months of 1925 will increase the demand for almost all automotive vehicles. An extension of the general demand to high or medium priced American cars can hardly be expected. Such a development might have been barely possible

if lire exchange had remained at about 22 to the dollar, where it seemed to have become stabilized several months ago. At the present writing it stands close to 25. The prices of American cars, converted into lire, would consequently be much higher, and the heavy gold duties also would be proportionately increased.

Two recent developments are prominent features in this market. The aggressive selling of European cycle and light cars has resulted in placing a largely increased number of those vehicles on the road. When a new small car built by a famous Italian company is distributed regularly within a few months, as announced, it should increase very materially the number of smaller and lighter vehicles in circulation. That the circulation of cars has grown tremendously of late years is evident by the beginnings of a real traffic problem in the centers of such cities as Rome and Milan. Traffic congestion has definitely manifested itself in the larger Italian cities where most of the country's passenger cars are concentrated, but of course nothing of the sort is found in the smaller towns or on the open roads. (Assistant Commercial Attaché A. A. Osborne, Rome, Italy, March 3.)

PERU

With economic and agricultural conditions generally favorable, automobile dealers in Peru report encouraging business during the first quarter of 1924 and anticipate continued normal trade during the second quarter. Normal trade means approximately 150 vehicles of all makes sold per month. Peru still remains a market for light machines, although an attempt is apparently to be made within the near future to create a demand for heavier types. Serious attention to this development will doubtless follow improved road conditions, toward which end a movement of considerable importance is now in progress.

In connection with the better-roads program, the Government has adopted legislation whereby an additional tax of one-half centavo per cigarette has been placed on all cigarettes sold in the country; the proceeds, estimated at \$2,000,000 per annum, will be utilized toward road construction. American motor cars recently wrote new chapters in the automotive history of Peru by completing grueling runs from Lima to Piura, and from Lima to Araquippa. The roads followed consisted of nothing more than sand without trails, and with numerous rivers and mountains and other obstacles to overcome. It is not believed that the Tacna-Arica dispute will have any real effect on American automotive trade. (Assistant Trade Commissioner W. N. Pearce, Lima, March 18.)

PHILIPPINE ISLANDS

Philippine automotive sales during the first quarter of 1925 have equaled expectations. Increased business during the first six weeks was particularly noticeable, although late February and March showed reactionary signs. Sales are now steady, and although the developments of the next three months may not repeat the spectacular features of January, a good aggregate turnover is anticipated. Dealers estimate that total sales have numbered about 600 during the quarter. Interest in trucks is also more lively, and a somewhat stimulated demand for machines in the weight class above 2 tons has appeared. (Assistant Trade Commissioner George, Manila, April 3.)

SPAIN

Two developments of interest in the Spanish market include the first use of credit by dealers accepting guaranteed paper and an increasing number of trade-ins of used cars. The former has resulted in an increased number of cars in circulation

which are not yet paid for, and dealers' credits consequently have been stretched rather far. Probably 50 per cent of the total sales now involve trade-ins, and large stocks of second-hand cars are now on the market. A promising market for 2-ton truck chassis for omnibus service has been opened by a royal decree providing for mail and passenger route concessions. European makes may secure the lion's share of this business, owing chiefly to insufficient representation of American trucks and lack of spare parts and servicing facilities. The establishment of truck branches by leading European manufacturers, permitting easier credits, immediate deliveries, and excellent spare-part service, is having a noticeable effect. American cars selling at over 10,000 pesetas are increasingly popular and withstanding competition very well, but light cars under that figure are not holding up so well. A large number of European cars have recently been put into taxicab service in Madrid and Barcelona. (Commercial Attaché Cunningham, Madrid, March 19.)

URUGUAY

The Uruguayan market continues to absorb about 6,000 passenger cars and trucks per year. During the last six months the average has been 544 cars per month, of which slightly over 97 per cent came from America. Two factors have

increased motor-car imports during the last two months. During the summer season sales are more brisk than at any other period of the year. The decline in the cost of exchange to nearly par prompted some importers to stock enough cars to carry them through the next few months, when exchange rates are expected to be higher. With the approach of winter in the Southern Hemisphere and the gradual rise in price of exchange, car sales are expected to decrease by 20 to 30 per cent. Another adverse feature is the depressed condition of the wool market, which will slow up automobile sales unless remedied. (Acting Commercial Attaché L. B. Clark, Montevideo, March 16.)

Additional information regarding automotive products appears in this issue under the following sections:

AGRICULTURAL IMPLEMENTS

George B. Bell, Chief, Agricultural Implements Division

ACTIVE DEMAND FOR AGRICULTURAL IMPLEMENTS IN FRANCE

Shortage of Labor on Farms Creates Demand for Machinery—Purchases of American Harvesting Machinery Increasing

Assistant Trade Commissioner Wilson K. Ray, Paris

French trade in agricultural machinery in 1924 showed considerable improvement over 1923 and the demand during the first quarter of 1925 was also active. The use of agricultural machinery is now general in France, and although the French rural population is as a rule slow to change established methods, conditions have in recent years been favorable for the sale of many types of modern farm equipment.

Factors Contributing to Increased Demand.

The largest factor affecting sales has been the shortage of man power on the farms caused by losses incurred during the war and by the steady drift of labor from rural to urban communities. Crop yields have also been high in recent years and farm products have commanded good prices, with the result that the farmers have been in position to buy the machinery which they needed. One unfavorable factor is the smallness of most French farms, but small farms are usually worked by their owners, and they are rapidly turning to the use of such modern equipment as is suitable for their needs.

Many Types of Implements Now Produced in France.

Most of the agricultural implements sold in France were imported until within the last few years. French factories are now producing nearly all types of implements and imports are becoming limited to certain kinds not yet manufactured in sufficient quantities to satisfy local demand. The value of the annual output of agricultural implement factories in France is estimated to be about 400,000,000 francs.

The French implement industry has been considerably handicapped by local prejudices. Farmers have demanded special types of implements peculiar to their particular locality, but now the manufacture of agri-

cultural implements is becoming centralized in large factories in quantity production and standardized designs. This is expected to result in lower cost of production and distribution, with decreased prices and consequent increased sales.

Tillage implements used in France, such as plows, harrows, and cultivators, are chiefly of French make. The types employed vary greatly according to the district, and in some sections handmade implements are still used, while in others implements produced by small local factories are preferred. Modern factories, with a country-wide sales organization, however, are rapidly introducing their implements into all sections.

Domestic Production of Implements Favored.

Most of the plows made by the larger companies are of the Brabant type, which is very popular. Improved cultivators and harrows find a ready sale, and the sale of disk harrows is increasing rapidly. Walking types of tilling and cultivating implements are generally employed and only in rare instances is a riding cultivator sold. Hay rakes and tedders of good quality are manufactured in France and the price at which they are sold makes foreign competition difficult. Most of the threshers being sold are of domestic make. English threshing machines were formerly popular, but are rapidly being displaced by the French product. Many types of grain drills are manufactured in France and there is a good demand for them.

American Harvesting Machinery Sales Increased.

Several American companies have been successful in selling grain drills but the sale has been limited by the variety in types used. American agricultural implements are well known in France at present, but the trade in many classes of them is becoming more diffi-

cult. Imports of American Harvesting machinery, however, have continued to increase. Fewer American reapers are being sold. The sales of mowers and binders have grown rapidly. French manufacturers are increasing domestic production of harvesting machinery, but are still far from being able to supply the domestic demand.

Large Increase in Imports in 1924.

Imports of agricultural implements into France in 1924—approximately 47,000 metric tons, of which about 29,000 metric tons came from the United States—were almost double those of 1922 and considerably greater than in 1923. The United States and Canada account for a very large proportion of the imports in each of the three years, while Belgium, Sweden, and Great Britain were the only other countries supplying great quantities of agricultural implements. Imports from the United States and Canada were made up chiefly of harvesting machinery, while tractors also comprised a large proportion of the American purchases in France. Implements imported from Belgium are chiefly plows and cultivating implements, while Sweden supplies mainly dairy equipment and Great Britain furnishes harvesting machinery, threshers, and such equipment as binders and cutters.

Exports Also Show Large Increase.

French exports of agricultural implements in 1924 amounted to approximately 13,500 metric tons, as compared with 8,500 metric tons in 1923 and 4,400 metric tons in 1922. The chief markets for French makes of implements in 1924 were Algeria, Tunis, Italy, Great Britain, Spain, Morocco, and Switzerland. Exports to Algeria, Tunis, and Morocco were stimulated by the close financial and commercial relations existing with France and by tariff privileges. Heavy machinery, such as binders, reapers, threshers, and tractors, were important items in the shipments to each of these countries. A considerable quantity of cultivating implements, feed grinders and cutters, wine presses, and implements used in viticulture were also included in these exports. Belgium purchased considerable quantities of rakes, tedders, mowers, threshers, and small tools, and similar implements were exported to Italy. A large quantity of binder twine was comprised in the exports to Great Britain, and Spain purchased small implements as well as a few mowers, reapers, and wine presses.

French Manufacturers Copy American Designs—Credit Terms.

Some French companies are said to be manufacturing implements of American design on which the patent rights have expired, and several companies are doing a very profitable business in manufacturing replacement parts for American implements. The French patent laws provide that products covered by patent must be manufactured or worked in France within a period of three years from the date of the patent, and this provision may in some cases enable French manufacturers to copy designs of imported machines.

Credit terms granted by importers and manufacturers of harvesting machinery generally specify that the account shall be due at the end of July for haying machinery and the end of August for grain-harvesting machinery. In some cases these dates are a month later. Other agricultural machinery is ordinarily sold

on terms of 2 per cent, 60 days; net, 90 days. It is only in rare instances that farmers fail to pay their accounts, although some dealers state that higher interest rates are attracting capital of the farmers, with the result that the latter are now showing a greater tendency to delay payment of their equipment accounts.

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

GERMAN MEAT SITUATION

Germany Buying More Live Animals and Less Prepared Meat—German Livestock Industry Practically at Pre-War Level—Purchases of Foreign Lard Maintained.

J. E. Wrenn, Foodstuffs Division

Germany is the second largest market for exports of American pork products, Great Britain being first; consequently the trend in German livestock production and meat consumption is of very definite interest to American exporters.

Recovery of German Livestock Industry.

The German livestock census as of December 1, 1924, compared with that of 1922, shows increases in all classes of livestock. The condition in reference to cattle and pigs is of particular interest to American producers. The German livestock industry has practically returned to its pre-war level, and as a result increased domestic supplies of meat have proportionately limited the market for imported products. As compared with that of December 1, 1913, the 1924 census discloses increases in the number of horses, sheep, and goats, with declines in the number of cattle and pigs. The census returns as reported by Trade Commissioner E. C. Squire, Hamburg, were as follows:

German livestock census

Livestock	December 1—		
	1913	1922	1924
Horses.....	3,806,700	3,650,500	3,849,600
Cattle.....	18,474,400	16,315,500	17,296,300
Pigs.....	22,533,400	14,678,300	16,843,500
Sheep.....	4,987,800	5,566,200	5,717,200
Goats.....	3,163,800	4,140,200	4,350,600

German Imports of Livestock.

German imports of livestock and meats during 1924 show large gains over the previous year, the number of cattle and calves imported increasing by 86,679, while the number of live pigs purchased abroad in 1924 was 178,767 more than purchases during 1923. Nearly all these animals are obtained from neighboring countries, principally Denmark.

The Monatliche Nachweise reports livestock imports and exports of December 1923 and 1924, as follows:

German trade in livestock, 1923 and 1924

Livestock	1923		1924	
	Imports	Exports	Imports	Exports
	Number	Number	Number	Number
Cattle.....	46,871	1,818	63,170	19,300
Calves.....	7,783	14	7,603	1,469
Pigs.....	18	39	2	676
Sheep.....	1,776	643	2,119	41,700
Goats.....	56,809	2,324	225,000	1,176

Purchases of Pork and Lard.

Corresponding increases in purchases of pork and lard are indicated in tables compiled from the issues of Monatliche Nachweise during the year 1924. Totals for the year for certain pork products, compared with purchases of previous years are shown below:

German purchases of pork products, 1922-1924

Products	1922	1923	1924
	Pounds	Pounds	Pounds
Bacon.....	56,923,654	87,015,121	59,513,397
Hams.....	1,338,413	496,035	733,691
Pork:			
Fresh.....	14,224,265	13,770,185	55,829,038
Prepared.....	28,587,273	36,762,148	28,433,872
Lard.....	144,000,726	275,802,515	233,251,703
Total.....	243,104,320	413,946,909	437,792,556

United States Exports of Meat Products to Germany.

The table of imports may be compared with recorded exports from the United States to Germany as shown in the following table:

United States exports of meat products to Germany, 1922-1924

Meat products	1922	1923	1924
	Pounds	Pounds	Pounds
Bacon.....	54,457,212	96,581,676	45,517,182

Neutral lard.....	2,049,593	1,758,988	4,536,086
Total.....	284,581,001	484,308,623	362,686,497

Receipts at Hamburg Destined for Various Countries.

A comparison of United States exports with reported German imports discloses that during the years 1922 and 1923 American exports consigned to Germany were greater than the total receipts by Germany. This is accounted for by the fact that Hamburg is the principal distributing point for provisions intended for northern Germany, parts of the Netherlands, and Belgium, Austria, and Czechoslovakia. At least part of those products consigned to Germany are trans-shipped to the countries named, or, being shipped on split bills of lading, are deflected, while en route, to northern points.

These data also indicate that, with the exception of lard, purchases of American pork products by Germany are declining, while German imports from other sources, especially of fresh pork and lard, have increased. Increased domestic slaughter of livestock in

Germany and relatively high levels for American products have combined to limit our trade.

Slaughtering of Livestock.

Slaughtering of livestock in Germany during 1924 was greatly in excess of that for 1923 and compares favorably with 1913. Data taken from Wirtschaft und Statistik, No. 2, for January, 1925, list slaughtering subject to inspection at 35 German markets, as follows:

German livestock slaughtering

Animals	First quarter	Second quarter	Third quarter	Fourth quarter	Year
Cattle:					
1924.....	276,287	285,160	355,634	370,570	1,287,651
1923.....	287,720	250,644	234,506	205,671	978,541
1913.....	312,668	322,565	347,465	338,765	1,323,463
Calves:					
1924.....	272,890	306,717	328,640	293,729	1,202,976
1923.....	230,405	302,354	159,853	124,498	817,110
1913.....	286,401	352,647	206,982	271,849	1,207,779
Pigs:					
1924.....	783,670	936,535	964,491	997,924	3,682,620
1923.....	552,572	562,172	324,306	279,112	1,818,162
1913.....	1,385,483	1,473,562	1,420,015	1,525,082	5,812,142
Sheep:					
1924.....	152,718	177,786	311,828	361,169	1,003,501
1923.....	141,431	158,298	184,452	158,483	642,664
1913.....	251,402	248,333	319,748	251,885	1,070,868

To the above must be added the receipts of carcasses at these markets, as follows (comparable data for 1913 not available):

Receipts of carcasses at 35 markets

Livestock	1923	1924	Livestock	1923	1924
Cattle.....	64,000	96,000	Pigs.....	59,000	157,000
Calves.....	92,000	131,000	Sheep.....	64,000	101,000

Total receipts at these 35 markets for the years 1924 and 1923 were:

Total receipts at 35 markets, 1923 and 1924

Livestock	1923	1924	Livestock	1923	1924
Cattle.....	1,042,541	1,383,601	Pigs.....	1,877,162	3,842,620
Calves.....	969,110	1,422,976	Sheep.....	690,664	1,104,501

Average Weight of Animals.

These data do not, of course, include all animals killed in Germany, since a large proportion of the total slaughtering are unreported at these markets, but they do indicate a trend. The average weight of animals at the markets reported upon during the years 1924, 1923, and 1913 were, as indicated in the following table, in which weights are estimated from the average weight for the first nine months of each year shown:

Average weight of animals slaughtered

Livestock	1913	1923	1924	Livestock	1913	1923	1924
Cattle.....	Kilos 293	Kilos 234	Kilos 263	Pigs.....	Kilos 85	Kilos 87	Kilos 88
Calves.....	40	40	41	Sheep.....	22	23	23

Tendencies in the German Meat Trade.

Based on the available meat from slaughtering subject to inspection throughout present Germany, the

total meat supply, exclusive of imported products, for the first nine months of 1913, 1923, and 1924 was 3,912,791,320 pounds, 1,826,187,024 pounds, and 2,717,450,807 pounds, respectively, or relatively 100, 47, and 69. The net imports of the more important meat (beef, pork, and mutton) items for these years were 120,993,960 pounds, 258,389,923 pounds, and 329,990,040 pounds, respectively, for 1913, 1923, and 1924, or relatively 100, 213, and 273.

To sum up, the German livestock industry is practically on a pre-war basis. Imports of live animals and of fresh meats, including beef and pork, are increasing, while the imports of prepared meats are declining. Purchases of foreign lard are being maintained. This is illustrative of that tendency on the part of Germany to import only those products which it is unable to produce in sufficient quantity. It also indicates a noticeable trend in German pig breeding to the fat type and the growing popularity of chilled and frozen beef.

Additional information regarding foodstuffs appears in this issue under the following sections:

Cable review, Far East:

Indian conditions during April.
Dutch East Indian business satisfactory.
Australian exports set new record.
Philippine March trade partially inactive.
China trade and markets during March.
Business and crops in the Hawaiian Islands.

Bureau's special circulars available.

Foreign trade opportunities.

Finance: Government agricultural bank formed in Spain.

Tariffs and Trade Regulations:

Antigua: Changes in import duty on bitters.
Burma: New regulations for sale of condensed milk in Rangoon.
China: Provincial stamp tax on tobacco.
Ecuador: Exports of foodstuffs prohibited.
France: Removal of export duty on butter substitutes.
Italy: Rice for manufacture of starch granted temporary free importation.
Mexico: Removal of export duty on bran.
Newfoundland: Upward revision of tariff.
New Zealand: Export prohibition on bran and pollard revoked.
Import duty on bran and pollard reimposed.
Norway: Gold surtax reduced.
Poland: Indefinite extension of tariff reduction.

Rates for Industrial Debenture Assessment Reduced

The basis for service of the industrial mortgage, as provided by the Reichstag on August 30 enacting the Dawes Plan, has been reduced from 17.1 per cent to 15.73 per cent of the working capital (Betriebskapital) of those concerns liable to the charge, according to an ordinance of April 11, 1925.

This amounts to a reduction of 8 per cent in the annual charge, and indicates that the total working capital of concerns assessed amounts to 31,790,000,000 gold marks. This estimate is based on the property tax declarations of December 31, 1923. Total liquid business capital in Germany to-day is estimated by Dr. Schacht, president of the Reichsbank, as approximately 20 per cent of the 1913 figure.

[An analysis of the industrial mortgage law, by C. O. Miller, is contained in *COMMERCE REPORTS* of February 16, 1925, page 370.]

TOBACCO

Tobacco Section, Foodstuffs Division

CANADA AS A POSSIBLE TOBACCO COMPETITOR

Canadian Tobacco Production Stimulated by Various Governmental Means—Greater Proportion of Home-Grown Tobacco Used in Canadian Factories.

Although tobacco is produced in commercial quantities in only two Provinces of Canada, the country has potentialities not to be ignored. Many opportunities for expansion surround the Canadian industry, and the economic position is particularly strong.

Methods of Encouraging Production.

The Canadian Government, though offering no direct bounty on production, fosters it by maintaining experiment stations, supplying fertilizer and seeds to growers, and offering prizes in fairs and exhibitions.

Aside from this, a great difference is made in the excise tax between foreign tobacco and Canadian tobacco. Foreign tobaccos are taxed 40 cents a pound for the unstemmed and 60 cents a pound for the stemmed product, while tobacco produced in Canada has a tax of only 20 cents per pound. This in itself is sufficient inducement for Canadian manufacturers to favor the home-grown product, and thus stimulate production through good prices brought about by an increased demand.

Manufacture of Tobacco Products.

The following table, extracted from Reports of the Dominion Bureau of Statistics, shows the production of manufactured tobacco in Canada for 1921 and 1923, and also the quantities of imported and Canadian tobacco used in factories for these two years.

Canadian manufacture of tobacco, 1921 and 1923

Items	1921	1923
Factories in operation	119	148
Production:		
Chewing tobacco.....pounds..	6,227,758	6,064,303
Smoking tobacco.....do.....	12,880,521	16,470,891
Snuff.....do.....	678,730	724,429
Total chewing, smoking, and snuff.....do.....	19,787,018	23,259,623
Cigars.....number.....	163,075,000	174,286,000
Cigarettes.....do.....	2,603,971,000	2,079,036,000
Relative quantities of domestic and imported tobacco used in manufacture of:		
Chewing and smoking tobacco and snuff—		
Imported.....pounds.....	4,853,681	4,995,430
Canadian.....do.....	7,434,737	10,861,467
Cigars and cigarettes—

Canadian.....do.....	2,527,092	4,398,226
Total—		
Imported.....do.....	18,054,876	15,234,855
Canadian.....do.....	9,962,429	15,259,693

Canadian Production Increasing.

Twenty-five years ago practically all the tobacco used in Canada was foreign grown, imported either in the leaf or in manufactured form. In 1913 Canada (the Provinces of Ontario and Quebec) produced 12-

500,000 pounds; in 1921, 13,249,000 pounds; in 1922, 25,948,000 pounds; in 1923, 21,297,000 pounds; and in 1924, 18,711,000 pounds.

In the Province of Ontario in 1924 were grown 5,261,000 pounds of Burley, 5,479,000 pounds of flue-cured, 1,145,000 pounds of Green River, and 250,000 pounds of other dark tobacco. The Province of Quebec supplies cigar and pipe tobaccos, and the production for 1924 has been reported to be 6,575,740 pounds, but as much difficulty is experienced in that Province in getting the growers to take out licenses, it is possible that this figure is much below the actual production.

Canada Using Less Imported Tobacco.

Although the United States has for many years supplied Canada with 90 per cent of its imports of tobacco, and does yet, it is nevertheless true that exports from the United States to Canada decreased from 16,679,000 pounds in 1921 to 11,357,000 pounds in 1923, and amounted to only 15,713,000 pounds in 1924. Coincident with a decreased supply of tobacco from the United States it may be noted from the above table that the Canadian production of chewing and smoking tobacco and snuff in 1923 increased almost 6,000,000 pounds over production in 1921, and that the production of cigars increased by about 11,000,000 pieces. A slight decrease is registered only in cigarette production. There were 29 more factories in operation in 1923 than in 1921.

The situation is clear that Canada has increased its manufacture of tobacco products and has also decreased its imports of raw material. The above table shows that in 1921 Canadian tobacco used in factories amounted to only about half as much as imported tobacco, and in 1923 Canadian tobacco used in factories amounted to 25,000 pounds more than imported tobacco.

Canadian Tobacco a Growing Factor in British Market.

Under the provisions of Great Britain's preferential tariff policy maintained toward the colonies, Canada is entitled to a deduction of one-sixth from the import duty required of foreign countries. Should Canadian production ever exceed the Canadian demand it is not impossible to suppose that Canada would supply to the British market certain tobaccos once furnished by the United States. Already Canada's exports to Great Britain have increased from 3,000 pounds before the war to 1,164,000 pounds in 1924.

TEXTILES

Edward T. Pickard, Chief, Textile Division

WORLD TEXTILE NEWS IN BRIEF

Persian Dealer Offers Furs and Rugs.

A wholesale dealer in Teheran, Persia, desires an American market for furs, skins, carpets, and rugs, according to a report from Vice Consul George Gregg Fuller. Correspondence with this concern may be in either French or English. Further information will be made available to American firms upon application to the Textile Division, Bureau of Foreign and Domestic Commerce, Washington. Refer to file No. 165204.

Uruguay Wool Market Lacks Orders.

The decreased activity in the Uruguayan wool market, which began in the latter part of January, became accentuated in February and continued into March. Stocks at Montevideo are very large, and the principal barracas are piled up with wool, but report no business offering. Prices are at a high level; and according to present indications the marketing of the clip may drag along into July or August, with the possibility of a carry over of a portion into next season. (Acting Commercial Attaché L. B. Clark, Montevideo, March 16.)

Cotton Cloth Imported into Guatemala.

Cotton cloth imports into Guatemala increased from \$2,663,000 in 1923 to \$4,212,000 in 1924, a gain of 58 per cent. In 1924 the United States supplied goods to the value of \$2,576,000, increasing its contribution 42 per cent compared with the preceding year; England, \$1,188,000, a gain of 30 per cent; Germany, \$238,000, a gain of 51 per cent; and France, \$50,000, a gain of 285 per cent. Japan and Italy furnished the remaining \$367,000, the major portion coming from Japan. (Consul General Philip Holland, Guatemala City, March 17.)

Nottingham Interested in American Mercerized Yarn.

The Nottingham trade is evincing an interest in American mercerized yarn for use in the local knitting industry and, to a certain extent, in the manufacture of dress fabrics. A large portion of the yarn now used is made of Egyptian brown cotton which has to be bleached before dyeing many of the shades now so much in demand. The American yarn, on the other hand, has a white natural fiber ready for dyeing without bleaching, which gives it a particular advantage if it is to be mixed with rayon and knitted or woven before dyeing, for the reason that rayon deteriorates greatly in the process of bleaching. (Consul Samuel T. Lee, Nottingham, March 26.)

Italian Cotton Industry Expanding.

Reports as to the condition of the Italian cotton spinning and weaving industry continue optimistic. Production is on the upward swing both as regards quantity and technical perfection, and Italian cotton textiles are beginning to be seen in many world markets to which they were hitherto unknown. Imports of raw cotton amounted to 201,435 tons in 1924, as compared with 185,341 in 1923 and 177,696 in 1922. Takings of raw cotton during January, 1925,

amounted to 25,905 tons, as against 18,030 in January, 1924, and only 8,060 tons during the same month of 1923. It is stated that up to February 6 of the current year Italy had already taken 73,252 more bales of American cotton than during the corresponding period last season. Exports of cotton yarn during 1924 amounted to 17,800 tons, as against 13,242 in 1923, while 52,288 tons of cotton piece goods were sold abroad as against 45,418 in the preceding year. (E. Humes, clerk to commercial attaché, Rome, March 21.)

Cotton Goods Markets in Netherlands East Indies.

Imports of cotton goods in the Netherlands East Indies increased considerably in 1924 as compared with 1923. Great Britain and Japan profited by this increase, while the Netherlands was the principal loser. Imports of cotton goods into Java and Madura during 1924 were as follows: Unbleached, 7,361,000 kilos; bleached, 12,973,000; and colored and printed other than sarongs, slendangs, etc., 13,889,000. Japan supplied 75 per cent of the unbleached, or approximately 30 per cent more than in 1923. Imports from China also showed an increase. Bleached goods came principally from Great Britain and the Netherlands. For colored and printed goods Great Britain is the principal source of imports; but Japan is becoming more important each year, and its share, 18,064,000 kilos, represented an increase of 53 per cent over 1923. Trade Information Bulletin No. 327, Cotton Goods Market in the Netherlands East Indies, by Assistant Trade Commissioner Edwin B. George, Batavia, may be obtained from the Government Printing Office, Washington, or the district offices of the Bureau of Foreign and Domestic Commerce, at a cost of 10 cents.

Jute Bag Market in Chile.

Imports into Chile of gunny or jute bags for shipping nitrate of soda in 1923 amounted to 3,000,000 kilos, valued at 1,500,000 pesos (kilos=2.2046 pounds and peso=\$0.365). In 1924 these imports reached a total of 12,500,000 kilos, worth 5,500,000 pesos. Most of these bags are shipped direct from India and are entered through the port of Iquique, according to a report from Consul Harry Campbell, Iquique. The bags in general use are known as "standard heavy C. rice bags"—dimensions, 23 by 33 inches, mesh 8x8 or 8x9, and average weight at time of shipment, 24 ounces. Quotations are practically all c.i.f. alongside discharging vessel at Iquique. Prices are quoted in English pence per bag. The present price is about 9d. per bag. It is said to cost 2d. or 3d. additional to land and deliver bags to the nitrate plants. An import duty of 0.03 Chilean gold pesos per kilo, gross weight, is levied. Payment is usually by 90-day draft on London, payable upon receipt of order of delivery or during the first week of the month after the arrival of the vessel for discharge. A list of Iquique dealers in bags will be made available to American firms upon application to the Textile Division, Bureau of Foreign and Domestic Commerce.

UNITED STATES HOSIERY PRODUCTION AND TRADE

American exports of hosiery did not continue to show the increase during 1924 which had been manifest in 1923. Shipments of cotton and rayon hosiery were considerably smaller but exports of silk hosiery were approximately 70 per cent greater than in the previous year. Exports during 1924 totaled 6,400,000 dozen pairs, valued at \$19,770,000, compared with 6,700,000 dozen pairs, worth \$19,830,000, in 1923. Of the 1924 total quantity, the United Kingdom took 21 per cent; Cuba, 15 per cent; and Argentina, 11 per cent. Cotton hosiery was the most important class in the 1924 exports and amounted to 4,825,000 dozen pairs, valued at \$9,096,000; silk ranked second in point of value with 755,000 dozen pairs, worth \$6,947,000; and rayon accounted for 845,000 dozen pairs, with a value of \$3,732,000. Comparable figures for 1923 show that prices for the 1924 exports were higher for cotton, approximately the same for rayon, and lower for silk hosiery.

1923 and 1924 Hosiery Exports Summarized.

The following table shows the United States exports of cotton, rayon, and silk hosiery to the principal consuming markets during 1923 and 1924:

United States exports of hosiery to principal countries

(In dozen pairs)

Countries	Cotton		Rayon		Silk	
	1923	1924	1923	1924	1923	1924
Denmark	41,487	18,864	7,973	10,262	1,460	2,391
France	66,360	22,767	37,176	11,153	2,457	1,657
Netherlands	16,871	11,722	2,681	8,805	1,547	2,922
Norway	21,553	11,303	3,794	1,856	1,527	2,470
United Kingdom	611,769	619,201	860,861	864,467	187,534	886,980
Other Europe	33,460	41,784	3,473	6,300	1,782	6,718
Canada	499,004	342,807	16,394	16,862	35,609	42,827
Costa Rica	40,726	60,356	467	5,265	223	3,024
Panama	48,122	51,824	10,723	7,449	5,531	12,196
Other Central America	89,458	149,824	2,474	18,140	752	6,606
Mexico	211,562	329,635	49,448	81,450	13,012	27,156
Cuba	1,239,457	993,836	98,671	62,539	21,464	24,091
Dominican Republic	88,087	110,394	2,168	4,384	811	2,580
Jamaica	66,277	57,764	2,793	4,848	1,240	2,481
Other British West Indies	72,193	69,852	5,618	6,652	3,613	3,874
Argentina	768,263	628,821	859,354	54,972	61,912	48,676
Chile	112,638	102,335	6,978	1,831	271	1,625
Colombia	140,932	161,721	5,609	19,880	1,999	8,938
Peru	172,975	206,614	949	1,224	90	2,438
Uruguay	202,122	189,097	32,555	29,086	2,363	5,504
Venezuela	86,943	117,760	4,996	5,016	209	1,275
Other South America	73,419	84,147	4,263	4,901	1,653	2,126
British India	26,855	84,896	4,921	11,617	6,550	12,949
Philippine Islands	84,598	91,946	5,482	15,715	3,918	12,598
Australia	178,411	109,518	33,275	15,804	35,152	48,681
British South Africa	107,380	95,606	35,480	30,063	33,085	57,752
Other countries	168,938	156,716	24,767	44,924	14,862	32,692
Total	5,159,750	4,825,563	1,113,218	844,960	440,885	754,652

In the preceding table, exports by parcel post are not included prior to December 31, 1923; after that date parcel-post shipments of over \$25 in value from commercial concerns to commercial concerns are included in the statistics.

The accuracy of these figures is dependent upon the carefulness with which shippers fill out their export declarations. Full cooperation on the part of the exporter, therefore, is strongly urged.

Cuba and Argentina Still the Largest Cotton Hosiery Markets.

Cuba and Argentina continued to be the largest markets for cotton hosiery, although each of these countries took less in 1924 than in 1923. The United Kingdom occupied third place as a buyer of this class of goods

and purchased a larger quantity than during the previous year. Exports to continental Europe were smaller in 1924 than for the year before, while those to Central America and Mexico were considerably larger. With the exception of Argentina, most of the South American countries took greater quantities than during 1923.

Larger Rayon Shipments to United Kingdom—Silk Hosiery.

Exports of rayon hosiery to the United Kingdom were larger than in 1923 and comprised approximately 40 per cent of the total shipments during 1924. Argentina, which was the second largest market in 1923, required only about 15 per cent of its 1923 takings of rayon hose, while Mexico's imports almost doubled and that country occupied second place in 1924. Shipments to Cuba were also smaller, but many of the heretofore unimportant markets showed substantial increases in their demands.

Exports of silk hosiery were over 70 per cent greater in quantity during 1924 than in the previous year, and, with the exception of Argentina and France, this increase was evident in all markets. The United Kingdom took over 50 per cent of the total silk hosiery exports and more than doubled the quantity it imported from the United States during 1923.

Imports Less than in 1923.

Imports of hosiery in 1924 were also less than in 1923. The 1924 receipts were as follows: Cotton, 530,939 dozen pairs, valued at \$1,409,318; and wool, 486,215 dozen pairs, worth \$2,924,230. Comparable figures for 1923 are: Cotton, 611,718, \$1,826,591; and wool, 501,600, \$2,944,980. Separate figures for imports of silk and rayon hosiery are not available.

Hosiery Production Increases.

No production statistics are available for 1924. Figures for the domestic production in 1923 showed a substantial increase in quantity over all previous years and, in point of value, were over four times that reported for 1914, totaling in 1923, 97,433,000 dozen pairs, valued at \$378,733,000. Production of all classes of hosiery, except all-wool, increased in 1923 as compared with 1921, but the largest gains were made in cotton hosiery and in hosiery of natural silk or rayon mixed with other fibers. Of the 1923 production total, the following is the division as to classes: Cotton, 57,620,000 dozen pairs, \$105,945,000; all-wool, 1,177,000, \$8,157,000; cotton and wool mixed, 7,891,000, \$25,352,000; all natural silk, 4,640,000, \$45,929,000; all rayon, 2,758,000, \$10,647,000; and natural silk or rayon mixed with other fibers, 23,347,000, \$182,702,000.

Fashion Requirements Made Quick Adaptations Necessary.

Hosiery manufacturers, on the whole, found 1924 far from satisfactory. This product is particularly responsive to fashion tendencies, and the trend toward novelties in men's socks, and the demand for a variety of colors and styles in women's hosiery, forced manufacturers in many cases to make quick adaptations of their products to meet the market requirements. The consumer's demand for attractive hosiery at reasonable prices has led to a further expansion in the use of rayon, both alone and in combination with other fibers, and such goods are rapidly displacing mercerized cotton hosiery and restricting the output of the cheaper grades of ordinary cotton hosiery.

Indian Firm Seeks American Market for Hemp and Carpets

An exporter in Bombay, India, desires an American market for hemp and carpets. Quotations will be made c. i. f. any port in the United States, according to a report from Assistant Trade Commissioner R. G. Sabine, Bombay. Further information will be made available upon application to the Textile Division, Bureau of Foreign and Domestic Commerce, Washington.

Additional information regarding textiles appears in this issue under the following sections:

Cable review, Far East:

Conditions in Japan during March:

China trade and markets during March.

Cable review, Far East—Continued.

Indian conditions during April.

Dutch East Indian business satisfactory.

Australian exports set new record.

Philippine March trade partially inactive.

Cable review, Europe:

Belgian cotton industry stronger than the linen.

Netherlands textile industries stronger.

German industry working mostly on part time.

Tariffs and Trade Regulations:

Germany: Relaxation of import license on certain fibers and waste.

Italy: Certain fabrics granted temporary free importation.

Newfoundland: Upward revision of tariff.

Norway: Gold surtax reduced.

Poland: Indefinite extension of tariff reductions.

Spain: Temporary duty-free imports of linen thread.

Bureau's special circulars available.

Foreign trade opportunities.

LUMBER

Axel H. Oxholm, Chief, Lumber Division

RELATIVE IMPORTANCE OF DOUGLAS FIR EXPORT MARKETS

The exportation of Douglas fir has increased rapidly since the war and now occupies first place among American woods with regard to the quantity shipped. The 1924 total of 1,117,128 M board feet is considerably higher than that registered in 1923, or 922,416 M board feet. As will be seen by reference to the chart on the fourth page of cover, an important feature of the trade is the tendency to ship more timber and lumber and, at the same time, reduce shipments of logs. This indicates that our exporters are concentrating more on the further manufacture of our forest products. The exports by degree of manufacture are shown in the following table:

Exports of Douglas fir from the United States

Items	1924	1923
	M feet	M feet
Logs.....	8,515	26,690
Timber.....	485,120	377,752
Rough lumber.....	599,130	494,236
Dressed lumber.....	24,363	23,738
Total.....	1,117,128	922,416

Japanese Market Outstanding.

Douglas fir has entered the market in the West Indies and in various new fields in Europe since the opening of the Panama Canal. This trade, however, is relatively small when compared with that with the Far East and the west coast of South America, which continue to be the principal outlets for the Pacific coast species, as is indicated by the map on the second page of cover. Japan is of paramount importance in the Douglas fir export trade, about 50 per cent of the total having been shipped to that country. The Japanese market is peculiar because more than half of the total shipments consists of square timber, while it is also the principal purchaser of both dressed and rough lumber. Japan also took 4,600 M feet of logs. While the effects of the earthquake unquestionably have accentuated the importance of the Japanese market for Douglas fir, it is reasonable to believe that it will continue to be the best outlet for this species of wood for some time to come.

China and Australia Also Important Markets.

Although of much less importance, China takes second place with about 172,000 M feet, most of which was shipped in the form of rough lumber. The market for square timber is also important, however. The Chinese market, which is capable of considerable, though probably gradual, expansion, is of consequence to our Douglas fir shippers because the requirements in regard to quality are not so exacting as in many other markets. It is safe to say that Douglas fir will continue to be used in China in increasing quantities. Australia, another important market, took about 154,000 M feet, equally divided between rough lumber and square timber.

Latin-American Markets Chiefly Purchase Rough Lumber.

The Latin-American countries which use Douglas fir import it chiefly in the form of rough lumber, the majority of the shipments to those markets in each case having been composed largely of that type. Peru assumed first place by taking 73,000 M feet, while Chile was second with a little more than a third of that amount, or 27,000 M feet. Mexico, which is a very important market for many other species of United States lumber, took 25,000 M feet. Argentina, which is a new field for Douglas fir, having been opened up since the war, purchased about 12,000 M feet; while Cuba, another market of growing interest, took about 10,000 M feet.

England was the only other market which took more than 10,000 M feet and compares with Mexico as a market for Douglas fir. A total of 25,000 M feet, comprising 15,000 M feet of rough lumber, 8,000 M feet of square timber, and smaller quantities of logs and dressed lumber, represented the English purchases in 1924.

Problem of Disposing of Low Grades.

The chief difficulty arising in the exportation of Douglas fir has been the fact that it was little known in most new foreign markets, making it necessary to concentrate on the marketing of the upper grades and large dimensions, because competition in this field has been limited. The great problem in the future for the Douglas fir shippers will be to dispose of not only the upper grades but also their lumber log run. It is obvious that success has been attained in the markets

bordering the Pacific Ocean, but further extension to other fields largely depends upon the cost-of-transportation factor.

Specialty Lumber to Other Than Pacific Markets.

The freight rates to other markets are too high as a rule, and the question arises as to whether it would not be advisable to ship specialty lumber cut along the lines of small dimension stock. Considerable progress has already been made by some mills on the Pacific coast shipping broom-handle squares, flooring blocks, etc. There is no reason why Douglas fir sash and door stock should not find a market in countries where the importation of doors made in the United States has been made impossible by high custom duties. It must be remembered, however, that these far distant markets require proper seasoning of the lumber to insure good condition on arrival.

Competition with Southern Pine.

Much has been said with regard to the competition between Douglas fir and southern pine in foreign markets. Unquestionably there are markets where such competition necessarily must exist. On the other hand, considering the export interest of the country as a whole, it would be desirable for Douglas fir exporters to follow up the trade of the southern pine exporters in markets where the requirements are for large timber, which can not be supplied in southern pine. In this manner the use of substitutes such as concrete, steel, etc., will be checked and we will retain our position in the lumber export field.

American Softwoods Stand High in Foreign Markets

Even those Americans who are familiar with the softwoods of the United States often show a serious lack of appreciation of their quality. However, it is

only necessary to witness the keen appreciation which is accorded our softwoods in foreign countries to realize our deficiency in this regard. Southern pine, for instance, when exported is cut to even feet only (10, 12, 14, 16 feet, etc.), although there is just as large a demand for intermediary sizes, such as 11, 13, 15, 17 feet, etc.

Foreign Users More Careful in Measuring.

The close reckoning with which our woods are marketed in foreign countries is a constant source of surprise to most of our exporters when visiting their foreign markets. Many American mills trim export stock to even feet only, with the idea that odd lengths are not acceptable, and waste many feet of valuable lumber in the process; then, in addition, allow an appreciable quantity, usually up to 4 inches, of extra length free of charge. The foreign importer, however, often retails this same stock on a 4-inch basis; all lengths are carefully measured and invoiced to the customer in order to take full advantage of every cubic inch.

This applies not only to southern pine but to many other American woods as well, some of which are of higher value. In short, we sell our woods by the foot, while they are retailed abroad by the inch, and in some cases are actually sold by the pound.

See also Cable review, Europe: Swedish lumber sales dull.

Tariffs and Trade regulations:

Germany: Relaxation of import license on.

Italy: Fabrics of shavings granted temporary free importation.

Newfoundland: Upward revision of tariff.

Norway: Gold surtax reduced.

CONSTRUCTION NEWS

Compiled in Industrial Machinery Division

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce or its district and cooperative offices by mentioning the country and reference number given. Where no reference number is given, further information is not available.]

Contract for Railroad in Ecuador.

The contract for the Quito-Esmeraldas Railway in Ecuador was signed early in February (see Construction News, April 13). It will be 42-inch gauge and divided into two sections of 173 and 190 kilometers, respectively, according to a report just received from Vice Consul William W. Morse, at Guayaquil. The cost of completing and equipping the Quito-Ibarra section is placed at 6,000,000 sucres. (The sucre is now worth about \$0.25.) Specifications call for the purchase of 9,200 tons of 45-pound steel rails, A. S. C. E. type, with the corresponding splice bars and spikes, approximately 300,000 crossties, structural steel, rolling stock, and other equipment. It is known that German manufacturers, through their local representatives, have already submitted bids for the rails. A copy of the contract in the original text, with an English translation, is available at the bureau to accredited American concerns, who should lose no time in getting in touch with the contractors.

Newfoundland Legislature Passes High Roads Bill.

The high roads bill providing for the expenditure of \$2,000,000 in the construction of motorable roads was adopted by the Newfoundland Legislature on March 25. The program provides for the construction of roads from Port Aux Basques to Bonne Bay, also extensive operations in the Avalon Peninsula. The former road will penetrate Newfoundland's salmon fishing areas and shooting resorts. (Assistant Trade Commissioner Walter J. Donnelly, Ottawa, Canada.)

Building Construction Shows Activity in Poland.

The beginning of building operations is one of the main items in the Government plan for improvement in the business situation in Warsaw, where plans are progressing favorably. At present there are 225 buildings under construction, 23 being rebuilt, and 45 being enlarged. In February the municipal authorities ratified 15 projects for building construction. (Commercial Attaché Leighton W. Rogers, Warsaw.)

Construction of Telephone Building Proposed in New Brunswick.

It is reported that the New Brunswick Telephone Co. will commence work on the erection of a telephone exchange building in Campbellton some time during

the month of May. The company uses the old system requiring the subscriber to ring for central connections, but it is understood that a more modern system will now be installed, either the automatic or that with the common battery. Reference No. 166062. (Consul G. C. Woodward, Campbellton, New Brunswick, Canada.)

Railway to be Constructed in Canada.

It is expected that tenders will shortly be called for the construction of a 30-mile standard-gauge railway from Thurso to the junction of the Blanche and Nation Rivers in order to tap extensive timber limits owned by a private concern. A sawmill is also planned at Thurso. Reference No. 35X. (Trade Commissioner Lynn W. Meekins, Ottawa.)

Railroad Charter Granted in Quebec.

The right to build a railway line from Quebec to Chicoutimi and from Chicoutimi to the boundary of the Province at or near Hamilton Inlet was given when the legislature last week granted a charter to a Canadian railway company. The company has also been empowered to build a branch line from any point on the main line to James Bay or Hudson Bay and to the St. Lawrence River at any point at or near Seven Islands. Reference No. 166334. (Consul E. Haldeman Dennison, Quebec, Canada.)

Capital Outlay Included in Indian Railway Budget.

The first separate railway budget was presented to the Indian Legislative Assembly in February of this year. In 1925-26 a capital expenditure of 230,000,000

rupees is proposed, of which over 65,000,000 rupees are for the construction of new lines (1 rupee=\$0.24). This program calls for the laying down of 2,000 miles of additional railway, 348 miles to be opened in 1925-26. (Consul General Julius G. Lay, Calcutta.)

Canadian Sanatorium to Spend \$100,000 on Additions.

Additions and improvements to cost \$100,000, including a new heating apparatus and laundry, are to be made at a sanatorium in Ontario. Reference No. 166393. (Consul Richard F. Boyce, Hamilton Ontario.)

Schoolhouses Planned in Scotland.

The Fife Education Authority has decided on several important plans for schoolhouse construction, the work to commence during the coming summer. An addition in Viewforth School at Kirkcaldy is estimated to cost \$50,000, exclusive of equipment. Another extension at the Auchterderran Higher Grade School of an art and science room is to cost \$9,000. A new school is to be commenced at Methilhill near Methil, Fife, during the summer, to cost \$72,000, exclusive of equipment. Reference No. 167039. (Consul Howard D. Van Sant, Dunfermline.)

Antofagasta to Have New Theater.

Construction is about to begin of a new theater in Antofagasta, which is expected to cost 400,000 paper pesos. There are to be 740 pit seats, 400 balcony seats, 400 amphitheater seats, and 1,200 gallery seats. When finished this theater will have double the capacity of any such structure in the city. Reference No. 164923. (Consul Stewart E. McMillin, Antofagasta, Chile.)

CHEMICALS

Charles C. Concannon, Chief, Chemical Division

MARKET IN ARGENTINA FOR AMERICAN PAINTS AND VARNISHES

Consul General Henry H. Morgan, Buenos Aires

There are various fundamental differences between building in Argentina and in the United States which have a direct bearing upon the paint market. In Argentina the vast majority of buildings, regardless of their nature, are constructed either of brick or cement, and generally they are of brick with a cement "veneer," which gives the appearance of an all-cement structure. Most of the modern buildings under construction are using very little paint except for interior decorations.

Importance of Paint Label in Argentina.

The Argentine paint user purchases paint by mark or name and not by gallon of type A or B. This is an important factor in meeting competition in this market. The manufacturer who through advertising and other means has succeeded in getting his product before the public and has created a demand for it is assured of a good business.

Several brands of American paints and varnishes are well established in Argentina. They are further kept before the public constantly by advertising, and special salesmen and technical men often are sent into the field for practical demonstrations. One of the greatest errors in the business practice of some American manufacturers is the changing of their labels every

few years. Their European competitors, on the other hand, may change the labels on products destined for home consumption, but not on those for the foreign market.

Kinds of Paint in Demand.

There is very little demand in Argentina for ready-mixed paints, and they can be sold only after considerable expense for advertising and resale assistance. A prejudice, which it is difficult to overcome, exists against this class of paint, since certain manufacturers, in order to meet competition or to undersell competitors, have put on the market inferior grades of paints under labels which were printed to cover only quality products for home consumption.

The largest amount of paints and paint materials imported into Argentina is in the form of white-lead paste, commonly known as white lead in oil, which constitutes about 75 per cent of the total of paint materials consumed.

Paint Manufactured Locally.

Several local manufacturers have placed on the market a very good grade of colored paste paints and also some cheaper and inferior grades to meet foreign competition. There are also manufactured within the country some cheap varnishes and mixed paint in small

cans. The only volume business secured by local manufacturers is that of the various Government departments and public utilities controlled by the Government. In this instance the materials are made up according to definite prescribed specifications, and the local manufacturers are given preference in accordance with the Government's policy of fostering and stimulating the growth of home industries.

Good Possibilities in Argentina for the Sale of Paints.

The future possibilities of this market are exceedingly good, as building is going on at a rapid rate, and the acute shortage of apartments and houses is a matter of public knowledge which is receiving the attention of the Government. The monthly figures of building permits, covering the past two years, show a constant increase in construction, yet it does not keep pace with the demand.

Paints and Varnishes Imported into Argentina.

The principal suppliers of paints and varnishes for Argentine consumption are the United Kingdom, the United States, and Germany. According to the Argentine statistics, the classification "paints in paste from colors not specified" constitutes the leading paint group imported. Total receipts reached 3,019,407 kilos in 1921 and 8,907,839 in 1922. The following table shows, by countries of origin, the latest available figures for the amount of paint of this variety imported:

Argentine imports of "paints in paste from colors not specified"

Countries	1921	1922	Countries	1921	1922
	Kilos	Kilos		Kilos	Kilos
Germany.....	42,755	375,141	Japan.....	280	4,830
Belgium.....	54,210	107,420	Norway.....	1,750	56,873
Chile.....	5,189	289	Netherlands.....	5,230	2,226,468
Spain.....	14,200	3,297	United Kingdom.....	1,528,910	720
United States.....	1,340,717	1,097,438	Uruguay.....		6,278
France.....	25,493	25,906	Canada.....		
Italy.....	673	3,679			

Receipts of "liquid paints in general" decreased in quantity from 915,661 kilos (1921) to 634,485 (1922). The United Kingdom furnished over one-half the requirements, or 680,581 kilos (1921) and 362,075 (1922). Shipments from the United States reached 215,813 kilos in 1921 and 232,045 in 1922.

Imports of varnishes into Argentina declined from 682,235 kilos in 1921 to 516,902 in 1922. The trade was supplied chiefly by the United States and the United Kingdom. England's participation dropped from 419,707 kilos in 1921 to 249,482 in 1922; and America's decreased slightly from 228,946 to 219,610. The remainder came principally from Germany and Belgium.

Receipts of "paints in liquid or paste form mixed with varnish" declined considerably from 559,175 kilos in 1921 to 440,244 in 1922. The United States was the leading supplier, having furnished 282,982 kilos (1921) and 264,376 (1922). Imports from the United Kingdom fell from 190,659 to 54,525 kilos for the above-mentioned periods. The Netherlands and Germany furnished the balance.

As has already been noted, imports of prepared paints were relatively small. In 1921 total receipts aggregated 38,793 kilos, and in 1922, 65,131. The United Kingdom and the United States practically dominate the market in Argentina for prepared paints, the United Kingdom having supplied 22,916 kilos

(1921) and 35,104 kilos (1922), while America's share rose very considerably from 9,943 kilos in 1921 to 28,647 in 1922.

American Paints and the Argentine Market.

Argentina ranks third among the countries of the Western Hemisphere in receipts of American paints and varnishes, being surpassed only by Canada and Cuba. The principal competition encountered by American manufacturers in 1922 was that of well-known British paints which have been reestablished on a firm basis since the war period, when America dominated the market. The United States maintained the leading position as a supplier of varnishes and enamels during 1922, but receipts of British paints and ready-mixed paints exceeded those from the United States. To obtain satisfactory results it is essential that American firms avoid the substitution of labels and quality in catering to the demands for paints and paint materials.

Additional information regarding chemicals appears in this issue under the following sections:

Cable review, Europe: German potash production for April double that of a year ago.

Cable review, Far East: Indian conditions during April.

Tariffs and Trade Regulations: Antigua: Changes in import duties on toilet preparations.

Dominica: Change in import duties on bay rum and certain medicinals.

Newfoundland: Upward revision of tariff.

Norway: Gold surtax reduced.

Poland: Indefinite extension of tariff reductions.

Bureau's special circulars available.

Foreign trade opportunities.

Slight Decline in French Wholesale Price Indexes

General wholesale prices registered a slight decline at the end of March, with an index number of 525 as compared with 526 at the end of February. The general index is compiled from prices of 45 commodities, on the basis of average prices in 1914. The foodstuffs index for the end of March was 450, as compared with 457 a month earlier; industrial materials rose to an average of 590 as compared with 587.

Retail prices in Paris, however, continued to advance. The index number at the end of March stood at 415, in contrast with 410 a month earlier. (Based on cable from Trade Commissioner Daniel J. Reagan, Paris, April 6.)

Budget of Madagascar for 1925

The published budgetary estimates of the French Colony of Madagascar for the calendar year 1925 totaled 123,497,834 francs, as compared with estimates amounting to 98,542,468 francs for 1924. As in previous years, the receipts and expenditures are estimated to balance and are distributed as follows: Local or ordinary budget, 96,705,500 francs; railway budget, 16,969,000 francs; native medical aid budget, 8,823,334 francs.

With a view to assuring the estimated increased revenue in 1925, provision has been made for a general increase in licenses and taxes, chiefly trading and professional licenses, consumption taxes, and export taxes. (Consul James C. Carter, Tananarive.)

IRON=STEEL=HARDWARE

Luther Becker, Chief, Iron and Steel Division

GAIN IN BRITISH FOREIGN TRADE IN STEEL

Cable from Acting Commercial Attaché Butler, London, April 14

Exports of iron and steel from Great Britain during March amounted to 312,194 long tons, a gain of nearly 5 per cent over the preceding month. The more important advances among the individual articles were: Tin plate, 14,321 tons; railway material, other than rails, 6,624 tons; and structural steel, 1,881 tons. Many items showed small losses. The more prominent declines were in wrought tubes, pipes, and fittings (5,326 tons), steel bars, rods, and angles (2,310 tons), and plates and sheets (1,348 tons).

Shipments of Galvanized Sheets Lead.

Foreign consignments of iron and steel totaled 936,306 tons for the first quarter of 1925, the bulk of this trade being in galvanized sheets, tin plate, and other plates and sheets, pig iron and ferroalloys, and steel bars, rods, and angles. Details of this trade and also of importation for the first quarter and for the month of March are presented in the following table:

British foreign trade in iron and steel

(In long tons)

Items	Imports		Exports	
	March	January through March	March	January through March
Pig iron and ferroalloys.....	24,699	88,738	52,675	162,996
Ingots, blooms, billets, and slabs.....	101,215	290,143	852	1,884
Iron bars, rods, and angles.....	20,754	74,475	3,253	9,412
Steel bars, rods, and angles.....	27,680	74,457	20,571	63,357
Structural steel.....	10,302	32,029	5,969	14,432
Hoops and strips.....	3,905	14,345	4,755	12,874
Plates and sheets.....	15,517	49,563	23,789	82,557
Galvanized sheets.....			66,341	186,604
Tin plate.....			45,298	120,135
Cast tubes, pipes, and fittings.....	3,006	11,481	7,622	22,240
Wrought tubes, pipes, and fittings.....	4,270	11,382	12,255	46,422
Rails.....	3,762	8,208	12,902	51,740
Railway material, other than rails.....	2,392	6,269	18,598	44,020
Wire.....	4,632	16,904	8,795	20,603
Wire cables and rope.....			2,173	5,480
Wire nails, including staples.....	5,294	16,148	366	1,188
Wire manufactures, not elsewhere specified.....	558	1,834	2,093	5,601
Nails, tacks, rivets, and washers.....	911	2,437	1,244	4,300
Bolts and nuts, including screws for metals.....	984	2,844	2,850	6,024
Iron and steel castings in the rough.....	749	2,134	146	472
Iron and steel forgings in the rough.....	701	1,957	77	275

Imports Also Heavier.

Importation of iron and steel was also heavier in March—a longer month—than in February by about 4 per cent. Receipts aggregated 244,921 tons for the month, bringing the total imports for the first quarter up to 714,618 long tons. The outstanding gains made in the imports for March as compared with those for the preceding month were in pig iron and ferroalloys (8,666 tons), ingots, blooms, billets, and slabs (2,598 tons), steel bars, rods, and angles (6,952 tons), and rails (1,752 tons). The larger losses were in iron bars, rods, and angles (2,982 tons), structural steel (4,622 tons), hoops and strips (2,083 tons), and plates and sheets (2,187 tons).

Greater Production of Iron and Steel.

In March there were 607,900 tons of pig iron and 684,700 tons of steel ingots and castings produced, as

compared with 534,100 tons of pig iron and 646,400 tons of steel ingots and castings in February. There were 169 blast furnaces and 284 open-hearth furnaces operating at the end of March, an increase of 5 blast furnaces and 5 open-hearth furnaces over the number active at the end of the preceding month.

Situation in the Belgian Siderurgical Industry

Cable from Commercial Attaché Fayette W. Allport, Brussels, April 17

The Belgian steel industry is already meeting with the greatest opposition to its proposals of wage reductions. The metallurgical markets are dull and prices are slightly lower. The present level of production is mainly dependent upon the Government's car building program and must decline upon its completion if the present dearth of export orders continues. The expected post-Easter revival has so far failed to come into evidence.

Luxemburg Competition—Labor Situation.

Luxemburg competition is being felt in the export trade. The threatened lockout in the Hainaut works has been avoided by the laborers' agreement to investigate the steel markets. If the results of this investigation support the employers' contention, wages are to be reduced 5 per cent, retroactively from April 1.

There are in Belgium 51 blast furnaces in operation, 4 of them turning out foundry pig iron and 47 furnaces producing 9,207 metric tons of basic pig iron per 24 hours. The prices on pig iron are lower, despite some export sales to England and Italy. Quotations on semifinished steels are firm, with supplies apparently exhausted. Prices on finished products are declining. A recent Danish rail order was accepted on the basis of an 80 per cent guaranty by the Belgian Government. The market for wire and nail products is depressed, but sheets and plates are firm.

Vizcayan Mining Prospects Improve

Commercial Attaché Charles H. Cunningham, Madrid, Spain

The year 1924 was an exceedingly unsatisfactory one for the mining industry in Vizcaya, Spain, according to the Revista Industrial-Minera Asturiana, notwithstanding that approximately 350,000 metric tons of mineral ore were exported in excess of the preceding year. Prospects for 1925 appear brighter because of the increasing production of the Spanish blast furnaces and the slightly increased demand for Spanish ore in England.

No Concurrent Rise in Prices with Increased Demand.

A contributing factor to the improved outlook has been the lower freight rates to England during January and February of this year. Since the slight increase in demand has not been characterized by a rise in prices, the result has been to reduce the deposits of ore at the mine mouth and to facilitate sales without corresponding profits. Due to the impossibility of increasing wages in the mines since March, 1924, there has been considerable labor unrest.

Lower Production Cost of Competing Ores.

The Spanish iron mining industry complains that it is becoming more and more difficult for the mines in the Bilbao region to compete successfully either with those of southern Spain or with those of Algeria and Tunis, whose output has about the same content of iron and sulphur as that of the mines in northern Spain. Algeria and Tunis are making great inroads on the former Spanish markets in England and Germany because of the lower price which they are able to quote, resulting from their lower production costs. Spain is exporting to England only 57 per cent of the quantity of iron ore sent in 1913, while Sweden has increased its exports to England by 45 per cent and Algeria and Tunis by 24 per cent.

Recent Improvement in Demand.

As to deliveries for the first quarter of 1925, one Bilbao firm reported the sale of 157,000 tons of ore at 21 pesetas a ton and another sale of 25,000 tons of the best red ore. Therefore, it is agreed, notwithstanding the competition alluded to, that the prospects for the

sale of Spanish minerals, not only in England but at home, are more favorable than at any time since 1921. Nevertheless the fear is expressed that speculation, rather than economic demand, may be one of the principle causes of this favorable movement.

Additional information regarding iron, steel, hardware appears in this issue under the following sections:

Cable review, Europe: Swedish industry dull.

German production moderate.

Belgian metallurgical industry inactive.

Tariffs and Trade Regulations: Chile: Export and production bounties for iron and steel.

Estonia: Temporary admission of materials for manufacture of packing cases.

Italy: Pig iron, unworked iron sheets, and steel in billets, etc., granted temporary free importation.

Newfoundland: Upward revision of tariff.

Norway: Gold surtax reduced.

Poland: Indefinite extension of tariff reductions.

Bureau's special circulars available.

Foreign trade opportunities.

SPECIALTIES

Warren L. Hoagland, Chief, Specialties Division

MARKET FOR AMERICAN TOYS IN INDIA

Consul Wilbur Kablinger, Bombay

India is a good market for toys and the American manufacturer should be able to secure a much larger share of the business than he now has. Germany, Japan, and the United Kingdom supply the greater part of the market at present. The following table shows the value of Indian toy imports in the fiscal years 1920 to 1923, inclusive:

Value of Indian toy imports, 1920-1923

[In rupees]

Country of origin	1919-20	1920-21	1921-22	1922-23
United Kingdom.....	294,890	840,180	391,029	498,251
Germany.....	1,100	421,910	914,947	1,854,747
Japan.....	2,400,550	1,668,790	824,555	943,859
United States.....	103,110	157,350	60,580	87,900
All other.....	70,910	126,150	85,164	134,827
Total.....	2,870,560	3,223,380	2,282,275	3,519,584

Although competition is very strong, it is believed that American toys of nearly all kinds can be sold—especially distinctive types which have not yet been offered.

Of India's 320,000,000 inhabitants, approximately 75 per cent are agriculturists, nearly all of whom might be disregarded, by reason of their low purchasing power, when estimating the potential market for toys and similar articles. The urban population, however, and the Europeans and Anglo-Indians scattered in the country districts are sufficiently numerous to insure a good market.

Large Variety of Toys Sold.

Almost every variety of toy is offered for sale, including mechanical, wood, rubber, celluloid, paper, and felt. All kinds seem to meet favor with the public according to the amount of money the customer has to spend. However, price is the chief consideration determining the sale of almost all products in India,

and it is no doubt for this reason that Japan and Germany have secured such a large share of the toy market. Bright colors are particularly appreciated, and in manufacturing toys for the Indian market this fact should be kept in mind.

While some toys are imported direct by department stores and other dealers, it is believed that the best means of introducing a new article is through a distributing agent already engaged in this line and well acquainted with the conditions of the market.

[Detailed reports, with lists of dealers, for Bombay, Calcutta, Karachi, Madras, and Rangoon may be obtained upon application to the Specialties Division.]

Australian Market for Optical Goods

Consul Henry M. Balch, Adelaide, and Vice Consul H. B. Coates, Melbourne

There is an active demand for optical goods of American manufacture in Australia. During the fiscal year ended June 30, 1924, optical goods were imported to the value of £56,844, of which £37,339 came from the United States.

Before the war the bulk of this trade was controlled by German manufacturers, who are again competing strongly for the Australian market. Within the last three years American tortoise-rimmed glasses have been popularized. Opticians and dealers say that their greatest demand is for this type of spectacle and that practically all of them come from the United States.

Additional information regarding specialties appears in this issue under the following sections:

Cable review, Europe: Belgian glass industry depressed.

Tariffs and Trade Regulations: Germany: Relaxation of import license on jewelry and pitch pipes.

Italy: Special colored glass and plate glass granted temporary free importation.

Newfoundland: Upward revision of tariff.

Bureau's special circulars available.

Foreign trade opportunities.

COAL

Charles P. White, Chief, Coal Division

AUSTRIAN COAL INDUSTRY MAINTAINS ACTIVITY

Assistant Trade Commissioner Elbert Baldwin, Vienna, March 31

There has been a considerable decline in the consumption of coal in Austria since pre-war years, the total amount of coal used in the territory embraced in the present Austria having been approximately 12,000,000 tons in 1913, while only 8,200,870 tons were consumed in 1924, or 1½ tons per capita. The decreased use of coal may be attributed to lower industrial activity (which averaged some 60 per cent of pre-war at the close of 1924), higher coal costs, and the progressive development of hydroelectric power, which, for locations capable of producing more than 1,000 horsepower, now totals 387,000 horsepower, as compared with 1,700,000 potential horsepower and an estimated maximum demand of 900,000 horsepower. On the other hand, the Austrian Federal railways have increased their coal consumption, which is two-thirds dependent upon bituminous imports, from 1,610,000 tons in 1922 to 1,980,000 tons in 1924.

Domestic Production Mainly Lignite.

Domestic coal production is more than 90 per cent confined to brown coal, or lignite, and at present covers approximately one-third of the total coal requirements. For its remaining requirements—particularly for bituminous coal—Austria is dependent upon imports from Polish Silesia, Czechoslovakia, and the Saar, named in the present order of importance, a circumstance which, with the addition of coke imports, accounted for 20 per cent of the 1924 trade deficit, which exceeded \$200,000,000 for a population of 6,500,000.

Coal Production and Imports Increase—Coke Output Greater.

Production of lignite in Austria in 1924 amounted to about 2,800,000 tons, an increase over the output of 2,700,000 in the preceding year, but below the 3,000,000 tons in 1922. The bituminous output was over 172,000 tons in 1924, an increase over the production of 158,000 and 166,000 in 1923 and 1922, respectively.

Imports of coal in 1924, also increased over 1923, amounting to over 4,500,000 and 3,700,000 tons in those years, while the 1924 imports were also greater than the 4,000,000 tons received in 1922. Imports of lignite amounting to 714,000 tons in 1924 were lower than the 861,000 tons imported in 1923 and the 1,404,000 tons in 1922.

The output of coke in 1924 was greater than in the two preceding years, amounting to 451,000 tons, against 367,000 and 384,000 tons in 1923 and 1922, respectively. Imports in 1924, however, dropped to 379,000 tons from 400,000 in 1923 and 387,000 in 1922.

Prices Decline but Remain Above Pre-war.

Coal prices have declined steadily from the peak postwar levels, but, in spite of the present excess production in European basins, remain materially higher than before the war. In 1913, the cost of bituminous furnace coal, at yard in Vienna, was \$6.80 per metric ton. In 1923, prices moved between maximum and minimum limits of \$15 and \$10.60, and at the end of March, 1925, stood at \$11. The price of domestic

lignite, which averages 3,500 calories, has moved up from \$7.15 to \$7.60 since the beginning of 1925.

Austrian Coal Able to Meet Foreign Competition.

In spite of certain difficulties, such as increased wages, taxes, etc., Austrian coal mines have been able to meet foreign competition and on the whole to maintain satisfactory activity so that improvement and modernization of their properties have again become possible. Coal is on the Austrian free list, but imports are subject to a 3 per cent sales tax and to differential railway tariffs which serve to protect domestic industries. With Government support these industries have been successful in popularizing increased use of domestic lignite coal, both for industrial and house-warming purposes, achieving an internal economy of fuel costs and an external economy by limiting imports of foreign bituminous coal. The complaint is made, however, that present price levels afford an insufficient margin of profit, and the opinion is expressed that either tax burdens must be reduced or else tariff protection against dumping of the excess production of neighboring countries must be adopted, if the industry is to maintain its healthy condition.

Small Increase in British Coal Exports

Exports of coal from the United Kingdom during March amounted to 4,392,258 long tons, as compared with 4,344,008 tons in February, 1925, and 5,190,265 tons in March, 1924, according to a radioletter, dated April 16, from Acting Commercial Attaché Hugh D. Butler, London. There is little hope of expansion in coal shipments, with the general output so much in excess of inquiry and German competition so active in all European markets. Tyne shipments during March were 1,355,616 tons as compared with 1,792,939 tons in March of last year. Production of coal during the week ended April 4 aggregated 5,293,300 tons.

Discovery of Coal in Mysore, South India

Consul Alfred R. Thomson, Madras, March 7

As a result of mining operations conducted for several months in the Indian native state of Mysore, South India, coal has been discovered at Kamasamudram, which is 18 miles by rail from the railway station known as Bowringpet. The Government of the Mysore State wishes to sink a small prospecting shaft and has commissioned a gold mining company to undertake this work. A new coal mine in South India, if operated successfully, will be a great economic asset in the matter of conducting the various Mysore gold mines and in supplying the South Indian railroads. Local industries, railways, and steamers are now largely dependent upon coal which is imported from Bengal, North India, and from the native state of Hyderabad.

RUBBER

Everett G. Holt, Acting Chief, Rubber Division

IMPORTANCE OF AUSTRIAN RUBBER INDUSTRY

Commercial Attaché H. Lawrence Groves, Vienna, March 21

The rubber industry is among the most important Austrian exporting industries. In 1924, Austria exported 5,586 tons of manufactured rubber goods, valued at \$6,300,000, and imported 1,207 tons, valued at \$1,500,000. In 1923, the corresponding figures were exports of 4,324 tons valued at \$5,000,000, and imports, 1,334 tons, valued at \$1,700,000.

The annual output before the war approached a value of \$8,000,000, and most of the pre-war factories are still within the bounds of present-day Austria. In order to meet heavy war demands, these factories were greatly developed and the present capacity is perhaps 50 per cent greater than the total production of the rubber factories of former Austria-Hungary combined. Taking price advances into consideration, the present Austrian rubber industry, when operating at full capacity, is able to turn out about \$15,000,000 worth of rubber products annually.

Extent of the Industry—Dependence on Export Trade.

The Austrian rubber industry exceeds by far the combined rubber industries of the other Succession States. It comprises six large factories organized in a syndicate, and employs about 10,000 persons, while the five Czech factories employ only about 1,500, and the two factories in Hungary employ some 1,000 workmen. Yugoslavia has no rubber factory and Poland has but one with very small capacity. Obviously, therefore, the Austrian mills are chiefly dependant on the export trade (70 to 80 per cent of normal production) to keep their mills going.

Chief Articles of Manufacture.

In 1922, the Austrian industry consumed 2,270 tons of crude rubber and in 1924 2,500 tons. It is imported via Hamburg and Trieste from British India, Brazil, and the Malay States. The chief articles manufactured are technical appliances, rubber tires of all kinds, balls, rubber overshoes, heels, vulcanized rubber goods, rubber fabrics, surgical appliances, erasers, and packings. Vienna has the largest factory on the European continent for the manufacture of rubber balls.

Wages Paid—Leading Manufacturers.

Wages paid in the rubber industry at present are, per hour, as follows: skilled workmen, \$0.12; unskilled assistants, \$0.095; and female assistants, \$0.06. The wages approximately are from 110 to 120 per cent of those of pre-war, in gold. Taking into consideration the increase in the cost of living (146 per cent) present wages represent from 75 to 82 per cent of their pre-war value.

The leading manufacturers are: Semperit Oesterr. Amerikanische Gummiwerke A. G., Vienna; Asbest & Gummiwerke Calmon G. m. b. H., Vienna-Stadlau; Vereinigte Gummiwarenfabriken Hamburg-Wien, vorm. Menier-Reithoffer, Vienna; Josef Reithoffer's Soehne, Garsten b/Steyr. Josefthaler Gummi- und Asbestwaren-Fabrik, G. m. b. H., Josefsth. l.

Increased Business in Vulcanized-Rubber Goods.

The situation of the Austrian rubber industry, unlike other industries, was favorable in 1924. Business in vulcanized-rubber goods increased materially, due to the increased interest in radio broadcasting and to the extended exports to England, Germany, Italy, Holland, and Poland.

Exports to other countries declined, particularly those to the United States, which in 1923 absorbed 50 per cent of the exports of vulcanized-rubber goods.

Exports of rubber toys, overshoes, and gymnastic shoes have grown considerably, going chiefly to Czechoslovakia, Poland, Italy, and Rumania. Rubber toys are sold to practically every European country.

Exports of rubber packing showed no great change over 1923 figures, and went to the Succession States, France, England, and Italy, and in lesser extent to Belgium, Germany, and Holland.

The Market for Austrian Tires.

The situation in the production of tires is much less favorable, Austrian products suffering from the strong and growing competition of French, German, and Italian manufacturers and to some extent by American products. Austrian manufacturers are also finding it increasingly difficult to compete with German tires in the Succession States.

Conditions are more favorable for Austrian firms in the case of solid rubber tires, but even here it appears that Austria is losing its foothold in export markets. On the other hand, Austrian tubes are used rather extensively both at home and abroad, and the production outlook is favorable for the near future.

Outlook for Sale of American Products.

The outlook for the sale of American inner tubes, owing to the severe competition and lower prices in domestic products, can not be considered favorable. With casings, however, the situation is different. The market is dominated by foreign products, particularly Michelin, and American tires that are competitive with Michelin in price, terms, and quality have a reasonable market prospect in Austria. To make headway in the market, however, it would be essential to maintain stocks in the country or at other European points where they would be readily available, in order to make quick delivery on receipt of order; furthermore, it would probably be found necessary to give the agent somewhat better than cash terms, since he in turn must do much of his selling on a credit basis, and commercial credit rates in Austria, if the agent must borrow at home, are prohibitive, ranging from 20 per cent upward.

The Constantinople Tire Market

Trade Commissioner Julian E. Gillespie, March 24

Tire prices in Constantinople have been subjected to a general increase ranging from 10 to 15 per cent, largely occasioned by the depreciation and extreme fluctuation of the Turkish currency. The activity in the tire market during the past three months has been below normal, the reduced sales of tires being attrib-

unable to the general business depression in this city and throughout the country.

Sales and Prices of Foreign Tires.

Dunlop tires continue to gain in popularity, and it is reliably reported that, despite the fact that the prices for these tires are from 5 to 10 per cent higher than Michelin quotations, they are making serious inroads into the business which Michelin previously controlled. The increasing success of the Dunlop tire on this market, it is said, is due to its superior quality and to the fact that the local agent makes an absolute mileage guaranty on all tires sold.

The French Goodrich, Continental, Peters Union, and Pirelli tires are of little importance in the Constantinople market.

The retail prices quoted on Dunlop cord tires in this city are as follows: Clincher—710 by 90, 56s. 3d.; 815 by 105, 76s. 8d.; 880 by 120, 113s. 5d.; 30 by 3½, 61s. 10d.; straight side—32 by 4½, 124s. 2d. (One shilling=approximately 46 piasters.) A 10 per cent reduction is given to all chauffeurs purchasing tires.

Foreign trade opportunities.

HIDES AND LEATHER

Wilbur J. Page, Chief, Hide and Leather Division

UNITED STATES LEADS IN SOLE LEATHER EXPORTS

J. Schnitzer, Hide and Leather Division

Since the close of the war, and especially since 1922, the principal tanning countries have tried to control the world sole-leather markets. Both Germany and the United Kingdom have been serious competitors, but in spite of this competition exports of sole leather from the United States continue to increase. American exporters are paying more attention to foreign markets and are catering more to the needs of specific markets now than ever before. Germany's exports of sole leather declined considerably during 1924 and amounted to less than during either of the two preceding years. British exports, on the other hand, have increased and the amount of sole leather exported from that country during 1924 was almost double that for 1922.

Germany's Exports Decline Because of Domestic Conditions.

Germany had considerable trouble in its tanning industry during 1924, and this greatly affected its foreign trade. Scarcity of ready cash and large failures in the leather trades were responsible for much loss to German tanners, who have been having considerable dispute with the Hide Sellers' Association. The association canceled its agreement with the tanners and now reserve the right to withdraw lots of hides and skins from the auctions if their prices are not met. Cash payments and less credit were other obstacles in the way of the German tanners obtaining necessary supplies of raw material. The exports of sole leather from Germany amounted to 8,039,871 pounds during 1922 and increased in the following year to 12,931,002 pounds, but there was a decided decline to 5,929,906 pounds in 1924.

Steady Increase in British Leather Trade.

Conditions in the British leather industry have been favorable for the expansion of its foreign trade in this product, as production has been increased and many new markets have been developed. Since 1922 there has been a steady increase in the exports of sole leather from the United Kingdom, so that the exports of this product during 1924 amounted to about 80 per cent more than the 1922 exports. During 1922 the British exports of sole leather amounted to 7,515,984 pounds, increasing in the following year to 10,336,816

pounds, and still further advancing to 13,486,704 pounds in 1924. The British exporters are very optimistic and expect to continue increasing their exports of sole leather in the coming years.

Expanding Markets for United States Leather.

Credit terms granted by American tanners to foreign buyers have been more liberal of late, and the quality of the sole leather exported from the United States has been of the best. Many of the foreign markets have increased their purchases and some new markets have been developed. The total exports of sole leather from the United States during 1922 amounted to 15,598,352 pounds—a larger amount than any of the other countries exported in any one year. In 1923 United States exports of sole leather amounted to 17,419,166 pounds and increased in 1924 to 22,521,227 pounds—an amount larger than the total from the United Kingdom and Germany combined during the same year.

Belgian Hide and Skin Market During 1924

Consul Hugh S. Fullerton, Antwerp

Hides and skins, like practically every other product on the Belgian market, advanced in price during 1924. At certain times during the year shortness was experienced in certain types of hides much in demand, and this factor contributed to the increased prices, which, once reached, rarely receded.

Improved General Market Situation.

Belgian importations of hides and skins during 1924 totaled 1,274,613 pieces, as compared with 1,302,163 pieces in 1923 and 916,144 in 1922. Stocks on hand on December 31, 1924, reached 66,771 pieces, as against 166,417 in 1923 and 101,587 at the end of 1922. Sales in 1924 aggregated 676,174 pieces, as against 543,872 in 1923 and 509,217 pieces in 1922. The transit movement during 1924 totaled 698,085 pieces, as compared with 693,461 hides and skins for 1923 and 473,329 for 1922. To sum up the situation, the hides and skins market was characterized by a generally more prosperous condition in 1924 than that of any year since the war. Although the volume of transactions was not as great as for 1923, advances in prices occurred and general market conditions were favorable.

SHOES AND LEATHER MANUFACTURES

A. B. Butman, Chief, Boot and Shoe Division

UNITED STATES EXPORTS OF LEATHER MANUFACTURED GOODS

The United States, during the first quarter of 1925, exported leather manufactured goods valued at \$5,035,281, as compared with \$4,713,365 in the corresponding period of 1924, which is an encouraging increase of 6.8 per cent. Footwear constituted the principal item, amounting to \$3,939,060, or an increase of 9.6 per cent; leather belting, valued at \$427,021, experienced an increase of 22.3 per cent; bags and suit cases, pocketbooks and purses, and miscellaneous leather goods also show increases. The only decreases noted are in the values for leather gloves and harness and saddlery.

Notable Increase in March Footwear Exports.

The footwear numbered 1,731,350 pairs, an increase of 15.9 per cent, and comprised 695,895 pairs of shoes for men and boys, 576,612 pairs for women, 404,903 pairs for children, 33,865 pairs of slippers, and 20,075 pairs of athletic and miscellaneous footwear. Shoes for men and boys represent an increase of 16.8 per cent, women's 26.4, and children 12 per cent. There was an even greater proportionate increase in the shipments of leather footwear to foreign countries during March, when 725,251 pairs, valued at \$1,647,894, were exported, representing an increase of 30 per cent in quantity and 24.2 per cent in value. Exports of leather manufactured goods from the United States are shown in the table following.

COMMERCIAL LAW

A. J. Wolfe, Chief, Division of Commercial Laws

PROTESTED DRAFTS AND CHECKS IN CHILE

Railton Squirrel, commercial attaché's office, Santiago

The Chilean Council of Government recently approved an amendment to clause 4, article 455, of the Chilean Code for Civil Proceedings, which relates to petitions for execution and is designed to strengthen confidence in bills of exchange and checks. Translated the amendment reads:

A private instrument acknowledged judicially or ordered to be held as acknowledged. Nevertheless this acknowledgment shall not be necessary with respect to the acceptor of a bill of exchange protested with the legal formalities or to the drawer or indorser of a duly protested check, and provided always that the protest be communicated to him and the action be brought within the periods required by law.

The original read as follows:

A private instrument, judicially acknowledged or ordered to be held as acknowledged. Nevertheless this acknowledgment shall not be necessary with respect to the acceptor of a bill of exchange who shall not have asserted the falsity of his acceptance at the time that the bill is protested for nonpayment.

Old Law Opened to Abuse.

The original clause has been interpreted by the courts of justice in such a way that bills of exchange which have not been protested in the personal presence of the acceptor have no executive force, according to a statement by the Minister of Justice, Señor José Maza. Unscrupulous merchants accordingly have taken advantage of such a ruling when their drafts were about to be protested. By simply hiding themselves for a time they deprived their creditors of executive action and eluded the legal consequences of cessation of payment. The bill of exchange consequently has lost considerable of its value as an instrument of credit. This defect was equally applicable to checks, despite the special efforts made in Law No. 3845 to eradicate it.

The amendment makes no provision for opposition on account of falsification (*tacha de falsedad*), and there is no call for the presence of the acceptor at the time of protest. The Minister of Justice believes, therefore, that any objection on grounds of falsification may be brought out after proceedings have commenced.

Santiago Trade-Mark Convention

The following additions and corrections should be inserted in the article, "United States Ratifies Santiago Trade-Mark Convention," appearing in *COMMERCE REPORTS* April 20, page 138:

On page 140, in the last paragraph, Costa Rica was included among the countries which had ratified the Santiago Trade-Mark Convention. Although Costa Rica has ratified the Convention for the Publicity of Customs Documents and the Convention for the Uniformity of Nomenclature for the Classification of Merchandise, signed at the Conference of Santiago, it has rejected the Santiago Trade-Mark Convention. The last paragraph of the article, therefore, should read as follows:

Five countries have already ratified the convention of 1923—Brazil, January 12, 1924; Guatemala, May 8, 1924; Paraguay, June 5, 1924; Cuba, August 2, 1924; and the United States,

February 24, 1925. All of the ratifications have not yet been deposited with the Government of Chile. The convention will enter into force after 30 days have elapsed following the last necessary deposit. Ratification has been recommended to the Colombian Legislature by the President of Colombia and early action is expected.

There is also some conflict in opinion as to the adherence of Bolivia to the convention of 1910. Adherence to this convention has been denied by the Government of Bolivia, but an explanation of this denial contradicting the general impression that Bolivia is a party to the convention of 1910 has not yet been published (see *Album of the Habana International Bureau*, issue of January-February-March, 1924, for official correspondence on this matter).

Because of the uncertainty which prevails on this point the word "doubtful" may be inserted after Bolivia in the paragraph on page 138 entitled "Arrangement initiated by convention of 1910."

Commercial Law Briefs

Construction of Workmen's Houses in Chile.

For the construction of inexpensive dwellings, a decree-law of March 5 creates a superior board of social welfare and establishes an extra tax on unimproved land within urban limits. The law details the method of constructing villages and the manner and degree of State participation. A translation of the law, transmitted by Commercial Attaché Ralph H. Ackerman, Santiago, is on file in the Division of Commercial Laws and may be loaned on request. Refer to 26419.

Japan Studies Taxation Reform.

A governmental investigation commission has been organized in Japan to recommend the readjustment of the national local taxation system, according to a cable from Acting Commercial Attaché Frank Rhea, Tokyo. Local taxes, while applied to local revenue requirements, are administered nationally in Japan. The results of the recommendations of the commission will be carefully studied in the Division of Commercial Laws, and persons interested will be kept informed upon request.

New Tax Régime in the Canton of Geneva.

A full report on the tax law of December 24, 1924, of the Canton of Geneva, Switzerland, prepared by Consul S. Pinkney Tuck, has been received by the Division of Commercial Laws and will be loaned on request. The law provides that foreigners not born in the canton, and not following there any lucrative profession, either personally or through investment in a business enterprise, are exempt from income and capital taxes for two years after their establishment in the canton. During this period they must pay, however, a tax upon any real estate owned in the canton. The tax liability after the expiration of two years is described fully in the report.

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

JAPANESE DISCOUNT PRACTICE

Consul C. R. Cameron, Tokyo

Commercial bills, rediscounted by the Bank of Japan, are required to have three indorsements, or two indorsements and collateral security. Several years ago, however, the Bank of Japan, in order to facilitate the marketing of drafts covered by export shipments destined for Europe and America, inaugurated the practice of putting its stamp on drafts presented by exporters and drawn against consignees whose standing was such as to satisfy the standard set by the bank. This stamp signifies that the draft bearing it may be presented to the Bank of Japan for rediscount at any time. Consequently "stamped bills" find a ready market at a favorable rate, said to average about 2 rin per 100 yen per day (nearly three-fourths of 1 per cent) below the average market rate.

No Stamping Privilege for Drafts on Oriental Countries.

The Bank of Japan, however, hitherto has not extended this privilege to drafts on oriental countries, owing, it is stated, to difficulty in securing reliable information regarding the standing of consignees as well as regarding general business conditions in those markets. Undoubtedly the fluctuation of silver, in which many of these bills are drawn, is an additional reason why the bank has been wary of admitting them to the stamping privilege.

It is now stated that the bank, in order to prepare itself to handle intelligently bills on oriental markets, will establish its own agencies at important commercial centers in the Far East. Shanghai is mentioned for the location of the first agency.

"Interest Bills" Used in Trade with Far East.

In the trade between Japan and various countries of the Far East, the custom has grown up of employing a special kind of draft known as "interest bills." These are drawn against shipments from Japan to Manchuria, China, or India, for which the local bank is accustomed to pay the face value without any discount whatsoever, collecting interest for the period from date to maturity from the consignee or acceptor. The collection of the full amount plus interest is, of course, guaranteed by the drawer of the bill in the usual way. The current rate on interest bills is 6 or 7 per cent, and the term does not exceed six months. In an effort to assist exporters the Japanese Department of Finance is now endeavoring to secure the co-operation of the various exchange banks for the purpose of bettering the terms of interest bills by reducing the rate of interest to 5, or even 4.5 per cent per annum, and extending the term to 8 or 12 months. The banks, nevertheless, are understood to have replied that as rates in the local money market range from 6 to 8 per cent, they will be unable to grant the reduced terms for interest bills unless the Government will undertake to furnish the necessary funds at a cheap rate.

GOVERNMENT AGRICULTURAL BANK FORMED IN SPAIN

Commercial Attaché Charles H. Cunningham, Madrid

An agricultural credit bank, with a capital of 100,000,000 pesetas (1 peseta=\$0.1423 at current exchange) will be organized by the Spanish Government. The royal decree published in the *Gaceta de Madrid* of January 25, 1925, specifies that the Government will furnish 75,000,000 pesetas of the capital and the remainder will be offered for public subscription in amounts of not less than 10,000 pesetas. The Government will pay in 10,000,000 pesetas immediately. The bank is authorized to issue bonds up to 300,000,000 pesetas. In addition, time deposits will be solicited.

Bank Under Ministry of Public Works—Agricultural Loans.

The operation of the bank will be under the supervision of the ministry of public works. It will be administered by an agricultural credit committee composed of the Minister of Public Works, the Director of Agriculture, representatives of the ministries of finance and labor and of the Bank of Spain; as well as other groups associated with agricultural development, such as the National Agricultural Confederation, and the Stock Growers' Association.

The bank will take over the administration of all agricultural loans heretofore made by the State through the local branches of the Bank of Spain. Many defects have rendered the earlier system impracticable.

Loans may be made to agricultural and dairy associations, stock raisers, or associations devoted to reforestation or the transformation of raw material of agricultural production into finished products. Associations receiving loans must give a satisfactory guaranty of solvency and the economic condition of those securing the loan must be clearly set forth. Loans from 2,500 to 15,000 pesetas may be made to individuals on farm mortgages when guaranteed by agricultural associations. When they are backed by personal guaranties, loans may be made for 1½ years; when backed by paper which may be hypothecated, 3 years; and when guaranteed by property mortgage, 20 years. Rates of interest on agricultural loans shall not be more than 5.5 per cent.

Loans Available for Various Purposes.

Loans are to be made by the bank for the assistance of agriculture and stock raising, or the transformation of raw materials of agriculture or dairying into the finished product; for the purchase of seeds, fertilizer, machinery, and prize stock for breeding purposes; for the encouragement of horticulture and viticulture; for reforestation; for the harnessing of rivers for irrigation purposes; for the aid of farmers who are in flood bottoms; and for the reclamation of waste land.

TRANSPORTATION

E. S. Gregg, Chief, Transportation Division

SHIPPING

Charter Rates Advance Slightly

The general level of ocean-trip charter rates advanced slightly in the first quarter of 1925. During that quarter the transportation division's index number rose to 103 per cent of the average for 1911-1913, after having fallen to 102 per cent in the third and fourth quarters of 1924. Outward chartering from the United States was fairly active; but here, as well as in other trades throughout the world, rates in general continued weak as the result of tonnage offerings in excess of requirements. Compared with the situation in the first quarter of 1924, when the index number rose to 111 per cent, the present situation is unsatisfactory.

The figures used in constructing the index of rates for the fourth quarter of 1924 and the first quarter of 1925 are shown below:

Charter rates on representative trade routes, October, 1924, to March, 1925

Commodity and route.	1924, fourth quarter		1925, first quarter

Damage to Transportation Facilities in Peru

Consul C. E. Guyant, Callao-Lima, March 14

Rainfall in southern Peru during January and February is reported to have been the heaviest since 1893, causing considerable damage to transportation facilities in the section between the city of Arequipa and Lake Titicaca and thereby breaking the communication with Bolivia.

The railways in central and northern Peru have also suffered severely, and the Central Railway, which passes through one of the principal mining regions of Peru, has been so constantly interrupted by landslides that it has been impossible to handle the traffic, and exports of ores have been reduced. As this line provides Lima with fresh fruits and vegetables, the scarcity of these foodstuffs has been pronounced and prices have risen considerably in Lima, Callao, and the surrounding territory.

In the north, in addition to breaking railway communications, the floods have threatened the freshwater service which supplies the oil fields around Talara and Negritos.

Port Administrative Change Sought for Buenos Aires

Commercial Attaché, Edward F. Feeley, Buenos Aires, March 17

Owing to the alleged inefficient handling of steamers and cargoes at Buenos Aires, a committee representing the principal organizations of importers, exporters, and shipping companies has petitioned the Minister of Finance to reestablish the harbor control board created by law No. 8389. This law provided for concentrating in a single division the technical management of the port of Buenos Aires, including the operation of the wharves, warehouses, railways, etc.

RAILWAY AND AIR SERVICES

Extensions of Australian Air-Mail Services

Vice Consul Haskell E. Coates, Melbourne

Important extensions of existing aerial mail services in Australia are being planned by the Commonwealth Government. It was announced early in January, 1925, that approval had been given for an alteration of the agreement with Queensland and Northern Territory Aerial Services (Ltd.) to provide for an extension from Cloncurry to Duchess and Camooweal (all in Queensland). A branch for the new silver-lead mining district of Mount Isa (Queensland) is also contemplated.

It is understood that an extension of the Western Australian service, now operating from Perth to Derby (Western Australia), will be made to Wyndham (Western Australia) and to Darwin (Northern Territory) during 1925. The existing agreement between

the Federal Government and Western Australia Airways (Ltd.) provided for an expansion, and the cabinet has agreed to an increase in subsidy so that the responsibility of extending the service in the Northern Territory may be undertaken.

Remarkable success has attended aerial mail services in Australia, and further extensions to the remoter sections will be welcomed by travelers and settlers in the "outback."

New German-Czechoslovak Railway Agreement

Commercial Attaché James F. Hodgson, Prague, March 30

The schedule of through freight rates between Czechoslovak railroad stations and German seaports, which became effective on January 1, 1925, was found inadequate to cover the requirements of shippers. A number of Czechoslovak stations and several commodi-

ties had not been provided for, and there were also criticisms from German railway and port officials. For these reasons the agreement negotiated between the railway officials of the two countries has now been revised at meetings held recently in Dresden and Prague.

The revised schedule, effective April 1, 1925, provides for freight rates that are in general from 10 to 25 per cent lower than those previously in effect, and refers only to through shipments of enumerated commodities to and from between Czechoslovak railway stations and the Germany ports of Hamburg, Bremerhaven, Stettin, and Warnemunde. An outstanding feature is the agreement to calculate all freight tariffs in Czechoslovak currency, thus facilitating payment on the part

of the shipper. Currency fluctuation is provided for by an arrangement for the mutual fixing of exchange rate from time to time.

As a result of this new agreement it is expected that many Czechoslovak export shippers, who have been using the port of Trieste in preference to the German railway service for some time past, will resume their former practice of exporting via German ports.

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

COMMERCIAL TREATIES AND AGREEMENTS

CANADA—SPAIN

Cable from office of Commercial Attaché, Madrid, April 18
Trade Commissioner Lynn W. Meekins, Ottawa, April 14 and 17

Conclusion of Commercial Agreement.

By a *modus vivendi* promulgated in Madrid on April 17, and effective April 20, 1925, the duties of the second column of the Spanish tariff are granted to Canadian products, pending negotiation of a more permanent treaty and subject to cancellation upon three months' notice.

Dispatches from the American trade commissioner at Ottawa advise of press reports that, in return, Canada will extend the intermediate tariff on goods the produce or manufacture of Spain when shipped directly from a Spanish port, or from a port of any country enjoying the intermediate or preferential tariff rates, into a sea or river port of Canada.

Of importance also to the United States is the provision whereby the Spanish prohibition on the importation of wheat, which has been in effect since January 10, 1922, is removed as of April 20. With the lifting of the import restriction, the rate of duty on wheat under the second column becomes 14 gold pesetas per 100 kilos, as compared with the general or first-column rate of 42 pesetas. Canada as well as the United States will now pay this second-column duty on wheat.

Since March, 1923, the general, or highest, tariff rates, both of Canada and of Spain, have applied to the products of the other.

CZECHOSLOVAKIA—GREECE

Consul General C. S. Wlnans, Prague, March 19

Temporary Extension of Provisional Commercial Treaty.

The provisional commercial treaty between Czechoslovakia and Greece, which was to have expired on March 1, has been extended until June 1, 1925.

CZECHOSLOVAKIA—GERMANY

Consul A. W. Kliefoth, Berlin, March 11

Extension of Most-Favored-Nation Treatment Approved.

The German Reichstag approved, by a law of March 3, published in the Reichsgesetzblatt for March 10, the exchange of rates of February 15 effecting a continuation of the most-favored-nation rights granted

Czechoslovakia in the agreement between Germany and Czechoslovakia, signed on June 29, 1920.

GERMANY—SIAM

Consul A. W. Kliefoth, Berlin, February 28

Provisional Commercial Agreement Effective.

The Reichstag has ratified the provisional commercial agreement between Germany and Siam, signed at Berlin on February 28, 1924, according to an announcement dated February 18, 1925, published in the Reichsgesetzblatt February 27. Ratifications have been exchanged, according to an announcement of February 20, and the agreement is now effective for a term of two years, and thereafter for six months from the date of notification by either party of intention to terminate it.

This agreement provides in general for most-favored-nation treatment in matters of commerce and navigation, and for consular rights.

[Notice of the ratification of this agreement by Siam appeared in COMMERCE REPORTS of March 23, 1925.]

GREECE—NORWAY

Minister Laurits S. Swenson, Oslo, March 18

Extension of Treaty of Commerce and Navigation.

By an exchange of notes between the Norwegian and the Greek ministers at Berlin, the treaty of commerce and navigation of October 15-27, 1852, with supplementary declaration of February 18-March 2, 1893, which was denounced by the Greek Government on September 7, 1924, has been extended to June 1, 1925.

SYRIA—IRAQ (MESOPOTAMIA)

Vice Consul Paul H. Alling, Beirut, March 14

Agreement Concluded for Facilitating Transit Shipments.

The French High Commission for Syria and the Lebanon recently concluded a transit agreement with the mandatory authorities of Iraq, permitting under certain conditions after April 1, 1925, the transportation of merchandise of whatever country of origin across the territory of either or both of the countries without the payment of the usual import duties. Instead of the import duty, there will be collected a transit tax of one-half of 1 per cent *ad valorem*, provided that the goods do not remain more than six months in the country of transit. No preference will be accorded the merchandise of any country.

GENERAL TARIFF CHANGES

NEWFOUNDLAND

Cable from Vice Consul George H. Barringer, St. Johns, April 9

Newfoundland Tariff Revised.

A complete upward revision of the Newfoundland customs tariff has taken place with effect from April 9, 1925.

The tariff schedule of 1905 as revised has been repealed, and a new schedule substituted with straight ad valorem rates. The new tariff carries 372 divisions as against 241 in the schedule just repealed.

The 10 per cent surtax of duties and the 5 per cent sales tax heretofore levied on most goods imported into Newfoundland have also been repealed.

[Details are being forwarded by the American consul, and will be published as soon as received.]

NORWAY

Cable from A. E. Fenselau, trade commissioner's office, Copenhagen, April 16

Gold Surtax Reduced.

The Norwegian gold surtax for the payment of specific duties in paper crowns has been reduced from 80 per cent to 70 per cent of the duty.

[See COMMERCE REPORTS for May 26, 1924, and December 15, 1924, for previous notices regarding this gold surtax.]

TARIFF CHANGES ON SPECIFIC ARTICLES

ANTIGUA

Second Supplement to Brussels Edition of the Tariff, January, 1925

Changes in Import Duties on Toilet Articles and Bitters.

The following increases in import duties were made effective in Antigua by an ordinance of November 28, 1924:

Bitters of all kinds, including flavoring extracts containing spirits, increased from 5s. to 6s. per gallon, general rate, and from 3s. 4d. to 4s., British preferential rate; and bay rum and all other perfumed spirits, including pomades, dentifrices, toilet preparations, and washes, increased from 30 per cent to 33½ per cent ad valorem, general rate, and from 20 per cent to 25 per cent ad valorem, British preferential rate.

BOLIVIA

Consul Dayle McDonough, La Paz, January 24

Samples of Merchandise for the Bolivian Centennial Exposition Exempt from Duty Payment.

Samples of articles will be admitted into Bolivia free of import duty when intended for display at the mercantile exposition under the auspices of the Bolivian Centennial, which will take place during August, 1925, according to a law promulgated December 1, 1924. Two samples of each article may be so imported and such articles must not be sold.

DOMINICA

First Supplement to Brussels Edition of the Tariff, February, 1925

Change in Import Duties on Bay Rum, Certain Chemicals, and Aircraft.

The following changes in import duties have been made effective in Dominica:

The duties on bay rum have been increased from 4s. 3d. to 11s. 6d. per liquid gallon, general rate, and from 3s. to 9s. British preferential rate.

Sulphuric acid imported for the manufacture of citric acid, arsenical preparations used in the treatment of venereal diseases, and British aircraft and accessories have been added to the free list.

ESTHONIA

Consul H. B. Quarton, Tallinn, February 26

"Temporary Admission" of Materials for the Manufacture of Packing Cases, etc.

In order to encourage the exportation of wooden boxes and packing cases the Esthonian Government has issued a new regulation permitting the duty-free importation of certain packing materials and hardware required for the manufacture of such boxes, provided a certain amount of similar boxes have already been exported. These materials, which include bifurcated rivets, tenter-hooks, nails, iron sheeting, rivets, clasps, and rod iron, must be imported within one year from the date of the exportation of the wooden boxes or packing cases.

[Information as to the terms under which this importation may be made will be furnished by the Division of Foreign Tariffs upon request.]

FRANCE

Eugene A. Masuret, trade commissioner's office, Paris, March 19

Removal of Export Duty on Butter Substitutes.

The 10 per cent ad valorem export duty applying to margarine, oleomargarine, other butter substitutes, and similar substances is suspended until further orders, according to a decree of March 7 published in the Journal Officiel for March 13, 1925.

[Notice of the establishment of the above export duty appeared in COMMERCE REPORTS for May 12, 1924.]

GERMANY

Feuille Officiel Suisse du Commerce, Berne, March 3

Limitation of Duty Exemption on Gift Packages.

By a regulation issued by the German Ministry of Finance on February 17, and published in the Reichsministerialblatt of February 20, the exemption from import duties extended to gift packages of foodstuffs and clothing shipped into Germany is modified, with effect from July 1, 1925, so that in the future this duty exemption will only be extended to parcels sent to those charitable organizations which are specially designated to handle the traffic in gift packages by the Minister of Finance. Moreover, for gift packages containing coffee, tea, sugar, chocolate powder and cocoa powder, and textiles (including pieces of clothing and washable goods and materials for clothing and washable goods), the exemption from import duty will be extended only to such gifts from abroad as are sent to the charitable organizations to be distributed according to that organization's own judgment, but only as gifts in specified quantities to needy persons.

For packages containing the following goods, on most of which the duty is at present remitted on all kinds of shipments, the freedom from import duty will continue for gift packages even if the duties are reimposed on ordinary shipments, when these gift packages are sent through the charitable organizations and even if they are to be distributed by these organizations to specified persons:

(Item 108) meat; (109) bacon; (ex. 111) furred game, killed, carved up or not, but not prepared; (116) salted her-ring; (120) grease and greaselike fats; (127, 128, 132) hog fat, goose fat, intestinal fat, and other animal fats; (129) beef and mutton tallow, raw; (131) fish oil, etc.; (134) butter, fresh, salted, or melted; (135) cheese; (ex. 136) eggs, raw, or only cooked in the shell; (162) flour, including roasted flour and burnt flour; (163) polished rice; (166, 167) fatty oils; (176) sugar and sirup; (205) margarine; (206) margarine cheese (207) artificial edible fats; (208) condensed milk, not canned

(ex. 219) preserves of meat, fruit, and vegetables, not prepared for fine table use, in hermetically sealed containers.

[Evidently articles other than those mentioned in the above two lists will not be granted duty-free entry.]

ITALY

Gazzetta Ufficiale, Rome, March 14

Additional Commodities Granted "Temporary Free Importation."

According to a royal decree of March 8, 1925, the following commodities will be admitted into Italy temporarily free of import duty under the conditions prescribed for each item:

Articles permitted temporary importation	Purpose	Minimum amount allowed	Maximum time before reexportation
Pig iron.....	For manufacture of cooking stoves and other apparatus for cooking food, heating stoves, radiators, ribbed tubes, boilers for central heating plants and joints.	Unlimited	1 year.
Broken rice and half rice.	For manufacture of starch.....	do	2 years.
Fabrics of wood shavings.	To be gummed on cotton fabrics, prepared and finished (conditional concession valid for 2 years).	100 kilos....	1 year.
Special colored glass....	For manufacture of glass lamps and artistic colored or enameled lamps, or transparent articles, however put together (conditional concession valid for two years).	do	Do.
Oiled cotton fabrics, plate glass, wheels stamped in sheet metal, ammeters, speedometers, electric signals, brake blocks, clutch disks, and spark plugs.	For the completion and fitting of automobiles and motor trucks (conditional concession valid for 1 year.)	Unlimited.	Do.
Cotton cord, fabrics and cotton cord.	For manufacture of pneumatic tires (conditional concession valid 1 year).	100 kilos....	Do.
Copper and zinc in pigs and scrap.	For manufacture of articles of any kind.	do	Do.
Aluminum in ingots.	For manufacture of sheets.....	do	Do.
Unworked iron sheets....	For manufacture of tins to be re-exported empty or filled with any article.	do	Do.
Steel in billets, bars, rods, and tubes, and copper tubes.	For manufacture of projectiles for artillery.	do	Do.
Metallic materials. (Materials for the construction of automobiles include rough castings and weldless steel tubes, driving chains for dynamo control and shock absorbers.)	For construction of automobiles and for manufacture of locks and padlocks; fittings for ships and vehicles of all kinds, furniture, doors and windows, trunks, bags, cases, hand-bags and purses, and for manufacture of plain and press metal buttons.	Unlimited.	2 years.
Rice, crude and partially worked.	For manufacture of any kind.....	500 kilos.	Do.

The concession for the temporary duty-free importation of glass plates for making photographic plates has been withdrawn.

Additional Commodities Granted "Temporary Free Exportation."

The decree of March 8, 1925, also permits the temporary exportation from Italy of the following articles in a minimum quantity of 100 kilos, to be reimported duty free within six months:

Tanned lamb skins for manufacture of suede leather (conditional concession valid two years); unbleached cotton fabrics for the surface to be worked to imitate that of wool (conditional concession valid one year).

Regulations for carrying out the provisions of the decree will be drawn up by the Minister of Finance. The decree became effective the day following its publication in the Gazzetta Ufficiale and will be presented to Parliament for conversion into law.

MEXICO

Diario Oficial, Mexico City, March 24

Removal of Export Duty on Bran.

The export duty of 0.01 peso per gross kilo on bran of all kinds (tariff item 114) has been removed by a Mexican decree of March 16, effective March 24, 1925.

NEW ZEALAND

New Zealand Gazette, Wellington, February 26

Import Duty on Bran and Pollard Reimposed.

The duty of 2 shillings and 6 pence per cental on bran and pollard imported into New Zealand, which was temporarily suspended from March 24, 1924, has been reimposed by an order in council effective from March 1, 1925.

[A notice appeared in COMMERCE REPORTS for May 26, 1924, relative to the suspension of the above duty.]

POLAND

L. J. Cochrane, trade commissioner's office, Warsaw, March 18

Indefinite Extension of Tariff Reductions.

The reductions in the Polish tariff on a number of articles of first necessity, provided for temporarily by decrees of July 11 and December 12, 1924, and extended from time to time for short periods, have now been extended indefinitely, according to a decree of February 27 published in the Dziennik Ustaw for February 28, 1925.

[For a list of the principal articles of possible interest to American exporters, see COMMERCE REPORTS for September 1, 1924. The principal changes to be noted are as follows: Rice (except polished) is free of import duty; the reductions on footwear and clothing have been canceled.

These reductions apply to imports from all countries and should not be confused with conventional reductions established by the Franco-Polish treaty and extended to the United States and certain other countries by most-favored-nation treaties.]

SPAIN

Commercial Attaché Charles H. Cunningham, Madrid, March 23

Temporary Duty-Free Importation of Linen Thread.

Temporary duty-free importation of linen thread for the manufacture of cloth for exportation is permitted by a royal decree of February 28, published in the Gaceta de Madrid for March 17, 1925. Such goods must be accompanied by certificates of origin, and other certifications as to their intended disposition, and the cloth must be exported within two years after the importation of the thread.

Temporary Duty-Free Admission of Articles for Expositions.

Temporary duty-free admission into Spain is provided by royal decrees of March 7, 1925, for merchandise to be exhibited at the sample fair to be held at Gijon during July and August, and at the food products show to be held at Madrid from April 11 to 26, and for automobiles to be exhibited at the Barcelona automobile show on May 16. Guaranties for the payment of duties must be given, and the merchandise must be reexported within a month after the exposition in question has closed.

TURKEY

Trade Commissioner Julian E. Gillespie, Constantinople, March 7

Duties on Inflammables and Other Products for Farming Paid by Agricultural Bank.

According to a law recently passed by the Grand National Assembly of Turkey, effective from the date of publication, the following are added to the list of

(Continued on p. 243)

EUROPE

Samuel H. Cross, Chief, European Division

BELGIAN FOREIGN TRADE IMPROVES DURING 1924

Based on report from Assistant Trade Commissioner E. V. D. Wight, Jr., Brussels, March 28

Belgian foreign trade during 1924, according to official statistics, shows that progress has been made in reducing the large excesses of imports that have characterized Belgian trade balance since the armistice. While a so-called trade deficit was normal for the country prior to 1914, the relatively small proportion of exports to imports in 1919, 1920, 1921, and 1922 was disquieting. In 1923, however, the pre-war ratio was recovered, and in 1924 it was surpassed.

Any opinion as to whether this progress can be maintained is hazardous, nevertheless, since growth of Belgium's exports has undoubtedly found its fundamental cause in declining exchanges during 1923 and early 1924. As internal price levels adjust themselves to the exchange value of the franc, Belgian ability to maintain a favorable ratio between exports and imports must be based on production advantages—cheap labor, longer working hours, technical improvements, and concerted selling agreements—many of which do not yet appear in the Belgian industrial situation.

Belgian foreign trade for 1924, by quantity and value of commodity groups

Commodity group	Imports		Exports	
	Metric tons	1,000 francs (paper)	Metric tons	1,000 francs (paper)
Live animals.....	15, 125	63, 687	17, 313	127, 716
Foodstuffs and beverages.....	3, 195, 600	4, 456, 821	623, 558	1, 234, 797
Raw material and semimanufactured products.....	28, 868, 699	8, 531, 154	14, 710, 242	4, 701, 005
Manufactured products.....	1, 315, 404	4, 516, 892	4, 808, 581	7, 817, 358
Gold and silver.....	6	13, 554	107	51, 628
Total.....	33, 394, 894	17, 581, 108	20, 150, 801	13, 982, 504

Belgian Trade Since the Armistice.

The most significant trade index to Belgian prosperity is found in relation of exports of manufactured goods to imports of like nature. Owing to absence of native raw materials, Belgium must always incur a heavy debt in maintaining operation of her industries. Excess exports of manufactured goods cancel in part this debt, and their increase or decrease reflects the situation of Belgian industry.

Comparative figures for years since the armistice and for 1913 illustrate the progress made in increasing the proportion of exports.

Belgian imports and exports, 1913, 1920-1924

Year	Total imports		Total exports		Imports of manufactured goods	Exports of manufactured goods
	Metric tons	1,000 francs (paper)	Metric tons	1,000 francs (paper)	1,000 francs (paper)	1,000 francs (paper)
1913.....	32,666,268	5,049,850	20,885,182	3,715,814	869,478	1,436,420
1920.....	13,347,058	12,941,765	10,613,184	8,862,011	3,479,237	4,834,878
1921.....	17,664,866	10,198,288	17,267,428	7,273,360	2,827,892	3,120,810
1922.....	22,558,424	9,098,007	17,003,204	6,063,118	2,793,861	3,366,959
1923.....	20,603,129	13,204,780	16,974,340	9,725,054	3,531,092	5,393,047
1924.....	33,394,894	17,581,108	20,150,801	13,982,504	4,515,892	7,817,358

The figures given above for 1913 call for some explanation. In that year there were imported 388,486,000 francs in silver coins, and their export aggregated 71,055,000 francs. If we deduct these amounts from total exports and imports, since they do not represent pure commercial operations, the final trade figures become: Imports, 4,661,373,000 francs; exports, 3,637,759,000 francs. The proportion of exports to imports thus increases to 78 per cent, at which point it is still below that attained in 1924.

Improvement in Trade Balance, Even on Gold Basis.

Further evidence of improvement in the Belgian trade-balance situation is revealed when statistics are reduced to a gold basis. The total trade then shows a decline from the pre-war situation, but the excess of imports over exports exhibits an encouraging reduction from 1,026,614,000 gold francs in 1913 to 866,908,000 gold francs in 1924.

Belgian foreign trade for 1913 and 1924, valued on a gold basis

[In thousands of francs]

Commodity group	Imports		Exports	
	1913	1924	1913	1924
Live animals.....	65, 273	15, 132	44, 443	30, 345
Foodstuffs and beverages.....	1, 034, 822	1, 068, 940	327, 663	293, 388
Raw materials and semimanufactured products.....	2, 667, 035	2, 027, 002	1, 826, 078	1, 116, 958
Manufactured products.....	869, 478	4, 072, 976	1, 486, 430	1, 857, 404
Gold and silver.....	24, 765	3, 220	3, 176	12, 267
Total.....	4, 661, 373	4, 177, 270	3, 637, 759	3, 310, 362

Quantity Figures Practically at Pre-War Level.

Trade statistics of Belgium indicated in paper francs are obviously vitiated by fluctuations in value of this currency. Computations in gold francs are unsatisfactory in that the exchange value applied is an average rate throughout the year, while ebb and flow of trade movements generally follow increase and decrease in value of the franc. On the other hand, measurements in quantity (metric tons in the case of Belgium) involve a constant factor. Nevertheless, it must be remembered that Belgian imports necessarily involve raw materials, or heavy items, while exports are finished, or lighter, goods. For a given increase in exports, therefore, there must be a proportionately larger increase in imports.

These quantity statistics show that exports have nearly reached their pre-war level. Imports are slightly in excess. Study of these figures, together with those given above and showing exports and imports measured in terms of gold francs, reveals the fact that Belgium, even under most unfavorable interpretation, has regained its pre-war commercial situation. Moreover, the excess of imports has undoubtedly decreased.

Unfavorable Balance Offset by Invisible Items.

The figures given above are those of the actual trade balance of Belgium, as shown by official statistics; but Belgian international payments would no doubt approximately balance if all invisible items were available, since these are favorable.

The total value of Belgian foreign investments is estimated at approximately 11,000,000,000 francs, and foreign participation in Belgian enterprises, based on banking transactions, amounts to approximately 8,500,000,000 francs. Invisible assets are probably of sufficient importance to effect a final balance of inter-

national accounts without recourse to speculative credits.

FAR EAST

H. A. Butts, Acting Chief, Far Eastern Division

AUSTRALIA TO FLOAT LARGE IMMIGRATION LOAN

Emmett A. Chapman, Far Eastern Division

The immigration problem of Australia, with its endless miles of unsettled land, is always a live issue. Numerous schemes for attracting desirable citizens have been tried out during the last quarter century, but results so far have not been satisfactory.

According to recent advices, the British and Commonwealth Governments have entered into an agreement whereby Great Britain is to bear a greater part of the cost of financing emigration to Australia than heretofore. Under the present plan both countries will participate in the flotation of a £34,000,000 immigration loan, which will be handled by the Commonwealth Government. For the first five years Great Britain will pay half the interest, but not to exceed 5 per cent on the loan, and one-third of the interest during the second five-year period. In addition, it will continue to participate in the cost of transportation and other sundry items. This obligation on the part of Great Britain represents, it is estimated, a total outlay of £7,000,000 over a period of 10 years. It was originally proposed that the entire loan should be raised by Great Britain, but the British Government contended that inasmuch as the loan was for Australia it should be raised by the Commonwealth.

Loan Essentially a Commonwealth and not State Project.

The details of just how the £34,000,000 loan will be expended have not as yet been announced. It is quite likely, however, that the direction of the campaign will be placed in the hands of a federal committee, or perhaps an immigration ministry will be created. Heretofore the different States have worked independently of one another, each with its own immigration office in Great Britain. Under such competitive conditions little or no cooperation has been possible. They are coming to realize, however, that regardless of which State an immigrant is recruited for he will eventually settle in the area which offers the greatest opportunities, and, therefore, the problem is one for the Commonwealth rather than for each individual State.

Immigration Policy a Handicap—Population.

The principal difficulty in attracting immigrants to Australia lies in the Commonwealth's immigration policy. The United States opened its gates to the whole world. Australia, on the other hand, has relied

almost entirely upon Great Britain as a source for its new settlers. Further prohibitions and restrictions have kept the Commonwealth's population more than 98 per cent British.

During the last 10 years the small increase in the total population may be accounted for almost entirely by the excess of births over deaths. From 1910 to 1921 the total gain was less than 1,000,000, or an average of less than 100,000 per year. Since 1921 the increase has continued at about the same slow rate, in spite of efforts on the part of the State and Commonwealth Governments, as well as Great Britain, to encourage increased immigration. During the war period, of course, little gain was made, and about 50,000 of the 360,000 Australians who went to the aid of the mother country never returned. From 1911 to 1915, inclusive, the excess of immigrants over emigrants averaged only about 20,000 per year.

The following table shows Australia's population for the years 1911 to 1921, inclusive:

Population of Australia

Year	Males	Females	Persons
1911.....	2,382,224	2,191,644	4,573,868
1912.....	2,478,208	2,268,598	4,746,801
1913.....	2,554,898	2,339,201	4,894,099
1914.....	2,577,528	2,394,769	4,972,297
1915.....	2,528,016	2,442,038	4,970,054
1916.....	2,437,275	2,481,857	4,919,132
1917.....	2,458,859	2,523,984	4,982,843
1918.....	2,516,442	2,565,237	5,081,679
1919.....	2,698,281	2,606,141	5,304,422
1920.....	2,751,622	2,660,696	5,412,318
1921.....	2,798,617	2,711,612	5,510,229

New Settlers Attracted to Cities Rather than to Farms.

In addition to the difficulty of getting people to come to the Commonwealth, the Government has found that they will not stay on the farms where they are needed. The reason is quite apparent. The bulk of emigrants leaving the United Kingdom were accustomed to living in cities or hamlets. Having spent their lives in trades or factories of one sort or another, they knew little of the practical side of farming or grazing, and gradually drifted to the cities or urban centers of the Commonwealth, where they followed occupa-

tions similar to those which they left in the mother country.

As a result of this trend, we find that almost half of Australia's total population of 5,835,187 resides in urban centers. About 42 per cent lives in the six capital cities of Sydney, Melbourne, Brisbane, Adelaide, Perth, and Hobart; one-fifth of the total in Sydney alone; while Melbourne and Sydney taken together account for one-third of the population of the whole Commonwealth. Outside the limits of the six cities mentioned, the population averages less than one person to the square mile and, in many places, less than one to 10 square miles.

Population Concentrated on "Fringe" of Continent.

Practically the whole of the population lives on what is known as the fringe of the continent. This fringe ranges from 200 to 600 miles in width, has an average rainfall of 20 to 50 inches, and is capable of supporting ten times as many people. At present the

bulk of the population is found on the eastern side of the continent in the States of Queensland, New South Wales, and Victoria. Portions of Southern Australia and Western Australia are fairly well settled, but the remainder of the country is very sparsely populated.

Time Opportune for Immigration Campaign.

The crop season just closing in Australia has been highly satisfactory. Farmers and pastoralists have profited from heavy yields, and, in addition, have received unusually high prices for practically every primary product shipped to oversea markets. The time is very opportune, therefore, for the flotation of a loan, as well as for the inauguration of an immigration campaign, and, without doubt, there will be a considerable increase in Australia's population during the next decade.

LATIN AMERICA

Richard F. O'Toole, Chief, Latin American Division

DAMAGE FROM FLOODS IN PERU

Consul C. E. Guyant, Callao, March 22

The swing of the Humboldt current from its normal course along the South American coast to somewhere out in the Pacific Ocean is a catastrophe to Peru. While Lima is only as far south of the Equator as Panama is north, the climate of this part of the country has been temperate rather than tropical because of the influence of this cold current; but late in January the cold stream from the Antarctic commenced to swing out to sea, resulting in a decided rise in temperature all along the coast, lower atmospheric pressure, heavy rainfall along the Andean Ranges, and serious floods and overflows of all rivers running from the mountains to the Pacific.

Serious Damage in River Valleys.

The floods were first reported from the south of Peru, where the rise of the Chili River washed out many bridges and a good deal of track on the Southern Railway, thus cutting off communication with Bolivia and isolating Cuzco. Then the northern rivers began to rise, and serious damage has been incurred in practically every river valley of the littoral. Sugar and cotton lands have been washed out, irrigation and hydroelectric canals destroyed, electric plants and transmission lines damaged, and railway lines and bridges carried away.

Railway Lines Washed Away.

It is understood that Piura and Paita, in the north of the country, and Trujillo have suffered most. In Lima and the Rimac valley, however, the economic losses are severe and will be felt for months to come. The Central Railroad of Peru, running from Lima to Huancayo, via Oroya, follows the valley of the Rimac River up into the mountains, and its line has been washed away in many places. When the waters recede, reconstruction work will be rushed with all speed, but in one section, 16 kilometers in length, repairs will require from one to two months.

Communications with Interior Affected—Foodstuff Prices

This interruption of rail communication with the interior affects the movement to the coast of the output of a large copper company. It is stated, however, that this company will probably be able to continue operations on a reduced scale.

The lack of communication with the interior is also seriously felt in Lima, which has depended largely on the mountain district for its corn, potatoes, chickens, eggs, fruits, and vegetables. Prices of all foodstuffs are increasing in this city and will be abnormally high for some time.

Electric Light and Power Service Crippled.

Even more serious than the shortage of foodstuffs, however, is the complete breakdown of all electric light and power service in the city. The canals carrying water to the hydroelectric plants which supply Lima, Callao, and vicinity with current have been washed out, portions of the plants have been destroyed, and the high tension transmission lines have been carried away. As a result, there is no electric car, light, or power service in this entire urban district of some 300,000 inhabitants. Repair work on one small plant near the city, which is run by steam, generated by crude oil, is being rushed and this will permit the restricted service of street lights in the most important sections; but it will be some time before tram service, house lighting, and power service can be restored. The lack of electricity has also stopped the production of ice.

Property Losses Large.

It is not anticipated that outside relief will be necessary, though these floods are the worst in the known history of the country. As the spring equinox has begun, it is hoped that a change for the better in climatic conditions will soon take place. The latest reports, however, are that rains are continuing in the mountains and the temperature of the ocean at Callao, which is normally 62 degrees at this time of the year, has been registering 82 degrees, with no indication of change.

(Continued on p. 248)

BUREAU'S SPECIAL CIRCULARS AVAILABLE

Numerous mimeographed circulars are issued by the bureau in addition to its various regular and special publications. These circulars are distributed to those interested, including persons and firms whose names are on the Exporters' Index, and copies may be obtained from the bureau or its district offices. The 95 circulars listed below were issued by 23 different divisions during the week ended April 20.

AGRICULTURAL IMPLEMENTS DIVISION

- No. 14. Monthly Export and Import Bulletin, February.
- No. L-30. Market for Lawn Mowers in Mexico.
- No. T-54. Market for Tractors in Mexico.
- No. I-28. Market for Incubators and Brooders in Mexico.

AUTOMOTIVE DIVISION

- No. 37. Automotive Foreign Market News Bulletin.

CHEMICAL DIVISION

- No. 57-B. Foreign Coal-Tar Products Market News.
- No. 57-D. World Notes on Paints, Varnishes, and Pigments.
- No. 58-A. World Notes on Industrial Chemicals.
- No. 58-B. Foreign Coal-Tar Products Market News.
- No. 58-D. World Notes on Paints, Varnishes, and Pigments.
- No. 58-E. World Notes on Fertilizers.
- No. 93. Iodine Production in Java.
- No. 94. Notes on the German Chemical Industry.

COAL DIVISION

- No. 271. Production of Brown Coal in Central Germany during 1924.
- No. 283. The Financial Status of the Welsh coal Industry, January, 1925.
- No. 284. Effect of the New Wage Agreement in South Wales.
- No. 304. Storage of Coal at Terminals and Cooperative Selling Agencies in Italy.
- No. 306. The Coal Industry of New South Wales, 1924.
- No. 307. Coal Imports at Boulogne-Sur-Mer during 1924.
- No. 308. Storage of Coal in Netherlands and Cooperative Agencies.
- No. 311. Exports of Welsh Anthracite to the United States and Canada, February, 1925.
- No. 312. Competition of Scotch Anthracite Coal at St. Stephen, N. B.
- No. 323. British Coal Situation (Weekly Radiogram).

COMMERCIAL LAWS DIVISION

- No. 78. Price for Bar Gold in London.

ELECTRICAL DIVISION

- No. 357. Swiss Radio Industry and Market.

EUROPEAN DIVISION

- No. 37. Economic and Trade Developments.

FAR EASTERN DIVISION

- No. 33. Far Eastern Trade News.

FINANCE AND INVESTMENT DIVISION

- No. 4. Far Eastern Financial Notes.

FOODSTUFFS DIVISION

- No. 67. Smyrna Raisin Situation Covering Period November 15, 1924, to January 31, 1925.
- Foodstuffs 'Round The World, Grain and Grain Products.
- Foodstuffs 'Round The World, Tropical Products.
- Foodstuffs 'Round The World, Fishery News.
- Foodstuffs 'Round The World, Canned and Dried Fruits.
- Foodstuffs 'Round The World, Fresh Fruits.
- Foodstuffs 'Round The World, Foreign Notes on Meats, Fats, Oils, and Livestock.

HIDE AND LEATHER DIVISION

- No. 414. Cultivation of Gambier in British Malaysia and Adjacent Dutch Islands.
- No. 426. Comparisons of English and American Trade in Sole Leather.

- No. 484. Hide and Leather Production in Lower Normandy, France.
- No. 435. Danish Slaughter Statistics.
- No. 439. Exports of Leather from Leading European Countries.
- No. 440. The Tanning Industry of the Irish Free State.
- No. 441. The Tanning Industry of Yucatan, Mexico.

INDUSTRIAL MACHINERY DIVISION

- No. 526. Machinery Trade in China in 1924.
- No. 528. German Twist Drill Union, Prices and Terms of Sale.
- No. 532. Logging Machinery and Sawmill Equipment Catalogues Requested.
- No. 533. Paving Machinery and Road-Making Equipment Catalogues Requested.
- No. 534. New Steam Boiler Exhibited at the Leipzig 1925 Spring Fair.
- No. 538. World Markets for American Metal-working Machinery.

IRON AND STEEL DIVISION

- No. 348. British Indian Import Statistics for November, 1924.
- No. 349. British Steel Statistics for January, 1925.
- No. 351. The Situation in the French Iron and Steel Market.

LATIN AMERICAN DIVISION

- No. 48. "Latin America At A Glance."

LUMBER DIVISION

- No. 12-B. Australian Box Note.
- No. 33. Market for Wooden Boxes and Crates in France.
- No. 412. Almeria (Spain) and Marseille (France) Stave Markets.
- No. 413. Hard Textured Oak Lumber Difficult to Sell in Argentina.
- No. 417. Press Releases, two weeks ending March 28, 1925.
- No. 419. Mild Winter Curtails North European Plywood Production.
- No. 420. Interest in Douglas Fir Plywood Growing in United Kingdom.
- No. 421. The Market for Sieve Rims in South Africa.
- No. 422. Export of Staves from Russia by French Firm.
- No. 424. Lumber Requirements of Railways in Central America and West Indies.
- No. 425. Irresponsible Agents Abroad.
- No. 427. The Australian Lumber Tariff Discussion.

MINERALS DIVISION

- No. 38. Foreign Trade Notes.

PAPER DIVISION

- No. 59. The German Paper Industry During 1924.

RUBBER DIVISION

- No. 844. Tire Exporters' Weekly News Letter.
- No. 845. Preliminary Statistics of Dealers' Stocks of Automobile Tires, April 1, 1925.
- No. 847. French Exports of Rubber Footwear During January and February, 1925.
- No. 848. British Tire Exports in February, 1925.
- No. 849. British Exports of Rubber Footwear in February, 1925.
- No. 850. French Exports of Rubber Tires During January and February, 1925.

SHOE DIVISION

- No. 477. Market for American Shoes in Manitoba.
- No. 478. Italy's Imports of Leather Footwear in 1924.
- No. 479. British Boot and Shoe Production.

SPECIALTIES DIVISION

- No. 103. Player Planos in Wales.
- No. 106. Market for Tableware in Porto Rico.

- No. 109. Market for Washing Machines in Switzerland.
 No. 110. The Rumanian Market for Metal Safes.
 No. 111. The Market for American Filing Equipment in Nantes, France.

STATISTICAL PRESS NOTICES

Total Values of Imports and Exports of the United States.
 Statement of Kinds of Wool Fabrics Imported at New York, Chicago, Philadelphia, Rochester, and Boston during March, 1925.
 Quantity and Value of Specified Kinds of Cotton Cloth Imported at New York, Boston, Philadelphia, Chicago, and San Francisco during March, 1925.
 Imports of Wheat from Canada into the Principal Northern Border Ports during the week ending April 11, 1925.
 Exports of Pork Products from Principal Ports of the United States during the week ending April 11, 1925.

Imports of Raw Wool at Boston, New York, and Philadelphia during the week ending April 11, 1925.

TEXTILE DIVISION

- No. 54-C. Weekly Bristle Report.
 No. 76-A. World's Wool Digest.
 No. 77-A. World's Wool Digest.
 No. 101-B. What the World's Cotton Goods Markets are Doing.
 No. 102-B. What the World's Cotton Goods Markets are Doing.
 No. 124-D. Weekly Cotton Service Bulletin.
 No. 125-D. Weekly Cotton Service Bulletin.

TRANSPORTATION DIVISION

- No. 20. Foreign Railway News.
 No. 20. Foreign Shipping News.

TARIFFS AND TRADE REGULATIONS

(Continued from p 238)

commodities on which, when imported by the Agricultural Bank for the use of farmers and agriculturists, the customs duties and consumption taxes are to be registered to the debit of the Agricultural Bank and paid from the special appropriation of the Budget of the Ministry of Agriculture:

Vacuum oil, grease, benzine, benzole, petrol, mazout, potassium, sulphur, sulphate of copper, sulphate of zinc, sulphuric acid, and leather straps for agricultural machinery.

[Notice of the commodities already placed on this list, under law of April 12, 1923, appeared in COMMERCE REPORTS of August 13, 1923.]

IMPORT AND EXPORT RESTRICTIONS

ECUADOR

Consul Richard P. Buttrick, Guayaquil, March 24

Exportation of Foodstuffs Prohibited.

The exportation of foodstuffs from Ecuador has been prohibited by recent legislation.

GERMANY

Reichsanzeiger, Berlin, March 26

Relaxation of Import License on Certain Fibers, Jewelry, Boxes, and Pitch Pipes.

By an order dated March 25, licenses will not be required for the importation of the following goods into Germany after April 1, except as regards unset precious stones for the manufacture of jewelry, etc., which remain subject to license until May 1:

(Item ex. 28) Upholstery tow and other fibers falling under tariff No. 28 and waste thereof for purposes other than spinning; (item 235) precious and semiprecious stones, not worked; (item ex. 470) waste from the spinning of flax; (item ex. 628) boxes made of wood shavings; (item 678) precious stones, worked (polished, etc.), not set; also those for technical purposes set in wood, horn, bone, or common metals (glaziers' and engravers' diamonds); also drawplates combined with perforated precious stones; (item ex. 942) pitch pipes.

NEW ZEALAND

New Zealand Gazette, Wellington, February 26

Export Prohibition on Bran and Pollard Revoked.

The New Zealand Government has revoked, with effect from March 1, 1925, the Order in Council of April 23, 1923, which prohibited the exportation of bran and pollard from the Dominion.

INTERNAL REGULATIONS AFFECTING TRADE

BURMA (BRITISH INDIA)

Consul Charles J. Pissar, Rangoon, January 5

New Regulations for Sale of Condensed Milk in Rangoon.

New regulations prescribing the percentages of milk fat and milk solids and labeling requirements for condensed milk sold in the city of Rangoon, Burma, are to become effective on July 1, 1925.

[Further information regarding these regulations will be furnished interested American concerns on application to the Division of Foreign Tariffs.]

CHILE

Railton Squirrel, commercial attaché's office, Santiago, March 13

Export and Production Bounties for Iron and Steel.

The following export and production bounties, payable by the Government of Chile for a period of 25 years from the date of the promulgation of the law, will be granted any new companies engaged in the fabrication of iron and steel from national ore, according to a decree of March 9, 1925:

For each ton of pig iron produced, 15 gold pesos; for each ton of steel produced, 20 gold pesos. These bounties are to be paid on production up to a maximum of 20,000 tons of each during the first two years, to 40,000 tons during the two following years, and to 50,000 tons for each of the remaining years.

In addition to the production bounty, for each ton of pig iron, 15 gold pesos, and for each ton of steel, 20 gold pesos, when exported either in rough or prepared form.

[Although not specifically stated, it is presumed this law refers to metric tons.]

CHINA

Consul M. S. Myers, Yunnanfu, February 18

Provincial Stamp Tax on Tobacco.

The Province of Yunnan, following the example of the Provinces of Kiangsu, Chekiang, Kiangsi, Hupeh, Anhwei, Kwantung, and others, has imposed a stamp tax of 20 per cent ad valorem on rolled tobacco sold in the Province.

[For earlier notification of the stamp tax on tobacco in the Province of Chekiang see COMMERCE REPORTS for February 22, 1923.]

SURVEY OF CURRENT BUSINESS

Prepared in the Bureau of the Census

The Department of Commerce announces the following further figures covering basic industrial and commercial movements in March:

Industrial Data.

Further reports of business statistics for March collected by the Department of Commerce and covering basic industrial and commercial movements show the usual seasonal increase over February in shipments of cement, a slight increase in the consumption of cotton, and a decline in the unfilled orders of the United States Steel Corporation. The number of business failures in March were slightly larger and the liabilities considerably smaller than for the previous month.

Financial Data.

Postal receipts in the 50 largest cities as well as in 50 important industrial centers were larger than in February, this increase, however, being fully accounted for by the longer month. Postal savings remained unchanged. Farm prices showed a slight advance over the previous month, but both wholesale and retail food prices were at the same level as in February. Check payments, after seasonal adjustment, were less than for the previous month.

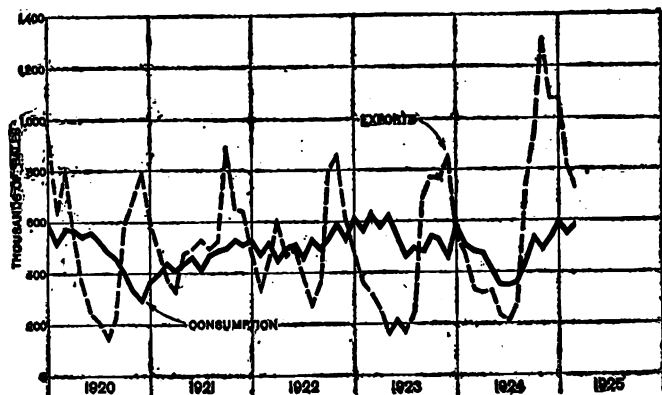

Imports and Exports.

Imports and exports of merchandise were both considerably larger than in February. Imports of gold were more than double, while exports of gold were less than half those of the previous month.

Comparison with Last Year.

Compared with March, 1924, practically all of the business and financial data showed improvement, the only downward movements among the business indicators being in the slight decline in factory employment, in the smaller imports of gold, and in the large decrease in the liabilities of failing concerns.

COTTON CONSUMPTION AND EXPORTS

Data from Survey of Current Business.

The following table gives such data from the April issue (No. 44) of the Survey of Current Business as have been received up to April 16, 1925.

All items given in the following table correspond with similar information in the issue of the Survey of Current Business. These figures should always be read in connection with the detailed tables in the Survey, where specific descriptions of the data and their sources are given. In addition to figures given from Government sources, there are also incorporated for completeness of service the figures from other sources generally accepted by the trades, the authority and responsibility for which are noted in the monthly Survey of Current Business, which may be obtained from the Superintendent of Documents, Washington, D. C., for \$1.50 per year.

FOREIGN TRADE OPPORTUNITIES

Reserved information may be obtained from the Bureau and its district and cooperative offices by duly registered firms and individuals upon written request by opportunity number. The Bureau does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; The usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Symbols: * Reported by American consular officers; † Reported by commercial attachés and trade commissioners; ‡ Direct inquiries received by the Bureau.

American manufacturers and exporters in following up foreign trade opportunities submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

LATIN AMERICA

(Continued from p. 241)

Expansion of Trade in Bolivia

Consul Dayee C. McDonough, La Paz

Increased mining operations in Bolivia and relative stability of exchange have produced a favorable effect on commerce in general. Importations have increased and business transactions are much larger.

An interesting phase of this betterment is the healthy improvement in commercial practice, which has almost entirely replaced the old custom so deeply rooted among retail merchants of not paying their obligations at maturity. Now almost all make punctual payment of drafts accepted at the time of purchases, in order to avoid protests and to maintain their credit. This has brought about an expansion of discount operations—formerly little practiced but now generally in use—with increase of business as a result. Large importers, who up to a short time ago carried considerable sums in bills received, now discount them in the banks, thus replacing in circulation the amounts involved.

Barbados Exports to the United States in 1924

The total value of the 1924 exports to the United States from the Barbados consular district which embraces the islands of Barbados, Dominica, St. Lucia, and St. Vincent, amounted to \$779,421. This represents an increase of \$156,699 in the value of trade over

the previous year. The gain is attributable to the greater production of limes and the higher prices received for lime juice and lime oil. The local products which are exported to the United States are as follows: Arrowroot, asphalt, old copper, cottonseed, molasses, skins, sugar, bay oil, cocoa, cloves, ginger, honey, lime juice, concentrated and raw, green limes, lime oil, nutmegs, orange oil, vanilla beans, cocoa beans, and kola nuts.

Jamaica's Exports to the United States in 1924

The total value of declared exports from the Island of Jamaica to the United States, in the calendar year 1924, amounted to \$5,750,259, as compared with \$7,349,953 in 1923. The decrease is accounted for by the falling off in shipments of bananas as well as the lessened price received for them. Among the import and items, decreases were also noted in the value of coffee and orange oil. Increases were registered by shipments of coconuts, ginger, cocoa beans, and copra.

[Detailed information on the figures from Barbados and from Jamaica are available in the Bureau and will be furnished to those interested.]

INVESTIGATION BY THE UNITED STATES TARIFF COMMISSION

PUBLIC NOTICE OF INVESTIGATIONS BY THE UNITED STATES TARIFF COMMISSION UNDER THE PROVISIONS OF SECTION 315 OF TITLE III OF THE TARIFF ACT OF 1922

Investigation No. 42 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Bent-Wood Chairs

The United States Tariff Commission, on this 23d day of April, 1925, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the following articles included within the class or kind of articles provided for in paragraph 410 of Title I of said tariff act, namely: Bent-wood chairs being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, That all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, That public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 23d day of April, 1925.

JOHN F. BETHUNE, Secretary.

Investigation No. 43 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Rag Rugs

The United States Tariff Commission on this 24th day of April, 1925, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to the following articles included within the class or kind of articles provided for in paragraph 1022 of Title I of said tariff act, namely: Rag rugs being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, That all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, That public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 24th day of April, 1925.

JOHN F. BETHUNE, Secretary.

COMMERCE REPORTS

A Weekly Survey of Foreign Trade

JULIUS KLEIN, Director Bureau of Foreign and Domestic Commerce

Editorial Board: Griffith Evans, Grosvenor M. Jones, R. Dana Durand, Eugene S. Gregg, and Archibald J. Wolfe

American Export Journals

In planning an advertising campaign for foreign business, the exporting manufacturer may well give careful study to the opportunities presented by American export journals. In the early stages of American export activities, these publications were the pioneers in foreign publicity. The foundation of many flourishing export departments has been laid by advertising in American export journals.

As American trade with foreign countries expanded and a more intense cultivation of individual markets was attempted, the publicity needs of American foreign trade in many cases required additional channels. Carefully planned circularization, the development of the export house organ, the intelligent use of lists, and the influence of the foreign resident agent upon the direction of publicity—all these factors have had their effect upon the shaping of foreign publicity campaigns.

There are still many manufacturers who are beginners in export. To these, a judicious use of publicity opportunities presented by the high-grade American export publications, both general and specialized, offers an excellent medium, not only for testing the exportability of their product but also for building up a nucleus of foreign business.

But even manufacturers with established foreign business, including those possessing a network of agencies and affiliations in foreign markets, as well as the rapidly increasing number of advertising agencies which undertake the direction of manufacturers' publicity campaigns for foreign trade, have every reason to examine carefully the true place of the high-grade export journal in foreign publicity.

One great advantage to American business abroad offered by the American export journal is the essentially American character of the publication. Whether printed in Spanish, French, or Portuguese, the American export journal offers its news and information to the prospective buyer under auspices favorable to the American advertiser.

The value of export publications in trade and goodwill building is fully recognized by the exporters of British and German goods. A single German export paper is reported as carrying approximately 900 advertisements of German manufacturers in each issue. Buyers in many foreign countries look to the American

export journal for novel ideas, because the world outside our gates regards America as a great laboratory of constructive thought in business and industry. This presents a most favorable receptive background for reaching the world through American export publications.

Export trade journals must stand and fall strictly on their merits. Their historic service in the building up of American export may be freely admitted. Have they outlived their usefulness, or have they kept pace with the development of American foreign trade? The continuance of advertising patronage, the consensus expressed at gatherings of export directors, and, in fact, the very appearance of leading export publications, seem to point in the direction of continued usefulness.

Advertising in American export publications is not the sole channel for bringing American goods before the buyers of the world, but in any intelligent scheme of world publicity the American manufacturer will do well to make a careful study of the availability of American export journals in the merchandising of his products in individual foreign markets. [A. J. WOLFE.]

Method of Forwarding Catalogues to Foreign Representatives

Since many firms continue to forward catalogues to the various American commercial attachés and trade commissioners in foreign countries through open mail or parcel post, it is thought best to suggest again that in sending catalogues to these officers, particularly in Latin American countries, they should be forwarded, with foreign postage prepaid, to the Bureau of Foreign and Domestic Commerce at Washington to be forwarded to these officers.

This method of forwarding obviates the loss of considerable time on the part of the representatives in foreign countries, and also avoids assessment of considerable additional fees, even when the catalogues are admitted free of duty.

In Brazil, particularly, the duties on catalogues printed in more than two colors are quite high; and in other countries, also, there are tedious formalities and customs duties on catalogues coming by parcel post. These catalogues sent for official use through the pouch are not subject to duty, and there is no customs formality involved.

[R. P. WAKEFIELD.]

World's Commercial News in Brief

The following are brief items compiled from data cabled by Government representatives stationed abroad, from official foreign publications, and from other sources. Countries included in the "Monthly Cable Reviews" are omitted from this section.

European Economic and Trade Developments

For reasons of Bureau administration, this heading includes also Canada

BELGIUM

Industrial depression continues, with curtailed production and increased unemployment. Business in general continues to await the outcome of the French crisis and the stabilization of the western European situation. Export trade feels the competition from Luxemburg, and it is reported that metallurgical production will decline unless more export orders are secured. The coal industry continues depressed, with reduced production. The plate-glass industry is still operating at about 50 per cent of capacity. The cotton-spinning industry, however, reports good foreign demand.

CANADA

Favorable weather in the western Provinces has enabled the farmers to get their spring seeding well under way. Mining activity in Ontario and British Columbia is increasing. The two principal railway systems have announced that they will cooperate in an effort to eliminate duplication of services, with the hope of resultant operating economies.

ESTHONIA

Considerable foreign interest is shown in the utilization of Esthonian shale for manufacture of asphalt. A Swedish concern has an important concession for the exploitation of 24,000 acres of shale area, and hopes ultimately to produce 500,000 metric tons of shale annually. Industrial conditions on the whole are somewhat depressed, except in the paper industry, where output and exports are increasing and are now considerably higher than the pre-war figures. Dairy production is expanding rapidly, with increased exports of butter and eggs, and agriculture as a whole continues to occupy an increasingly important position in the foreign trade of the country.

FINLAND

Exports of paper and wood pulp during the first three months of 1925 were considerably higher in quantity than during the corresponding period of 1924. This is particularly true of paper, for which orders are being received in good volume, especially from Soviet Russia. Prices are said to be very good. Lumber sales for 1925 shipment are gratifyingly improved over last year. It is reported that a combination has been effected for exporting lumber to the United States. Finnish total imports for this season have appreciably declined as the result of a diminished home market, but exports have risen to an unusually high figure. There has been some expansion in note circulation, although the total is slightly less than the corresponding figure for 1924. The foreign exchange reserves of the bank of issue remain very high.

GREAT BRITAIN

Pound sterling attained during the week the highest quotation in 10 years. There was very strong buying from banks, which stimulated purchases by commercial houses. Iron and steel production so far this year has been unsatisfactory as compared with 1924 and 1923. The same is true of the general foreign-trade situation, the general increase having been attended by an excess of imports much larger than for the corresponding period of 1924. The decrease in coal exports has occasioned a serious reduction in railroad receipts, particularly by the Great Western.

GERMANY

High production costs and low domestic purchasing power continue the outstanding factors in German business. A 30 per cent drop in railroad rates for iron and steel increases the German competitive advantage in one of its most important export industries, and similar rate reductions for the finishing industries are hoped for. (Sixty per cent of German exports are by rail.) The ministry of labor is discussing with labor and employer representatives a qualified return to the 8-hour day. It is reported that similar discussions concerning wages are expected to result in a general increase of about 8 per cent in the wage level, perhaps within a few months. The application of such increases would favorably affect domestic purchasing power. The mobilization of public funds for agricultural credits has created a temporary surplus in the short-term money market. Long-term credit remains scarce, although there has been a marked increase in capital issues during the last few months, particularly in agricultural mortgage bonds. The removal of the 10 per cent tax on profits from foreign loans payable abroad has been favorably received in banking circles.

ITALY

A new crisis in the Italian security markets, occasioned in part by diminished public confidence, recently resulted in a further temporary suspension of trading. A conference between Government and business interests, however, had a very good effect. Commercial Attaché MacLean, at Rome, reports a local belief that the crisis has been passed, and that sufficient funds at an average of 7 per cent are available for the monthly stock carry over.

LITHUANIA

In an effort to facilitate business and to effect greater progress in economic recovery, the official discount rate of the Bank of Lithuania has been reduced from 8 to 7 per cent. The actual rate paid, however, is about 10 per cent, when fees and charges customarily made are added. A slight reduction in the interest rates of pri-

vate banks has also been effected. Lithuanian currency has undergone but slight fluctuation relative to the dollar. Discounts and loans of the bank of issue are increasing, and there has been a slight contraction in total deposits. Money stringency remains the most important factor in the economic situation.

NETHERLANDS

Industrial conditions in the Netherlands are more satisfactory than in Belgium and France, and have been followed by demands for wage increases in several large industries. Results of the recent Utrecht fair are considered satisfactory and an improvement over the 1924 spring exhibition. American participation in this fair was confined principally to automotive products, office equipment, and specialties. Shipping during March showed a considerable advance over March, 1924, both in the number of ships and in tonnage. There is at present no idle tonnage at either Amsterdam or Rotterdam.

RUMANIA

The transportation system, on the rehabilitation of which Rumania's economic reconstruction materially depends, continues in acute need of repairs, expansion, and additional equipment. In spite of two increases of 25 per cent during 1924, rates are said to be lower than in any other European country. Further substantial increases are to be made, with the hope that the railways may be placed upon a self-sustaining basis, thus relieving the budget of a heavy burden. General business remains depressed. Importation of American and

Argentine wheat and of Egyptian flour has begun, and includes a reported order of 16,000 tons of American wheat.

SPAIN

The general trend is upward, though in recurring periods of depression and progress. A principal factor in this movement is the considerable mining activity, although iron-ore mining continues somewhat depressed. The banking crisis is gradually subsiding with a return of confidence, and quotations on bank shares are recovering.

SWEDEN

Imports are increasing, but there has been an even greater expansion in exports. Sales of wood pulp, paper, and lumber for 1925 shipment are very high. Swedish requirements for industrial raw materials and for grains and other foodstuffs also are increasing, however, and will tend to maintain a considerable spread between imports and exports, but this spread will be reduced with the usual summer expansion in exports. Repatriation of foreign loans and Swedish currency notes, which have been held abroad, particularly in Germany, continues. Price levels have maintained a marked stability, with the wholesale index unchanged during the last three months. Industrial earnings, in spite of recent wage increases, display a tendency to rise. Swedish industries hope to pay off their large indebtedness to home financial institutions, and thus acquire a greater measure of financial independence.

Latin America at a Glance

BRITISH GUIANA

Business continues depressed in British Guiana, with no new developments, reports Consul Gaston Smith, Georgetown, under date of April 23.

PANAMA

The general situation in Panama is good, with business active. Imports during the month of March were valued at \$1,100,000, as compared with \$900,000 during February, and were slightly in excess of the monthly average for 1924. Some increase has been noted in retail sales, and a general price adjustment occasioned by tariff changes is taking place. The outlook is reported as favorable for the sale of automobiles and tires during the next few months. Work on the national highways is progressing satisfactorily, and there is considerable house building being undertaken in Panama City. The reduction of import duties on tobacco and cigarettes has already gone into effect, but in accordance with constitutional provisions tariff increases will not be effective until June 1. Due to the protective tariff of \$0.05 a kilo on all imported soap, the local soap industry is showing increased activity. (Cable from Consul H. D. Myers, Panama, April 23.)

COSTA RICA

Delayed settlements for the present coffee crop of Costa Rica have retarded wholesale and retail trade so that the usual seasonal improvement has not been shown. The movement of merchandise has not been active, though the wholesale market continues firm.

The prospects for the crop next year are excellent, but it will probably come on the market later than usual. Local prices for foodstuffs are slightly lower than during March and collections are good. The arrangements made for the payment of the French loan, reported in March, are still awaiting congressional action. (Cable from Vice Consul R. W. Unckles, San Jose, April 24.)

NICARAGUA

The usual seasonal falling off in imports has prevailed in Nicaragua during April, and it is reported that imports will be considerably less this year than last year. Importing during 1924 was excessive, and less money is now in circulation, crops during the past season having been small. Exchange remained steady throughout April at parity with the United States dollar. Coffee exports to date have amounted to 5,900 tons, with some 5,000 tons still on hand. Coffee sales were less during April than during the corresponding month of last year, although prices are higher. Sugar exports to date have equaled 5,900 tons, with 5,000 tons remaining. (Cable from Consul Harold Playter, Corinto, April 25.)

SALVADOR

General business conditions in Salvador continued good during April, notwithstanding the fact that the coffee market was inactive and coffee prices showed a further decline, according to a cable from Consul W. J. McCafferty, San Salvador, dated April 23. The rains have commenced and the coffee growers anticipate a good crop for the present year. Considerable

progress has been made on the various public works undertaken. Some months ago the report was published that the boll weevil had done considerable damage to the cotton crop in Salvador (COMMERCE REPORTS, February 2). This was an error, as the damage done to the crop was by a caterpillar or measuring worm. The boll weevil as yet has not injured crops to any great extent.

GUATEMALA

The slight dullness in general business continues in Guatemala, with about 85 per cent of the entire coffee crop shipped and the remainder being held by the growers for a rise in price. Exports of Guatemalan coffee showed an increase during April as compared with the preceding months. Some of the growers have been sending their coffee abroad on consignment, hoping to obtain in this way better prices than those offered by the local buyers, but so far this method has not proved successful. The financial condition of the majority of the coffee growers is good, as they disposed of their crops to the local buyers before the market declined and the export tax increased. The growers are borrowing much less than usual for financing the next crop. (Cable from Consul General Philip Holland, Guatemala, April 23.)

PORTO RICO

Business conditions generally are slow in Porto Rico considering that this should be the most active season of the year. However, April shows slight improvement over March, with collections somewhat better and the amount of money in circulation increasing as a result of the marketing of the tobacco and sugar crops. Bank clearings are slightly under those of last year. Merchandise stocks on hand are normal or above. Clothing, dry goods, and shoe lines show heaviest stocks with small turnover and slow collections. Automobile sales are good, with stocks lower than last month. Dealers report that cash sales of automobiles are increasing, although retail merchants in most other lines complain that collections are slow. Building activity has slackened, with stocks of building materials fair. The weather has been generally favorable to crops. The sucrose content of the sugar cane is now normal, although prices are off somewhat and shipments are less than last year. Tobacco now being marketed is of good quality and the prices being received are satisfactory, although the crop is smaller than

normal. (Cable from Trade Commissioner E. W. James, San Juan, April 26.)

DOMINICAN REPUBLIC

The grinding of the sugar crop in the Dominican Republic is proceeding steadily with improving yields. Sugar shipments are heavy, practically all moving to Europe. Severe hailstorms in the north have injured the tobacco and cacao crops, but as the storm area was limited the damage will not exceed 10 per cent, and record crops are expected. The first of the new crop of cacao is being received at ports. Considerable corn is being shipped to Porto Rico. Retail business is dull and continued large importations are believed to exceed the retail movement. Collections are generally unsatisfactory. It is expected that the reorganization of the public works department will retard the highway program at least temporarily. March customs collections amounted to \$387,000, compared with \$305,000 for the corresponding month of last year. Internal-revenue collections for March amounted to \$235,000, practically the same as last year. The total Government revenues for the first quarter of 1925 exceeds those of the same period of 1924 by \$380,000. (Consuls C. B. Hosmer and W. A. Bickers, Santo Domingo, April 23.)

HAITI

The export coffee movement from Haiti up to the end of March was estimated at 52,000,000 pounds and little more is expected. Cotton prospects are very favorable with good prices. Sugar acreage is being extended with irrigation. Experiments in tobacco growing begin to show positive results with favorable outlook for expansion. Although crop prospects continue good, prices remain low. Competition for retail trade is keen with signs of overstocking, particularly in textile lines. Overimporting in March is now evident. The credit situation is less favorable with collections more difficult. Construction activity continued unabated. Government finances are in good condition. (Consul M. P. Dunlap, Port au Prince, April 24.)

CUBA

The general commercial situation continues unchanged in Cuba with business slow and collections difficult in some lines. There were no developments in the sugar industry. According to figures published in one of the Habana papers the total public debt was reduced by \$200,500 during March, the balance at the end of the month being given as \$99,379,900.

Far Eastern Trade News

PHILIPPINE ISLANDS

The Philippine abaca (Manila) market continued dull during the week ended April 25, according to cabled advice from Assistant Trade Commissioner E. B. George, Manila. Both New York and London buyers were inactive. Prices were steady but nominal. Supplies of copra were short because of rather heavy purchases by one American mill representative. Local and other American mills, however, still bought sparingly. Copra prices showed an upward tendency, resacado again reaching over 14 pesos per picul (139 pounds). The week saw no change in the favorable sugar conditions.

AUSTRALIA

Wool sales held at Geelong during the week ended April 25 developed little competition, the highest price realized being 29d. per pound. More than half the present season's clip has already been sold at excellent prices, however, and with careful feeding of the market it is generally believed that the remainder will yield a satisfactory return, according to cable advices from Trade Commissioner E. G. Babbitt, Melbourne. The Tasmanian apple season is in full swing, and space for the shipment overseas of 1,000,000 cases of the crop has been engaged in 28 vessels due to call at Hobart up to May 14. Apple production has been

especially good, and it is stated that 1,500,000 cases could be exported if shipping space were available.

For the first seven months of the present fiscal year—July, 1924, to January, 1925, inclusive—Australia's trade balance was favorable by \$2,556,814, as compared with an unfavorable balance of £18,845,201 for the corresponding period of 1923-24. Imports from the United States during the seven months ended January 31, 1925, aggregated £19,681,000, as against £19,929,261 for the corresponding period of 1923-24, while exports to the United States increased from £4,572,000 to £5,757,000 during the same periods.

JAPAN

Japan's foreign trade continues adverse, the preliminary returns for the second 10 days of April showing exports of 57,000,000 yen against imports of 92,000,000 yen, according to the weekly cable from Acting Commercial Attaché Frank Rhea, Tokyo. The excess of imports, totaling 25,000,000 yen, brings the cumulative excess since the beginning of the year to more than 410,000,000 yen. In spite of this adverse trade, Japanese exchange continues to improve, New York quotations having passed \$0.42 during the past week.

Match manufacturers of Kobe are organizing an association under the new export encouragement act passed at the last session of the Diet.

In order to encourage the development of cooperative cocoon warehouses and drying establishments, the Government is extending a subsidy of 605,000 yen for

the current fiscal year, with the stipulation that the subsidy is not to exceed 40 per cent of the required expenses. Subsidization of warehouses will be continued for eight years and of drying establishments five years.

INDO-CHINA

Indo-China's rice market is rising, due to increased purchases by Japan and the Philippines, according to a cable from Consul H. N. Cookingham, Saigon, April 20. This, however, has caused a decline in European sales. The season's rice harvest has closed, with a crop of 2,215,000 metric tons and an exportable surplus of 1,250,000 tons. Shipments of rice and rice products from Saigon for the first quarter of the current year totaled 391,812 tons, compared with 402,489 tons for the same period in 1924. The Indo-China piastre on April 20 had fallen slightly to a value of \$0.55½. Its equivalent in French currency was 10.60 francs.

SIAM

Bangkok March imports were valued at 14,800,000 ticals, exceeding those of February by more than 2,000,000 ticals, states a cable from Consul C. H. Albrecht, Bangkok. Of this increase, general merchandise accounted for over 1,300,000 ticals. The Siam tical is now around \$0.4475 bank buying rate and \$0.4350 selling rate. Shipments of native products from Bangkok, including rice, 17,000,000 ticals, and teak, 745,000 ticals, brought the total exports for March to approximately 20,000,000 ticals in value.

MONTHLY CABLE REVIEWS

LATIN AMERICA

Richard F. O'Toole, Chief, Latin American Division

Argentina's Export Movement Depressed

Based on cable from Commercial Attaché E. F. Feely, Buenos Aires, April 25

The export movement from Argentina, with the exception of meat, is still depressed and the consequent lack of export bills is affecting exchange and the general business situation adversely. Bank collections and customs revenues indicate a steady increase in imports. American manufacturers are obtaining a large share of the trade, in spite of the uncertain exchange.

The renewal of the export movement would greatly improve the import trade. German competition is increasingly active.

Federal revenues show large increases over last year, especially in import duties and internal revenue. Municipal revenues for 1924 show a budget surplus of 5,000,000 pesos. Bank deposits and loans have increased and interest rates are easier.

The wool market is somewhat improved, with German buyers active. Stocks here are 9,800 tons as compared with 3,350 tons last year.

Employers have again protested the enforcement of the pension law. Congress opens early in May.

Exports of Argentine Products.

The export of Argentine products from January 1 to April 23, as compared with the same period in 1924, are as follows:

Argentina's exports January 1 to April 23—

Product	1924	1925
Bird seed.....tons.....	2,552	895
Wheat.....do.....	2,224,000	1,792,000
Corn.....do.....	275,000	402,000
Linseed.....do.....	684,000	234,000
Butter.....cases.....	607,000	393,000
Shoepskins.....bales.....	11,000	6,000
Beef.....quarters.....	2,654,000	3,045,000
Mutton and lamb.....carcases.....	1,378,000	1,420,000
Wool.....bales.....	1,208,000	1,148,000
Salted and dried hides.....	3,007,000	2,415,000

¹ Oct. 1, 1924, to Apr. 23, 1925.

Uruguayan Business Continues Dull

Based on cable from Acting Commercial Attaché L. B. Clark, Montevideo, April 25

Business in Uruguay continues dull, but imports have been fairly well sustained. The wool market is dead, except for a slight interest in merinos at 9.50 to 10 pesos per 10 kilos. Practically all the remaining stocks, amounting to 35,000 bales, is now held in Montevideo.

The packing houses have been working at to speed all month, with a strong demand for chilled and frozen meats for England and the Continent. Total killings this season are now only 10,000 behind last year, as compared with 50,000 less at the end of February.

Prices are holding around 10 to 11 cents per kilo for the best grades of steers.

Money is tight. Loans are at 9 per cent, overdrafts 8½ per cent, and fixed deposits 6 per cent. Exchange continues steady at 106, very little being offered except meat bills.

Typical Imports.

The following are typical imports from March 22 to April 21: Agricultural implements, 821 cases from the United States; 111 cases from Europe. Cotton yarn, 268 cases from the United States; 80 cases from Europe. Sewing machines, 345 from the United States; 41 from Europe. Typewriters, 102 from the United States; 35 from Europe. Adding machines, 25 from the United States; 2 from Germany. Cement, 1,000 barrels from the United States; 8,000 from Europe. Wire, 18,000 rolls from Europe, and none from the United States.

Continued Improvement in Chilean Situation

Based on cable from Commercial Attaché Ralph H. Ackerman, Santiago, April 26

Very little change is apparent in the generally improved situation in Chile reported in March. The betterment has now extended to most all lines of business. Reports from the south indicate a continuance of heavy buying. Purchases in the north, however, have been unfavorably affected by labor unrest. Strikes during the last two months have been more numerous than at any time in recent years, with unrest permeating both laboring and salaried classes, particularly in mining industries and public utilities.

Financial Conditions.

Credit continues to be restricted, although slightly less so than during March. Bank rates have been somewhat reduced on high-class collateral, while interest rates have been reported as low as 9½ per cent, with overdrafts higher, generally around 12 per cent. In an effort to discourage this type of business, stock-exchange rates continue around 24 per cent. Daily transactions have been increasing, but with prices unsteady. Both internal and foreign collections are still difficult, with an increasing tendency manifest to ask for extensions. Nevertheless, no important failures are reported.

The average of exchange for the first 20 days of April was 8.82 paper pesos to the dollar. Circulation of paper on April 17 was 302,163,530 pesos.

Mining Activities.

A renewed foreign demand for nitrate has resulted in association sales thus far this month of approximately 500,000 tons, of which 200,000 tons is for delivery during the next nitrate year. Total sales of the Nitrate Association delivered this nitrate year have been 2,200,000 tons. Exports for the first 15 days of April approximate 100,000 tons.

Copper production in April is expected to show a slight increase over March.

The coal situation remains unchanged. There is a slight demand for foreign coal for nitrate ports, although no large transactions have been reported. Prices remain at the same levels as during last month, such slight variations as appear being due to the charter market. Domestic quotations for northern ports are from 80 to 82 pesos.

Active Demand for Many Lines of Foreign Goods.

Foreign demand for agricultural products continues good, with little change in prices, while all lines of domestic manufactured goods enjoy a fair sale. Production continues to be fair, although strikes threaten in some industries. Shipments of merchandise to arrive have been generally above last month. Automobiles of all classes are moving better and sales of trucks suitable for bus service and light delivery have greatly increased. Tire sales have been better than for several months past, particularly in Santiago, where the trade has been favorably affected by the street-car strike. Tractors are moving well, but sales of other agricultural implements are at the lowest since the beginning of the year. Demand for small electrical equipment and appliances has been accelerated by the approach of winter. Larger electric installations and industrial machinery are not selling so well. Demand for mining machinery is fair. Heavy shipments have been made of mining and electrical machinery to the new Potrerillos copper mins, and to Chuquicamata for increasing production, but business was not placed locally. Demand for iron and steel is fair, although American manufacturers continue unable to meet European competition. Tin plate from local stocks is moving well. The market for textiles is still active.

Foreign shipping at Valparaiso for the first 20 days of April has been less than for the corresponding period in March.

Paraguayan Situation Improved

Based on cable from Consul D. A. Willson, Asuncion, April 25

The economic situation in Paraguay is slightly better as cotton and tobacco movements begin. Trade conditions are generally improved. Important orders from the interior indicate a good beginning for autumn demand, especially in textiles.

The money market is easier, loans being offered and taken at from 8 to 12 per cent. The banks are speculating on a better cotton harvest in spite of the uneasiness felt as a result of recent rains.

Cautious Buying Prevails in Brazil

Based on cable from Commercial Attaché W. L. Schurz, Rio de Janeiro, April 25

The weakening tendency of the milreis in Brazil continued during April, and resulted in cautious buying by importers.

The note circulation of issues by the Bank of Brazil amounted to 67,500,000 milreis on March 31, 1925.

The total number of immigrants entering Brazil in 1924 was 98,125 including 22,168 Germans, compared with a total of 86,679 in 1923, of which only 8,254 were Germans.

Export Products—Cotton and Sugar Stocks.

The coffee market was stagnant during April with local interests seriously concerned over reduced purchases by foreign markets, although "Brazilian coffee exporters believe foreigners will soon have to abandon hand-to-mouth buying and purchase on a normal basis." Indications are that the 1925 crop will yield more than 10,000,000 bags.

Cotton stocks in Pernambuco on April 24 were 1,000,000 kilos, Rio de Janeiro 1,880,000 kilos, and Sao Paulo 5,371,115 kilos. The market was quiet but great interest is being displayed in increased planting

in the Sao Paulo area, which reached 636,708 hectares for the 1924-25 crop.

Sugar stocks in Pernambuco on April 24 were 382,600 bags and Rio de Janeiro, 166,900 bags, with little activity in the market.

Sao Paulo Trade Increased in 1924.

Total exports from Sao Paulo in 1924 amounted to £52,424,942, as against £36,442,258 in 1923. Imports in 1924 were £23,877,141, compared with £16,982,703 in 1923.

Iron and Steel, Machinery, and Electrical Markets.

Prospects of iron and steel sales are good. European competition is lessening and stocks are low. Railroads are beginning to buy but collections are slow.

The market for machinery and agricultural implements still shows improvement.

Electrical goods sales are improving after three dull months. German competition is still strong, but has declined in severity during the past six months. Radio sales decreased considerably in April.

Paper, Automotive, Tires, and Coal Sales.

Competition in paper is still extremely strong from European manufacturers and between local importers, and the demand continues slow. An American paper company has reentered the market, dealing largely in German paper.

Automotive sales decreased slightly in April as compared with March on account of a general tightening of money, although the movement of some makes was restricted by lack of stocks. Tire sales in April were only about 60 per cent as large as in March, due to overstocking.

Coal stocks in Rio de Janeiro on April 24 were 80,000 tons. Imports were 65,000 tons, including 15,000 tons from the United States. Stocks en route were 40,000, including 30,000 tons from United States for Lloyd Braseleiro. American coal is quoted at \$4.25 per ton and the freight rate is \$4.25 per ton. British price and freight are 39s. and 16s., respectively.

Rio and Sao Paulo Situation Unimproved.

There is a serious congestion in the warehouses at the port of Rio and long delays are met in dispatching imported merchandise.

The Santos port congestion shows no appreciable improvement. There were 46 ships alongside on April 22 and 43 awaiting berth.

No early relief is expected for the Sao Paulo power situation.

Peruvian Situation Shows Little Improvement

Based on cable from Commercial Attaché H. Bentley MacKenzie, Lima, April 25

There has been very little change in the Peruvian situation since the beginning of April. The recent heavy rains, which proved so disastrous to the country, have now ceased in some sections, but continue in the northern and central interior districts. All railway traffic is still suspended in the north, although resumption has been made to a large extent in the south. The Central Railway now operates trains to a short distance beyond Lima. Another two months will be required for completing repairs on the line to Oroya.

Largely because of this lack of transportation, the nondistribution of mails, and damage to agriculture, trade continues to be poor, all lines feeling the depression. Collections in general are slow, with a high

percentage of overdue accounts. As many of the smaller firms are particularly affected in this respect, exporters are cautioned to consider carefully the size of their shipments to them in the near future.

Good Year Anticipated for Peruvian Cotton.

Peruvian cotton interests are anticipating a good year, provided the present level of United States cotton prices is maintained. Cotton crops in the central valleys have been destroyed to a considerable extent by rains, but in the northern districts, despite losses which will reduce the volume of crops due in July, August, and September, plantings have been increased in sections where fields have drained, and as a consequence larger crops than usual will probably be obtained in December. January crops in the south are expected to be delayed; nevertheless, they, too, should be larger because of the abundance of water available for the growing plants.

Living Costs Decline Slightly.

The cost of living has declined slightly, although it is still at a very high level. New Government relief measures include the waiving of customs storage charges for a period of 60 days at northern ports, and the admission of cattle at all ports free of all duties except 15 soles per head.

Industry and Legislation—Finance.

There has been a slight improvement in the electric power situation in the Lima district, although industries are still obliged to operate on a part-time basis.

Congress, in its second extra session, is occupied with a discussion of the present year's budget. A proposal has been made to impose an additional import tax of 20 centavos per meter on motion picture films, for the benefit of public instruction. Concessions have been granted for the construction of automobile highways between Lima and Chosica, and Lima and Huacho.

The gold reserve fund on March 31 was 5,413,327 Peruvian pounds; notes in circulation amounted to 5,868,295 pounds; and bank clearings 5,251,000 pounds. Peruvian exchange at the beginning of the month registered \$4.125 to the pound, but has since gradually declined to \$4.085 on April 25.

Business More Active in Mexico

Based on cable from Commercial Attaché Alexander V. Dye, Mexico City, April 24

There was some increase in general buying and selling in Mexico during the month of April, though business was spotty. The shoe trade was dull and most of the local factories are working only part time. The textile mills have been doing unusually well, but labor troubles are now threatening. It is reported that the Laguna cotton crop will fall considerably below the average annual yield. The grocery trade has shown considerable improvement, and the automobile market is still active.

Oil Located—Mining Activities.

The Mexican National Railways have struck oil on their right of way between Tampico and San Luis Potosi, and it is expected that the finding of such oil will aid the railways in balancing their budget. Passes on the railways have been strictly limited, and it is estimated that now only 5 per cent of passengers carried do not pay fares.

Mining continues along the same level, with perhaps a slight increased sale of mining machinery. There is also some increase in the sale of agricultural machinery, although the season's movement is not so good as during previous years.

The national department of mines has been very active during the present year in canceling all mining titles on which the taxes have not been paid or in which there were some irregularities in the claims filed. It is reported that 10,000 properties have been cleared off the books between January 1 and April 1, though many of these had not been more than nominally held on the books for some years.

Mexican Government Arranges to Finance Obligations.

Money is tighter and bank loans very restricted. The Government is still accumulating funds.

A recent governmental decree provides for the payment of the debts owed by the Government to the merchants in the following manner: On April 28 there is to be paid 50 per cent to creditors who hold individual claims not exceeding 20,000 pesos, and 10 per cent to those holding more than that amount. On May 13 the balance due on the accounts under 20,000 pesos is to be paid, and 15 per cent of the large accounts; and the remaining 75 per cent of the larger accounts is to be paid in three equal monthly installments thereafter. Drafts given in past years on financial agency in New York to be paid 25 per cent each month on the 13th day of May, June, July, and August.

Conditions Continue Good in Venezuela

Based on cable from Consul Doyle C. McDonough, Caracas, April 25

Conditions in Venezuela continued favorable during April but merchants report seasonal slowness. Automobile sales show a steady increase. Exchange dur-

ing the month remained steady at 5.15 bolivars to the dollar (at par 5.18 bolivars equal \$1), owing to coffee shipments and expenditures in the oil fields. Banks report collections fair.

Coffee Market Good—Construction and Transportation.

European countries are resuming the purchase of coffee. Washed coffee brought 125 bolivars per 46 kilos; threshed coffee, 105 bolivars for average grades. Cacao dropped to 53 bolivars per 50 kilos. Hides and skins were inactive, going mostly to Europe on account of the rigid American selection and import regulations.

The Puerto Cabello-Valencia highway is to be concrete-surfaced and the minister of public works is to be in charge of the construction.

The Aluminum Line agent announces improvement in the service from New Orleans to the north coast of South America, with fortnightly sailing dates—the average time to La Guaira to be 15 days.

Petroleum Exports Continue Active.

March exports of petroleum reached 1,717,000 barrels, making a total of 4,175,000 barrels for the first quarter of 1925.

An airship of the German Condor syndicate made a trial trip from Curacao to La Guaira and return, carrying the first air mail. It is planned to establish a regular service to Maracaibo.

Congress opened on April 19.

Conditions Satisfactory at Puerto Cabello.

Consul W. P. Garrety at Puerto Cabello reports normal conditions for this time of the year. Practically all coffee and cacao is now moved from that district, but quantities are arriving from the eastern regions. The consul also reports that the coffee crop is smaller than was expected.

EUROPE

Samuel H. Cross, Chief, European Division

Expansion Characterizes Norwegian Developments

Based on cable from A. M. Fenselau, secretary to commercial attaché, Copenhagen, Denmark, April 23

The recovery and improvement that have characterized Norwegian economic conditions during the past months is definitely entering the stage of expansion. Industrial and mining output is growing, fishing is yielding excellent catches, and exports are increasing. These movements are facilitated by increased purchasing power of Norwegian currency and a greater domestic and foreign demand. A drop in general price levels has now taken place after a long period of rising prices.

Large Loans to be Floated.

In order to take care of the floating obligations of the Government authority has been granted by Parliament to issue a loan of 100,000,000 crowns. In addition a maturity of 100,000,000 crowns has to be met toward the middle of the year, and it is proposed, furthermore, to convert the so-called food administration loan of 150,000,000 crowns. Because of the tightness of the domestic market a foreign loan was finally issued by the city of Oslo (Christiania) for \$8,000,000; this will be used to complete the construction of important public works.

New Bank Administration Law Proposed.

A proposal for a new bank administration law has now been drafted, which aims to make possible a more rapid action in case of financial difficulties, either by liquidation or by effective reconstruction, if conditions warrant. It also provides for a more flexible scheme for the payment of deposits.

Two minor provincial banks applied for public administration during the past month. Recommendation has now been made that Den Norske Handels Bank and the Fredriksstad Privatbank be liquidated.

Money Market Tight but Turnover Increasing.

Stringency is still apparent in the money market. There was a slight expansion in note circulation during the past month, the total on April 15 being 381,500,000 crowns, as against 354,500,000 crowns on March 23. This is due in part to greater business activity. The deflation policy is still carried on; loans and discounts of the bank of issue were reduced to 351,800,000 crowns as of April 15 from 354,000,000 as of March 23. Norwegian exchange made considerable gains, rising from 15.8 cents to 16.3 cents as of April 25; the present rate is 2½ cents higher than at the corresponding date of 1924. A very significant development is the increase in foreign-exchange holdings of the

bank of issue from 42,800,000 crowns in March to 56,200,000 crowns in April.

The monthly clearings of the Oslo banks indicate an appreciable increase in the amount of business. Total clearings for March were 519,000,000 crowns, as against 358,000,000 crowns in February.

Stock Exchange Active and Firm.

Greater activity with a firm trend characterized the Oslo Bourse during March. The total trading aggregated 3,600,000 crowns, as against 2,100,000 crowns in February. Banking shares have shown greater strength, the index rising from 108 on March 16 to 110 on April 14. Shipping and industrial shares are slightly lower than a month ago; the indexes on April 14 stood at 120 and 253, as compared with 121 and 254 on March 16.

A considerable increase took place in capital issues during March, when they amounted to 5,300,000 crowns, as compared with 3,900,000 crowns during February. The number of failures during March was 84, as compared with 62 during February.

As a result of appreciating exchange and a general decline in world price levels, a drop occurred in the Norwegian price levels during March; the index for that month stood at 275.6, as against 280.8 for February. With the exception of fuel and textiles, all chief commodity groups registered lower prices.

Industrial Activity Expanding.

Favored by good demand in both foreign and domestic markets, Norwegian industries are able to operate on full time. Unemployment is decreasing and now amounts to 19,000, as compared with 21,000 during March. The key industries, such as lumber, wood pulp, paper, metal, and fish canning, are especially prosperous. With a greater demand and rising prices a recovery is likewise noted in the mining industry, which was the greatest sufferer from postwar deflation. Several copper and pyrite mines have now resumed operations.

Foreign Trade During February Very Heavy.

Considerable increase was reported in Norwegian imports during February, with a slight increase in exports. The unfavorable balance increased from 13,000,000 crowns in January to 37,500,000 crowns in February. The value of imports was 123,500,000 crowns, as against 108,500,000 crowns in January. The metric quantities of principal items during February were as follows (January figures in parentheses): Coal and coke, 193,000,000 (157,000,000); mineral oils, 6,000 (7,000); and iron pyrites, 5,000 (4,000). Importations of automobiles numbered 159, as against 92 for January.

Exports and reexports showed a fractional gain, from 95,400,000 crowns to 96,000,000 crowns, during February. The values of the principal items were as follows (January figures in parentheses): Paper and pulp, 26,600,000 crowns (26,400,000); lumber, 6,700,000 (6,500,000); minerals, 12,500,000 (13,700,000); metals, raw and half finished, 7,097,000 (10,520,000); and fish products, 23,260,000 (17,700,000). Cement exports reached a total of 16,000 metric tons, as against 25,200 metric tons in January.

Increased Exports to the United States.

The value of Norwegian exports to the United States during March, declared through the American consulates, was \$1,721,000, as against \$1,504,000 in February. The chief items during March were valued as follows

(February figures in parentheses): Wood pulp, \$511,000 (\$763,000); fish, \$388,000 (\$243,000); cement, \$62,000 (\$86,000); aluminum, \$158,000 (\$130,000); and ferromanganese, \$200,000.

Danish Labor Conflicts Cause Temporary Depression

Based on cable from A. E. Fensclau, secretary to commercial attaché, Copenhagen, April 23

Danish economic conditions have undergone further depression by the extension of industrial conflicts to practically all the industries of the country. This constitutes such a complete reversal of the gradual improvement manifested during the early part of 1925 that the greater confidence inspired by the initial success of the exchange stabilization plan has been somewhat shaken. Although conditions have been rendered still more difficult by the continued stringency in the money market, the Danish crown has shown persistent strength.

Money Market Stringent.

In pursuance of the established policy, the bank of issue and other leading banks are very strict in their extension of credit, so that it is practically impossible to float domestic capital issues of any importance, and recourse is therefor taken to foreign markets. Thus, the Copenhagen Telephone Co. has recently contracted a \$2,000,000 loan abroad. The State exchequer will, in conformity with the exchange stabilization plan, issue treasury notes for a total of 25,000,000 crowns on May 13 for fiscal purposes.

The credit restriction is reflected in the consolidated statement of Danish private banks for February, showing that aggregate deposits dropped from 2,408,000,000 crowns in January to 2,389,000,000 crowns in February and that loans and discounts contracted from 2,529,000,000 crowns to 2,520,000,000 crowns. Announcement regarding the Copenhagen discount and revision bank, liquidated last year, shows that its losses totaled 70,000,000 crowns, thus wiping out capital and reserves and leaving a settlement of 76.25 per cent to creditors and depositors. Note circulation of the bank of issue, after expanding considerably at the commencement of April, subsequently contracted until on April 15 it totaled 432,500,000 crowns, as against 402,500,000 crowns on March 23. As there was no change in the total metallic reserve, the rate of cover was reduced to 52 per cent. The foreign-exchange holdings of the bank increased from 23,600,000 crowns as of February 28 to 34,800,000 crowns as of March 31.

Danish Exchange Appreciates.

Considerable strength and further appreciation featured the foreign-exchange market during the past month. The rise in official quotation of the Danish crown during the period, from 18.3 to 18.5, is a good indication of the value of the recent exchange-stabilization measure when operating during a period of stress.

Stock Exchange Depressed—Price Levels Receding.

Effects of the late labor disputes are clearly distinguishable in the stock-exchange quotations. Much hesitancy is being shown, and quotations on the whole are lower. The index for representative bank shares, as of April 18, was 77, as against 79 a month ago; for shipping shares 80, as against 85; and for industrial shares 128.5, as against 130 on March 21.

A further drop occurred in wholesale price levels during March, which was especially noticeable in grains and feedstuffs. The wholesale index was reduced from 230 for February to 220 for March. Commercial failures during the first quarter of the year numbered 150, or slightly more than the 134 for the corresponding quarter of 1924.

Extension of Labor Disputes.

Failing to reach an agreement, there has been a further extension in the number of workers involved in labor conflicts. In addition to the industries enumerated in COMMERCE REPORTS of April 6, strikes and lockouts are now operative in the shoe, leather, paint and varnish, textile and garment, paper, match, brick, cement, stone, roofing and asphalt, fertilizer, and tobacco industries, together with several minor trades. At the present time the total number of workmen involved in the conflicts is 150,000, resulting in a virtual tie-up of industry. Besides those involved in the conflicts, there are some 40,000 unemployed, as compared with 44,000 in March. Transport workers finally decided against participation in the disputes, and this very important development will permit uninterrupted shipment of Danish farm produce, so vital to the welfare of the country.

Agricultural Conditions Favorable.

From unofficial statements it appears that winter crops have benefited from the mild winter and are now developing favorably. Agricultural shipments are being maintained at figures equaling those of 1924, which was a record year. Prices in the export markets are very satisfactory, and the demand remains good from both England and Germany.

Decline in February Foreign Trade.

There was a drop in both imports and exports during February, although the unfavorable balance still remained at 22,000,000 crowns. Imports were reduced from the January figure of 204,000,000 crowns to 188,500,000 crowns for February, the crown value of the principal items (January figures in parentheses) being: Grains, 20,700,000 (29,000,000); feedstuffs, 27,800,000 (35,000,000); groceries, 9,300,000 (10,400,000); and textiles, 19,200,000 (17,400,000). The number of imported automobiles increased from 108 in January to 142 in February.

Farm Produce Exports Slightly Lower.

Reexports during February were valued at 13,800,000 crowns, as compared with 12,000,000 crowns in January. Exports of domestic merchandise declined in value from 170,000,000 crowns for January to 152,000,000 crowns during February. The principal export items stood as follows (January figures in parentheses): Packing-house products, 48,300,000 crowns (57,000,000); dairy products, 55,500,000 (63,300,000); eggs, 8,900,000 (12,000,000); livestock, 3,900,000 (4,000,000). Cement shipments increased from 29,795 metric tons in January to 33,030 metric tons in February.

Unfavorable Swedish Trade Balance for March

Based on cable from Commercial Attaché T. O. Klath, Stockholm, April 27

Returns for Swedish foreign trade during March show some unfavorable effects of the lockouts that seriously impeded Swedish industries during that month. Exports reached a total of only 71,388,000

crowns, as compared with 80,320,000 crowns during February and 69,100,000 crowns during March, 1924. Imports, on the other hand, increased somewhat from 105,315,000 crowns in February to 112,482,000 crowns in March, with the result that the adverse balance of trade rose from 24,994,000 crowns in February to 41,094,000 crowns in March. During March, 1924, the unfavorable balance was 20,600,000 crowns.

Grain and Food Imports Remain Very High.

Imports during March were featured by exceptionally large takings of wheat, sugar, and other foodstuffs. The principal items of import during March had a crown value (February figures in parentheses) as follows: Manufactured textiles, 13,357,000 (11,528,000); textile raw materials, 10,148,000 (8,558,000); grains, 13,320,000 (16,327,000); groceries, 10,235,000 (8,535,000); raw minerals, 10,222,000 (8,500,000); and vehicles and machinery, 9,845,000 (8,964,000).

Practically all chief export items declined during March. Exceptions were lumber, which increased from 6,358,000 crowns in February to 6,409,000 in March; unworked metals, from 6,308,000 crowns to 8,067,000; and manufactured metals, from 4,921,000 crowns to 5,365,000. The other export items during March declined as follows (February figures in parentheses): Wood pulp and paper, 15,498,000 crowns (20,988,000); mineral ores, 8,855,000 (8,871,000); and vehicles and machinery, 7,514,000 (9,932,000).

Austrian Key Industries More Active

Based on cable from Commercial Attaché H. Lawrence Groves, Vienna, April 25

Seasonal increase in trade and industry has reduced unemployment in Austria from its maximum of 190,000 at the end of February to 164,000 at the middle of April, or by 14 per cent. This and a gradual easing of the money market, better prospects of foreign credits, and a reduction of the discount rate of the Austrian National Bank on April 25 from 13 per cent to 11 per cent have given a better tone and have inspired confidence in the business world.

Revenues Increased.

Government finances are developing favorably, with revenues well maintained. The tax receipts for the month of January, amounting to \$8,400,000, exceed the estimates by \$1,500,000. Import duties under the new tariff rose to \$2,400,000, as against \$1,500,000 under the old tariff in December. As a result there was an operating surplus for the month of \$2,000,000 instead of the deficit of \$100,000 that was expected.

National Bank Reserves Still Stronger.

The Austrian National Bank on April 15 had a sound-money reserve covering 42 per cent of its note circulation and demand deposits. Hitherto currency and bills held by the bank under agreement for the delivery of corresponding amounts at a later date and at certain rate were included in the reserves. These holdings are now excluded from the reserves. If the computation for March 15 were made on the present basis, it would show only a 40 per cent cover, so that the bank is now stronger than it was a month ago.

Savings deposits in nine of the larger Vienna banks and in municipal savings banks throughout the country at the end of March amounted to \$49,100,000, an increase of 7 per cent over the amount at the end of

February. The increase is nearly fourfold in the course of a year.

Practically all restrictions on dealings in foreign currencies and exchange were removed on March 26.

A law was passed on April 4 revising and materially reducing taxes on corporations, on business earnings, and on private incomes.

The stock market is still declining. The official index of stock quotations at the middle of April was 710, or 4 per cent below that of the middle of March.

The official index of wholesale prices, which takes 1914 as 100, stood at 139 at the middle of April, as against 143 at the middle of March and 146 at the middle of February—a steady decrease, which makes for industrial peace.

Unfilled Orders for Staples are Higher.

The cotton-spinning mills report unfilled orders at the end of February amounting to 13,100,000 pounds, an increase of 18 per cent over the amount of unfilled

orders at the end of January, thus insuring employment of the mills and operation to capacity for a considerable period.

The Alpine Mining Co. had unfilled orders for iron and steel to the amount of 48,000 tons at the end of March, or 26 per cent more than at the end of February. A continuance of production by this company at its pre-war rate is expected.

Production Less in Certain Lines.

The February production in other lines was as follows: Lignite 250,000 tons, a decrease of 11 per cent as compared with January; paper 13,100 tons, a decrease of 4 per cent; mechanical wood pulp 13,700 tons, the same as in January, in spite of lack of water. The export business in paper is good.

The exports from Austria to the United States declared through American consulates during March, as reported by United States Consul Heingartner, amounted to \$590,000 as against \$415,000 in February.

LEGAL ASPECTS OF FOREIGN ADVERTISING

Ignorance of Foreign Laws May Result in Failure of Advertising Campaign Plans—Penalties to Be Avoided

Guerra Everett, Division of Commercial Laws

The common law of England and English commerce and trade have not always been acquainted with each other—a century and a half ago they were not on speaking terms. Law and publicity, however, always have been boon companions. The art of publicity is just as old as the practical science of jurisprudence. Ancient laws, whether consisting of the decrees of the tribal chieftain or of the formulated voice of the people, were published on stone tablets; canon law required the publishing of banns; and the common law of England, when it could not discover the criminal object of its vengeance, called publicity to its aid and nailed its judgment of outlawry to the signpost at the crossroads or the public wharf. To-day, law, commerce, and publicity go hand in hand, and only in exceptional instances work at cross-purposes; but when they do, ignorance of the law may prove expensive.

Advent of Foreign Corporations Revealed by Publicity.

This divergence is illustrated by the decision in a recent Alabama case, which added another restriction to the disabilities of corporations operating beyond the borders of their home State. The Alabama decision was more severe than the usual blow directed against "foreign" corporations. It held that where a foreign corporation disposed of its products within Alabama through an independent dealer or distributor, it was not engaged in "carrying on business within the State;" but where, in such a case, the foreign corporation sends a representative into the State for the purpose of boosting sales, whether through canvassing, newspaper display ads, or other publicity media, such activities, coupled with the existence of a distributorship contract, constitute "doing business" in Alabama, and accordingly subject the corporation to all the liabilities, penalties, and disabilities imposed upon foreign corporations operating within the jurisdiction without a license.

The difficulties that manufacturers have to face in interstate commerce afford a faithful mirror of the troubles to be encountered in international trade. Just as some of the States are lenient in their treat-

ment of corporations from beyond their State lines, so certain foreign nations promote and facilitate business from abroad, placing as few obstacles in the way as possible.

In Cuba, for example, the Alabama rule would not apply. The Cuban distributor may advertise himself as the sole representative of an American company; on behalf of the American firm he may enter into contracts for local display advertising, billboard publicity, or sample distribution without bringing the American company within the jurisdiction of Cuban registration laws.

Other Countries Penalize Publicity.

In other countries the laws in this particular are rigorous. The mere display of the American firm's name on the letterhead of the distributor—a common practice in Cuba—may alone serve to bring down upon the American firm all the dire consequences of the law, or else it may constitute one of the leading factors in establishing this liability on the part of the American firm.

Recently an American manufacturer expressed a desire to have his South African distributor use his uniform order blank form which bore the name of the firm. The Division of Commercial Laws took the matter up with Trade Commissioner Perry J. Stevenson, Johannesburg, and learned that it was against the law in South Africa for domestic firms to have in their possession invoice blanks of foreign concerns. This law was passed to prevent customs frauds, and, although it might not be applicable to order blanks, there was a chance that the authorities would look with suspicion upon such forms unless the firm was actually engaged in business in South Africa under its own name.

In this instance it happened that the manufacturer made inquiry of the Division of Commercial Laws before acting. The experience of the division with a number of disagreeable cases in various parts of the world, involving letterhead advertising, had induced it to make a special investigation of the possible dangers involved.

Foreign Advertising Campaign Has Legal Aspects.

Before a foreign department executive can call his foreign publicity campaign plan complete, he must take into consideration the local laws and ordinances applicable in the premises, many of which are on file in the bureau. There has just been received, for example, a report from the consul at Harbin on the new police regulations and tax provisions governing outdoor advertising in the special area of the Eastern Provinces. Failure to comply with these rather strin-

gent requirements subjects the advertiser to penalties, the extent of which is left to the discretion of the police authorities. In the Republic of Panama recent legislation prohibits the use of foreign languages on signs or posters unless accompanied by a translation into grammatically correct Spanish. The object of this legislation is avowedly the preservation of the purity of the Castilian tongue. Some apprehension is expressed with regard to the possibility of rendering in that idiom such homely aphorisms as, "The Ham What Am," and similar slogans.

ADVERTISING VALUE OF TRADE-MARKS IN LATIN AMERICA

A Trade-Mark is Not Only a Commercial Signature But An Advertising and Sales Instrument

Bernard A. Kesicki, Division of Commercial Laws

During the last two decades advertising has made great strides in the United States, commanding the services of skilled artists and writers, psychologists, and business experts. This great advance in the art and science of publicity no doubt accounts for the popular impression that no matter what the nature of a product may be, advertising will make that product famous.

The exporting manufacturer of trade-marked merchandise is in the business to stay. He is convinced of the value of his product. He wants to prove its value to customers abroad, to get orders, and to get repeat orders.

Purchaser's Psychology An Important Factor.

Initially, the exporter, in undertaking a merchandising campaign abroad, must inquire into the purchaser's need and psychology. The product must be immediately or potentially salable. With this feature of market investigation, we are not immediately concerned. Granting that the commodity can be sold, the question is, How can it be sold most economically and satisfactorily? How can the resistance of the purchaser be most effectively overcome?

In overcoming this resistance, the appearance of the product, its distinctive and attractive appeal, are of primary importance. They reduce the embarrassment of introduction and lead to lasting friendships. People, whatever regions they may inhabit, are susceptible to suggestions of beauty, of color, of imagination. Their ideas of aesthetic values may differ, but the instinct is the same and the response to an imaginative appeal always ready.

A Good Trade-Mark Has a Selling Power.

A good trade-mark has a selling power of its own. It assists advertising and builds sales with the spontaneous force of its suggestion and appeal.

A good trade-mark is one that strikes the purchaser's mind and imagination. The purchaser is the man to be reckoned with; his temperament, his tastes, his understanding are factors to be considered.

Should the Trade-Mark Be Translated?

In the countries of Latin America where English is as foreign as French in the United States, and where illiteracy is not uncommon among people of small means, a trade-mark designed for use in the United States may prove a drawback, or else a dead weight, which must be lifted by the energy of the sales machinery. The great majority of trade-marks in present-day use are purely verbal. They contain word

combinations that suggest the quality or origin of the goods to one who can read them understandingly. Such a trade-mark in Latin America would be no more than an arbitrary word, perhaps thoroughly unpronounceable. In such a case the purchaser in Latin America may avoid buying the goods, if others of the same kind please him equally well, or else he may resort to describing the appearance of the product by some distinguishing feature, as a colored band or illustration. This, of course, makes for easy substitution.

It is not wholly a question as to whether or not the trade-mark should be translated into the language of the foreign country. A pure translation is almost always predestined to failure. Catchwords, fanciful word combinations, and slogans do not lend themselves to translation. Their power rests not so much on the linguistic as the idiomatic value of the word or phrase, its meaning to a certain group which the manufacturer is endeavoring to reach.

Adoption of Special Trade-Marks

Among American firms selling in the markets of Latin America the custom of substituting a Spanish or Portuguese equivalent for their word marks, or else of adopting special trade-marks suited to the market, is becoming more common. Whichever course is adopted, the reaction of the customer in Latin America should guide the choice. "What does my trade-mark mean?" the exporter may well ask himself. Does it suggest the quality of the goods, their origin, their durability, their comfort, their economy? Does it command attention? Does it favorably distinguish the product from competing goods?

Easy Identification An Essential of a Good Trade-Mark

A good trade-mark is one that clearly and easily identifies the goods. It should not only sell them but keep on selling. If a trade-mark is difficult to remember, or is easily confused with others used on the same class of goods, repeat sales may be lost. The label, if it is attractively gotten up and contains striking colors, distinctive lettering, and simple and familiar designs, strengthens the force of a trade-mark and assists the memory. Any directions as to the use of the article that may be printed on the label should be in the language of the country where it is to be sold. For Latin American trade it may be found convenient to print the directions both in Spanish and Portuguese.

The purchaser, it must be remembered, has no interest in carrying an accurate impression of a trade-mark. He is invariably careless about such things and, unless his interest is aroused by some easily re-

membered feature of the trade-mark or label or package, he will be content to buy the brand he has always bought, or else to take the first best thing that is offered. No matter how good an article it may be, if it can not be identified easily, its sale will be handicapped. The observation of Emerson that the world will beat a track to the house of a skillful craftsman, even though he hides himself in a forest, does not apply in this day of keen competition.

The Trade-Mark at Law.

A good trade-mark must be one that the law will protect. In the countries of Latin America, as a general rule, the same distinction is not drawn between a trade-mark and label as in the United States. Both are protected by the trade-mark law. There are certain words, however, which the law will not permit to be appropriated by one person to the exclusion of others. Such are, for example, geographical or descriptive terms, or essential designations of the product. There are other words and signs which can not be used as trade-marks on the ground of public policy, as, for instance, national insignia, and the Red Cross emblem and the words, "Red Cross." In designing a trade-mark for use in Latin America, such words or signs should be avoided.

To get legal protection for a trade-mark in any of the countries of Latin America, the trade-mark must be registered. The right is regarded as a grant from the Government and not as a common-law right springing from the use of the mark in trade. Registration should be applied for in the name of the real owner of the trade-mark as soon as commerce is entered into, to avoid piracy and to secure the title to the trade-mark. In Mexico and in Guatemala advertisements of some artistic merit and originality may be registered under the trade-mark law and protected against imitation for a period of years.

Sales Value.

A good, legally protected trade-mark possesses genuine sales and advertising value in Latin America, where advertising is comparatively a new development. The trade-mark, to a large extent, must gather its own momentum and establish its own popularity. A wise selection or adaptation of the trade-mark, where that appears to be necessary, is the first step in the direction of profitable sales.

[Adapting Your Trade-Mark to Export Markets was discussed in *COMMERCE REPORTS*, August 6, 1923. A list of articles of particular interest appearing in other publications is available upon request to the Division of Commercial Laws.]

ADVERTISING METHODS IN MEXICO, PERU, URUGUAY, AND CHILE

Advertising has progressed considerably in a number of Latin-American countries and modern methods are being employed to a considerable extent. A series of reports on advertising have been received from the representatives of the Department of Commerce stationed in a number of these countries and are given below.

Compiled by the Specialties Division, Warren L. Hoagland, Chief

MEXICO

Advertising in Mexico does not differ essentially from that in the United States, except that it conforms to local conditions and is printed in the Spanish language, reports Commercial Attaché Alexander V. Dye. Practically all the ideas on advertising that are used in Mexico were taken from the United States and adapted to local usage.

It is estimated that 60 per cent of all advertising is paid for either directly or indirectly by foreign firms and on behalf of foreign goods. Sometimes it is paid for direct by houses in the United States which furnish the copy. At other times it is furnished by the local house but added to the retail cost of the goods. Of all foreign products advertised, 65 to 70 per cent is on behalf of American goods, 20 per cent German goods, and 8 to 10 per cent French goods. British goods are advertised but little, and there is a scattering of Belgian and Spanish advertising.

The principal media employed are also the same as in the United States—newspapers, circulars, window displays, billboards, street railways, and electric signs.

Newspapers Considered Good Advertising Media.

There are 10 or 12 daily newspapers in the Republic which may be considered as good advertising media. Of these, four are in the City of Mexico and the remainder scattered throughout the Republic. As approximately only 25 per cent of the people read and write, newspaper advertising reaches only the more intelligent class, and goods which are intended for that class only should be advertised in the daily papers.

Weekly and monthly publications in Mexico—except those that are merely weekly summaries of the larger dailies—have rarely existed for any length of time and consequently they reach a still smaller class than the daily papers.

Handbills Less Favored.

Handbills are not considered as the best advertising medium because distribution is expensive and they are limited in their application. Two principal methods are used in handbill distribution. One, a very common method which is perhaps peculiar to Mexico City, is to hire men to stand on certain corners and throw a copy of the bill in each automobile which passes. It is doubtful whether this is an effective method, as most of the occupants of the automobiles resent having a circular flung in their faces. Another method is to distribute the circulars liberally on the city streets. The psychological value of this practice is better than it appears, because the circular usually carries some picture with a very simple heading that can be identified and the people who can not read will find out from the picture what it is all about. This is a favorite method for advertising patent medicines and announcing cinematograph shows. Mail circulars are very little used.

Window Displays.

Window displays are probably the most effective method. Most of them are prepared in the United States, as there is a lack of expert copy men and designers in Mexico and most of the preparation of advertisements is done in the United States. The main value of window displays is to have the trade-mark, by picture or otherwise, very prominent in order that the article advertised may be identified by the trade-mark. The leading psychological feature in Mexico is that probably 75 per cent of those who look in the window will not be able to read the printed matter, except possibly the first few words, but will identify the goods by the picture or the trade-mark. For instance, a certain brand of flour which has had a vogue for years is known simply as "El Viejo" (The Old Man), because there is a picture of an old man on the sack of flour.

Billboard Advertising Limited.

Billboard advertising is done but not nearly so extensively as in the United States and is mostly limited to advertising patent medicines. This practice is not looked upon with much favor by advertising men, probably because it is difficult to secure good sites and often because of certain restrictions.

Street Railway Signs Follow American Lead.

Street-railway advertising is handled as in the United States. In fact, the contract for street advertising is held by an American firm with an American in charge of the office in Mexico City. The exhibits are ordered from the United States or reprinted locally from American designs and the only difference is the language, which is Spanish. Some advertising does not seem appropriate to the locality and it is probable that contracts are let on too broad a basis without regard to local adaptation.

Electric Signs Growing in Popularity.

Electric-sign advertising is in its infancy but is growing rapidly. The principal signs displayed are tobacco, cigarettes, and theaters, with a few other specialized commodities. The leading exponent of the electric sign is one cigarette factory (El Buen Tono) whose advertisements dominate Mexico City and are almost the only ones which are particularly noticeable.

PERU

Although much progress has been made in recent years, Peru is still far behind most of the other larger Latin-American countries in the adoption and use of modern advertising methods and in the extent to which advertising is carried on, writes Commercial Attaché H. Bentley Mackenzie. In an area of about 534,000 square miles, Peru has a population of only approximately 5,500,000 and of this number probably over 60 per cent are peons unable to read and with an extremely low purchasing power. Incentive for extensive advertising is therefore lacking. A large percentage of advertising in Peru is done in Lima, the principal city, and Callao, the seaport and the surrounding country. By these two cities, and Trujillo in the north and Arequipa in the south, Peru is covered in an advertising sense, in so far as the foreign manufacturer and exporter is concerned.

Rapid Commercial and Industrial Development.

Peru is developing rapidly along commercial and industrial lines and there should be a considerable increase in advertising in the next few years. This applies particularly to advertising other than that in publications, as in this field it is already carried on extensively and is constantly increasing. There is a very limited use of other advertising media and the prospective increase would appear to be along such lines as sign boards, electric signs—of which there are very few at present—attractive advertising novelties, circular mail, road maps, and theater programs.

That the market is susceptible to a well managed advertising campaign has been evidenced in the past year, during which there was a large increase in the sale of several American products, which formerly had a very small sale, the recent increase being directly attributed to new advertising. These are outside the proprietary remedy field, the products of which are always well advertised in Peru.

Peru a Comparatively Small Market.

In planning an advertising campaign in Peru, the essential fact is that in comparison with many other countries it is a small market, that the appeal in most cases is to a small class of educated persons of some means who are desirous of obtaining as many of the modern comforts and luxuries of life as are within their reach, and that trade with this class can be increased through a well planned campaign. The prime factor in Peru is not the amount expended but rather the care with which the advertising is placed and results observed.

In advertising of entirely local preparation, copy and layout are far behind the modern American style.

Although lithographic facilities are available locally, few illustrations are used and examples of local commercial art and photography are few. Colored letter work, however, is used rather generally. As the manufacturing industries in Peru are relatively small, a large part of the advertising appearing here has originated abroad and consists of cuts prepared in the United States and Europe.

Newspaper Advertising.

It is in the newspaper and periodical field that 90 per cent of the advertising in Peru is found, and most of the publications to be considered by the foreign manufacturer are published in Lima. They contain a large amount of material and are used by both foreign and local concerns.

The most important dailies of Lima are *El Comercio*, *La Cronica*, and *El Tiempo*. They cover Lima, Callao and suburbs, and have a mail circulation throughout the country. Except for purposes of a thorough advertising campaign to be managed locally, the use of newspapers in the smaller towns to any extent is not believed necessary in the case of articles other than proprietary remedies and toilet articles. The small dailies, *La Industria*, of Trujillo, and *El Pueblo*, of Arequipa, are two possible exceptions.

Magazine Advertising.

Several weekly and monthly magazines published in Lima are excellent for advertising purposes, as they have a good circulation among the educated and wealthier classes and have the additional advantage of being well adapted to display advertising. Considering the size of the market, however, few advertisers believe the expense of color illustrated work justified.

Mundial, a weekly publication, is profusely illustrated with photographs of local events, scenes, etc., and has good color covers with colored advertising on the last page. It circulates widely among wealthier classes.

Variedades is a publication of similar character to *Mundial* and competes with it, although it has a smaller circulation.

West Coast Leader, an English language weekly, is affiliated with the organization controlling the Brazilian American in Rio de Janeiro, the Mexican American in Mexico City, the South Pacific Mail in Santiago, Chile, and a new publication in Panama. It circulates throughout the west coast of South America.

La Vida Agricola is a monthly agricultural magazine. It contains articles primarily of agricultural interest and circulates among the wealthy agricultural class, cotton, and sugar planters, etc.

Ciudad y Campo, a monthly magazine published by the *West Coast Leader*, is profusely illustrated with photographs. It contains articles on city and country architecture, real estate and mining development, and is active in a good-roads campaign.

Posters and Painted Boards Introduced.

With the recent construction of several new highways in the Lima district the use of billboard advertising has been introduced in Peru. A few of these billboards have already been constructed and are in use; more will undoubtedly be built in the near future. It is not believed that any antibillboard campaign will be experienced in Peru, at least for some time to come, as the country through which the few automobile highways pass is not scenically of a very attractive nature. A few advertisers use also the adobe mud walls that line the principal roads, and signs are sometimes painted on them.

Street Car Advertising.

Advertising by means of cards in street cars and omnibuses is not practised in Peru, although it would appear that this would develop with the growing number of omnibuses in Lima and vicinity. As the patrons of the street-car lines are comprised very largely of the poorer classes, the installation of a street-car advertising system has not found favor with local firms. The only way in which publicity of this kind is manifest in Peru is in painted signs covering the exteriors of a number of large two-story buses operated in Lima.

Motion Picture Advertising Extensively Used.

Motion pictures are undoubtedly the most popular form of entertainment in Peru, a large number of small theaters drawing good crowds at every showing. As a result, the use of advertising slides now adopted by a number of firms, chiefly local retailers, is undoubtedly an effective method. Its value is increased by the fact that in every motion picture theater

in Peru an interval of approximately five minutes is taken between the showing of each reel and this period is utilized in the display of advertising slides.

Miscellaneous Methods in Vogue.

Very little direct mail circularizing is practised, a few of the clothing and department stores doing this at infrequent intervals. This is usually done in a rather crude way, being limited to cheaply printed circulars on poor paper, addressed to all post office box numbers.

The use of handbills passed out on the street is rather general by theaters and bull-fight promoters, but it is done only to a very small extent by commercial houses.

There is almost no use of advertising novelties. Several Lima houses from time to time issue a few calendars or blotters. The use of the numerous other attractive novelties found in the United States is not regarded as justified by local advertisers.

URUGUAY

Advertising in Uruguay has undergone considerable development within the last 10 years according to a report from Acting Commercial Attaché L. B. Clark. Previously, practically the only method used was daily newspaper and magazine announcements, and they are still undoubtedly the greatest media of advertising.

Newspapers Used in Advertising.

Advertising, confined to the daily issues of the most important newspapers in the country, will at least be given a steady and serious attention from the reading public.

El Dia is a morning paper with probably the largest circulation in Montevideo. It is perhaps the most widely read paper in the country and enjoys national circulation.

El Plata, an afternoon paper, is generally considered a family publication.

El Pais is a political paper representing practically half of the population of Uruguay.

El Imparcial, although only recently founded, has quickly established itself as one of the principal papers.

La Manana is generally considered one of the best informed and printed papers in the country.

The most widely read magazine in Uruguay is Mundo Uruguayo, a weekly, founded in 1919, having a circulation of about 45,000 copies. The price is 0.07 pesos per copy which makes it a popular edition.

Street Car Advertising Popular.

Street-car advertising is an important feature of local publicity and one that is freely used in Montevideo. There are 605 street cars with 150 trailers operating daily on the streets of Montevideo, and during 1924 these trams carried 142,401,622 passengers, or approximately 390,000 daily. There are two electric tram companies operating in Montevideo and this form of advertising compares favorably with that on an American city of similar size and importance.

Outdoor Advertising Favored in Uruguay.

Outdoor advertising is one of the most common forms in Montevideo, although the countryside in general is not so much utilized. In Montevideo and the more important cities, it is customary to take advantage of building construction for advertising purposes, and indeed this is the chief type of billboard propaganda. From the street level to the top of the work as it progresses, placards, boards, and luminous signs are thickly plastered. High fences and walls around vacant lots are also used, and recently a number of large sign billboard advertisements have appeared in various parts of the city with a plainly visible open-faced clock surmounting them—a distinctly useful and effective form of publicity. Rates for billboard advertising vary according to the location but are usually between 1 and 4 pesos per square meter per month.

Electric Signs Increasing.

The last two years have seen an increase in electric-sign advertising. Several moving figures and flashing signs have appeared, although the number and intricacy of American luminous advertising is not approached. The cost of this form of advertising depends upon the amount of money the seller wishes to expend on his program. Current for such advertisement costs 0.03 peso per kilowatt hour in Montevideo. There is little or no advertising of this type outside of the Capital.

Window Display Advertising Common.

Advertising by window displays is common and much more general than formerly, when it was customary for merchants

to pull a heavy iron shutter down over their street windows when the stores were closed for the night. Some of the American automobile representatives have very creditable night display windows. One type of advertising that is rarely, if ever, seen in this country is the window demonstration.

CHILE

The art of printed advertising has not been highly developed in Chile, reports Commercial Attaché Ralph H. Ackerman. Under the handicaps of a small population (3,905,358 estimated December, 1924), almost 50 per cent of whom do not read and have a low purchasing power, and the limited number of large manufacturing industries actively competing in the nationwide distribution of their products, little serious attention has been given to creating a trained body of advertising specialists, competent to analyze the reaction of the public and understand the relative merits of different methods of popular appeal.

Difficulties Encountered in Advertising in Chile.

Efforts to establish advertising agencies have not thus far been successful. To the obstacles of a limited and scattered public are added equally difficult problems of a system of merchandising which does not readily lend itself to a centralized practice. With few exceptions, manufacturers are small, distributing to only a limited area and depending upon personal solicitation and friendship for the movement of their products. Merchants, whether in large cities or small towns, seldom follow the fixed-price plan of selling except on those lines of staples that are highly competitive. Neither manufacturer, importer, nor retailer has as yet been fully convinced of the advantages and increased turnover which may be derived from entrusting their publicity campaigns to an agency learned in advertising technique.

As a result, all advertisers prepare their own copy. Those few that expend large sums have an individual or, at times, a small staff devoting itself entirely to this end. In most instances, however, copy is prepared by untrained individuals little aware of its potentialities.

The usual methods of advertising are practised in Chile but exhaustive checks on the relative merits of each of these methods are seldom kept.

Little individuality or originality is apparent, either in the means or in the material used, and reading matter is often monotonous and usually imitative. Invariably it is directed to the public en masse rather than to the individual. The background advertisement, such as historical narrative or local incident, designed to arouse the intense interest of the reader, is rarely seen.

As in most Latin countries, printed matter is directed almost entirely to the male reader, although there is a growing sentiment manifested by department and other stores handling articles for the home to give greater attention to feminine purchasers.

Personal Acquaintance Has Large Influence in Chile.

Sentiment plays an important rôle in business in Chile and the spoken recommendation is relied upon for new business to a much greater extent than in countries having a large population. Firms in Chile that have been doing business for years have a personal relation to their clients more intimate, perhaps, than can be found even in the rural districts of the United States. Aside from supplying those articles which they have for sale, they are often entrusted to

purchase for their customers' account a wide range of articles not easily found on the local market. Many of these houses, particularly those having branches in the agricultural belt, carry open accounts for their clients, accepting in repayment the products of the farm and only press for payments at rare intervals. As a result, these houses only occasionally resort to paid advertisements. The small merchant likewise depends upon his location and liberal terms of credit for his clientele and only resorts to other measures of publicity at such times as he can afford, to his way of thinking, such luxury.

Newspapers Reach Largest Class.

The largest public is reached through the use of columns of the newspaper. The newspapers are read and reread not only by the urban population but in rural districts as well. Although the large dailies of Santiago, Valparaiso, Concepcion, Antofagasta, and Punta Arenas are well distributed in the territory tributary to these centers and, combined, cover the entire country, there is scarcely a town of more than 10,000 inhabitants that does not boast a sheet of some sort, mostly of a political character. The morning papers have the largest circulation and are the best advertising media, although evening editions are slowly gaining greater favor.

The front and last pages are most desirable for advertisements, hence rates are two or three times above those paid for pages devoted exclusively to advertising matter. Two-color advertisements usually with a few words of red scattered in the text, pay an additional surcharge, but are seldom seen except on the front or last page. A few retailers, particularly the department stores and some of the better class textile and hardware establishments, avail themselves of this means of publicity, but the more important dailies are used to a much larger extent for advertising foreign made articles. The publicity campaigns of such articles as patent medicines, automobiles, and electrical goods are prominent in the advertising columns of all of the principal dailies, and the two latter are especially well prepared.

Local Trade Papers Have Limited Distribution.

The trade paper, so well developed in the United States, is nonexistent in Chile. While the Nitrate Producers' Association, the Agricultural Society, Manufacturers' Association, Automobile Association, and a few other smaller associations, have a monthly organ, they are merely for distribution to members and carry only a smaller number of advertisements. Practically the only periodical carrying a large percentage of advertisements of domestic manufacturers is the Bulletin of the Sociedad de Fomento Fabril.

Few magazines or periodicals have a nation-wide distribution and none are serious competitors of the newspapers in the advertising field. Their use as advertising media should be limited to those articles appealing to a restricted clientele. Two of these, Zig Zag and Sucesos, both published in Santiago, have much the largest circulation and are suitable for reaching the better classes of the public. The advertising matter carried in these magazines almost exclusively features imported articles.

Posters and Painted Boards Little Used.

Outdoor posters and painted boards have not been used to a great extent in Chile. Many towns and cities prohibit their erection within the corporate limits and only a limited number may be found along public highways, more often near the larger centers of population. Announcements on the arches of portals surrounding the more frequent plazas or public parks and those on the sides of buildings, when such arrangements can be entered into with the owners of the premises, are more common. The technique of billboard advertising is much inferior to that displayed in the United States; advertisements are often small, commonplace, and lack individuality designed to attract and hold the attention of the passer-by.

Street Car Advertising Reaches Certain Classes.

Placards in street cars are limited by the lack of proper space and visibility, but the upper lights of windows and the front and rear windows leading to the platforms as well as boards placed on the upper outside of these conveyances are available for advertising purposes. This method is principally utilized by local manufacturers for such articles as cigarettes, wines, and liquors, and is believed to have certain advantages over newspaper advertising for popularizing an article of general consumption, as it also reaches a portion of the nonnews-

paper reading public. It is doubtful whether the expense involved in advertising in the street cars would be justified for articles not entering general consumption.

Electric Signs Have Recently Come Into Use.

Attractive electric signs are a recent innovation, and their introduction has been due largely to the efforts of an American-English electrical supply house which has succeeded in inducing most of the automobile dealers to take advantage of this relatively inexpensive means of advertising. The animated electric signs are also a recent innovation, having so far been utilized only by the electric light company and two newspapers. Doubtless there is a field for great development in this type of advertising and the success thus far attending the initial efforts of the electrical supply house attests the growing appreciation of the drawing power of electric signs.

Samples and Novelties.

Distribution of samples and novelties as a means of advertising is often employed by European firms. French and German houses especially give careful attention to this means of placing some of their products before certain clientele but they have not resorted so frequently to the newspapers and periodicals as have firms in the United States. In pharmaceutical products, it is almost indispensable to use samples that may be distributed among physicians and hospitals. Certain other articles, particularly those used in the household, may also be advantageously introduced in this way but the cost of transportation, customhouse dispatching, etc. and the labor involved has acted as a deterrent. The use of novelties is rare, but some American manufacturers with local offices have given a wide distribution to blotters and other desk reminders.

Catalogues and Circulars.

Catalogues and other printed matter sent from abroad to importers or consumers have more general application and give beneficial results when sent to a selected mailing list. The results to be derived from this method are so largely dependent upon the nature of the article offered and the firms or individuals to whom they are directed, that it is well to give careful consideration to the problem involved before undertaking the expense of such a campaign.

The printed or mimeographed circular also brings good results at times. Some local houses now employ this method of keeping new lines before their established clientele but, in general, 90 per cent of the circulars received are those sent from abroad. Handbills and posters are seldom used and are limited almost entirely to those distributed by moving picture houses which advertise a coming attraction.

Cooperation with Local Sales Agent.

When selecting media for a publicity campaign, it is always desirable for foreign firms to consult their local agents. Not alone is it often possible to effect a saving in rates, but the local house is usually familiar with the sphere of influence of the various avenues and can avoid undue waste.

Although many foreign firms still leave to the discretion of the importer or their agent the decision as to giving publicity to the articles being handled, some American firms have found it advisable to enter into special arrangements with their representatives to insure adequate circulation. It may be stipulated that a special commission on sales will be paid for this express purpose, the foreign firm may agree to stand a certain percentage of the cost of advertising when bills and samples are rendered or it may elect to carry its own advertising. Which of these methods is most suitable depends entirely upon the article and the representative, but it is always desirable to have this clearly stipulated at the time agency arrangements are entered into, and always, when newspaper and magazine advertising is considered advisable, the manufacturer should exercise a reasonable diligence as to its constancy.

The relative merit of large advertisements at stated intervals or smaller advertisements in each issue continues to be a mooted question, and the foreign firm, having greater familiarity with the product and the effects of continued experiment, would find it well to give the benefit of its experience to the local dealer. It is usually well also to furnish the local dealer with any cuts to be used, as the local product is expensive and often falls short of the standard of excellence prevalent in the United States. Reading matter, however, may be prepared in the language of the supplier's country for local translation, so as to avoid the use of unfamiliar or cumbersome wording or phrasing, or this may be left to the judgment of the local house so as to take advantage of seasons, local happenings, or aspects peculiar to this market. In any event, the foreign firm should always be on the alert to assist and guide its local representative.

HOW LATIN AMERICAN DIVISION CAN HELP THE ADVERTISER

By R. C. Long and Hector Lazo, Latin American Division

There is perhaps to-day no subject of more importance to American enterprises in Latin America than advertising. Brought down to rock bottom, advertising is only mass selling. If the Latin American Division can aid the salesman, it can also aid the advertiser.

The staff of the division is made up of trained economic research experts, most of whom have spent many years in Latin American countries and can, therefore, intelligently interpret economic and statistical data sent in by American commercial attachés and their staffs and by consular officers of the State Department. The intelligent dissemination of this information is one of the most important functions of the division.

Picture of Economic Background Indispensable to the Advertiser.

This training, and continued close touch with the economic, financial, and industrial developments of Latin America, permit the experts of the division to form an accurate picture of the economic background of any given region. For the advertiser, such an economic background is indispensable. The current general economic situation; its comparative condition last year; its outlook for the future; the psychology and tastes of the particular region affected; the average purchasing power of the various countries; the most important commodities entering into their import trade; the competition being offered by other nations, how and why—these are some of the major considerations which the Latin American Division continuously keeps up to date.

Interpretation of Import and Export Statistics.

It is important for the advertiser, for example, to know that while the general average per capita import of Latin America for 1923 was \$20.72, Salvador, showed a per capita import figure of only \$4.80; whereas Cuba, having the highest per capita import trade of Latin America, shows an importation of \$86.11 for every man, woman and child on the island. Obviously, sales campaigns are more likely to bear fruit in Cuba than in Salvador—always depending upon the article in question.

Similarly, the Latin American Division is in a position to interpret for the advertiser the proper relation between a per capita export in Argentina of \$63.48 and of only \$6.68 in Ecuador. Incidentally, through a Special Circular (number 160) entitled "Per Capita Trade of Latin America," the Latin American Division gives comparative statistics of Latin American per capita imports and exports, compared with the United States and some of the leading commercial nations of the world.

Factors Affecting Buying Power.

Since the buying power of Latin America is largely dependent upon agricultural crops, it is important to be fully informed of crop prospects. Furthermore, such factors as political disturbances, earthquakes, floods, etc., influence very directly the purchasing

power of Latin America. The advent of the rainy season will necessarily slow interior movement of goods and advertising campaigns should be timed to coincide with the best selling season.

Through the personal knowledge of, and close contact with, the field, the experts of the Latin American Division can advise inquirers whether or not a certain article would have a possible appeal for Latin American purchasers. Obviously, an article which might sell well in Colon or Panama City might find practically no market in Bogota, for example, which, although only comparatively a few miles away as the crow flies, is high up in the mountains.

When, How, and Where to Advertise in Latin American Countries.

In other words, the Latin American Division stands ready to aid American advertisers as to when, how, and where to advertise in Latin American countries.

Obviously, however, initiative must come from the advertiser himself. The staff of the division is not composed of advertising experts, and it is not its function to initiate business. The division does and will gladly continue to aid exporters, manufacturers, and advertisers to promote their trade and their interests throughout Latin America, by the publication of special and timely articles such as the weekly bulletin *Latin America at a Glance*, giving a weekly cable survey of all Latin America; articles in *COMMERCE REPORTS*, the weekly publication of the Department of Commerce; special circulars such as *The Per Capita Trade of Latin America* (No. 160), *Marketing Methods in Mexico* (No. 162), *Living and Office Operating Costs in Brazil* (No. 175), *Routing a Salesman Through Venezuela and Colombia* (No. 164); special bulletins entitled "Trade Information Bulletins," such as *Mexico as a market for American Goods—When, Where, and What Mexico Buys*, *Markets of Southern Chile*, *United States Trade with Latin America in 1924*, *Merchandizing Methods and Trade Conditions in the Amazon Valley*, etc.; and particularly by daily answers to inquiries from American business men throughout the length and breadth of the United States.

International Sample Fair at Padua, Italy

The Seventh International Sample Fair at Padua, Italy, which will include exhibits of industry, commerce, agriculture, trades, arts, science, etc., will be held from June 5 to June 19, 1925. Foreign exhibits will be accepted for display, but no final date has been set for the acceptance of applications of prospective exhibitors. Consul James B. Young, at Venice, reports that the fair offers a special opportunity to firms dealing in agricultural machinery and agricultural equipment in general, as Padua is the center of a considerable farming region.

Further information regarding the type of exhibits accepted, the charge for space, and other matters are on file in the European Division of the Bureau of Foreign and Domestic Commerce, and will be furnished on request.

LATIN AMERICAN TRADE DISTRIBUTION

Advertising a Most Important Factor in Marketing American Products in Latin America

R. F. O'Toole, Chief, Latin American Division

Latin America, a trade region populated by nearly 100,000,000 people, and consuming almost \$800,000,000 worth of American products during a single year, certainly merits most serious consideration from the standpoint of our export trade. When that same region possesses highly important expansive possibilities, and a consequently greater purchasing power for the absorption of larger quantities of our merchandise, that consideration becomes imperative, and too much earnest endeavor can not be expended in trying to avail ourselves of the obvious advantages.

Economic Importance of Latin America to the World.

Embracing a territory of over 8,000,000 square miles in area, the major part of which awaits development, Latin America has within its confines natural resources in sufficient volume and variety to make it of the utmost economic importance to the world at large.

Capital and labor are its outstanding requirements, there being, at present, a decided trend of both to that area. The ever-increasing financial operations effected in United States markets, the proceeds of which are expended in Latin American development, and the increasing establishment of American-owned industries in those countries, indicate that Americans are keenly alive to the opportunities of the situation.

Renewed purchasing power in Europe is creating a much greater demand for Latin-American raw products, and the incidental need of a larger labor supply. These labor requirements are finding satisfaction through the changed course of European emigration, incident to its restriction under United States laws. Opportunity, racial affinity, and an equable climate are factors that particularly influence the surplus populations of Italy, Spain, and Portugal to migrate to the Southern Republics.

United States Has Certain Advantages in Latin-American Markets.

Aside from a traditional friendship of long standing between our own country and the nations of Latin America, the United States, by virtue of its geographical proximity and its vast market opportunities for the products of those countries, enjoys a special community of interest with the Latin-American field—an interest that is becoming more intense as time passes.

Reverse seasons in a number of the Republics to the south of us operate to equalize the production of many of our industries, by permitting the extension of commodity manufacturing beyond the limits of our own seasonal demand. The influence upon living standards through the implantation of many American products and services, acts as an added stimulant in creating a demand for still others of our manufactures. Many there are that are so acceptable to those peoples and so strongly entrenched as to enjoy a virtual monopoly. The motor car and the motion picture are but two cases in point, these industries dominating the Latin-American market.

American Products Lack Effective Distributing Methods.

Manufacturing developments in the United States have been largely responsible for our high standard of living—a standard enjoyed by few other peoples. Americans utilize and enjoy in their everyday ex-

istence a variety of products and services that seem to them commonplace necessities, accepted as a matter of course, which in the eyes of people whose economic development is not yet advanced to the same degree seem luxuries. The populations of newer countries, particularly in Latin America, present a fruitful field for a more intensive and carefully planned campaign for increased consumption of American products. They have already come to appreciate the utility value of many of them, but there remains a great variety that is either little known, or entirely unknown. The opportunity is clear, and availment only awaits better methods of introduction through proper distribution.

Efficient and effective distributing methods in foreign trade are just as important as in domestic trade, and are weighty determinants of sales volume. The mere obtaining of an order from a foreign agent or representative is but the groundwork of export selling. The distribution question becomes paramount. Too many exporters of American products are content to sell to one or several clients in the larger centers. Too many of these clients through indifference, or ignorance of modern distributing methods, do little or nothing to reach that unapproached, potential buying power, scattered throughout their territories.

In a great many instances, no attention is paid to the more distant parts of a country. The agent at Rio de Janeiro seldom covers the northern or southern sections of Brazil; the representative at Buenos Aires but infrequently attempts to sell in the distant Provinces of his country. American traveling representatives generally flit from one capital to the other, ignoring the less comfortable though commercially important outlying regions. Our competitors, unfortunately for us, do not overlook such details—a fact that accounts for the prevalence of non-American products in many out-of-the-way parts of Latin America.

Urgent Need for Better Distributing Methods.

The day has come when a greater attention to distribution by those interested in Latin American trade is essential, if we are to maintain and expand our volume of sales in that field. The study and adoption of more effective media, and their systematic uses, as well as the tactful implantation in the minds of foreign representatives of a similar course is the export need of the hour. Advertising of the right sort is a big step in the right direction.

Various methods exist for advertising our products to the Latin American consumer. They range from the use of American publications circulating throughout the southern Republics to the employment of local advertising media in the foreign field.

The matter of choice will depend entirely upon a number of factors, chief among them, the type or class of commodity, circulation of advertising medium, racial or group appeal or preference, competition, and local psychology.

Irrespective of the ultimate choice, the careful consideration and study of the question of distribution is, and will continue to be, of utmost importance to our export trade. The advertising fraternity has a large and fruitful field in which it can play an important rôle.

AUTOMOTIVE PRODUCTS

Percy Owen, Chief, Automotive Division

VALUABLE ADDITIONS TO MONTHLY EXPORT AND PRODUCTION FIGURES

For the first time there is now included in the regular monthly figures of automotive export and production for the United States and Canada three additional lines of information—first, the figures for the corresponding month of the previous year, made necessary by the seasonal nature of the trade; second, separate export-production ratios for cars and for trucks, revealing the wide difference between the United States and Canada in the ratio for each group; third, the same ratio after foreign assemblies have been included in the export figures, thus meeting the point of view of the National Automobile Chamber of Commerce without sacrificing the straight export-production ratio accepted by the Automotive Division as its standard for ascertaining the extent to which our domestic production is finding foreign absorption.

RECORD MARCH EXPORTS REFLECT GROWING IMPORTANCE OF FOREIGN MARKETS

The March automotive export data for both the United States and Canada, completing the first quarter of the current year, reveal a truly remarkable record made by those automobile concerns in the United States exporting cars and trucks. Passenger-car shipments accounted for the unprecedented figure of 23,265—an advance of 47.2 per cent over the previous record month of April, 1924. Truck exports, likewise, reached a record total of 4,728.

Canada, also, came to the fore in passenger-car exports and just managed to top its previous high record of 6,477, reached in March, 1924. Although this increase was inappreciable, amounting to only 0.28 per cent, it should not be forgotten that in March, 1924, Canada still enjoyed the preferential arrangement with the United Kingdom allowed under the McKenna duties, whereas March, 1925, found Canada on the same footing with other countries, including the United States, France, and Italy. Only in the case of Canadian truck shipments is any backward movement evident among the major automotive items.

American Foreign Assemblies Register Record Number.

American foreign assemblies likewise felt the urge of foreign demand, with the result that another record was created. When to the new figure of 15,433, covering all reported foreign assemblies of passenger cars and trucks, is added the combined United States and Canadian March exports amounting to 35,566, the resultant total of approximately 51,000 can not fail to impress.

Policy to Correlate Output with Demand.

March production, although behind that of the corresponding month in 1924, showed an extremely healthy gain over each of the two preceding months of 1925. A well thought-out production policy is in effect at the present time, which seeks to correlate output with demand. Production thus held in check and coming concurrently with a well-developed foreign demand, the export-to-production figure has reached a point which is extremely satisfying, being no less than 7.7 per cent for the United States and the remarkable figure of 50 per cent for Canada, or a balanced figure of 9.4 per cent for the combined passenger-car and truck export-production ratio of the two countries. If to the regular export figures are added foreign assemblies, the resultant ratio is 13.5.

Export and Production Figures.

A summary table, in more detailed form than those of previous studies on monthly exports, follows:

Export and production of American passenger cars and trucks (complete or chassis), by number, for March, 1925

Item	March, 1924	February, 1925	March, 1925	Total first quarter, 1925
EXPORTS				
United States:				
Passenger cars.....	14,035	14,739	23,265	52,499
Trucks.....	2,329	2,152	4,728	9,862
Combined.....	16,364	16,891	27,993	62,358
Canada:				
Passenger cars.....	6,477	4,008	6,495	14,235
Trucks.....	2,080	1,128	1,078	3,648
Combined.....	8,556	6,136	7,573	17,883
Total:				
Passenger cars.....	20,512	18,747	29,760	68,731

Little Change in Leading Markets.

The record United States passenger-car exports during March, numbering 23,265 and valued at \$17,675,385, resulted not so much from the finding of markets hitherto little unworked as from a more aggressive development of those which have been recognized for some time as constituting the leaders. It is true that there was some slight shifting in the order of rank, but on the whole the leading markets for American passenger cars during the month in question varied but slightly from those of the past calendar year. Australia maintained its dominant position, leading its nearest rival, Argentina, by more than a 100 per cent margin. Italy, alone, made the most marked change, rising to seventh place and accounting for 1,069 passenger cars, or approximately 41 per cent of its entire 1924 takings.

Italy, furthermore, not content with a much improved position in its demands for American passenger cars, also developed such a pronounced liking for American trucks as to become the outstanding leader, its high figure of 741 outstripping the next-ranking United Kingdom by 134 per cent. Some light is cast on the nature of this advance when it develops that the average unit value of trucks exported to Italy was only \$254, as contrasted with \$635 for the trucks exported to the United Kingdom. It is probable, however, that some of the Italian takings were reexported to the Near Eastern markets.

The following table shows the developments of the United States passenger-car and truck foreign markets in comparative detail.

Exports of passenger cars, motor trucks, and busses (complete or chassis) from the United States during March, 1925

² Not listed separately prior to Jan. 1, 1925.

NOTE.—Detailed figures for Canadian exports during March are not yet available by countries of destination.

Improved Export Trade for Remaining Automotive Products.

Of the automotive exports other than passenger cars and trucks, the most striking advance was shown in the case of automobile engines, particularly those for passenger cars. These last, in totaling 12,261, might fairly be termed a fitting corollary to the splendid showing made by March passenger-car exports. The same might be said of the figure for automobile parts for replacement, which reached the top figure of \$2,922,633.

Airplanes, seaplanes, and other aircraft, after getting away to a poor start in their export activities during the first two months of the year, seemed to

gather new life in that field, with the result that more than seven times as many were exported during March as during the two previous months combined. Motor cycles, also, came back to a point well above the monthly average of 1923, the previous best period in the motor-cycle export trade.

Other automotive exports from the United States during March, 1925

Cable review, Latin America:

Cautious buying prevails in Brazil.

Continued improvement in Chilean situation.

Bureau's special circulars available.

Foreign trade opportunities.

Cable review, Europe:

Danish imports increase in February.

Norwegian imports nearly double in February those of January.

Belgian Exposition of Household Novelties

Novelties of interest to manufacturers and dealers in garden tools, kitchen utensils, machines for washing clothes, ironing machines, metal polishers, cleaning materials, furniture, and other household conveniences will be exhibited at the international exposition of novelties to be held in the town of Heysel-Laeken, Belgium, from July 15 to August 15 of this year. The exposition is under the direction of the Belgian Government, acting through a Secretariat General, whose address is 40 Rue des Joyeuses Entrées, Louvain, Belgium.

PAPER

O. M. Butler, Acting Chief, Paper Division

CHANGES IN NETHERLANDS PAPER TRADE

The total imports of paper and boards into the Netherlands during 1924 amounted to 87,245 metric tons, valued at 25,484,000 guilders (\$10,224,000), showing a decrease in quantity compared with 1923 of 27 per cent. The principal decreases were in paper bags, 43 per cent, wrapping paper 30 per cent, other paper products 25 per cent, wood-free writing paper 18 per cent, imitation parchment and grease-proof papers 12 per cent, and envelopes 11 per cent. Increases over 1923 quantities were noted in other paper and boards amounting to 31 per cent, parchment paper 17 per cent, wood-content writing paper 15 per cent, newsprint 14 per cent, and wall paper 6 per cent.

Increase in Exports.

The total exports of paper and boards from the Netherlands during 1924, amounting to 274,343 metric tons, valued at 35,400,000 guilders (\$14,231,000), showed an increase of 11 per cent over the quantity exported in 1923. The principal increases in exports were in other paper products, which amounted to 96 per cent, wood-free writing paper 16 per cent, strawboard 14 per cent, and newsprint 4 per cent. The principal decreases were in boards 20 per cent, wood-content writing paper 15 per cent, and wrapping paper 7 per cent.

Quantity and Value of Imports and Exports.

The quantity and value of paper and boards imported and exported from the Netherlands during 1923 and 1924 is shown below:

² Values in 1,000 guilders (1 guilder=\$0.402).

Germany's Share in the Dutch Import Trade.

Germany supplied about 85 per cent of the total imports of paper and boards into the Netherlands during 1924. The percentages of imports of German origin

for the different classes of paper were as follows: Newsprint, 78; wood-content writing paper, 96; wood-free writing paper, 83; boards, 80; wrapping paper, 89; parchment paper, 44; imitation parchment and grease proof papers, 74; wall paper, 77; papeteries, 66; other paper and board 87; blank books, 92; envelopes, 98; paper bags, 95; and other paper products 86.

Most of the remaining imports were supplied by near-by countries, such as Great Britain, Belgium, France, Scandinavian countries, Austria, and Switzerland. The United States furnished only 23 metric tons of wood-free writing paper, 76 metric tons of boards, and 135 metric tons of other paper and boards.

Trade in Paper Base Stocks.

During 1924, 61,712 metric tons of paper base stocks were imported into the Netherlands, as compared with 47,897 tons during 1923—an increase of 29 per cent. At the same time 63,235 metric tons were exported, as compared with 48,210 tons during the previous year—an increase of 31 per cent. Imports and exports of paper base stocks, showing quantity and value, are given below:

Netherlands imports and exports of paper base stocks

¹ Quantities in metric tons of 2,204.6 pounds.

² Values in 1,000 guilders (1 guilder=\$0.402).

Distribution of Netherlands Exports.

Exports of newsprint from the Netherlands are shipped principally to France, Great Britain, and Belgium, with smaller quantities to Ireland, Spain, South Africa, and British India. Great Britain is the largest purchaser of Dutch writing paper with wood content, followed by the Netherlands East Indies, Belgium, British India, and other countries. In 1924, Japan was the largest purchaser of wood-free writing paper, taking 3,016 metric tons, and Great Britain second with 2,593 tons. South America took 3,353 metric tons, and 1,508 tons were shipped to British India.

Great Britain led in the purchase of boards, followed by the Netherlands East Indies and Belgium. Strawboard was shipped principally to Great Britain, that country taking over 84 per cent of the total. The remaining 16 per cent was shipped to all parts of the globe, British India taking the second place and the United States third.

More than 40 per cent of the wrapping paper was exported to Great Britain, Egypt following second with 781 metric tons, and British India third with 658

tons. Great Britain also leads in the purchase of Dutch grease-proof and imitation parchment paper, taking more than 42 per cent of the 1924 total, the remainder going to Belgium, Netherlands East Indies, Greece, Hongkong, British India, and Argentina.

Marked Increase in Imports of Straw Pulp.

Imports of all paper-base stocks, with the exception of mechanical wood pulp, show considerable increases over 1923. The greatest increase was shown in straw pulp, which gained 127 per cent over the previous year, followed by chemical wood pulp, 53 per cent, and rags, 43 per cent. The decrease in imports of mechanical wood pulp amounted to 34 per cent under 1923.

Gain in Exports of All Paper Base Stocks.

Exports of all paper base stocks also showed considerable increases over 1923 exports, the greatest increase being in chemical wood pulp, which rose 265 per cent over the previous year, followed by mechanical wood pulp, 95 per cent; straw pulp, 75 per cent; and rags, 25 per cent. Although the percentages of increase are large, the quantities of wood and straw

pulp exported are still of little importance. Practically all of the wood and straw pulp imported into the Netherlands is used for consumption in Dutch mills. There is, however, a considerable trade in rag stock, the quantity exported greatly exceeding the imports.

Origin of Imports of Wood Pulp.

Most of the wood pulp imported into the Netherlands comes from Sweden, Norway, Finland, and Germany, while all the straw pulp imported comes from Germany. Germany supplied 46 per cent of the rag stock imported during 1924, 26 per cent came from Belgium, and the remainder from Great Britain, France, Italy, and elsewhere.

See also Cable review, Latin America: Cautious buying prevails in Brazil.

List of "Bureau's special circulars available" in this issue.

Cable review, Europe:

Norwegian February exports slightly higher.

Swedish March exports declined.

CHEMICALS

Charles C. Concannon, Chief, Chemical Division

UPWARD TREND OF AMERICAN CHEMICAL EXPORT TRADE

Naval Stores Show Large Gains—Trade in Paints, Varnishes, Industrial Chemicals, and Other Products Shows Improvement

The exports of chemicals and allied products from the United States to foreign countries during the first quarter of 1925 attained an aggregate value of \$36,034,000 and showed 11 per cent increase over the corresponding period of 1924. This figure also was higher than that for any single quarter throughout the year 1924. Shipments of naval stores, paints and varnishes, explosives, and perfumery and toilet preparations were all larger than during any quarter of the preceding year.

Naval Stores Show Greatest Gain.

Of the major groups, naval stores represented the biggest change, having risen 43 per cent in value, from \$4,251,000 in the first three months of 1924 to \$6,079,000 in January-March, 1925. Exports of rosin advanced from 288,000 barrels, valued at \$2,510,000, to 295,000 barrels, worth \$3,693,000. Whereas 722,000 gallons more spirits of turpentine were shipped abroad during the first quarter of this year than during the corresponding period in 1924, or a total of 2,057,000 gallons, valued at \$1,907,000, 32,000 gallons less of wood turpentine, or a total of 93,000 gallons, were exported. Although turpentine substitutes gained in quantities shipped from 225,300 gallons to 264,000, they fell in value from \$73,000 to \$70,000.

Paint and Varnish Export Improves.

The export of pigments, paints, and varnishes during the past quarter, which reached a value of \$4,133,000, was more favorable than it has been for over a year and a half and showed an improvement of 8 per cent over the corresponding period in the preceding year. The only losses registered occurred in the sales of all pigments except zinc oxide, as all the other com-

modities included under this group showed an increase in valuation of shipments.

The following amounts of paints and varnishes left the United States for foreign countries in the first three months of 1925: Enamel paints, 453,000 pounds, valued at \$130,000; other ready-mixed paints, 477,000 gallons, \$1,063,000; other paints, 2,811,000 pounds, \$448,000; oil varnishes, 172,000 gallons, \$306,000; and other varnishes, 92,000 gallons, \$171,000.

Sulphur Sales Good—Fertilizers Approximately the Same.

Sulphur, one of the commodities in which the United States is one of the leading world factors, improved 33 per cent in quantity and 50 per cent in value from 93,400 tons, valued at \$1,443,000, to 125,000 tons, worth \$2,165,000. France, Germany, Australia, Spain, and the United Kingdom were the leading consumers, in the order named.

Although the quantity of fertilizers exported during the first three months of 1925 was very slightly under the figure of the corresponding period in 1924—3 per cent less—the value was 5 per cent less. Total shipments amounted to 238,000 tons, valued at \$3,906,000.

Ammonium sulphate showed the biggest decline, having diminished from 36,500 tons, valued at \$2,224,000, to 23,300 tons, worth \$1,290,000. Whereas shipments of high-grade hard rock rose from 34,800 tons, valued at \$397,000, to 39,700 tons, worth \$515,000, those of land pebble fell from 134,000 tons, valued at \$660,000, to 129,000 tons, worth \$635,000.

A marked improvement was evident in the demand for superphosphates as the values doubled during the periods under discussion. The quantities shipped, however, showed a gain of but 26 per cent.

A drop of 12 per cent in quantity but a rise of .5 per cent in values characterized the trade in prepared fertilizer mixtures, the total exports of which amounted to 5,500 tons, valued at \$258,000, in January-March, 1925.

Industrials Chemicals Record Slight Change.

Although the exports of industrial chemicals during the first three months of 1925, amounting to \$2,470,000, showed but a slight change—a gain of 1 per cent—as related to the corresponding period in 1924, the shipments during the month of March were higher than for any single month throughout the year 1924. Larger amounts of acids and anhydrides, aluminum sulphate, acetate of lime, bleaching powder, copper sulphate, dextrine, and formaldehyde, were sent abroad during the present quarter than during the first quarter of 1924.

The following table records the leading industrial chemicals exported in the first three months of 1924 and 1925:

Exports of leading industrial chemicals from the United States

Items	First three months of—

Larger Shipments of Explosives—Smaller Coal-Tar Export.

In the explosives group, which recorded an advance of 37 per cent in value during the first quarter of 1925 as compared with the corresponding period of 1924, each of the several classes, with the exception of dynamite, showed larger amounts sent to foreign countries. The total shipments of explosives for the period reached 6,159,000 pounds, valued at \$1,135,000. Dynamite accounted for 60 per cent of this figure.

Although the exports of coal-tar chemicals for the first quarter of 1925, amounting to \$2,642,000, were 19 per cent less than those for the corresponding period of 1924, they were 47 per cent higher than those for the last quarter of the year. The decline, as in 1924, occurred in sales of benzol. Larger shipments of crude distillates other than benzol, tar, pitch, aniline oil and salts, all other intermediates, dyes, medicinals, and photographic chemicals were made during the period under discussion. The outgoing shipments of coal-tar colors, dyes, and stains, in the first three months of 1925 amounted to 1,990,000 pounds, valued at \$554,000.

Decrease in Value of Drugs and Herbs—Essential Oil Increase.

A drop in the export price of crude drugs, herbs, and leaves characterized the trade in this group, as the quantities shipped during the first three months of 1925 were 36 per cent in excess of the quantities shipped during the first three months of 1924, but the values

were 13 per cent less. The decline occurred in foreign sales of ginseng, which class accounted for 58 per cent of the total shipments—\$906,000 (1,661,000 pounds).

The exports of all essential oils showed an 8 per cent increase in quantities shipped, having risen from 336,000 pounds in the first quarter of 1924 to 364,000 in January-March, 1925, but a 2 per cent decrease in values, from \$357,000 to \$349,000. Peppermint oil diminished 72 per cent in quantity, from 46,000 pounds to 13,000, but only 30 per cent in value, from \$162,000 to \$114,000, whereas the "all other essential oil" class rose from 290,000 pounds, valued at \$195,000, to 350,000 pounds, worth \$236,000.

Advance Recorded for Medicinal and Pharmaceutical Preparations.

Foreign sales of medicinal and pharmaceutical preparations continued the upward movement throughout this period until a total of \$4,826,000 worth left the United States. This represented an improvement of 13 per cent over the corresponding period of 1924.

The quantities of quinine sulphate and other salts of cinchona dispatched to foreign countries during the first quarter of 1925 surpassed shipments of the first quarter of 1924 by 320 per cent, reaching 429,000 ounces, worth \$100,000. After the exceedingly large total of 12,000,000 cubic centimeters, valued at \$313,000, of antitoxins, serums, and vaccines for the January-March, 1924, period, the quantities shipped went down 36 per cent to 7,648,000 cubic centimeters, but the values were off only 4 per cent to \$300,000. Foreign demand for medicated plasters exceeded that of the preceding year.

The exports of the "all other medicinal and pharmaceutical preparations," largely made up of prepared medicines, continued the growth that has been evident during the past two or three years and recorded an expansion of 13 per cent during the first quarter of 1925 as compared with the corresponding 1924 period. A total exportation of \$4,263,000 was reached for this period.

Perfumery and Toilet Preparation Trade Favorable.

The favorable condition of the export trade of perfumery and toilet preparations was maintained, and a total of \$1,814,000 worth was sent abroad during the first three months of 1925. Heavier shipments of perfumery and toilet waters, talcum and other toilet powders, and dentifrices were made this year than last, whereas one-fifth less of creams, rouges and cosmetics left this country destined for foreign ports.

The total exports of goods of this type during the first three months of 1925 were: Perfumery and toilet waters, 103,000 pounds, valued at \$102,000; talcum and other toilet powders, 804,000 pounds, \$416,000; creams, rouges and other cosmetics, 476,000 pounds, \$242,000; dentifrices, 802,000 pounds, \$765,000; and all other toilet preparations, 430,000 pounds, \$289,000.

Additional information regarding chemicals appears in this issue under the following sections:

Foreign trade opportunities.

RUBBER

Everett G. Holt, Acting Chief, Rubber Division

RECORD EXPORTS OF RUBBER GOODS IN MARCH

Rubber products exported from the United States in March, valued at \$4,411,107, set a new high monthly record.

Exports of automobile tires have shown a steady increase since early 1924, culminating in shipments of 151,352 casings, valued at \$1,777,093, and 164,138 inner tubes, valued at \$268,089, during March, 1925. Tire exports contributed chiefly to the record monthly total, but shipments of all classes of rubber products, except waterproof rubber boots and shoes, were relatively heavy. March is customarily a month for heavy tire shipments, as foreign distributors lay in heavy stocks for the summer trade at this season.

Principal Tire Markets.

The largest tire shipments went to Argentina, 20,276 casings; Brazil, 13,802; United Kingdom, 12,897; Denmark, 11,277; Australia, 9,494; Philippine Islands, 9,299; Mexico, 7,859; and Cuba, 7,856; but tires were sent to every important market during the month.

Argentina was also the principal customer for inner tubes, taking 31,923, followed by Denmark, 16,671; Brazil, 14,564; Cuba, 14,092; Australia, 9,150; United Kingdom, 7,069; Mexico, 6,556; Philippine Islands, 5,731; and Venezuela, 5,492.

Solid tire exports numbered 8,086, the United Kingdom taking 1,757; Cuba, 1,164; Australia, 996; and New Zealand, 533.

The average unit value per casing exported during March was \$11.74; inner tubes averaged \$1.63 and solid tires \$26.78, or about the same as in recent months.

Heavy Trade in Canvas Rubber-Soled Shoes.

Although exports of waterproof rubber footwear were not high, the 46,310 pairs of rubber boots and 57,320 pairs of rubber shoes exported represent good business for this normally slack season. In the canvas rubber-soled shoe trade the shipments amounted to 508,801 pairs, valued at \$360,602—a record previously exceeded but once, in March, 1923, when 598,928 pairs were exported.

The principal markets for the canvas shoes were the United Kingdom, 106,190 pairs; Cuba, 89,894; Denmark, 55,139; the Philippines, 47,170; Argentina, 34,415; Mexico, 31,506; Dominican Republic, 17,427; Norway, 16,396; Germany, 16,392; and Newfoundland, 13,814. During March 289,301 pounds of rubber heels and soles, valued at \$88,321, were exported, the heaviest shipments going to Mexico, Cuba, Colombia, and the Philippines. Formerly, Latin American countries were the principal purchasers, but the recognized quality of certain American brands has resulted in an increasing demand in certain additional countries in Europe and Africa.

Mechanical Rubber Goods Trade Improves.

The March trade in mechanical rubber goods was heavier than for several months, 349,750 pounds of rubber belting, 428,959 pounds of hose, and 172,282 pounds of packing being exported.

Shipments to Chile continue much lighter than last year, and the South African market remains a smaller

market than in 1922 and 1923. Mexico, Canada, United Kingdom, Cuba, Argentina, Peru. British India, Japan, and Australia, however, have increased their purchases from America.

The United States is by far the largest exporter of both rubber belting and hose, and is one of the leading competitors in the packing trade, and in these lines recognized quality is the only sound basis on which business can be built, which indicates the merit of the American products.

The United States also holds a leading position in the rubber thread trade, exporting large quantities to England, France, Italy, Spain, Belgium, Canada, Mexico, Japan, and, in recent months, to Germany. There is believed to be opportunity for aggressive salesmen to develop additional markets in Europe, particularly in Switzerland, Poland, and Czechoslovakia, where there are important elastic-webbing industries.

Principal Markets for Rubber Sundries and Specialties.

March was a fairly good month for exports of rubber sundries and specialties. Over 20,000 water bottles and fountain syringes were exported, Argentina, New Zealand, and Brazil in the Southern Hemisphere being the chief markets at this season, while over 1,000 units were exported to Mexico, Cuba, and France, respectively. The leading markets for other druggists' rubber sundries were the United Kingdom, Canada, Argentina, Cuba, and Mexico, each taking over \$4,000 worth. An excellent business was done in rubber bathing caps, 36,453 dozen, valued at \$59,396, being exported in March. Distributors are now laying in supplies for the heavy demand in European resorts during the summer months. American-made rubber balls, toy balloons, and balloon novelties are also widely appreciated abroad, nearly \$1,000,000 worth being exported during 1924. During March the exports were valued at \$135,894, a new high monthly record, the leading markets being Great Britain, Germany, the Netherlands, Canada, and Mexico.

Hard-rubber goods for electrical purposes, valued at \$21,472, were exported in March, and other hard-rubber goods shipped were valued at \$67,998. Canada, Great Britain, France, Brazil, and Australia were the principal markets, Australia taking \$19,268 worth of hard-rubber articles other than electrical. Japan, Mexico, and Peru also took fair quantities.

Scrap and Reclaimed Rubber Exports.

The higher price of crude rubber is causing increased purchases of scrap rubber from America. During March exports of scrap and old rubber amounted to 1,443 long tons, the average value per pound being \$0.043. Germany was the principal purchaser, taking almost one-third of the quantity, but France, Spain, Great Britain, and Canada are also heavy importers, and important trade has been developed with Italy, the Netherlands, Sweden, and Japan.

American exports of reclaimed rubber go principally to Canada, where rubber manufacturers use the

standard grade of reclaims produced here. European manufacturers are supplied locally by firms which produce innumerable varieties of reclaims in limited quantities to suit the customer's particular desires for a special product.

Good Trade in Waterproof Fabrics and Clothing.

Although waterproofed fabrics and clothing are not included in the monthly total of rubber goods exports stated above, a considerable share of the exports in these classes consists of rubber-proofed articles. The March exports of "waterproofed auto cloth and rubberized fabrics" amounted to 202,893 square yards, valued at \$112,819, and these exports have a very wide

foreign distribution. In March 48,572 waterproofed outer garments, valued at \$112,944, were exported, the leading markets being the Philippines, 9,633 garments; Newfoundland, 9,152; Cuba, 8,111; Mexico, 6,440; British South Africa, 3,822; Canada, 3,003; Siam, 1,240; Argentina, 1,224; and Uruguay, 1,104. There is a large European trade in this line, but it is mostly supplied with British and German made waterproofs.

LUMBER

Axel H. Oxholm, Chief, Lumber Division

COMMANDING POSITION OF OAK IN U. S. EXPORTS OF HARDWOODS

Oak timber and lumber is the most important American hardwood entering into our export trade, a total of 175,624 M board feet, comprising 2,794 M feet of timber and 172,830 M feet of lumber, having been shipped out of the country in 1924. This represents more than seven-twelfths of the total shipments of hardwoods in the same period, which amounted to approximately 300,000 M board feet. There was a considerable increase in oak exports during 1924 over 1923, since the total in that year was 151,205 M feet, embracing 3,635 M feet of timber and 147,570 M feet of lumber. Both these years, however, reflect a decline from the pre-war shipment of 287,855 M feet of lumber in 1913, no data upon timber exports being available for that year.

There is a noticeable decrease in the amounts of timber, but the fact that this is more than equalled by increases in lumber exports is indicative of a favorable trend. In fact, if American oak was manufactured to the greatest possible extent it would be more profitable, both to us and our foreign customers in most cases.

Principal Foreign Markets.

United States oak is mainly shipped to about 20 different foreign markets, as will be observed in a study of the map on the second page of the cover showing the geographical distribution of our oak exports. There were small shipments to a number of unimportant markets not classified by the statistics, but the total of these did not exceed 1,200 M feet. Our largest purchaser of oak continues to be England, 87,000 M feet having been shipped to that market in 1924, or about 50 per cent of our total exports. Canada was next in importance with 33,000 M feet, followed by Belgium with 14,000 M feet; Argentina, 11,000 M feet; Scotland, 8,000 M feet; the Netherlands, 4,000 M feet; and British South Africa, 4,000 M feet. The other markets took less than 4,000 M feet each.

Greater Geographical Distribution Desirable.

Although England is our best customer and is a field in which American oak has found a ready market, it has appeared at times that the American hardwood market in England has been glutted with the usual attendant conditions. The problem in the future will be to distribute our oak exports over a larger territory, both by finding new markets and by further cul-

tivating other fields which are now of lesser importance.

Advantage in Maintaining Export Market.

A great deal has been said in regard to a possible shortage of oak in the United States. It is true that oak prices have advanced in line with almost every other commodity; but, on the other hand, there are many uses for oak in the United States which have declined in importance since the war. The same conditions obtain in regard to other American hardwoods. American oak manufacturers appreciate the importance of maintaining a steady foreign market, but their position would be much stronger if they were willing to cut their lumber to such specifications as would enable them to compete more successfully with European and Japanese oak lumber.

Competition Feasible in Short-Length Trade.

It must be remembered, for instance, that Slavonian oak, which is the keenest competitor of American oak, is marketed in European countries in lengths of about 1 foot and up, cut on the basis of 2 inches, 4 inches, or 10 inches, according to length. This gives the Slavonian producers a considerable advantage in the way of closer utilization. There are some progressive exporters in this country who have already gone in for this business, but the majority probably are not catering to this trade in short stock. Special oak dimension stock is shipped in small quantities, but the foreign market for this material is practically unexploited as yet.

The figures given above cover exports of lumber and timber only. Oak flooring, cooperage, and similar semifinished oak lumber products are not included.

Bordeaux and Cadiz Stave Markets

Consul Lucien Memminger, Bordeaux, France, March 17, and Vice Consul Edward B. Silvers, Cadiz, Spain, March 14

The stave market in Bordeaux, France, though experiencing a poor demand on account of the dullness in the wine market, continues to receive shipments. Russian staves are arriving in increasing quantities, more from this source having been taken in the first two months of 1925 than in the whole of either 1923 or 1924. Of stave imports totaling 7,983 tons in Janu-

ary and February, 4,928 tons were from Russia, 1,653 tons from the United States, and 1,125 tons from Yugoslavia. There are from 500,000 to 600,000 American staves due to arrive in the near future, according to reports.

United States Ranks First in Trade.

The United States easily led all other countries in the Bordeaux oak barrel stave import trade in both 1923 and 1924, furnishing 16,859 tons out of a total of 25,738 tons in the former year, and 14,608 tons out of 20,509 tons in the latter year. Russia increased its shipments from 1,510 tons in 1923 to 2,450 tons in 1924. Yugoslavia lost ground in 1924, there having been 4,736 tons brought in from that country in 1923 and only 1,556 tons in 1924. Imports of barrel staves other than oak amounted to 331 tons in 1923 and 223 tons in 1924.

Increased Business Dependent Upon Lower Prices.

Agents handling American staves state that on account of present conditions high prices can not be expected, and that \$300 to \$325 per thousand for good quality white oak staves, c. i. f. Bordeaux, is the most that can be obtained. It is further stated that business on a large scale would only be possible at a price in the neighborhood of \$250. At the price now asked for imported staves the cost of the finished barrel amounts to 140 francs which is considered excessive.

Increase in Local Freight Charges.

Under a new rule all vessels bringing staves must unload at Bassens, on the opposite side of the river from Bordeaux, which arrangement, because of the larger wages demanded by the stevedores of that quarter and the extra railway haul, the rate for which has lately been doubled, adds considerably to the cost of the imported staves laid down in Bordeaux.

Cadiz Stave Imports Decrease.

The Cadiz market for oak staves is largely controlled by American imports. Total stave imports for 1923 were 8,419 metric tons against 7,966 metric tons in 1924. These staves are imported in the rough and worked up by independent coopers or in the cooperage shops of the various wine producers. This work is generally done by hand. Attempts have been made to bring in finished staves but the coopers refuse to work them so the practice had to be abandoned. The stocks on hand range from 400,000 to 500,000 pieces. It has been found that oak is the most suitable species for wine casks; chestnut from Italy is less costly and has been used for domestic trade but has not been found satisfactory.

"Foreign trade opportunities."

Cable review, Europe: Norwegian February exports higher.

SHOES AND LEATHER MANUFACTURES

A. B. Butman, Chief, Boot and Shoe Division

NOTABLE INCREASE IN UNITED STATES EXPORTS OF FOOTWEAR

The United States foreign trade in leather footwear during March amounted to 725,271 pairs, valued at \$1,647,894, compared with shipments of 531,342 pairs, valued at \$1,194,378, in the corresponding month of 1924 and 474,271 pairs, valued at \$1,108,816, in the preceding month of 1925. The greatly increased demand, which prevailed in most of the principal markets and applied to all classes of boots and shoes, included 289,940 pairs, valued at \$910,710, of men's and boys', or an increase of 42.3 per cent in quantity over March of the preceding year; 248,115 pairs, valued at \$524,091, of women's, or an increase of 37.9 per cent; and 164,654 pairs, valued at \$182,598, of children's, or an increase of 15.4 per cent. There were also included in this number 17,411 pairs of leather slippers, valued at \$21,290, and 5,130 pairs of athletic footwear, valued at \$9,205.

Increased Shipments to Many Markets.

Cuba, the leading market for all kinds of United States leather footwear, purchased 125,320 pairs of men's and boys' in March, 1924, and 140,290 pairs in March, 1925. Increases were also noted in the respective shipments to Mexico, 17,542 and 30,209 pairs; Panama, 6,315 and 15,518 pairs; and the Philippine Islands, 3,496 and 34,339 pairs.

Large increases occurred in the exports of women's shoes to most of the leading markets, Cuba taking 88,520 pairs; the United Kingdom, 40,451 pairs; Mexico, 18,122 pairs; the Dominican Republic, 15,321 pairs; and Newfoundland and Labrador, 15,072 pairs. Can-

ada, however, decreased its purchases from 21,959 pairs in March, 1924, to 13,444 pairs in March, 1925.

Children's shoes to the number of 131,102 pairs were exported to Cuba in March, 1925, while the other principal markets in the order of their importance were Newfoundland and Labrador, 6,996 pairs; Dominican Republic, 4,964 pairs; Panama, 4,534 pairs; Mexico, 3,933 pairs; and Canada, 3,870 pairs.

United States Imports of Leather Footwear

The leather footwear imported into the United States during March, 1925, amounted to 151,932 pairs, valued at \$248,154, comprising 68,318 pairs free of duty and 83,614 pairs of dutiable goods. There was little change in the totals for either dutiable or free footwear in March, 1925, compared with March, 1924. However, an interesting development in the latter classification is the fact that imports of slippers have declined steadily in the past three years, amounting to 49,557 pairs in March, 1923, to 23,937 pairs in 1924, and to only 4,539 pairs in March, 1925. Concurrently there has been an increase in the receipts of boots and shoes, free of duty, mounting from 43,951 pairs, to 46,050 pairs, and finally to 63,779 pairs for the respective periods.

More Expensive Shoes Come from United Kingdom and France.

Approximately 59 per cent of the leather boots and shoes, imported free of duty, were men's and boys', 39 per cent were for women, and the remainder were for children. These goods were furnished principally by

Germany, 20,045 pairs, valued at \$19,645; United Kingdom, 18,102 pairs, valued at \$110,145; and Switzerland, 13,369 pairs, valued at \$54,146. Of the 38,090 pairs of shoes for men and boys, valued at \$118,896, Germany supplied 18,022 pairs, at a cost of \$12,535, and the United Kingdom 15,026 pairs, valued at \$87,450. A large portion of the German shoes for men and boys were of the leather sandal type. France supplied 2,297 pairs, valued at \$12,460.

Dutiable Goods Come from Far East and Germany.

Women's shoes amounting to 24,412 pairs, valued at \$106,477, were imported during this month, principally from Switzerland (13,369 pairs valued at \$54,146); the United Kingdom supplied 3,021 pairs, valued at \$23,530; and Czechoslovakia provided 3,352 pairs,

valued at \$8,760. There was a total of 1,277 pairs of children's shoes, valued at \$1,650, imported, coming from Czechoslovakia, 492 pairs; Spain, 480 pairs; France, 126 pairs; Germany, 104 pairs; United Kingdom, 55 pairs; and Japan, 20 pairs. Turkey in Europe supplied 2,400 pairs and Japan 1,056 pairs of the slippers imported free of duty. The dutiable footwear, totaling 83,614 pairs, imported during March, 1925, was manufactured principally in Japan, 73,955 pairs, valued at \$11,311; Hongkong, 4,711 pairs, valued at \$1,695; and Germany, 1,924 pairs, valued at \$1,079.

INDUSTRIAL MACHINERY

W. H. Rastall, Chief, Industrial Machinery Division

INCREASED MACHINERY EXPORTS TO SPAIN

United States exports of industrial machinery to Spain in 1924 were valued at \$1,897,776, compared with \$1,839,934 in 1923. Exports of power-generating machinery increased from \$94,077 in 1923 to \$113,336 in 1924; mining, oil-well, and pumping machinery from \$406,119 to \$518,456; and machine tools from \$280,350 to \$324,020.

Spain's Growing Importance as a Textile Machinery Market.

A gain of over 50 per cent occurred in exports of textile, sewing, and shoe machinery from the United States to Spain last year in comparison with 1923—from \$170,447 to \$264,766. A growing market for cotton-carding machines, wool-carding and weaving machinery, and other textile and textile-finishing equipment is indicated by 1924 United States customs returns.

The following table gives American exports of industrial machinery to Spain for 1922, 1923, and 1924:

United States exports of industrial machinery to Spain

Class	1922	1923	1924
Power-generating, except electric.....	\$161,129	\$94,077	\$113,336
Construction and conveying machinery.....	84,138	115,422	98,524
Mining, oil-well, and pumping machinery.....	154,167	406,119	518,456
Metal-working machinery.....	228,815	280,350	324,020
Textile, sewing, and shoe machinery.....	168,843	170,447	264,766
Other machinery, except agricultural.....	573,776	773,519	578,674
Total.....	1,370,868	1,839,934	1,897,776

[Further information on the Spanish machinery market may be found in COMMERCE REPORTS of February 9, 1925, industrial machinery section. The article in that issue gives in detail the recent expansion of the market for American textile machinery and discusses the possible market for grain milling equipment in Spain.]

German Machinery Exports to Spain

Vice Consul Erik W. Magnuson, Stuttgart

German machinery exports to Spain decreased sharply in 1924, compared with the two years preceding. The export in 1924 was 11,589 metric tons less

than in 1922. Machinery exports decreased in weight from 18,673 metric tons in 1913 to 18,297 tons in 1922, to 11,353 tons in 1923, and to only 6,708 tons in 1924. Among the various types of machinery shipped to Spain, internal-combustion engines, metal-working machinery, and textile machinery lead in importance.

The following table gives German exports of machinery to Spain during 1913, 1922, 1923, and 1924:

Exports of German machinery to Spain

(In metric tons)

Class of machinery	1913	1922	1923	1924
Steam engines.....		171	35

Situation in Czechoslovak Machinery Industry

Commercial Attaché James F. Hodgson, Prague, March 28

The increased activity in the machinery industry of Czechoslovakia which commenced at the end of the year 1924 has been well maintained. While the factories are not in general working to capacity, employment is considered satisfactory and the tendency is toward an increase in activity.

The most serious handicap is the high price of raw material and semifinished products, as compared with last year, the advances ranging from 10 per cent upward. Wage scales, however, have been maintained at former levels, as have the prices for finished products, the increased cost of materials being compensated for through a reduction in overhead expenses and profits.

Exports Largely Increased—Domestic Demand.

The export trade has shown considerable improvement since the beginning of the year, a number of large sales having been negotiated with Soviet Russia, Rumania, Latvia, and Finland, with smaller sales to the other Baltic and Balkan States being reported.

The value of machinery exports for the first two months of 1925 was 46,532,000 crowns (about \$1,380,000) compared with 31,408,000 crowns (about \$938,000) in the first two months of 1924—an increase of almost 50 per cent for January and February of the current year.

Domestic demand is also relatively higher than last year, the marked increase in general industrial activity having resulted in a corresponding improvement in the demand for machinery.

CONSTRUCTION NEWS

Compiled in Industrial Machinery Division

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce or its district and cooperative offices by mentioning the country and reference number given. Where no reference number is given further information is not available.]

Legislation Promotes Building of Houses in Chile.

The Government of Chile has recently proclaimed a law to promote the erection of modern dwelling houses and modern tenement houses. Construction is to be financed by loan from the Caja de Credito Hipotecario at a low rate of interest and amortization, with easy terms of purchase. The law provides that the Caja de Credito Hipotecario may, during the present year, loan for this purpose the sum of 50,000,000 pesos. (American Minister William M. Collier, Santiago.)

Paving Scheme Discussed in Wellington.

At a recent meeting of the city council it was decided to approach the taxpayers with a proposal to raise £200,000 for permanently paving 20 miles of Wellington streets. It is possible that American firms may be given an opportunity of competing, some American equipment being already in use near Wellington and apparently giving satisfaction. (Vice Consul J. C. Hudson, Wellington, New Zealand.)

Harbor Improvements Contemplated at Durban.

General recommendations for improving the Durban harbor channel have been made by a commission of engineers. The channel is at present too narrow for the safe handling of the large vessels that call. In addition, large blocks of concrete which have fallen from the pier are a source of danger to vessels. It is proposed to make the channel ultimately 800 feet wide and 36 feet deep in order that the largest vessels may be entered and dispatched without awaiting the tide. (Consul Harry M. Lakin, Durban, Natal, South Africa.)

Funds Appropriated for Prince Rupert Grain Elevator.

The sum of \$150,000 has been appropriated by the Dominion Parliament at Ottawa for commencing construction work on the grain elevator for which foundations are now being built at Prince Rupert. A sum sufficient to complete the work is to be provided before the close of the present session. The elevator is designed to hold approximately 1,250,000 bushels of grain, and is to be of the circular-bin type, so constructed that additional sections may be built as required. Reference No. 167228. (Consul E. A. Wakefield, Prince Rupert, British Columbia, Canada.)

Contract Awarded for Montevideo Customhouse.

The National Council of Uruguay has accepted the bid of a local concern for the construction of a reinforced concrete customhouse (see Construction News, August 4, 1924). Work will be started on the foundations of the new building early in May of this year. The contract calls for the completion of the work within two and one-half years, but it is estimated that it will be fully three years before the work is finished. (Acting Commercial Attaché L. B. Clark, Montevideo, Uruguay.)

Modern Bakery Proposed in Brazil.

The leading bakers in Porto Alegre recently decided on the organization of a company to consolidate the present independent baking concerns. It is planned to establish a bakery on the most modern lines, with the latest mechanical devices for baking bread. (Commercial Attaché W. L. Schurz, Rio de Janeiro.)

Authority Requested to Dam New Brunswick River.

An important Canadian lumber company has applied to the Provincial Legislature of New Brunswick for authority to construct a 522-foot dam on the Tobique River. Local papers report that the proposed dam is to be used in connection with the new mill to be added to the number already owned and operated by this company in the Provinces of New Brunswick and Quebec. Reference No. 167434. (Consul G. C. Woodward, Campbellton, New Brunswick, Canada.)

Pernambuco to Improve Asylum.

The government of the State of Pernambuco, on the advice of the public health department, will soon effect a number of improvements in the State Asylum for Mental Diseases. The sanitary system of the asylum will be modernized and running water installed in all sections. The most important of the improvements to be effected is the construction of a pavilion for the observation of new cases brought to the institution. (Vice Consul Fred C. Eastin, jr., Pernambuco, Brazil.)

Canadian Railway Announces 1925 Construction Program.

The recent decision of the Canadian Pacific Railway to expend \$3,500,000 for construction work in the Province of British Columbia during 1925 was confirmed by the general manager of the western lines, according to the Journal of Commerce, Vancouver. The work will comprise ballasting and renewals of lines, alterations to the platform at the Vancouver Station, extension of trackage facilities, improvements and construction of

wooden bridges, and installation of five meeting tracks along the main line. (Assistant Trade Commissioner Walter J. Donnelly, Ottawa.)

Bolivia Developing Public Works Program.

Bolivia is at the present time developing a comprehensive and ample plan of public works in several regions of the Republic. This plan contemplates principally the construction of three railroad lines, one of which runs toward the north, its object being to reach a navigable point of the Beni River, tributary to the Amazon, connecting in this manner the immense valleys of the northern and northwestern parts of the Republic with the Andes Region; the second line runs

toward the east, in order to connect Sucre, one of the principal centers of the Republic, with the rest of it; and the third is to join the Bolivian railroad system with that of Argentina.

Spain Considering New Railways.

The Consejo Superior de Ferrocarriles in March began consideration of new railway projects totaling 9,142 kilometers, on which the State is asked to guarantee 5 per cent interest on the cost of construction. All these lines have been surveyed and studied, but await approval of the Consejo Superior de Ferrocarriles. Reference No. 167213. (Consul Augustin William Ferrin, Madrid.)

COAL

Charles F. White, Chief, Coal Division

INCREASE IN MARCH BITUMINOUS COAL EXPORTS

Total exports of bituminous coal from the United States during March, 1925, amounted to 918,746 long tons, as compared with 820,407 tons in February, 1925, and 1,135,284 tons in March, 1924. Exports during March were considerably below the monthly average during 1924, due largely to the relatively small shipments to Canada, 662,455 tons going to that destination, as compared with 587,205 tons in February.

Increased Exports to Italy.

Overseas exports during March totaled 249,838 tons, against 226,711 tons during February. Our best overseas customer during March was Italy, 65,084 tons going to that country, an appreciable increase over 51,726 tons in February and 44,616 tons in January. Exports to Panama totaled 31,388 tons in March and were considerably below 46,365 tons shipped in the preceding month, but a great increase over 19,366 tons in January. There were 47,020 tons exported to Cuba, or considerably more than the February shipments but under the exports for January.

Exports to South America Higher.

Although exports of bituminous coal during March to South American destinations, amounting to 25,794 tons, constituted an appreciable increase over 16,020 tons shipped in February, they are far below exports in January, which totaled 105,358 tons. The principal cause for this decrease was the low shipments to Brazil, 17,332 tons going to that country in March, or an increase over the 5,913 tons in February but well below the 80,785 tons in January.

Shipments to Argentina Increase.

Shipments to Argentina totaling 6,740 tons in March were slightly above the February exports but well under those in January. The exports to Chile which dropped from 2,998 tons in January to 87 tons in February were nil in March. For the second time in 1925, American bituminous coal was consigned to Colombia, 1,304 tons being exported to that country in March, while shipments during January were 20 tons, the total for the first three months of 1925 being nearly as much as the total exports in the entire year of 1924. As in February, there were no shipments during March to Uruguay, the 6,001 tons in January being the only ex-

ports to that country from the United States during the first three months of 1925.

Exports to Egypt, which were nil in January, increased from 5,126 in February to 6,726 tons in March. The other shipments to Africa amounted to 8,000 tons to Algiers and Tunis, the only exports to those destinations during the first three months of 1925, and 6,947 tons to other French African possessions against 7,029 tons in February and none in January.

Decrease in Anthracite Exports—Coke Shipments Heavier.

Total exports of anthracite from the United States during March amounted to 200,953 tons, being considerable below the total of 288,971 tons shipped in February and 296,075 tons in January. Decreased shipments to Canada were largely responsible for the lower exports, only 200,219 tons going to that destination in March as compared with 277,989 and 291,976 tons in February and January, respectively. No anthracite was exported to Cuba to which destination 10,028 tons were shipped in February and 2,770 tons in January.

Coke exports during March were the highest so far in 1925, totaling 65,980 tons against 61,130 in February and 62,845 tons in January. Increased shipments to Canada, amounting to 61,389 tons in March against 57,554 in February, were largely responsible for the increase over the February shipments.

Greater Spanish Production of Coal in 1924

Commercial Attaché Charles H. Cunningham, Madrid, March 23

Advance statistics on the production of coal in Spain for 1924 show a total production of 5,819,922 metric tons of bituminous coal as against 5,672,377 for 1923. Anthracite production amounted to 282,469 tons in 1924 as against 229,669 in the year preceding, and the amount of lignite produced in 1924 was 371,488 tons against 394,368 tons in the year before.

Asturias Leads in Output.

The greatest production is shown in the Asturias district where 4,004,853 tons, or about 62 per cent of the total Spanish output, were produced. The Province of Leon stands second with 843,911 tons, or 13 per cent of the total, and the Province of Cordova, where the anthracite coal deposits are situated, produced 431,627 tons, or 7 per cent of the total.

Germany Recovers Favorable Balance in Coal Trade

Trade Commissioner William T. Daugherty, Berlin, March 18

For the first month in three years, Germany exported more coal in January than was imported. German trade figures for January show that 881,067 metric tons of bituminous coal, anthracite, and unrefined cannel coal were imported, while exports amounted to 1,376,021 tons, making a net export of about 495,000 tons. Of the total imports, 456,336 tons came from Polish Upper Silesia, 291,502 tons from the United Kingdom, and 90,998 tons from the Saar. Of the exports, 732,695 tons, or 53 per cent of the total, went to the Netherlands, 216,185 tons to France, 28,190 to Argentina, 15,709 to Dutch East Indies, 29,262 to the British Mediterranean, and 16,426 to Spain.

German-Italian Coal Agreement.

The Ruhr Coal Co. (Ruhrkohle A. G.) and the Italian State railways are reported by the Industrie Kurier to have concluded an agreement whereby the Italian railways shall purchase 2,000,000 metric tons of coal annually from Germany. The agreement has been submitted to both Governments for approval, and the outlook that it will be approved is said to be promising.

The Coal Industry of Poland in 1924

Consul Donald R. Heath, Warsaw, March 10

Polish coal production during 1924 amounted to 32,224,680 metric tons, or considerably below the 1923 and 1922 totals of 36,097,997 and 34,832,105 tons, respectively. The decrease is almost entirely accounted for by the lessened production of the Upper Silesian district which accounts for about three-fourths of the Polish coal output. Labor troubles, the decreased demand from Germany, and the abrupt stabilization of Polish currency had their influences.

Favorable Prospects for 1925.

The prospects for profitable operation in 1925 are distinctly favorable. Most of the mines have readjusted their organization to cope with the new conditions of a stabilized currency and high taxes. Polish industries are steadily increasing their production and consequent coal consumption.

Under the terms of the Upper Silesian plebiscite, Germany was required to admit free of duty Silesian coal and other products for a period of three years. This condition expired on April 14, 1925. Endeavors have been made in the negotiations between Germany and Poland for a commercial treaty to include provision for the admission into Germany of Silesian products duty free, or at least with considerable reduction in duties, but the success of these endeavors is doubtful.

Need of Improved Equipment.

Although 1925 is expected to bring fairly profitable returns to the Polish coal industry, the industry is nevertheless faced with some rather trying problems. The mines are practically all short of operating capital, and it is expensive to work with local and even German capital. Considerable improved equipment is necessary and the mines have not funds with which to purchase much of it, nor is it feasible to finance such investments locally.

Export Trade—Smaller Tonnage to Germany.

The total exports of coal in 1924, amounting to 11,532,225 metric tons, were 1,028,070 tons below the 1923

shipments. Germany took only 58.76 per cent of the 1924 exports as compared with two-thirds of the 1923 total. Germany's lessened demand for Silesian coal in 1924 was largely because of the industrial depression prevailing in that country. German imports would have been still less had it not been for the coal strike there during the spring of 1924. Practically all Polish coal exports are from Polish Upper Silesia, exports from other districts being unimportant.

An increase of over 300,000 tons is shown in the case of exports to Hungary as well as increases to Austria, Danzig, Rumania, and Yugoslavia. Exports to Czechoslovakia and Sitzerland were lower than in 1923. The destinations of Polish coal exports in 1923 and 1924 are shown in the following table:

Polish coal exports in 1923 and 1924

Destination	1923	1924	Destination	1923	1924
German Upper Silesia	Metric tons 1,746,158	Metric tons 1,964,384	Denmark	Metric tons 17,770	Metric tons 9,160
East Prussia	209,685	210,096	Switzerland	154,065	61,644
Germany proper	6,087,060	4,602,379	Yugoslavia	21,187	50,739
Austria	2,789,607	2,867,370	Rumania	121,302	138,192
Czechoslovakia	742,226	564,953	Sweden	24,965	365
Italy	6,150	13,576	Norway	585	
Hungary	374,571	686,032	Latvia	2,950	14,223
Danzig	240,221	337,827	Bulgaria	85	1,147
Memel	16,247	19,264	France		365
Lithuania	5,461	1,468			
			Total	12,560,295	11,532,225

British Coal Markets Inactive

Acting Commercial Attaché H. D. Butler, London, radiogram dated April 23

The market for South Wales coal is stationary, except for large admiralities, which are more active. Tonnage arrivals are fairly good, and collieries are working more regularly. Other markets are inactive, especially Glasgow. A meeting of the miners' federation to decide a wage program adjourned to May 13. Contracts for the Hjoge gas works have been placed for 1,500 tons of Wear specials at 25s. 3d. c. i. f. A Glasgow firm has secured a contract from Yugoslavia for 10,000 tons of screened navigation coal for naval purposes, April-May shipment. This is the first time that an order for Scotch coal has been placed by an Adriatic power. Production in the United Kingdom for the week ended April 11 amounted to 4,493,600 tons.

Hydroelectric Energy in Bavaria

It is estimated that the Province of Bavaria can produce approximately 2,000,000 horsepower of hydroelectric energy, of which 540,000 horsepower, or 27 per cent, has already been developed. Another 50 plants, with a total of 50,000 horsepower, are under construction, while 145 plants, totaling 400,000 horsepower, are contemplated. This total, 990,000 horsepower, represents practically one-half of Bavaria's potential hydroelectric power. (Trade Commissioner William T. Daugherty, Berlin, Germany.)

TEXTILES

Edward T. Pickard, Chief, Textile Division

WORLD TEXTILE NEWS IN BRIEF

Turkish Market for Secondhand Clothes.

Old or second-hand clothes are imported into Turkey to the value of \$90,000 to \$100,000 per year. By far the largest quantity of this old clothing comes from the United States. Only men's clothes are imported, jackets forming the greatest proportion. Large sizes, dark colored cloth, good material, and conventional cuts are required. (Consul Edwin A. Plitt, Constantinople, March 25.)

English Firm Desires Agency for American Hosiery and Piece Goods.

A large wholesale firm in London desires to represent American exporters dealing in piece goods and rayon hosiery, according to a report received from Assistant Trade Commissioner C. Grant Isaacs. A member of this firm will be in the United States about the first of May and may be communicated with through the New York district office of the Bureau of Foreign and Domestic Commerce. Further information regarding this firm will be made available at the New York district office or the Textile Division, Washington. Refer to file No. 26691.

German Artificial Flower Industry Declining.

The German artificial flower industry has been very unfavorably affected by recent fashions and by French competition in England and the United States. Exports of artificial flowers, fruits, and leaves to the United States amounted to \$1,512,748 in 1924—a decrease of almost 25 per cent from the 1923 figure. Total exports from all of Germany, of which the greater part is produced in Saxony, declined from 635 metric tons (metric ton=2,204.6 pounds) in 1923 to 432 in 1924. The domestic market was also slow during the year. It is estimated that the industry employed 3,500 persons less than in 1923. (Consul Christian T. Steger, Dresden, March 17.)

Unemployment in German Textile Industries Decreases.

Unemployment statistics of the German Textile Workers' Association, which usually furnish the most reliable indication of the labor situation in the textile industry, show that the improvement which began in August, 1924, has continued steadily up to the present time. In July, 1924, only 46.9 per cent of the 462,000 textile workers included in this organization were fully employed. Figures for February, 1925, show an increase to 84.3 per cent. With the exception of a brief period last spring, this shows the most favorable situation which has been reported since 1922 when in April 99.4 per cent was reported fully employed. (Consul Christian T. Steger, Dresden, March 21.)

Hosiery Market in Irish Free State.

Hosiery imports into the Irish Free State during the first 11 months of 1924 amounted to 707,603 dozen pairs, valued at £681,418. Of these, 548,499 dozen pairs, worth £544,743, were listed as coming from England. Statistics, however, do not show country of origin, and as practically all foreign hosiery enters this market through England, it is impossible to ascer-

tain the proportion furnished by each country. A considerable amount of the cotton, rayon, and silk hosiery is of American origin, and it is felt that with due attention to this market, exporters in the United States should furnish a larger proportion than they do at the present time. (Vice Consul John S. Richardson, jr., Cobh, March 23.)

German Rayon Production and Trade Reported.

The rayon industry is the only branch of the textile trades in Germany in which all plants are working full time. German production in 1924 is estimated at 10,760 metric tons (metric ton=2,204.6 pounds). Exports of rayon from Germany during 1924 amounted to 2,348 metric tons, a 50-per-cent increase over the preceding year, while imports totaled 1,080 metric tons, or approximately four times the amount imported in 1923. The United States is the chief foreign market for this German product. In addition to the more common uses of rayon in the weaving and knitting industries, German manufacturers are using this material in the production of garters and suspenders, gloves, hats, white and colored wigs, imitation furs and leathers, and artificial flowers. (Assistant Commercial Attaché Douglas Miller, Berlin, March 30.)

Cotton Cloth Produced in Mexico.

Cotton-textile mills in Mexico numbered 142 on October 31, 1924, of which 116 were operating and 26 closed down, according to statistics furnished by the Department of Special Taxes of the Department of Hacienda. An increase was evident, both in number and activity, compared with April 30. Investment in machinery and buildings approximated \$37,000,000. During the six months ended October 31, 38,844 workers were employed. Cloth production during this period totaled 174,000,000 yards, compared with 167,000,000 in the corresponding period of 1923. The quantities in millions of yards of the principal classes of cotton cloth produced were as follows: Gray, 57; bleached, 18, printed, 38; piece-dyed, 12; yarn-dyed, 34; drills, 6; and other, 9. (Commercial Attaché Alexander V. Dye, Mexico City, March 30.)

German Knit Goods Exported.

The Chemnitz knit-goods industry, for the most part, was less subject to fluctuations during 1924 than any other industry. A large domestic demand made up for the decrease in foreign sales and, although statistics are lacking, it is generally believed that the total knit-goods production in 1924 exceeded that of the preceding year. Exports of cotton hosiery from Germany amounted to 4,928 metric tons (metric ton=2,204.6 pounds), as compared with 5,849 in 1923. The higher unit prices, however, brought the values up nearer to those of the previous year. Total exports of cotton gloves amounted to 1,618 metric tons, or a decrease of 283 from the 1923 figure. Exports to other countries than the United States, however, showed an increase. Business in the tricot goods was not quite so favorable as in other knit goods. (Consul Christian T. Steger, Dresden, March 17.)

Less Activity in Bradford Wool Industry

Consul Frank C. Lee, Bradford, England, April 3

At the beginning of 1925, wool values began to decline, principally in merinos and the better grades of crossbreds which dropped from 5 to 10 per cent by the end of January. This reaction followed the sensational rise of wool prices during the last two or three months of 1924.

Price Fluctuations.

Prices fluctuated during February and the early part of March, and during the second series of London wool sales, March 10 to 20, merino quotations decreased 10 per cent and crossbreds from 10 to 20 per cent compared with the prices realized at the February auctions. In the latter part of March, the difference between quotations for merino and crossbred tops began to compare more closely with the pre-war ratio than at any time since the war. In 1913, 64's were quoted at about 2s. 6d. (\$0.61) and 40's were about 1s. 3d., or one-half the merino price; in 1920, 64's were priced at 12s. 6d. (\$3.04) and 40's at 3s. (\$0.73) per pound; and near the close of March, merino 64's were quoted at approximately 5s. 3d. (\$1.27) and crossbreds at 2s. 6d. (\$0.61), the relation between the two grades being practically the same as in 1913. (The preceding conversions were made at the par value of the pound sterling.)

Top Makers Hopeful—Wool Pack Not Acceptable to Growers.

Despite the irregularity in crossbreds toward the close of the London sales, Bradford holders of wool and top makers seem to be in a more contented frame of mind, believing that the low level for prices has been touched, and that later in the year business will improve.

It is evident now that the carefully devised scheme for the introduction of an all-wool pack, to replace the jute wrapper generally used, does not have a very good chance of success. The opposition from the wool-growing interests is very strong, and is based upon points which are difficult to meet. Doubts have also been expressed as to the durability of the wool fabric in its present form. An interesting new development is the attempt by jute manufacturers in India to produce a jute wrapper that will meet the requirements of the wool growers. In wool-trade circles, however, a good deal of skepticism is expressed as to the possibility of manufacturing a jute fabric that will not shed its particles into the wool.

Spinning Section Less Affected by Fluctuations of Raw Wool.

The spinning branch of the Bradford wool industry seems to have fared better than any other during the first quarter of 1925, yarn prices having remained comparatively reasonable and steady. The output of the medium and lower grades of yarn, both for continental and domestic consumption, was fairly large. Germany continued to purchase greater quantities of yarn than any other country. January exports of worsted yarns were larger than those for any month of 1924, and were on a par with average prewar shipments. Toward the end of March, increased inquiries were received from continental buyers, but, in many cases, their price offers were not high enough for Bradford manufacturers. The spinning branch also

began to feel the effects of the stagnation in the other sections of the Bradford wool industry.

Poor Business in Woolens and Worsteds—Unemployment Increases.

In the woolen, and, more especially, the worsted section of the trade, great difficulty was experienced during the first quarter of 1925, the lack of business being attributed to the importation and general distribution in other parts of the United Kingdom of competitive goods made in continental European countries of depreciated exchange. British imports of woolen and worsted materials from the Continent amounted to 23,111,000 square yards in 1923, 29,610,000 in 1924, and 6,392,000 during the first two months of 1925.

The depression was particularly acute in the Huddersfield or fine-worsted district, some manufacturers claiming that the situation was as bad as the slump of 1921. Merchants are said to be buying only for immediate requirements, and several European countries have succeeded in producing good imitations of fancy worsteds at lower prices than those asked for Huddersfield fabrics. The suggestion has been made that the adoption of a distinctive brand for Huddersfield worsteds might aid the manufacturers in combating this competition from continental goods.

Employment figures show that 10,753 were totally unemployed and 1,643 were working part time in Bradford on March 18, 1925—a considerable increase over the comparative figures for March 28, 1924, which were 5,046 and 1,615, respectively.

Australian Railways Desire Bids for Felt Body Blocks

The Textile Division has received copies of specifications under which bids may be submitted to the Chief Storekeeper of the Victorian Government Railways, Melbourne, Australia, for felt body blocks. Bids close at 11 a. m., June 17, 1925. A copy of these specifications will be made available upon application to the Boston, New York, or Philadelphia district office. Refer to file No. 168115.

Bombay Firm Desires to Sell Goat Hair and Rags

A firm in Bombay, India, desires an American market for goat hair and rags of all grades, according to a report from Assistant Trade Commissioner Don C. Bliss. This company is in a position to ship from 2,000 to 5,000 bales of goat hair per month. Further information regarding this concern will be made available upon application to the Textile Division, Bureau of Foreign and Domestic Commerce, Washington. Refer to file No. 26116.

Additional information regarding textiles appears in this issue under the following sections:

ELECTRICAL EQUIPMENT

D. S. Wegg, Acting Chief, Electrical Equipment Division

HYDROELECTRIC DEVELOPMENTS IN SPAIN

Commercial Attaché Charles H. Cunningham, Madrid

Various hydroelectric companies in Spain continued the development of their plants during the past year. The works at Penas de Castro, on the Tagus River, capable of developing 2,000 horsepower, have been completed. This power is being transmitted to Vilcavaro for the Cementos Valderribas factory. The Hidroelectrica de Castilla Co. is still working on its 15,000-horsepower plant at Villalba de la Sierra on the Jucar, where this company has invested approximately 30,000,000 pesetas. The Gallega de Electricidad is spending 16,000,000 pesetas on the works in Corunna, on the Tambre, and the Hidroelectrica del Cantabrico is continuing the development of its works of Somiedo, which will double their present capacity. Small installations were completed during 1924 at Ataun, Villafraanca, and Deva.

Other Construction Work.

The Hidroelectrica Espanola has completed the construction of 80 kilometers of line between Madrid and Huelves, the Molinar-Dos Aguas-Valencia line and improvements on the Madrid-Valencia line. This company has also purchased the works of Tranco del Lobo on the Jucar and increased its central station in Madrid from 12,000 to 20,000 horsepower. The Electra de Viesgo has during 1924 finished the central station of Santa Cruz de Ujo, at the mouth of the coal mines of the Hullera Espanola. This station, of 15,000 horsepower, which may be developed to 40,000 horsepower, together with the station of Astillero, Santander, of 2,500 horsepower, serves as a reserve for the seven installations which this company has in Santander, Asturias, and Palencia.

Bids Wanted On Bare Copper Wire

Specifications have been issued by the State Electricity Commission of Victoria, Melbourne, Australia, inviting bids on bare hard-drawn copper cable. The closing date is June 15, 1925. Copies of specifications are available for consultation in the New York and Chicago district offices of the Bureau of Foreign and Domestic Commerce.

Electrical Trade Notes

Second Wireless Exhibition in Manchester.

The Provincial Exhibitions (Ltd.) of Manchester has announced that the second Manchester Evening Chronicle Wireless Exhibition will be held in the City Exhibition Hall, Manchester, from October 27 to November 7, 1925. It is expected that the exhibition will have a considerable attendance. Details will be furnished in the near future. (Vice Consul Charles W. Lewis, jr., Manchester, England.)

Electric Power Service in Bolivia to Be Sold.

A Canadian syndicate is interested in the purchase of the electric light, power, telephone, and tramway service at La Paz, according to the Panama Times. The service is now owned by the Bolivian General

Enterprise, (Ltd.). Canadian representatives are believed to be now in La Paz where negotiations for the transfer of all the La Paz properties of the present company to the new syndicate have already been brought to an advanced stage. The price to be paid is understood to be about \$4,500,000.

New Radio Society Desires Catalogues.

A radio society has recently been organized in a large city in South America for the purpose of stimulating interest in radio and disseminating instruction in radio communication. It also plans to erect a broadcasting station at a later date. The society wants catalogues of broadcasting apparatus and receiving sets and parts as well as American magazines devoted to radio activities. The address of the society may be obtained from the Electrical Equipment Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., by referring to No. 166775.

Electric Lighting Plant for Sao Bento.

The prefect of the municipality of Sao Bento has been recently authorized to enter into an agreement with any company or individual to establish an electric lighting system for the city of Sao Bento, reports Consul Fred C. Eastin, jr., at Pernambuco, Brazil. Further information may be obtained from the Electrical Equipment Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., by referring to No. 166231.

Construction of Austrian Hydroelectric Plant Financed.

The Tyrolese Hydroelectric Power Co., a joint-stock company of which the majority stock is held by the City of Innsbruck, has obtained a loan of \$3,000,000, for the development of its Achensee power plant. This loan will enable the development of 70,000 horsepower by 1927 and it is planned that the plant will eventually be enlarged to develop 100,000 horsepower. The power generated will be sold to the Federal Railways for the Kufstein-Innsbruck line, to existing neighboring industries, and to the City of Innsbruck for such requirements as the municipal power plant is unable to accommodate. (Trade Commissioner Elbert Baldwin, Vienna.)

Situation in Shanghai Metals Market

The Shanghai, China, metals market is a fairly good trade barometer. During the middle of February there were some quite active inquiries from the local industrial centers, from Hankow, and also from the northern ports. In many cases these inquiries resulted in shipments, especially for water tubes. The close of the month saw prices on the downward trend and a general lack of interest being displayed throughout the market. (Consul General E. S. Cunningham, Shanghai, China.)

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

THE PASSING OF JAVA COFFEE

Mary L. Bynum, Foodstuffs Division

Java coffee gained its reputation for fine quality in former days when practically all the coffee plantations in Java and Sumatra were owned or indirectly controlled by the government of the Netherlands Indies.

Under the "cultuur" system, or forced cultivation, coffee was bought by the government and held in storage for several years, during which it underwent a mellowing or aging process. Officials took much pride in the quality of coffee that was shipped to European markets, and native overseers were given special compensation for the production of coffee of good quality. The cultivation and marketing of coffee was a government monopoly from the early part of the nineteenth century, with the exception of the period during which the island was controlled by Great Britain, until 1905, although it was not until in 1918-19 that all cultivation by the government was discontinued.

Java Coffee Superseded by Disease-Resisting Types.

The so-called "Java" coffee—in reality *Coffea arabica*—was successfully introduced into Java about 1699. This type flourished under the system referred to above, but unfortunately it has few qualities of resistance, and when the leaf disease known as *Hemileia vastatrix* appeared in western Java and spread slowly over the island, many plantations of fine Java coffee were destroyed. To-day there are only a few plantations producing the real Java coffee and these to do so must be located at an altitude between 3,000 to 4,000 feet in order to escape the ravages of diseases. This type together with *Liberica* has been almost entirely abandoned in favor of *Robusta*, a type introduced about 1900 and found to be more resistant to the leaf disease, although it has in turn fallen a prey to "koffiebessenboeboek," a coffee borer which appeared in western Java about 12 years ago.

There are but few firms dealing in what was formerly known as "genuine" Java coffee, since the amount produced is insignificant. It is a rare privilege to be served with this coffee even in Java. There are certain resorts, however, where the berries are gathered by the natives and sold to resthouses, hotels, and sanatoriums. *Coffea arabica*, or Java grade, is still grown in considerable quantities in the outer possessions of Sumatra, Celebes, Bali, and Timor. It is the same kind as Java except for the fact that it is not grown on the island of Java. The soil and climate is the same as on the island of Java, and while the present Java and Java grades may not be considered equal to the "Old Government Java" (owing, perhaps, to the fact that the mellowing process does not extend over a year or so, but takes place during the ocean voyage to points of destination) at least such Sumatra coffees as Mandheling, Ankola, Padang Interior, and Kroe have the reputation of being among the finest and highest priced coffees at present produced in any region. They are grown on what were formerly government estates.

Coffee Production in Netherlands Indies.

The total commercial production of Java and Java grades on the island of Java and in the outer possessions has dropped to 15,352,224 pounds, compared with 34,264,928 pounds for the island of Java alone around 1900, and with 174,945,240 pounds in 1879.

The following table shows the commercial production of Java coffee (*Coffea arabica*) in Java and the outer possessions, compared with the total production of all kinds of coffee. The figures are taken from the annual reports of a leading brokerage firm in Batavia.

Production of Java coffee as related to total production

[Thousands of pounds]

Years	Java	Sumatra	Bali and Celebes	Total Java and Java grades	Total all kinds of coffee
1919.....	5,140	8,500	10,241	13,881	122,665
1920.....	2,218	3,304	9,604	15,126	109,806
1921.....	599	938	5,074	6,611	120,871
1922.....	2,733	5,315	10,183	18,231	109,152
1923.....	1,038	4,223	14,604	19,865	140,276
1924 ¹	1,321	4,167	9,864	15,352	132,760

¹ Estimated.

Restriction on Use of Term "Java."

During the past six years Java and Java grades averaged only 12.7 per cent of the total, while Java coffee produced on the island of Java averaged but 2.9 per cent of the total quantity of coffee produced in the Netherlands East Indies. On account of the fact that the term "Java" has been so much abused, the pure food and drug act ruled that only *Coffea arabica* grown on the island of Java can properly be called "Java" coffee, and this means that only a million or so pounds can be marketed annually under that designation in the United States.

Additional information regarding foodstuffs appears in this issue under the following sections:

Cable review, Latin America:

- Continued improvement in Chilean situation.
- Cautious buying prevails in Brazil.
- Conditions continue good in Venezuela.

Cable review, Europe:

- Danish farm produce exports lower in February; crop conditions favorable.
- Swedish grain and food imports remain very high.

Tariffs and trade regulations:

MINERALS

Guy C. Riddell, Chief, Minerals Division

EXPANSION OF EGYPTIAN MARKET FOR LUBRICATING OILS

Trade Commissioner Richard A. May, Alexandria, March 28

Egypt is an important and growing market for lubricating oils of a wide range of types and qualities. According to official returns, during 1924 there were imported 11,806 metric tons of mineral lubricating oils and greases, valued at 232,542 Egyptian pounds (the Egyptian pound=\$4.9431 at par), representing an increase of about 20 per cent in quantity and almost 30 per cent in value. The quantity increase, while greater than that of 1923 over 1922, was not in any sense abnormal or unexpected, considering Egypt's continued expansion in imports of automotive vehicles, tractors, and machinery and engines of all kinds.

United States Contributes Largest Share—Other Sources.

By far the largest share of Egypt's imports of lubricating oils and greases comes from the United States—in 1924 slightly more than three-quarters of the total quantity and almost three-quarters of the total value. These products occupied fourth place among Egypt's imports of American merchandise in 1924 and third in 1923, the lower rank in 1924 being attributable to the extra heavy importation of American motor vehicles.

The following table shows Egypt's imports of lubricating oils and greases by countries of origin during 1922, 1923, and 1924:

Egyptian imports of lubricating oils and greases

Countries of origin	1922	1923	1924
	<i>Kilos</i>	<i>Kilos</i>	<i>Kilos</i>
United Kingdom.....	1,138,283	1,406,322	891,252
British Far East.....	125,830	158,187	961,000
Belgium.....	567,230	481,100	301,698
France.....	432,982	338,254	285,659
United States.....	6,045,190	7,072,088	8,895,123
Other Far Eastern countries.....	85,180	315,307	354,046
All other.....	15,081	142,736	116,920
Total.....	8,409,776	9,913,942	11,805,698

Leading Items from Important Countries.

Imports of lubricating oils from the United Kingdom are confined mostly to cylinder and engine oils. Egypt in 1924 took much larger quantities of lubricating oils from British possessions in the Far East than ever before, the volume rising far in advance of the importation from the United Kingdom itself, which in previous years had invariably stood second in importance to the United States. This increase is largely accounted for by certain Egyptian government purchases. These Far Eastern oils are mostly lower-grade cylinder and engine oils.

Lubricating oils entering Egypt from Belgium and France have experienced steady declines in both volume and value in the past three years. These Belgian and French oils are mainly of the better grades for engine, cylinder and diesel purposes, for which there seems to be a declining market in Egypt. It is estimated that almost 98 per cent of Egypt's imported lubricating oils comes in steel drums or wooden barrels,

the remaining 2 per cent being motor oils shipped in 1 and 5 gallon tins or in imperial gallon tins from England. The usual size of drum found on the Egyptian market is the 51-gallon, while in past years much of the bulk business has been in wooden barrels of 40-gallon capacity.

Government the Principal Purchaser.

The principal purchaser of lubricating oils is the Egyptian government, whose administrations, it is estimated, require 25 per cent of the total Egyptian consumption. The Egyptian State Railways take the largest amount, principally for locomotive and allied lubrication. The next most important government consumer is the mechanical department of the Ministry of Public Works, which supplies lubricants to the government pumping stations throughout the country. There is also an appreciable demand, particularly for motor oils, from the mechanical transport administration, and for marine oils for the ports, lighthouses, and other marine administrations.

The Egyptian government, in filling its annual and semiannual lubricating oil requirements, advertises for tenders in advance and buys strictly according to specifications. Egyptian government tender conditions usually specify a provisional deposit of 2 per cent of the amount of the bid upon submittal, to be increased to 10 per cent if the tender is successful, and to be returned upon completion of the contract or the placing of the adjudication elsewhere. Usual payment is cash upon delivery. Price is a very important element in this business.

Kinds of Oil Consumed—Credit and Duty.

In general, the Egyptian market demands the usual range of lubricating oils found in similar markets. Egypt's principal consumption is of general oils for Diesel engines, coal engines, and oil engines, in the order named. These oils at present are shipped to Egypt almost always in 51-gallon drums, and generally are classified within two grades. Cylinder oils are similarly contained, and fall likewise within two quality grades.

The Egyptian consumption of motor oils requires the usual types—light, medium, heavy and extra heavy. Owing to the customs of the market, heavy oils are in greatest demand, even though the larger share of motor vehicles in the country actually require lighter oils, and notwithstanding intensive educational advertising on the part of some distributors.

The market in Egypt for strictly marine oils is estimated at but 5 per cent of the total consumption, and is divided between general engine, cylinder, and Diesel oils.

The Egyptian commercial demand for lubricating oils at present generally requires the extending of credit of from 60 to 90 days after delivery of goods at Alexandria or Port Said. However, terms of cash against documents, Alexandria or Port Said, may be required where the credit responsibility of customers

is not fully established. Price quotations should be made c. i. f. Alexandria or Port Said, usual 51-gallon drum or 40-gallon wooden barrel, excepting motor oils, which may be quoted both in drums and tins.

The present import duty on mineral lubricating oils assessed by the Egyptian customs administration is 15 per cent ad valorem, plus a consumption tax of 2 per cent.

Mixing of Lubricating Oils a Common Practice—Motor Oils.

Among Alexandrian importers and wholesale merchants there is a large business in the mixing of lubricating oils for distribution to the retail trade and for consumption throughout Egypt. It is a common practice for importers, especially of Greek nationality, to prepare their own mixtures of heavy green cylinder oils and red engine oils for sale in the local markets as motor oils in competition with the brand motor oils dealt in on the Egyptian market by the regular representatives of large American and British refiners and shippers. Some of these local importers also mix in

a similar fashion large quantities of Diesel engine oils, which are sold in large volume in the interior villages at prices which generally can not be reached by the more directly established distributing and sales organizations representing American and British refiners and shippers of branded Diesel engine oils.

At present two well-known American brands of motor oils and one British are marketed in tins. Branded oils in tins enjoy rather wide distribution and sale, and are generally well advertised. Motor oils in drums are also sold in large volume.

TOBACCO

Tobacco Section, Foodstuffs Division

OPPORTUNITIES FOR MARKETING TOBACCO IN HUNGARY

Based on report by Consul Walter S. Reineck, Budapest

The production of tobacco in Hungary in 1924 amounted to 44,092,000 pounds, and shows an increase of more than 50 per cent over the previous year, although the planted area increased but 3 per cent. Accumulated stocks on September 1, 1924, amounted to 35,273,600 pounds. The Hungarian monopoly states that it is using Virginia and Kentucky tobaccos from the United States, Havana and Cuba tobaccos from Cuba, and Brazilian seed-leaf and Carmen tobaccos from Brazil. The crop of 1924 is now being purchased by the monopoly.

Foreign Trade in Raw Tobacco.

The monopoly purchases foreign tobacco in the European tobacco markets direct from importers and pays cash. The quantities and varieties needed each year depend on local requirements and market conditions. Total imports of raw tobacco into Hungary in 1924 were 4,724,900 pounds, representing an increase of 68 per cent over the quantity imported in 1923. Bulgaria supplied over 60 per cent of the total imports; Greece, 26 per cent; and about 600,000 pounds—probably United States tobacco—were furnished by the Netherlands and Germany.

In 1924, Hungary exported 8,965,888 pounds of tobacco. This quantity, although amounting in weight to nearly twice the imports, was worth but 5,232,000 gold crowns, or little more than half the value of imported tobacco. The monopolies of Czechoslovakia and Poland took 7,340,000 pounds, and neighboring countries—Germany, Belgium, and the Netherlands—bought about 500,000 pounds each.

Opportunities for Introducing American Tobacco.

No direct imports of raw tobacco have been made from the United States since the war. A small stock of Kentucky and Virginia tobacco, on hand from 1922, is being worked up into a pipe tobacco, the success

of which on the Hungarian market may lead to future trade. It is believed that Hungary is a field for development, if only the popular taste can be satisfied.

An excellent opportunity for the introduction of American tobacco products in small lots is offered in a recent decree of the Hungarian Ministry of Finance, which grants a concession to seven Hungarian firms to import and distribute foreign tobacco products in Hungary in quantities not to exceed the amounts permitted for their own personal requirement. The amount which may be imported for any one person in one year has been limited to 5,000 cigarettes or 16½ pounds of any other kind of tobacco products.

By the further terms of the decree, the concessionaires may not sell foreign tobacco or tobacco products in an open business place. They may, however, solicit individual orders and import on behalf of any customer an annual quantity not in excess of the amount mentioned above—5,000 cigarettes or 16½ pounds of other tobacco products. Concessionaries must, of course, be able to prove that their orders are bona fide, and they are not permitted to do a credit business. Private individuals may also import tobacco products upon a permit from the Ministry of Finance. Concessions are valid until December 31, 1927.

Import Duty.

The customs duty on cigarettes amounts to 60 gold crowns a kilo, or about \$5.51 a pound. This duty is said to average about 1,000 paper crowns, or nearly 1½ cents a cigarette. The duty on other tobacco products is 48 gold crowns a kilo, or \$4.41 a pound.

[A list of the firms to which concessions for the restricted importation and sale of foreign tobacco manufactures has been granted is on file in the Tobacco Section of the Bureau of Foreign and Domestic Commerce and on request will be furnished to any member of the trade whose name is on the Exporters' Index. For the benefit of those not enjoying the advantages of the Exporters' Index, it may be explained that this is a free service available to all American firms or individuals whose names and interest in foreign trade have been properly recorded with the Bureau.]

IRON=STEEL=HARDWARE

Luther Becker, Chief, Iron and Steel Division

UNITED STATES IRON AND STEEL EXPORTS RECOVER

A noticeable improvement characterized the exportation of iron and steel from the United States during March; altogether 155,386 tons of iron and steel were consigned to foreign countries. This represents an increase of 53 per cent over the low level established in February and exceeds the January shipments by nearly 10 per cent.

Principal Gains Made in Manufactured Products.

The principal gains in the March exports were in such important manufactured goods as rails, steel bars, steel plates, black sheets, hoops and bands, tin plate, metal lath, boiler tubes and welded pipe, cast-iron pipe, pipe fittings, plain wire, barbed wire, wire nails, and car wheels and axles. A comparison of the trade for the two months is afforded by the following table, which gives also the corresponding statistics for the first three months of the year:

Exports of iron and steel from the United States in 1925

[In long tons]

Articles	February	March	First quarter
Pig iron, not including ferro-alloys	1,413	2,037	4,748
Scrap	2,659	3,414	8,650
Ingot, blooms, billets, sheet bars, and skelp	6,362	6,308	15,103
Iron bars	287	625	1,269
Steel bars	9,189	12,390	30,049
Alloy steel bars	155	839	1,310
Wire rods	1,156	1,643	6,131
Plates, iron and steel	6,305	11,241	22,641
Galvanized sheets	15,640	13,048	57,014
Black steel sheets	3,575	6,254	10,087
Black iron sheets	1,045	1,334	3,139
Hoops, bands, and strip steel	3,078	4,196	9,646
Tinplate, terneplate, etc.	8,051	14,425	41,892
Structural shapes, plain material	7,129	6,741	20,721
Structural materials, fabricated	5,149	5,907	16,492
Metal lath	65	277	509
Steel rails	2,468	18,709	31,729
Rail fastenings, switches, frogs, etc.	1,081	2,496	5,554
Boiler tubes and welded pipe	11,425	18,085	43,376
Malleable iron screwed pipe fittings	538	949	2,082
Cast iron screwed pipe fittings	275	417	1,009
Cast iron pressure pipe and fittings	758	1,216	2,528
Cast iron soil pipe and fittings	766	1,457	2,927
Plain wire	2,638	3,960	9,665
Barbed wire and woven wire fencing	4,201	7,700	17,955
Wire cloth and screening	88	121	394
Wire rope	406	419	1,223
Insulated wire and cable	34	84	206
Wire not elsewhere specified and manufactures of	520	837	1,999
Wire nails	600	818	2,172
Nails other than wire, including tacks	759	912	2,460
Horseshoes	71	46	191
Bolts, nuts, rivets, and washers, except track	908	1,511	3,689
Car wheels and axles	1,109	2,068	4,192
Iron castings	921	775	2,424
Steel castings	482	691	1,623
Forgings	173	400	600
Ferromanganese and spiegelisen	838	1,026	3,063
Total	102,302	155,386	399,402

Gains in Iron Ore and Screw Exports—Imports Continue High.

Iron-ore exportation continued its upward trend, advancing from 1,361 tons in February to 4,354 tons in March. A large gain was also made in the foreign shipments of wood screws, 859,254 gross, valued at \$101,125, having left the American ports during the month, as compared with 658,421 gross, valued at \$85,948, in February.

Although the total receipts of iron and steel for March, 92,110 tons, were slightly less (270 tons) than in February, the takings of the more important iron

and steel articles, such as pig iron, iron and steel bars, shapes, rails, and tubular products, increased considerably. Had it not been for the diminished receipts of ferro-alloys and scrap, the United States imports of iron and steel would have registered a large gain for March.

Unfabricated Materials Constitute Bulk of Imports.

The importation of iron and steel during the first three months of 1925 aggregated 265,555 tons, the bulk of which was comprised of pig iron, ferro-alloys, and scrap. The tonnages allotted to the various types of products imported during February, March, and the first quarter of the current year are shown in the following table:

Imports of iron and steel into the United States in 1925

[In long tons]

Articles	February	March	First quarter
Pig iron	47,803	50,803	139,950
Ferromanganese, manganese metal, and alloys	10,542	5,021	22,053
Ferrosilicon	656	670	1,802
Scrap	14,502	4,755	33,370
Steel ingots, blooms, billets, slabs	4,906	3,490	9,381
Steel bars	2,864	4,016	9,415
Bar iron	816	1,178	2,673
Structural shapes	4,008	7,003	19,326
Rails and splice bars	1,931	6,484	11,719
Boiler and other plates	22	16	99
Sheets, skelp, and saw plates	60	647	1,141
Tinplate	46	27	73
Round iron and steel wire (all kinds)	273	266	682
Wire rope and insulated wire	194	152	495
Flat wire and strip steel	93	234	465
Wire rods	780	814	1,564
Tubular products	2,825	6,719	10,546
Nails and screws	12	111	178
Bolts, nuts, rivets, and washers	11	16	42
Castings and forgings	231	238	581
Total	92,380	92,110	265,555

Drop in Iron Ore Receipts.

During March 162,695 tons of iron ore were imported, a considerable falling off from 226,472 tons for February and 174,398 tons for January. Cuba was the principal source of this mineral during March, having sent 72,820 tons, while Chile held a prominent position with 60,200 tons; Spanish ore to the amount of 20,420 tons was received. On the other hand, takings of manganese ore far outstripped that for the preceding month. There were 23,315 tons (manganese content) of foreign manganese ore admitted during March, against only 9,450 tons (manganese content) for February.

The advance in the receipts of card clothing was continued in March, 50,327 square feet of foreign-made card clothing having entered the country in that month, as compared with 30,248 square feet in February and 10,459 square feet in January.

Better Business in Brazilian Steel Market

Cable from Commercial Attaché Schurz, Rio de Janeiro, April 25

Business in the Brazilian iron and steel import markets is tending toward normal and prospects are now good. European competition is lessening and stocks are low. Railroads are beginning to buy, but collections are slow.

Use of Oil Heaters in Denmark Successful

Consul General Marion Letcher, Copenhagen

Heating apparatus which use oil as a fuel have been used in Denmark, especially Copenhagen, for several years. One Danish factory manufactures a fuel-oil heater, and a German appliance is also on the market. Installations of both have been made in considerable numbers within the last year or two, and reports indicate that both burners have given general satisfaction.

Type Well Adapted to Climate.

The climate of Denmark seems rather favorable to the use of oil-heating plants, since cold and relatively warm days are likely to alternate. Raw but not extremely cold weather is the rule, and unpleasantly cool days are not rare even in the summer. It is believed that an oil heater would be better adapted to graduation to suit the varying temperatures than would a coal furnace; the oil burner is also probably much easier to manipulate. On the other hand, the use of furnaces to heat houses is relatively rare in Denmark, statistics indicating that only about 10 per cent of the Danish houses are heated in that way. Soft coal stoves are the rule, and heating methods long discarded in the United States are still the common practice.

French Iron and Steel Exports Lower

Trade Commissioner Daniel J. Reagan, Paris, April 2

The efforts of the French metallurgical interests to accelerate foreign shipments during February were successful only with regard to a few of the semifinished and finished products. This result was disappointing to the French industry, especially as its production was but slightly inferior to the high output in January and domestic consumption showed a decline. Rising production costs were reflected in higher domestic prices and were applied also, though to a somewhat lesser degree, to export prices. The prices of many imported iron and steel products were also higher than in the preceding month. The industry's hope that the depreciation of the franc during February would increase foreign buying was not realized and the French producers are now seeking other expedients—notably an alliance with the German interests—in an endeavor to increase their foreign sales.

Slight Increase in Net Exports of Iron Ore.

Exports of iron ore were almost 100,000 metric tons above the January shipments, with net exports up only 15,000 tons since imports showed a sharp increase of 85,000 tons. Although Germany, the Netherlands, and the Belgium-Luxemburg Union continued to be the principal purchasers of French ore, shipments to each of these countries were below the January deliveries.

Pig Iron Exports Decline Over 37 Per Cent.

Exports of pig iron declined from 63,000 tons to 40,000 tons, while imports rose from 2,400 tons to 3,400 tons. The principal buyers of French pig iron remained Belgium-Luxemburg, Italy, and Switzerland. Small shipments were made to the United States, Algeria, and Tunisia; a sharp decline occurred in exports to Great Britain. The average price per ton exported remained about 60 francs per 100 kilos, indicating that hematite pig still dominates this market. Exports of ferromanganese were down 85 per cent, but imports were up 100 per cent.

Tendency Irregular in Semifinished and Finished Products.

The two most significant items of this group—blooms, billets, and bars and rails—showed some increase. Exports of the former rose from 141,000 tons to 155,000 tons, while imports declined from 6,600 tons to 1,600 tons. The principal countries of destination for the month were Belgium-Luxemburg, Great Britain, Italy, and Switzerland, with minor shipments to Algeria and Tunisia. Small quantities were also sent to Morocco, Brazil, the United States, and Norway; however, exports destined for these latter countries were less important than in January. The decline of the franc undoubtedly stimulated February exports.

Exports of rails advanced from 15,000 tons to 20,000 tons, while imports were practically negligible. The most important shipments went to Belgium-Luxemburg, Japan, Switzerland, the United States, and Tunisia. Foreign consignments of machine iron and steel dropped sharply; strips and bands showed slight increases; and declines were general in the other semifinished and finished products. Scrap iron exports advanced sharply from 48,000 tons to 62,000 tons, while imports declined from 1,400 tons to 700 tons.

Gain in Canadian Production of Iron and Steel

Trade Commissioner Lynn W. Meekins, Ottawa, April 21

The production of 63,932 long tons of coke pig iron in Canada during March, 1925, was the highest monthly output reported since May 1924, according to the Dominion Bureau of Statistics. This output exceeded the combined totals for January and February of this year. The increase over February was 117 per cent; February in turn showed an increase over January of 4 per cent. The entire March output consisted of basic iron, 63,740 tons being for the further use of the reporting firms.

Decrease from 1924 Production—Greater Steel Output.

The cumulative production of pig iron for the first quarter amounted to 121,740 tons, as compared with 201,280 tons for the first three months of 1924, and consisted of 97,736 tons basic iron, 15,722 tons foundry iron, and 8,282 tons malleable iron. Of the 5,433 tons of ferro-alloys produced during the quarter, 1,962 tons were turned out in March.

Reflecting the high output of pig iron in Canada, the production of 107,605 long tons of steel ingots and castings was the greatest tonnage reported for any month since May, 1924. This exceeded the February output by 189 per cent and brought the total for the first quarter of the current year up to 171,952 tons, as compared with 207,224 tons for the corresponding period of the preceding year. The output for the January-March period of 1925 included 167,336 tons of steel ingots, which were made for the further use of the reporting firms, and 4,616 tons of steel castings.

Belgian Iron and Steel Production Increases

Commercial Attaché Fayette W. Allport, Brussels, April 28

During March the output of iron and steel by Belgian works amounted to 282,000 metric tons of pig iron, 262,000 tons of raw steel, 6,600 tons of rough castings, 220,000 tons of finished steel, and 13,500 tons of finished iron, compared with 245,000 tons of pig iron, 233,000 tons of raw steel, 6,000 tons of rough castings, 199,000 tons of finished steel, and 14,000 tons of finished iron.

Export Orders Lacking.

The markets for metallurgical products have been weaker. There is a noticeable absence of export contracts and the earlier orders are being completed. Competition from Luxemburg is active, and German producers are prominent in the markets for machinery, wire, and sheets. The price on plates is steady, but quotations for all other products are lower.

Iron, Steel, and Hardware Notes**Australia to Have New Screw Factory.**

A large factory for the manufacture of screws is to be erected at Sunshine, Victoria, by the English firm of Guest, Keen, and Nettlefolds (Ltd.). The company has registered in Victoria under the name of Nettlefolds Proprietary (Ltd.), with £500,000 capital in £1 shares. (Vice Consul Haskell E. Coates, Melbourne, Australia.)

French Mine Increases Its Production of Hematite.

The production of hematite ore from the May-sur-Orne mine of the Societe Mines et Produits Chimiques is estimated to have exceeded 250,000 metric tons in 1924, compared with the output of 155,000 tons in 1923 and 121,000 tons in 1922, according to L'Industrie Chimique. This mine is estimated to still contain 8,000,000 tons of hematite. (Trade Commissioner Daniel J. Reagan, Paris.)

Decrease in Santander Ore Shipments.

The shipments of iron ore from Santander, Spain, in February amounted to only 21,303 metric tons, as compared with 25,133 tons in January, 1925, and 22,670 tons in February, 1924. The very bad weather which

prevailed throughout the month interfered with the loading of ore and with the sailing of vessels from the port. (Consul Leonard G. Dawson, Santander, Spain.)

Terni Steel Plant to Expand.

In view of the more extensive Italian demand for steel products, the board of the Terni Societa per l'Industria e l'Elettricit  recently decided to construct two new open-hearth furnaces and to build a new tin mill at Terni. (Assistant Commercial Attach  A. A. Osborne, Rome, April 4.)

Report on Polish Iron and Steel Industry in 1924.

A r sum  of conditions in the Polish siderurgical industry during 1924, prepared by L. J. Cochrane, office of the commercial attach  at Warsaw, has been received in the Bureau. This report includes production statistics for blast furnaces, steel works, and rolling mills in Congress Poland and Polish Silesia and gives tables of the foreign trade of Poland for 1923 and 1924.

[A copy of this report will be made available to interested American concerns upon application to the Iron and Steel Division, Bureau of Foreign and Domestic Commerce, Washington. Mention should be made of File No. 26713-Poland-12.]

Additional information regarding iron-steel-hardware appears in this issue under the following sections:

Cable review, Europe: Austrian unfilled orders increase in March.

Cable review, Latin America: Cautious buying prevails in Brazil.

Tariffs and trade regulations: Germany—Iron pyrites do not require export license.

HIDES AND LEATHER

Wilbur J. Page, Chief, Hide and Leather Division

STAGNATION OF CZECHOSLOVAK MARKET CONTINUES

Commercial Attach  James F. Hodgson, Prague, April 6

Conditions in the Czechoslovak leather market have not materially changed in spite of the sample fair held recently in Prague. Business is still suffering from the stagnation prevailing since the beginning of the year. Although many dealers visited the fair, their visits were generally for information only and no large orders were placed for either sole or upper leather. There is, however, a distinct tendency toward improved demand, and the prices consequently are generally firm. In some kinds of leather prices have declined slightly, such decreases being attributed to attempts of the leather dealers to meet their customers half way. The hide and skin markets are such as to predict an increase in leather prices as soon as there is an improvement in the demand for leather.

Controversy Over Export Policy.

Recently a delegation of representatives of dealers in skins and of the leather industry called on the Minister of Commerce to discuss the exportation of goatskins. The skin dealers desired that two-thirds of the goatskins produced in the country annually should be allowed to be exported, and that one-third should be

turned over to the domestic trade at an average price of 35 Czech crowns. The representatives of the leather industry, on the other hand, insisted that the export restriction be maintained. The minister was requested to decide the question, the skin dealers further bringing to his attention the fact that there were still on hand 250,000 goatskins of the 1923 crop and 350,000 from the 1924 crop, representing a tied-up capital of about \$750,000. The Ministry of Commerce has not yet announced a decision in the matter.

Argentine Hide Production

There were 371,788 packer hides produced in Argentina during March, making a total production of 1,001,110 hides for the first three months of 1925, as compared with 1,015,283 hides for the corresponding period of 1924, according to a cable dated April 16 from Commercial Attach  E. F. Feely, Buenos Aires. Figures regarding the abattoir production were not yet available, but stocks of this class of hides were increasing slightly.

NEW HOURS OF LABOR FOR FRENCH SEAMEN

Commercial Attaché Chester Lloyd Jones, Paris, April 9

Hours of labor in the French merchant marine, by a recent decree, are now regulated on a 48-hour-week basis that involves certain modifications of the previous 8-hour law in its application to specific kinds of service.

Modification of Previous Regulations.

The law of August 2, 1919, established eight hours as the standard working day in the French merchant marine. Its provisions were interpreted by an administrative regulation of February 24, 1920, adopted after a study on the part of representatives of shipowners and sailors as to what would be acceptable conditions. This regulation proved very unsatisfactory to shipowners and was modified by a later one on September 5, 1922. The first regulation endeavored to apply the eight-hour principle, but with little modification. The second allowed shipowners temporarily to organize their workers on the assumption that 12 hours of presence on the job equaled 8 hours of effective work on the bridge and in general services on the vessels.

This adjustment was unacceptable to the workmen, who have on a number of occasions protested against it; in June, 1924, they formally petitioned for its abrogation. Efforts to secure a modification through a committee of representatives from the two groups failed, and the Government has now issued new regulations on its own initiative, which are effective 10 days after April 1, the date of their publication in the "Journal Officiel."

Application of New Decree.

The Government authorities have endeavored to replace the regulations heretofore obtaining, which were to some extent contradictory, by new measures giving a comprehensive exposition of the application of the eight-hour day to the merchant marine. They recognized that the decree of September 5, 1922, had allowed employers to insist on service of a permanent character, often extending beyond eight hours per day. The new decree adopts the principle of the 48-hour week, and allows much less extensive modifications of the daily working period than heretofore.

Taken as a whole, the new decree brings back the standard of employment very closely to that set up in the decree of 1920, and is materially beneficial to the seamen. The chief provisions of the new regulations are summarized below:

GENERAL RULES

Navigation companies must on all their vessels engaged in long voyages choose one of the following methods in arranging the work hours of the employees, including service on the bridge, in the engine room, for the general maintenance of the ship, and for wireless telegraphy.

1. The limitation of "effective work" to eight hours a day.
2. The unequal division of the "effective work" period on the basis of 48 hours a week, not including one day's rest in seven.
